

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REMINISCENCE.

THOUGH I am native to this frozen zone
That half the twelvemonth torpid lies, or dead ;
Though the cold azure arching overhead
And the Atlantic's intermittent moan
Are mine by heritage, I must have known
Life elsewhere in epochs long since fled ;
For in my veins some Orient blood is red,
And through my thought are lotus blossoms blown.
I do remember . . . it was just at dusk,
Near a walled garden at the river's turn
(A thousand summers seem but yesterday !),
A Nubian girl, more sweet than Khoorja musk,
Came to the water-tank to fill her urn,
And, with the urn, she bore my heart away !

Thomas Bailey Aldrich.

DAGNAN-BOUVERET.

I.

HAD been studying in Paris about six months when, in M. Bonnat's school, where I was making my first attempts at drawing from the model, I heard some of the senior pupils, who had advanced to the dignity of painting studies from life, talk about a picture in the Salon of 1878 by Dagnan-Bouveret. They spoke so highly of it, and said it was so good, that the next time I went to the Salon I made a point of seeing it. It was the "Manon Lescaut," a canvas of moderate size, and, as it seemed to me in my ignorance, rather empty and uninteresting. I have never had better proof of the fact that appreciation of good art depends upon cultivation of the sense of seeing, than my first impression of that picture. It is a charming work (I have seen it since); the two figures are beautifully drawn, and the delicate color-scheme of pale grays and yellowish tints is most artistically conceived, and delightfully carried out in the painting. The next year at the Salon a much less sympathetic subject by Dagnan, "A Wedding-Party at the Photographer's," evoked my admiration for its marvelous technical skill; and in 1880, when I saw "The Accident," I became, like every other young painter in Paris, an enthusiastic advocate of the ability of the brilliant artist whose name became, by the exhibition of that picture, as well known as that of Bastien-Lepage. These two young men have always stood side by side in my mental retrospect of the achievement of French painters up to the time that Bastien's career was ended by his untimely death in 1884. Since then I have followed, as closely as my residence in New York would permit, the development of Dagnan's work; and in 1889, at the Paris Exposition, where I saw nine or ten of his best works, I placed him in the first rank of modern painters, and could find in all the galleries of that wonderful exhibition no picture by a living painter on which to found so much hope for the future of the French school as on "The Blessing." It seemed to me, in looking at it, that if it does not prove to be one of the works of our day most held in esteem a generation hence, it will be only because all canons of taste will have been reversed, and all appreciation of the true and beautiful have ceased. In the "Horses at the Watering-Trough," and "The Consecrated Bread" at the Luxembourg Gallery, in the "Breton Women at the Pardon," in "Vacci-

nation," "The Pardon," and other works, I have seen much to convince me that Dagnan-Bouveret is one of the ablest painters of our time, and that his temperament, most refined and sympathetic in its artistic quality, is supported by a skilfulness of technic, and an individuality of expression, that give to his works a personal character such as few others possess. His pictures satisfy the most rigorous technical requirements, and impress by their truth to nature and by their healthful sentiment.

Unfortunately I have not the pleasure of a personal acquaintance with M. Dagnan-Bouveret. Those of my friends who have speak of him as a man of gentle temper, and devoted to his art. From one of them who has told me of his intercourse with him in Paris, where they had studios in the same building, I have heard interesting details of his life and character. He is a man of small stature, with dark hair and beard, intense eyes that investigate and pierce the mystery of the subject that occupies his attention, of a strong, determined will and the most resolute perseverance, but, withal, of such sweet disposition that all who know him are instinctively drawn to him. His will, though it stops at no barrier, never offends those brought in contact with him. "When he used to come into my studio sometimes," says this friend, "he would seem for the moment absorbed in my work, and would examine it closely, and talk about it to me with the same earnestness that he might if it were his own. He is a man of the most sympathetic nature and the kindest heart, and in his work, whether he is occupied with some detail of still life or with the expression of an important figure, he brings to bear on the task in hand the same intense study, and the same strong purpose to get out of it all that it means. With his hard study of nature in his school work, and his unflinching perseverance in bringing out in his pictures what he feels in the subject before him, are combined a sympathetic, artistic perception and a poet's thoughts. All this makes him the artist he is."

It appears that to Dagnan no quality is greater than sincerity; and this is apparent enough in his work for us to know it without being told. He has the greatest admiration for Holbein, in whose work he recognizes the presence of the same intentions that are so clearly shown in his own. He cares nothing for fashionable life, but lives solely for his art. In his studio and garden at Neuilly he works incessantly. Sometimes he goes to the country

with his wife and son, and there too he works with equal ardor. A little story about the "Horses at the Watering-Trough" well illustrates the thoroughness of his methods. Dag-

primitive sorts of casts of the horses' backs by laying over them cloths soaked in plaster of Paris, and when these were hard and dry, they were set up, and the harness was placed on them

nan was passing the summer at his father-in-law's place, and there saw the subject of this picture. His father-in-law entered with great interest into the project of making a picture of the farm-horses, and arranged various devices to make the task of painting the picture from nature as convenient as possible. The summer wore on, and the picture progressed, but the way Dagnan paints a large canvas (or a little one, for that matter) takes time. So, at his father-in-law's suggestion, they took

just as it would be if the horses themselves were standing before the trough. And here every day Dagnan came to paint his straps and buckles, and before he had finished them to his satisfaction the snow fell on his palette as he worked.

It is not to make note of mere painstaking labor that I think it worth while to speak of this incident: what it shows is that Dagnan believes that no detail in a picture may be neglected; that everything, however small, has its

own character; and that that distinctive character can be rendered only by the most thorough study; and that the conditions must be such as to enable the painter to make that study conscientiously and well. Like all great artists, he knows that there is as much character in a hand as in a head; that among all the men in the world no two noses are exactly alike, and no general type will serve to represent them. He carries out the same principle in the minor parts of his pictures, and even when the interest of the work requires that these minor parts should be broadly indicated only, we may be sure that the indication is based on the individual char-

acter possessed by the objects, and that truth to facts is the foundation of all that we see.

Dagnan takes little part in the discussions of the groups in the art-world of Paris and the divisions of coteries. He followed his friends from the old Salon to the Champs de Mars when the split came about in 1890, but he lives apart from the strife of the schools. More like an artist of the early Renaissance than a Parisian of to-day, he lives for his art, and finds his pleasure in his work and in the companionship of a few intimate friends. One of these is Gustave Courtois, the well-known painter, who was a fellow-student at the Beaux-Arts, and another

of them was Bastien. We can easily understand that the great artist who painted those wonderful portraits of his grandfather and of his mother, "The Haymakers," and "Jeanne Darc," would admire the work of his confrère Dagnan, and that their similarity of artistic aim would draw them together even without personal sympathy. But a strong attachment existed between them, and they were most intimate friends.

II.

PASCAL ADOLPHE JEAN DAGNAN-BONVERET was born in Paris January 7, 1852. His father, going to Brazil to engage in commerce, took his family with him, and there Dagnan's mother died when he was only six years old. His father then sent him and his brother back to France, and he went to live with his grandfather.

father, M. Bouveret, at Melun. He was brought up by him, and, following a not uncommon practice in France, Dagnan added to his name that of his mother's family. M. Bouveret, who was an old officer of the army of Napoleon I., had acquired a modest but comfortable competence, and sent Dagnan to the College of Melun, where he obtained his education during the ten years from 1858 to 1868. About the time he finished his studies, his father, who had remained in Brazil, offered him a chance to go into business with him; but Dagnan refused this offer, expressing his firm purpose to become a painter. His father thereupon cut off all financial aid. Assisted by his grandfather, however, he entered the École des Beaux-Arts under the instruction of M. Gérôme in 1869. "Depuis, à part quelques voyages en Brésil (1874), en Italie (1882), en Hollande et Belgique, en Allemagne et en Algérie (1888)," the painter writes me, "mon existence est d'une platitude extrême, toute consacrée à mon travail." He worked in the Beaux-Arts until 1876, when he won the second Grand Prix de Rome, a high academic honor, but, fortunately perhaps, not carrying with it, like the first prize, a residence in Rome, at the government's expense, at the French Academy. Had he gone there, his individuality might have been restrained, and we might not have witnessed the development of the real Dagnan so soon. But I fancy that no adverse circumstances, and no uncongenial surroundings, could long have kept him from following his bent.

The first picture exhibited by Dagnan was "Atlanta," at the Salon of 1875, and though it attracted some attention, it revealed no originality on the part of the artist. "Orpheus," which followed in 1876, may also be passed over without comment, the first indication of individual feeling appearing in the "Manon Lescaut" in 1878. "The Wedding-Party at the Photographer's" (1879) brought the artist into prominence, and "The Accident" (1880) achieved for him a settled reputation as a skilful, thoughtful, and individual painter. "The Blessing" (1882) placed him definitively in the first rank. His first "recompense" was a third-class medal at the Salon of 1878 for "Manon Lescaut." At the Salon of 1880 for "The Accident" he was awarded a medal of the first class. He was made chevalier of the Legion of Honor in 1885, received the Medal of Honor in painting at the Salon of 1889 for his picture, "Breton Women at the Pardon," and at the Universal Exposition the same year was awarded one of the grand prizes for the collective exhibition of his works. In 1892 he was made officer of the Legion of Honor. He has received gold medals at international exhibitions at Munich, Vienna, and Ghent, and is a member of the fine arts academies of Munich, Stock-

holm, and Berlin. Though a *sociétaire* of the Society of French Artists, under whose direction the "Old Salon" is held at the Palais de l'Industrie in the Champs Elysées, he is more intimately connected with the National Society of Fine Arts, which holds the "new Salon" in the galleries erected at the Champ de Mars for the exhibition of 1889, and in 1893 he exhibited there two pictures—"In the Forest" and "In the Fields."¹

III.

It is one thing to learn the grammar of the art of painting, and another and very different thing to make good use of the knowledge afterward. Any young student with sufficient natural ability to learn may with patience, intelligence, and hard work become proficient in the *métier*; but to express what one feels depends on qualities of brain and temperament. Indeed, as study to acquire the art of painting is study to educate the eye, what a man will paint after his eye is trained to a just sense of form, proportion, and color, will be decided by what his imagination prompts him to portray or interpret. Many a clever man, after acquiring the knowledge of how to look at nature, has continued all his life to paint what are veritably no more than school studies. Others who have acquired the knowledge even not so well have been able, by their superior faculty for perceiving what is most interesting in nature, and by their deeper insight into the character of things, to paint pictures that, if technically not so good, have greater human interest. But the man who is endowed with an excellent sense of form and color, who faithfully devotes himself to the hard work necessary to develop them,

¹ The principal works of P. A. J. Dagnan-Bouveret are: 1875, "Atlanta" (Melun Museum); 1876, "Orpheus"; 1878, "Manon Lescaut" (a replica belongs to the Hon. Levi P. Morton, New York); 1879, "The Wedding-Party at the Photographer's" (Lyons Museum); 1880, "The Accident" (owned by Mr. W. T. Walters, Baltimore, Maryland); 1882, "La Bénédiction," or "The Blessing" (owned by M. Tretiakoff, Moscow); 1883, "Vaccination" (owned by Mr. Turner, London, England); 1884, "Hamlet and the Grave-Diggers"; 1885, "Horses at the Watering-Trough" (Luxembourg Gallery, Paris); "Madonna" (Pinakothek, Munich); "Madonna" (owned by Mr. T. S. Clarke, Pittsburgh, Pennsylvania; engraved in THE CENTURY for December, 1892); 1886, "The Consecrated Bread" (Luxembourg Gallery, Paris); 1887, "The Pardon" (owned by Mr. George F. Baker, New York); 1888, "La Bernoise" (owned by Mr. John G. Johnson, Philadelphia); "Young Breton Peasant" (owned by Mr. Potter Palmer, Chicago, Illinois); 1889, "Breton Women at the Pardon" (owned by M. Engel-Gros, Basel, Switzerland); "Madonna" (engraved in THE CENTURY MAGAZINE, January, 1890); 1891, "The Conscripts" (Chamber of Deputies, Paris); 1893, "In the Forest"; and "In the Fields" (owned by M. Constant Coquelin, Paris); twenty to thirty portraits (including a beautiful one of Mrs. George F. Baker of New York), and some small single figures.—EDITOR.

"THE CONSECRATED BREAD."

and who is at the same time gifted with qualities of head and heart, is the one who will become the great artist. Such a man is Dagnan. He could never paint the pictures he has painted if he had not studied as he did in the school with an intense determination to render on his canvas or drawing-paper the exact and literal appearance of things as he saw them in the model before him. He could not robe that truth in such attractive form in his pictures if he had not the technical force fully to express facts in nature as he finds them, and he could not express the truth that the combination of these facts reveals without the most thorough study of every one of them in the aspect in which they presented themselves to him. Further than this, with the most perfect technical equipment he could attain, he penetrates the superficial aspects of nature, and, like a man who comes to feel instinctively the thoughts in the mind of another person with whom he is in intimate relation, he arrives at a sympathetic knowledge of what is inside. It may be no more than the sleeve of a jacket, but its wrinkles and folds have for him a distinctive character. He does not dissect like the surgeon; he analyzes, reasons, and forms conclusions with the gentle intelligence of a friend. Peasant at his toil, or Breton woman at her devotions, when Dagnan has painted them for us, we feel that he has felt their thoughts.

His style is far less synthetic than that of Millet, and it is somewhat less naïve than that of Bastien. This delicious quality of naïveté, that so often escapes a painter of great technical skill, is present in Dagnan's best work. Very little of it is to be found in "The Wedding-Party at the Photographer's," where there is an evident confidence shown in the way the picture is painted, to meet difficulties and to vanquish them. In "The Accident" this confidence is less apparent, and the picture is by so much better than "The Wedding-Party"; in "The Blessing" it has almost vanished. There is just enough of it left to hold the interest of the spectator to the technical excellence of the work, and not too much to cause him to think of the means of expression. This timidity before nature (I call it timidity for lack of a better word, meaning by it an artist's fear that he cannot, well as he may paint, paint well enough to do justice to nature) is apparent in most of Bastien's work. In the portrait of his mother, for instance, it shows in every touch of the brush seeking to render the subtlety of expression in the face, in the beautiful drawing of the mouth, in the almost indecisive way in which the line and form are felt. It is a quality that distinguishes the best art of the kind to which the work of Bastien and Dagnan belongs, and it is not one that needs to be sought for in looking

at a picture. If it is present at all, it communicates its charm unknowingly. Such a charm is in the work of Holbein, in that of some of the Dutch masters, as Terburg or Van der Meer of Delft, and it pervades that wonderful masterpiece by Rembrandt in the Louvre, "The Supper at Emmaus." The chief points of technical excellence in Dagnan's work are first, his drawing, which, while without nervous quality, is delicately felt, irreproachably correct, and faithful to detail; second, sympathetic and refined color-schemes of more depth and of more variety than are usually found in the work of men who are essentially draftsmen, and give such careful attention to form as he does; third, frank, simple, and unobtrusive brush-work; and, fourth, good composition. In composition his originality is remarkable; for while his groups are unconventional, and the point of view taken by the painter in most of his pictures seems to be a novel one, and in the hands of an artist with a less well-developed sense of symmetry would incline sometimes to eccentricity, his art of arranging his figures on the canvas to give an impression of naturalness is so great that the effect is always agreeable, and impresses by its unity of ensemble. His technical faults, judging his work by an ideal standard, are a tendency at times to "breadiness" of facture, and, in his out-of-door pictures, a slight lack of atmosphere or envelop. His methods in composition are well shown in the "Breton Women at the Pardon," and in "In the Forest," and the quality of his exquisite drawing is especially well exemplified in the heads of the women in the church in "The Consecrated Bread," in "La Bernoise," and in some of his small single figures, which are comparable only to the works of the Dutch masters.

The scene of "The Blessing" is taken from the life of the French peasantry, and shows a young couple who are about to leave the father's house for the church, receiving the parents' blessing before their marriage. The young man is kneeling on the floor at the left of the picture, in profile to the spectator, and the bride, with the veil falling over her shoulders, is at his right hand and a little in advance. The father and mother, who are standing a little farther to the left, are dressed in clothes kept for such great occasions, and at the back of the room behind the long white-draped table, where the feast will soon be spread, are the friends who are to assist at the ceremony — young girls in white, with here and there a colored ribbon, and sturdy-looking men, sunburnt and brown in contrast with their white linen; and about all, the warm glow of the sunlight, veiled by the white muslin curtains at the windows, colors the plastered walls, and the wooden rafters of the ceiling, with tints of amber, opal, and blue. Dagnan

"VACCINATION."

FROM A PHOTOGRAPH BY A. BRADY & CO.

was never more happy in his choice of a subject than in this, and has never more admirably rendered, nor with such delicate appreciation, the subtle values of light and air. In the figures of the young people, the old man, the good mother, and the guests, in every line of the faces and turn of the bodies, there is something expressed that adds its part to the beauty of the picture as a whole. Without a particle of affectation, or over-insistence on the sentimental side of the scene, without a vestige of appeal to the literary sense, he gives us a picture full of poetry, and sound, fresh, and charming from the artistic point of view. In the "Vaccination," a scene in one of the large rooms in the municipal building of a provincial town, where mothers, with their children in their arms, and a doctor, the personification of the traditions of the *médecin de province*, are grouped, there is equal knowledge, the same sure, frank, well-felt modeling as in "The Blessing," and agreeable, quiet color. But to describe, even in the most summary way, the pictures by Dagnan that deserve as much praise as these is more than space will permit. "The Pardon," one of his pictures owned in this country, is one of the finest of his renderings of Breton character, and the "Breton Women at the Pardon" must be passed with a mere mention that it is one of the finest of his works, and the one perhaps that has given him the most renown. So, too, "In the Forest," the picture which was exhibited last year in Paris, and of which those who have seen it can speak only with the highest praise for the rugged but gentle sentiment expressed in the scene, where a party of

woodcutters, resting after the noonday meal, are listening to one of their number who plays the violin, must be thus briefly referred to. Even in a reproduction in black and white it shows how eloquently, and with what simple pathos, the painter has told an idyl of the woods. Dagnan, whether it be in one of his most important compositions, in a simple, single figure of a peasant, such as the one owned by Mr. Potter Palmer of Chicago, which represents a young man holding a taper, or in such a portrait of a lady as the one he painted in 1889, and which belongs to Mr. George F. Baker of New York, is always the same sincere painter. His talent and his skill are indisputably great. In this present day, when insincerity and superficiality parade themselves in the exhibitions, and too often receive from the world consideration they do not deserve; when "fads" and experiments are leading many a good man in art into devious paths; when the rush for notoriety and quick success almost excludes from view those who are content to strive in an honest way to achieve that which they know is true and good; when Fame cuts capers, and casts her laurels all too carelessly, it is more than gratifying to find such a man as Dagnan steadily pursuing his ideal, regardless of clamor and strife, and remaining faithful to the principles that have made all the good art in the world. There are other men in the French school as solid as he, fortunately, and every one of them is an influence for good. When the dust behind the *fin-de-siècle* chariot shall have cleared away, we shall find the work of such men as Dagnan standing like sign-posts on the road to point the way to truth.

William A. Coffin.

MINORCHORD.

I.

THE flowers have their bold bees to woo them;
 The brooks have their fresh rains to feed them;
 The nights have their stars to o'erstrew them;
 The dawns have their pure dews to bead them:
 Yet my steps go darkling,
 With but the dim sparkling
 Of memory's lamp, love, to lead them!

II.

The sea hath its waves to make sheen with;
 The winds have their music to sigh with;
 The groves have their boughs to be green with;
 The birds have their fleet wings to fly with:
 But I, in my lonely
 Allegiance, have only
 This deep-wounded heart, love, to die with!

PUDD'NHEAD WILSON.

A TALE BY MARK TWAIN.

GRATITUDE and treachery are merely the two extremities of the same procession. You have seen all of it that is worth staying for when the band and the gaudy officials have gone by.—*Pudd'nhead Wilson's Calendar.*

THANKSGIVING DAY. Let all give humble, hearty, and sincere thanks, now, but the turkeys. In the island of Fiji they do not use turkeys; they use plumbers. It does not become you and me to sneer at Fiji.—*Pudd'nhead Wilson's Calendar.*

CHAPTER XVIII.

THE Friday after the election was a rainy one in St. Louis. It rained all day long, and rained hard, apparently trying its best to wash that soot-blackened town white, but of course not succeeding. Toward midnight Tom Driscoll arrived at his lodgings from the theater in the heavy downpour, and closed his umbrella and let himself in; but when he would have shut the door, he found that there was another person entering—doubtless another lodger; this person closed the door and tramped upstairs behind Tom. Tom found his door in the dark, and entered it and turned up the gas. When he faced about, lightly whistling, he saw the back of a man. The man was closing and locking his door for him. His whistle faded out and he felt uneasy. The man turned around, a wreck of shabby old clothes sodden with rain and all a-drip, and showed a black face under an old slouch hat. Tom was frightened. He tried to order the man out, but the words refused to come, and the other man got the start. He said, in a low voice—

"Keep still—I's yo' mother!"

Tom sunk in a heap on a chair, and gasped out—

"It was mean of me, and base—I know it; but I meant it for the best, I did indeed—I can swear it."

Roxana stood awhile looking mutely down on him while he writhed in shame and went on incoherently babbling self-accusations mixed with pitiful attempts at explanation and palliation of his crime; then she seated herself and took off her hat, and her unkempt masses of long brown hair tumbled down about her shoulders.

"It ain't no fault o' yo'n dat dat ain't gray," she said sadly, noticing the hair.

"I know it, I know it! I'm a scoundrel. But I swear I meant for the best. It was a mistake, of course, but I thought it was for the best, I truly did."

VOL. XLVIII.—3-4.

Roxy began to cry softly, and presently words began to find their way out between her sobs. They were uttered lamentingly, rather than angrily—

"Sell a pusson down de river—*down de river!*—for de bes'! I would n't treat a dog so! I is all broke down en wore out, now, en so I reckon it ain't in me to storm aroun' no mo', like I used to when I 'uz trompled on en 'bused. I don't know—but maybe it's so. Leastways, I's suffered so much dat mournin' seem to come mo' handy to me now den stormin'."

These words should have touched Tom Driscoll, but if they did, that effect was obliterated by a stronger one—one which removed the heavy weight of fear which lay upon him, and gave his crushed spirit a most grateful rebound, and filled all his small soul with a deep sense of relief. But he kept prudently still, and ventured no comment. There was a voiceless interval of some duration, now, in which no sounds were heard but the beating of the rain upon the panes, the sighing and complaining of the winds, and now and then a muffled sob from Roxana. The sobs became more and more infrequent, and at last ceased. Then the refugee began to talk again:

"Shet down dat light a little. More. More yit. A pusson dat is hunted don't like de light. Dah—dat 'll do. I kin see whah you is, en dat's enough. I's gwine to tell you de tale, en cut it jes as short as I kin, en den I 'll tell you what you's got to do. Dat man dat bought me ain't a bad man; he's good enough, as planters goes; en if he could 'a' had his way I'd 'a' be'n a house servant in his fambly en be'n comfortable: but his wife she was a Yank, en not right down good lookin', en she riz up agin me straight off; so den dey sent me out to de quarter 'mongst de common fel' han's. Dat woman war n't satisfied even wid dat, but she worked up de overseer ag'in' me, she 'uz dat jealous en hateful; so de overseer he had me out befo' day in de mawnin's en worked me de whole long day as long as dey 'uz any light to see by; en many's de lashin's I got 'ca'se I

could n't come up to de work o' de stronges'. Dat overseer wuz a Yank, too, outen New Englan', en anybody down South kin tell you what dat mean. *Dey* knows how to work a nigger to death, en dey knows how to whale 'em, too — whale 'em till dey backs is welted like a washboard. 'Long at fust my marster say de good word for me to de overseer, but dat 'uz bad for me; for de mistis she fine it out, en arter dat I jist ketched it at every turn — dey war n't no mercy for me no mo'."

Tom's heart was fired — with fury against the planter's wife; and he said to himself, "But for that meddlesome fool, everything would have gone all right." He added a deep and bitter curse against her.

The expression of this sentiment was fiercely written in his face, and stood thus revealed to Roxana by a white glare of lightning which turned the somber dusk of the room into dazling day at that moment. She was pleased — pleased and grateful; for did not that expression show that her child was capable of grieving for his mother's wrongs and of feeling resentment toward her persecutors? — a thing which she had been doubting. But her flash of happiness was only a flash, and went out again and left her spirit dark; for she said to herself, "He sole me down de river — he can't feel for a body long; dis 'll pass en go." Then she took up her tale again.

"'Bout ten days ago I 'uz sayin' to myself dat I could n't las' many mo' weeks I 'uz so wore out wid de awful work en de lashin's, en so downhearted en misable. En I did n't care no mo', nuther — life war n't wuth nothin' to me if I got to go on like dat. Well, when a body is in a frame o' mine like dat, what do a body care what a body do? *Dey* was a little sickly nigger wench 'bout ten year ole dat 'uz good to me, en had n't no mammy, po' thing, en I loved her en she loved me; en she come out whah I 'uz workin' en she had a roasted tater, en tried to slip it to me, — robbin' herself, you see, 'ca'se she knowed de overseer did n't gimme enough to eat, — en he ketched her at it, en give her a lick acrost de back wid his stick, which 'uz as thick as a broom-handle, en she drop' screamin' on de groun', en squirmen' en wallerin' aroun' in de dust like a spider dat 's got crippled. I could n't stan' it. All de hell-fire dat 'uz ever in my heart flame' up, en I snatch de stick outen his han' en laid him flat. He laid dah moanin' en cussin', en all out of his head, you know, en de niggers 'uz plumb sk'yerd to death. *Dey* gathered roun' him to he'p him, en I jumped on his hoss en took out for de river as tight as I could go. I knowed what dey would do wid me. Soon as he got well he would start in en work me to death if marster

let him; en if dey did n't do dat, they 'd sell me furdur down de river, en dat 's de same thing. So I 'lowed to drown myself en git out o' my troubles. It 'uz gitt'n' towards dark. I 'uz at de river in two minutes. Den I see a canoe, en I says dey ain't no use to drown myself tell I got to; so I ties de hoss in de edge o' de timber en shove out down de river, keepin' in under de shelter o' de bluff bank en prayin' for de dark to shet down quick. I had a pow'ful good start, 'ca'se de big house 'uz three mile back f'om de river en on'y de work-mules to ride dah on, en on'y niggers to ride 'em, en *dey* war n't gwine to hurry — dey 'd gimme all de chance dey could. Befo' a body could go to de house en back it would be long pas' dark, en dey could n't track de hoss en fine out which way I went tell mawnin', en de niggers would tell 'em all de lies dey could 'bout it.

"Well, de dark come, en I went on a-spinnin' down de river. I paddled mo'n two hours, den I war n't worried no mo', so I quit paddlin', en floated down de current, considerin' what I 'uz gwine to do if I did n't have to drown myself. I made up some plans, en floated along, turnin' 'em over in my mine. Well, when it 'uz a little pas' midnight, as I reckoned, en I had come fifteen or twenty mile, I see de lights o' a steamboat layin' at de bank, whah dey war n't no town en no woodyard, en putty soon I ketched de shape o' de chimblly-tops ag'in' de stars, en de good gracious me, I 'most jumped out o' my skin for joy! It 'uz de *Gran' Mogul* — I 'uz chambermaid on her for eight seasons in de Cincinnati en Orleans trade. I slid 'long pas' — don't see nobody stirrin' nowhah — hear 'em a-hammerin' away in de engine-room, den I knowed what de matter was — some o' de machinery 's broke. I got asho' below de boat and turn' de canoe loose, den I goes 'long up, en dey 'uz jes one plank out, en I step' 'board de boat. It 'uz pow'ful hot, deckhan's en roustabouts 'uz sprawled aroun' asleep on de fo'cas'l', de second mate, Jim Bangs, he sot dah on de bitts wid his head down, asleep — 'ca'se dat 's de way de second mate stan' de cap'n's watch! — en de ole watchman, Billy Hatch, he 'uz a-noddin' on de companion-way; — en I knowed 'em all; 'en, lan', but dey did look good! I says to myself, I wished old marster 'd come along *now* en try to take me — bless yo' heart, I 's 'mong frien's, I is. So I tromped right along 'mongst 'em, en went up on de b'iler deck en 'way back aft to de ladies' cabin guard, en sot down dah in de same cheer dat I 'd sot in 'mos' a hund'd million times, I reckon; en it 'uz jist home ag'in, I tell you!

"In 'bout an hour I heard de ready-bell jingle, en den de racket begin. Putty soon I

hear de gong strike. 'Set her back on de outside,' I says to myself—'I reckon I knows dat music!' I hear de gong ag'in. 'Come ahead on de inside,' I says. Gong ag'in. 'Stop de outside.' Gong ag'in. 'Come ahead on de outside—now we's pintoed for Sent Louis, en I's outer de woods en ain't got to drown myself at all.' I knowed de *Mogul* 'uz in de Sent Louis trade now, you see. It 'uz jes fair daylight when we passed our plantation, en I seed a gang o' niggers en white folks huntin' up en down de sho', en troublin' deyselves a good deal 'bout me; but I war n't troublin' myself none 'bout dem.

"'Bout dat time Sally Jackson, dat used to be my second chambermaid en 'uz head chambermaid now, she come out on de guard, en 'uz pow'ful glad to see me, en so 'uz all de officers; en I tole 'em I 'd got kidnapped en sole down de river, en dey made me up twenty dollahs en give it to me, en Sally she rigged me out wid good clo'es, en when I got here I went straight to whah you used to wuz, en den I come to dis house, en dey say you 's away but 'spected back every day; so I did n't dast to go down de river to Dawson's, 'ca'se I might miss you.

"Well, las' Monday I 'uz pass'n' by one o' dem places in Fourth street whah dey sticks up runaway-nigger bills, en he'ps to ketch 'em, en I seed my marster! I 'mos' flopped down on de groun', I felt so gone. He had his back to me, en 'uz talkin' to de man en givin' him some bills—nigger-bills, I reckon, en I's de nigger. He 's offerin' a reward—dat 's it. Ain't I right, don't you reckon?"

Tom had been gradually sinking into a state of ghastly terror, and he said to himself, now: "I 'm lost, no matter what turn things take! This man has said to me that he thinks there was something suspicious about that sale. He said he had a letter from a passenger on the *Grand Mogul* saying that Roxy came here on that boat and that everybody on board knew all about the case; so he says that her coming here instead of flying to a free State looks bad for me, and that if I don't find her for him, and that ~~pretty soon~~, he will make trouble for me. I never believed that story; I could n't believe she would be so dead to all motherly instincts as to come here, knowing the risk she would run of getting me into irremediable trouble. And after all, here she is! And I stupidly swore I would help him find her, thinking it was a perfectly safe thing to promise. If I venture to deliver her up, she—she—but how can I help myself? I've got to do that or pay the money, and where 's the money to come from? I—I—well, I should think that if he would swear to treat her kindly hereafter—and she says, herself, that he is a

good man—and if he would swear to never allow her to be overworked, or ill fed, or—"

A flash of lightning exposed Tom's pallid face, drawn and rigid with these worrying thoughts. Roxana spoke up sharply now, and there was apprehension in her voice—

"Turn up dat light! I want to see yo' face better. Dah now—lemme look at you. Chambers, you 's as white as yo' shirt! Has you seen dat man? Has he be'n to see you?"

"Ye-s."

"When?"

"Monday noon."

"Monday noon! Was he on my track?"

"He—well, he thought he was. That is, he hoped he was. This is the bill you saw." He took it out of his pocket.

"Read it to me!"

She was panting with excitement, and there was a dusky glow in her eyes that Tom could not translate with certainty, but there seemed to be something threatening about it. The handbill had the usual rude woodcut of a turbaned negro woman running, with the customary bundle on a stick over her shoulder, and the heading in bold type, "\$100 REWARD." Tom read the bill aloud—at least the part that described Roxana and named the master and his St. Louis address and the address of the Fourth-street agency; but he left out the item that applicants for the reward might also apply to Mr. Thomas Driscoll.

"Gimme de bill!"

Tom had folded it and was putting it in his pocket. He felt a chilly streak creeping down his back, but said as carelessly as he could—

"The bill? Why, it is n't any use to you; you can't read it. What do you want with it?"

"Gimme de bill!" Tom gave it to her, but with a reluctance which he could not entirely disguise. "Did you read it *all* to me?"

"Certainly I did."

"Hole up yo' han' en swah to it."

Tom did it. Roxana put the bill carefully away in her pocket, with her eyes fixed upon Tom's face all the while; then she said—

"You 's lyin'!"

"What would I want to lie about it for?"

"I don't know—but you is. Dat 's my opinion, anyways. But nemmine 'bout dat. When I seed dat man I 'uz dat sk'yerd dat I could sca'cely wobble home. Den I give a nigger man a dollar for dese clo'es, en I ain't be'n in a house sence, night ner day, till now. I blacked my face en laid hid in de cellar of a ole house dat 's burnt down, daytimes, en robbed de sugar hogsheads en grain sacks on de wharf, nights, to git somethin' to eat, en never dast to try to buy noth'n', en I 's 'mos' starved. En I never dast to come near dis place till dis rainy night, when dey ain't no

people roun'sca'cely. But to-night I be'n a-stannin' in de dark alley ever sence night come, waitin' for you to go by. En here I is."

She fell to thinking. Presently she said —

"You seed dat man at noon, las' Monday?"

"Yes."

"I seed him de middle o' dat artemnoon. He hunted you up, did n't he?"

"Yes."

"Did he give you de bill dat time?"

"No, he had n't got it printed yet."

Roxana darted a suspicious glance at him.

"Did you he'p him fix up de bill?"

Tom cursed himself for making that stupid blunder, and tried to rectify it by saying he remembered, now, that it *was* at noon Monday that the man gave him the bill. Roxana said —

"You's lynin' ag'in, sho." Then she straightened up and raised her finger:

"Now den! I's gwine to ast you a question, en I wants to know how you's gwine to git aroun' it. You knowed he 'uz arter me; en if you run off, 'stid o' stayin' here to he'p him, he 'd know dey 'uz somethin' wrong 'bout dis business, en den he would inquire 'bout you, en dat would take him to yo' uncle, en yo' uncle would read de bill en see dat you be'n sellin' a free nigger down de river, en you know *him*, I reckon! He 'd t'ar up de will en kick you outen de house. Now, den, you answer me dis question: hain't you tole dat man dat I would be sho' to come here, en den you would fix it so he could set a trap en ketch me?"

Tom recognized that neither lies nor arguments could help him any longer — he was in a vise, with the screw turned on, and out of it there was no budging. His face began to take on an ugly look, and presently he said, with a snarl —

"Well, what could I do? You see, yourself, that I was in his grip and could n't get out."

Roxy scorched him with a scornful gaze awhile, then she said —

"What could you do? You could be Judas to yo' own mother to save yo' wuthless hide! Would anybody b'lieve it? No — a dog could n't! You is de low-downest orneriest hound dat was ever pup'd into dis worl' — en I's 'sponsible for it!" — and she spat on him.

He made no effort to resent this. Roxy reflected a moment, then she said —

"Now I'll tell you what you's gwine to do. You's gwine to give dat man de money dat you's got laid up, en make him wait till you kin go to de Jedge en git de res' en buy me free agin."

"Thunder! what are you thinking of? Go and ask him for three hundred dollars and odd? What would I tell him I want with it, pray?"

Roxy's answer was delivered in a serene and level voice —

"You 'll tell him you's sole me to pay yo' gamblin' debts en dat you lied to me en was a villain, en dat I 'quires you to git dat money en buy me back ag'in."

"Why, you've gone stark mad! He would tear the will to shreds in a minute — don't you know that?"

"Yes, I does."

"Then you don't believe I'm idiot enough to go to him, do you?"

"I don't b'lieve nothin' 'bout it — I *knows* you's a-goin'. I knows it 'ca'se you knows dat if you don't raise dat money I 'll go to him myself, en den he 'll sell *you* down de river, en you kin see how you like it!"

Tom rose, trembling and excited, and there was an evil light in his eye. He strode to the door and said he must get out of this suffocating place for a moment and clear his brain in the fresh air so that he could determine what to do. The door would n't open. Roxy smiled grimly, and said —

"I's got de key, honey — set down. You need n't cle'r up yo' brain none to fine out what you gwine to do — I *knows* what you's gwine to do." Tom sat down and began to pass his hands through his hair with a helpless and desperate air. Roxy said, "Is dat man in dis house?"

Tom glanced up with a surprised expression, and asked —

"What gave you such an idea?"

"You done it. Gwine out to cle'r yo' brain! In de fust place you ain't got none to cle'r, en in de second place yo' ornery eye tole on you. You's de low-downest hound dat ever — but I done tole you dat befo'. Now den, dis is Friday. You kin fix it up wid dat man, en tell him you's gwine away to git de res' o' de money, en dat you 'll be back wid it nex' Tuesday, or maybe Wednesday. You understan'?"

Tom answered sullenly —

"Yes."

"En when you gits de new bill o' sale dat sells me to my own self, take en send it in de mail to Mr. Pudd'nhead Wilson, en write on de back dat he's to keep it tell I come. You understan'?"

"Yes."

"Dat's all, den. Take yo' umbreller, en put on yo' hat."

"Why?"

"Beca'se you's gwine to see me home to de wharf. You see dis knife? I's toted it aroun' sence de day I seed dat man, en bought dese clo'es en it. If he ketched me, I 'uz gwine to kill myself wid it. Now start along, en go sof', en lead de way; en if you gives a sign in dis

house, or if anybody comes up to you in de street, I 's gwine to jam it into you. Chambers, does you b'lieve me when I says dat?"

"It 's no use to bother me with that question. I know your word 's good."

"Yes, it 's diff'rent fom yo'n! Shet de light out en move along — here 's de key."

They were not followed. Tom trembled every time a late straggler brushed by them on the street, and half expected to feel the cold steel in his back. Roxy was right at his heels and always in reach. After tramping a mile they reached a wide vacancy on the deserted wharves, and in this dark and rainy desert they parted.

As Tom trudged home his mind was full of dreary thoughts and wild plans; but at last he said to himself, wearily —

"There is but the one way out. I must follow her plan. But with a variation — I will not ask for the money and ruin myself; I will *rob* the old skinflint."

XIX.

FEW things are harder to put up with than the annoyance of a good example. — *Pudd'nhead Wilson's Calendar.*

IT were not best that we should all think alike; it is difference of opinion that makes horse-races. — *Pudd'nhead Wilson's Calendar.*

DAWSON'S LANDING was comfortably finishing its season of dull repose and waiting patiently for the duel. Count Luigi was waiting, too; but not patiently, rumor said. Sunday came, and Luigi insisted on having his challenge conveyed. Wilson carried it. Judge Driscoll declined to fight with an assassin — "that is," he added significantly, "in the field of honor."

Elsewhere, of course, he would be ready. Wilson tried to convince him that if he had been present himself when Angelo told about the homicide committed by Luigi, he would not have considered the act discreditable to Luigi; but the obstinate old man was not to be moved.

Wilson went back to his principal and reported the failure of his mission. Luigi was incensed, and asked how it could be that the old gentleman, who was by no means dull-witted, held his trifling nephew's evidence and inferences to be of more value than Wilson's. But Wilson laughed, and said —

"That is quite simple; that is easily explicable. I am not his doll — his baby — his infatuation: his nephew is. The Judge and his late wife never had any children. The Judge and his wife were past middle age when this treasure fell into their lap. One must make allowances for a parental instinct that has been starving for twenty-five or thirty years. It is famished, it is crazed with hunger by that time, and will be entirely satisfied with anything that

comes handy; its taste is atrophied, it can't tell mud-cat from shad. A devil born to a young couple is measurably recognizable by them as a devil before long, but a devil adopted by an old couple is an angel to them, and remains so, through thick and thin. Tom is this old man's angel; he is infatuated with him. Tom can persuade him into things which other people can't — not all things; I don't mean that, but a good many — particularly one class of things: the things that create or abolish personal partialities or prejudices in the old man's mind. The old man liked both of you. Tom conceived a hatred for you. That was enough; it turned the old man around at once. The oldest and strongest friendship must go to the ground when one of these late-adopted darlings throws a brick at it."

"It 's a curious philosophy," said Luigi.

"It ain't a philosophy at all — it 's a fact. And there is something pathetic and beautiful about it, too. I think there is nothing more pathetic than to see one of these poor old childless couples taking a menagerie of yelping little worthless dogs to their hearts; and then adding some cursing and squawking parrots and a jackass-voiced macaw; and next a couple of hundred screeching song-birds, and presently some fetid guinea-pigs and rabbits, and a howling colony of cats. It is all a groping and ignorant effort to construct out of base metal and brass filings, so to speak, something to take the place of that golden treasure denied them by Nature, a child. But this is a digression. The unwritten law of this region requires you to kill Judge Driscoll on sight, and he and the community will expect that attention at your hands — though of course your own death by his bullet will answer every purpose. Look out for him! Are you heeled — that is, fixed?"

"Yes; he shall have his opportunity. If he attacks me I will respond."

As Wilson was leaving, he said —

"The Judge is still a little used up by his campaign work, and will not get out for a day or so; but when he does get out, you want to be on the alert."

About eleven at night the twins went out for exercise, and started on a long stroll in the veiled moonlight.

Tom Driscoll had landed at Hackett's Store, two miles below Dawson's, just about half an hour earlier, the only passenger for that lonely spot, and had walked up the shore road and entered Judge Driscoll's house without having encountered any one either on the road or under the roof.

He pulled down his window-blinds and lighted his candle. He laid off his coat and hat and began his preparations. He unlocked his trunk and got his suit of girl's clothes out from under the male attire in it, and laid it by. Then

he blacked his face with burnt cork and put the cork in his pocket. His plan was, to slip down to his uncle's private sitting-room below, pass into the bed-room, steal the safe-key from the old gentleman's clothes, and then go back and rob the safe. He took up his candle to start. His courage and confidence were high, up to this point, but both began to waver a little, now. Suppose he should make a noise, by some accident, and get caught—say, in the act of opening the safe? Perhaps it would be well to go armed. He took the Indian knife from its hiding-place, and felt a pleasant return of his waning courage. He slipped stealthily down the narrow stair, his hair rising and his pulses halting at the slightest creak. When he was halfway down, he was disturbed to perceive that the landing below was touched by a faint glow of light. What could that mean? Was his uncle still up? No, that was not likely; he must have left his night-taper there when he went to bed. Tom crept on down, pausing at every step to listen. He found the door standing open, and glanced in. What he saw pleased him beyond measure. His uncle was asleep on the sofa; on a small table at the head of the sofa a lamp was burning low, and by it stood the old man's small tin cash-box, closed. Near the box was a pile of bank-notes and a piece of paper covered with figures in pencil. The safe-door was not open. Evidently the sleeper had wearied himself with work upon his finances, and was taking a rest.

Tom set his candle on the stairs, and began to make his way toward the pile of notes, stooping low as he went. When he was passing his uncle, the old man stirred in his sleep, and Tom stopped instantly—stopped, and softly drew the knife from its sheath, with his heart thumping, and his eyes fastened upon his benefactor's face. After a moment or two he ventured forward again—one step—reached for his prize and seized it, dropping the knife-sheath. Then he felt the old man's strong grip upon him, and a wild cry of "Help! help!" rang in his ear. Without hesitation he drove the knife home—and was free. Some of the notes escaped from his left hand and fell in the blood on the floor. He dropped the knife and snatched them up and started to fly; transferred them to his left hand, and seized the knife again, in his fright and confusion, but remembered himself and flung it from him, as being a dangerous witness to carry away with him.

He jumped for the stair-foot, and closed the door behind him; and as he snatched his candle and fled upward, the stillness of the night was broken by the sound of urgent footsteps approaching the house. In another moment he was in his room and the twins were standing aghast over the body of the murdered man!

Tom put on his coat, buttoned his hat under it, threw on his suit of girl's clothes, dropped the veil, blew out his light, locked the room door by which he had just entered, taking the key, passed through his other door into the back hall, locked that door and kept the key, then worked his way along in the dark and descended the back stairs. He was not expecting to meet anybody, for all interest was centered in the other part of the house, now: his calculation proved correct. By the time he was passing through the back yard, Mrs. Pratt, her servants, and a dozen half-dressed neighbors had joined the twins and the dead, and accessions were still arriving at the front door.

As Tom, quaking as with a palsy, passed out at the gate, three women came flying from the house on the opposite side of the lane. They rushed by him and in at the gate, asking him what the trouble was there, but not waiting for an answer. Tom said to himself, "Those old maids waited to dress—they did the same thing the night Stevens's house burned down next door." In a few minutes he was in the haunted house. He lighted a candle and took off his girl-clothes. There was blood on him all down his left side, and his right hand was red with the stains of the blood-soaked notes which he had crushed in it; but otherwise he was free from this sort of evidence. He cleansed his hand on the straw, and cleaned most of the smut from his face. Then he burned his male and female attire to ashes, scattered the ashes, and put on a disguise proper for a tramp. He blew out his light, went below, and was soon loafing down the river road with the intent to borrow and use one of Roxy's devices. He found a canoe and paddled off down-stream, setting the canoe adrift as dawn approached, and making his way by land to the next village, where he kept out of sight till a transient steamer came along, and then took deck passage for St. Louis. He was ill at ease until Dawson's Landing was behind him; then he said to himself, "All the detectives on earth could n't trace me now; there's not a vestige of a clue left in the world; that homicide will take its place with the permanent mysteries, and people won't get done trying to guess out the secret of it for fifty years."

In St. Louis, next morning, he read this brief telegram in the papers—dated at Dawson's Landing:

Judge Driscoll, an old and respected citizen, was assassinated here about midnight by a profligate Italian nobleman or barber on account of a quarrel growing out of the recent election. The assassin will probably be lynched.

"One of the twins!" soliloquized Tom;

"how lucky! It is the knife that has done him this grace. We never know when fortune is trying to favor us. I actually cursed Pudd'nhead Wilson in my heart for putting it out of my power to sell that knife. I take it back, now."

Tom was now rich and independent. He arranged with the planter, and mailed to Wilson the new bill of sale which sold Roxana to herself; then he telegraphed his Aunt Pratt:

Have seen the awful news in the papers and am almost prostrated with grief. Shall start by packet to-day. Try to bear up till I come.

When Wilson reached the house of mourning and had gathered such details as Mrs. Pratt and the rest of the crowd could tell him, he took command as mayor, and gave orders that nothing should be touched, but everything left as it was until Justice Robinson should arrive and take the proper measures as coroner. He cleared everybody out of the room but the twins and himself. The sheriff soon arrived and took the twins away to jail. Wilson told them to keep heart, and promised to do his best in their defense when the case should come to trial. Justice Robinson came presently, and with him Constable Blake. They examined the room thoroughly. They found the knife and the sheath. Wilson noticed that there were finger-prints on the knife-handle. That pleased him, for the twins had required the earliest comers to make a scrutiny of their hands and clothes, and neither these people nor Wilson himself had found any blood-stains upon them. Could there be a possibility that the twins had spoken the truth when they said they found the man dead when they ran into the house in answer to the cry for help? He thought of that mysterious girl at once. But this was not the sort of work for a girl to be engaged in. No matter; Tom Driscoll's room must be examined.

After the coroner's jury had viewed the body and its surroundings, Wilson suggested a search up-stairs, and he went along. The jury forced an entrance to Tom's room, but found nothing, of course.

The coroner's jury found that the homicide was committed by Luigi, and that Angelo was accessory to it.

The town was bitter against the unfortunates, and for the first few days after the murder they were in constant danger of being lynched. The grand jury presently indicted Luigi for murder in the first degree, and Angelo as accessory before the fact. The twins were transferred from the city jail to the county prison to await trial.

Wilson examined the finger-marks on the knife-handle and said to himself, "Neither of

the twins made those marks." Then manifestly there was another person concerned, either in his own interest or as hired assassin.

But who could it be? That, he must try to find out. The safe was not open, the cash-box was closed, and had three thousand dollars in it. Then robbery was not the motive, and revenge was. Where had the murdered man an enemy except Luigi? There was but that one person in the world with a deep grudge against him.

The mysterious girl! The girl was a great trial to Wilson. If the motive had been robbery, the girl might answer; but there was n't any girl that would want to take this old man's life for revenge. He had no quarrels with girls; he was a gentleman.

Wilson had perfect tracings of the finger-marks of the knife-handle; and among his glass-records he had a great array of the finger-prints of women and girls, collected during the last fifteen or eighteen years, but he scanned them in vain, they successfully withstood every test; among them were no duplicates of the prints on the knife.

The presence of the knife on the stage of the murder was a worrying circumstance for Wilson. A week previously he had as good as admitted to himself that he believed Luigi had possessed such a knife, and that he still possessed it notwithstanding his pretense that it had been stolen. And now here was the knife, and with it the twins. Half the town had said the twins were humbugging when they claimed that they had lost their knife, and now these people were joyful, and said, "I told you so!"

If their finger-prints had been on the handle — but it was useless to bother any further about that; the finger-prints on the handle were *not* theirs — that he knew perfectly.

Wilson refused to suspect Tom; for first, Tom could n't murder anybody — he had n't character enough; secondly, if he could murder a person he would n't select his doting benefactor and nearest relative; thirdly, self-interest was in the way; for while the uncle lived, Tom was sure of a free support and a chance to get the destroyed will revived again, but with the uncle gone, that chance was gone, too. It was true the will had really been revived, as was now discovered, but Tom could not have been aware of it, or he would have spoken of it, in his native talky, unsecretive way. Finally, Tom was in St. Louis when the murder was done, and got the news out of the morning journals, as was shown by his telegram to his aunt. These speculations were unemphasized sensations rather than articulated thoughts, for Wilson would have laughed at the idea of seriously connecting Tom with the murder.

Wilson regarded the case of the twins as

desperate — in fact, about hopeless. For he argued that if a confederate was not found, an enlightened Missouri jury would hang them, sure; if a confederate was found, that would not improve the matter, but simply furnish one more person for the sheriff to hang. Nothing could save the twins but the discovery of a person who did the murder on his sole personal account — an undertaking which had all the aspect of the impossible. Still, the person who made the finger-prints must be sought. The twins might have no case *with* him, but they certainly would have none without him.

So Wilson mooned around, thinking, thinking, guessing, guessing, day and night, and arriving nowhere. Whenever he ran across a girl or a woman he was not acquainted with, he got her finger-prints, on one pretext or another; and they always cost him a sigh when he got home, for they never tallied with the finger-marks on the knife-handle.

As to the mysterious girl, Tom swore he knew no such girl, and did not remember ever seeing a girl wearing a dress like the one described by Wilson. He admitted that he did not always lock his room, and that sometimes

the servants forgot to lock the house doors; still, in his opinion the girl must have made but few visits or she would have been discovered. When Wilson tried to connect her with the stealing-raid, and thought she might have been the old woman's confederate, if not the very thief herself disguised as an old woman, Tom seemed struck, and also much interested, and said he would keep a sharp eye out for this person or persons, although he was afraid that she or they would be too smart to venture again into a town where everybody would now be on the watch for a good while to come.

Everybody was pitying Tom, he looked so quiet and sorrowful, and seemed to feel his great loss so deeply. He was playing a part, but it was not all a part. The picture of his alleged uncle, as he had last seen him, was before him in the dark pretty frequently, when he was awake, and called again in his dreams, when he was asleep. He would n't go into the room where the tragedy had happened. This charmed the doting Mrs. Pratt, who realized now, "as she had never done before," she said, what a sensitive and delicate nature her darling had, and how he adored his poor uncle.

(To be concluded in the next number.)

Mark Twain.

FRAGMENTS.

BY JAMES RUSSELL LOWELL.

I. LIFE IN LITERATURE AND LANGUAGE.

IT is the office and function of the imagination to renew life in lights and sounds and emotions that are outworn and familiar. It calls the soul back once more under the dead ribs of nature, and makes the meanest bush burn again, as it did to Moses, with the visible presence of God. And it works the same miracle for language. The word it has touched retains the warmth of life forever. We talk about the age of superstition and fable as if they were passed away, as if no ghost could walk in the pure white light of science, yet the microscope that can distinguish between the disks that float in the blood of man and ox is helpless, a mere dead eyeball, before this mystery of Being, this wonder of Life, the sympathy which puts us in relation with all nature, before that mighty circulation of Deity in which stars and systems are but as the blood-disks in our own veins. And so long as wonder lasts, so long will imagination find thread for her loom, and sit like the Lady of Shalott weaving that

magical web in which "the shows of things are accommodated to the desires of the mind."

It is precisely before this phenomenon of life in literature and language that criticism is forced to stop short. That it is there we know, but what it is we cannot precisely tell. It flits before us like the bird in the old story. When we think to grasp it, we already hear it singing just beyond us. It is the imagination which enables the poet to give away his own consciousness in dramatic poetry to his characters, in narrative to his language, so that they react upon us with the same original force as if they had life in themselves.

II. STYLE AND MANNER.

WHERE Milton's style is fine it is *very* fine, but it is always liable to the danger of degenerating into mannerism. Nay, where the imagination is absent and the artifice remains, as in some of the theological discussions in "Paradise Lost," it becomes mannerism of the most wearisome kind. Accordingly, he is easily parodied and easily imitated. Philips, in his "Splendid Shilling," has caught the trick exactly:

Not blacker tube nor of a shorter size
 Smokes Cambrobrition (versed in pedigree,
 Sprung from Cadwallader and Arthur, kings
 Full famous in romantic tale) when he,
 O'er many a craggy hill and barren cliff,
 Upon a cargo of famed Cestrian cheese
 High overshadowing rides, with a design
 To vend his wares or at the Arvonian mart,
 Or Maridunum, or the ancient town
 Yclept Brechinia, or where Vaga's stream
 Encircles Ariconium, fruitful soil.

Philips has caught, I say, Milton's trick; his real secret he could never divine, for where Milton is best, he is incomparable. But all authors in whom imagination is a secondary quality, and whose merit lies less in what they say than in the way they say it, are apt to become mannerists, and to have imitators, because manner can be easily imitated. Milton has more or less colored all blank verse since his time, and, as those who imitate never fail to exaggerate, his influence has in some respects been mischievous. Thomson was well-nigh ruined by him. In him a leaf cannot fall without a Latinism, and there is circumlocution in the crow of a cock. Cowper was only saved by mixing equal proportions of Dryden in his verse, thus hitting upon a kind of cross between prose and poetry. In judging Milton, however, we should not forget that in verse the music makes a part of the meaning, and that no one before or since has been able to give to simple pentameters the majesty and compass of the organ. He was as much composer as poet.

How is it with Shakspeare? did he have no style? I think I find the proof that he had it, and that of the very highest and subtlest kind, in the fact that I can nowhere put my finger on it, and say it is here or there.¹

I do not mean that things in themselves artificial may not be highly agreeable. We learn by degrees to take a pleasure in the mannerism of Gibbon and Johnson. It is something like reading Latin as a living language. But in both these cases the man is only present by his thought. It is the force of that, and only that, which distinguishes them from their imitators, who easily possess themselves of everything else. But with Burke, who has true style, we have a very different experience. If we go along with Johnson or Gibbon, we are carried along by Burke. Take the finest specimen of him, for example, "The Letter to a Noble Lord." The sentences throb with the very pulse of the writer. As he kindles, the phrase glows and dilates, and we feel ourselves sharing in that warmth and expansion. At last we no longer read, we seem to hear him, so livingly is the whole man in what he writes; and when the spell is over, we can scarce believe that those dull types could have held such

ravishing discourse. And yet we are told that when Burke spoke in Parliament he always emptied the house.

I know very well what the charm of mere words is. I know very well that our nerves of sensation adapt themselves, as the wood of the violin is said to do, to certain modulations, so that we receive them with a readier sympathy at every repetition. This is a part of the sweet charm of the classics. We are pleased with things in Horace which we should not find especially enlivening in Mr. Tupper. Cowper, in one of his letters, after turning a clever sentence, says, "There! if that had been written in Latin seventeen centuries ago by Mr. Flaccus, you would have thought it rather neat." How fully any particular rhythm gets possession of us we can convince ourselves by our dissatisfaction with any emendation made by a contemporary poet in his verses. Posterity may think he has improved them, but we are jarred by any change in the old tune. Even without any habitual association, we cannot help recognizing a certain power over our fancy in mere words. In verse almost every ear is caught with the sweetness of alliteration. I remember a line in Thomson's "Castle of Indolence" which owes much of its fascination to three *m*'s, where he speaks of the Hebridean Isles

Far placed amid the melancholy main.

I remember a passage in Prichard's "Races of Man" which had for me all the moving quality of a poem. It was something about the Arctic regions, and I could never read it without the same thrill. Dr. Prichard was certainly far from being an inspired or inspiring author, yet there was something in those words, or in their collocation, that affected me as only genius can. It was probably some dimly felt association, something like that strange power there is in certain odors, which, in themselves the most evanescent and impalpable of all impressions on the senses, have yet a wondrous magic in recalling, and making present to us, some forgotten experience.

Milton understood the secret of memory perfectly well, and his poems are full of those little pitfalls for the fancy. Whatever you have read, whether in the classics, or in medieval romance, all is there to stir you with an emotion not always the less strong because indefinable. Gray makes use of the same artifice, and with the same success.

There is a charm in the arrangement of words also, and that not only in verse, but in prose. The finest prose is subject to the laws of metrical proportion. For example, in the song of Deb-

¹ In his essay, "Shakspeare Once More" (Works, Vol. III., pages 36-42), published in 1868, Mr. Lowell

has treated of Shakspeare's style in a passage of extraordinary felicity and depth of critical judgment.

orah and Barak: "Awake, awake, Deborah! Awake, awake, utter a song! Arise, Barak, and lead thy captivity captive, thou son of Abinoam!" Or again, "At her feet he bowed; he fell, he lay down; at her feet he bowed, he fell; where he bowed, there he fell down dead."

Setting aside, then, all charm of association, all the influence to which we are unconsciously subjected by melody, by harmony, or even by the mere sound of words, we may say that style is distinguished from manner by the author's power of projecting his own emotion into what he writes. The stylist is occupied with the impression which certain things have made upon him; the mannerist is wholly concerned with the impression he shall make on others.

III. KALEVALA.

BUT there are also two kinds of imagination, or rather two ways in which imagination may display itself—as an active power or as a passive quality of the mind. The former reshapes the impressions it receives from nature to give them expression in more ideal forms; the latter reproduces them simply and freshly without any adulteration by conventional phrase, without any deliberate manipulation of them by the conscious fancy. Imagination as an active power concerns itself with expression, whether it be in giving that unity of form which we call art, or in that intenser phrase where word and thing leap together in a vivid flash of sympathy, so that we almost doubt whether the poet was conscious of his own magic, and whether we ourselves have not communicated the very charm we feel. A few such utterances have come down to us to which every generation adds some new significance out of its own store, till they do for the imagination what proverbs do for the understanding, and, passing into the common currency of speech, become the property of every man and no man. On the other hand, wonder, which is the raw material in which imagination finds food for her loom, is the property of primitive peoples and primitive poets. There is always here a certain intimacy with nature, and a consequent simplicity of phrases and images, that please us all the more as the artificial conditions remove us farther from it. When a man happens to be born with that happy combination of qualities which enables him to renew this simple and natural relation with the world about him, however little or however much, we call him a poet, and surrender ourselves gladly to his gracious and incommunicable gift. But the renewal of these conditions becomes with the advance of every generation in literary culture and social refinement more difficult. Ballads, for example, are never produced among cultivated people. Like the mayflower, they

love the woods, and will not be naturalized in the garden. Now, the advantage of that primitive kind of poetry of which I was just speaking is that it finds its imaginative components ready made to its hand. But an illustration is worth more than any amount of discourse. Let me read you a few passages from a poem which grew up under the true conditions of natural and primitive literature—remoteness, primitiveness of manners, and dependence on native traditions. I mean the epic of Finland—Kalevala.

I am driven by my longing,
Of my thought I hear the summons
That to singing I betake me,
That I give myself to speaking,
That our race's lay I utter,
Song for ages handed downward.
Words upon my lips are melting,
And the eager tones escaping
Will my very tongue outhasten,
Will my teeth, despite me, open.

Golden friend, beloved brother,
Dear one that grew up beside me,
Join thee with me now in singing,
Join thee with me now in speaking,
Since we here have come together,
Journeying by divers pathways;
Seldom do we come together,
One comes seldom to the other,
In the barren fields far-lying,
On the hard breast of the Northland.

Hand in hand together clasping,
Finger fast with finger clasping,
Gladly we our song will utter,
Of our lays will give the choicest—
So that friends may understand it,
And the kindly ones may hear it,
In their youth which now is waxing,
Climbing upward into manhood:
These our words of old tradition,
These our lays that we have borrowed
From the belt of Wainamoinen,
From the forge of Ilmarinen,
From the sword of Kaukoniemi,
From the bow of Jonkahainen,
From the borders of the ice-fields,
From the plains of Kalevala.

These my father sang before me,
As the ax's helve he fashioned;
These were taught me by my mother,
As she sat and twirled her spindle,
While I on the floor was lying,
At her feet, a child was rolling;
Never songs of Sampo failed her,
Magic songs of Lonhi never;
Sampo in her song grew aged,
Lonhi with her magic vanished,
In her singing died Wipunen,
As I played, died Lunminkainen.
Other words there are a many,
Magic words that I have taught me,

¹ This translation is Mr. Lowell's, and, so far as I know, has not been printed.—C. E. NORTON.

Which I picked up from the pathway,
 Which I gathered from the forest,
 Which I snapped from wayside bushes,
 Which I gleaned from slender grass-blades,
 Which I found upon the foot-bridge,
 When I wandered as a herd-boy,
 As a child into the pastures,
 To the meadows rich in honey,
 To the sun-begoldened hilltops,
 Following the black Maurikki
 By the side of brindled Kimmo.

Lays the winter gave me also,
 Song was given me by the rain-storm,
 Other lays the wind-gusts blew me,
 And the waves of ocean brought them;
 Words I borrowed of the song-birds,
 And wise sayings from the tree-tops.

Then into a skein I wound them,
 Bound them fast into a bundle,
 Laid upon my ledge the burthen,
 Bore them with me to my dwelling,
 On the garret beams I stored them,
 In the great chest bound with copper.

Long time in the cold they lay there,
 Under lock and key a long time;
 From the cold shall I forth bring them?
 Bring my lays from out the frost there
 'Neath this roof so wide-renowned?
 Here my song-chest shall I open,
 Chest with runic lays o'errunning?
 Shall I here untie my bundle,
 And begin my skein unwinding?

Now my lips at last must close them
 And my tongue at last be fettered;
 I must leave my lay unfinished,
 And must cease from cheerful singing;
 Even the horses must repose them
 When all day they have been running;
 Even the iron's self grows weary
 Mowing down the summer grasses;
 Even the water sinks to quiet
 From its rushing in the river;
 Even the fire seeks rest in ashes
 That all night bath roared and crackled;
 Wherefore should not music also,
 Song itself, at last grow weary
 After the long eve's contentment
 And the fading of the twilight?
 I have also heard say often,
 Heard it many times repeated,
 That the cataract swift-rushing
 Not in one gush spends its waters,
 And in like sort cunning singers
 Do not spend their utmost secret,
 Yea, to end betimes is better
 Than to break the thread abruptly.

Ending, then, as I began them,
 Closing thus and thus completing,
 I fold up my pack of ballads,
 Roll them closely in a bundle,
 Lay them safely in the storeroom,
 In the strong bone-castle's chamber,
 That they never thence be stolen,
 Never in all time be lost thence,

Though the castle's wall be broken,
 Though the bones be rent asunder,
 Though the teeth may be pried open,
 And the tongue be set in motion.

How, then, were it sang I always
 Till my songs grew poor and poorer,
 Till the dells alone would hear me,
 Only the deaf fir-trees listen?
 Not in life is she, my mother,
 She no longer is aboveground;
 She, the golden, cannot hear me,
 'T is the fir-trees now that hear me,
 'T is the pine-tops understand me,
 And the birch-crowns full of goodness,
 And the ash-trees now that love me!
 Small and weak my mother left me,
 Like a lark upon the cliff-top,
 Like a young thrush 'mid the flintstones,
 In the guardianship of strangers,
 In the keeping of the stepdame.
 She would drive the little orphan,
 Drive the child with none to love him,
 To the cold side of the chimney,
 To the north side of the cottage,
 Where the wind that felt no pity,
 Bit the boy with none to shield him.
 Larklike, then, I forth betook me,
 Like a little bird to wander,
 Silent, o'er the country straying
 Yon and hither, full of sadness.
 With the winds I made acquaintance,
 Felt the will of every tempest,
 Learned of bitter frost to shiver,
 Learned too well to weep of winter.
 Yet there be full many people
 Who with evil voice assail me,
 And with tongue of poison sting me,
 Saying that my lips are skillless,
 That the ways of song I know not,
 Nor the ballad's pleasant turnings.
 Ah, you should not, kindly people,
 Therein seek a cause to blame me,
 That, a child, I sang too often,
 That, unfledged, I twittered only.
 I have never had a teacher,
 Never heard the speech of great men,
 Never learned a word unhomely,
 Nor fine phrases of the stranger.
 Others to the school were going,
 I alone at home must keep me,
 Could not leave my mother's elbow,
 In the wide world had her only;
 In the house had I my schooling,
 From the rafters of the chamber,
 From the spindle of my mother,
 From the axehelve of my father,
 In the early days of childhood;
 But for this it does not matter,
 I have shown the way to singers,
 Shown the way, and blazed the tree-bark,
 Snapped the twigs, and marked the footpath;
 Here shall be the way in future,
 Here the track at last be opened
 For the singers better-gifted,
 For the songs more rich than mine are,
 Of the youth that now are waxing,
 In the good time that is coming!

Like Vergil's husbandman, our minstrel did not know how well off he was to have been without schooling. This, I think, every one feels at once to be poetry that sings itself. It makes its own tune, and the heart beats in time to its measure. By and by poets will begin to say, like Goethe, "I sing as the bird sings"; but this poet sings in that fashion without thinking of it or knowing it. And it is the very music of his race and country which speaks through him with such simple pathos. Finland is the mother, and Russia is the stepdame, and the listeners to the old national lays grow fewer every day.

Before long the Fins will be writing songs in the manner of Héine, and dramas in imitation of "Faust." Doubtless the material of original poetry lies in all of us, but in proportion as the mind is conventionalized by literature, it is apt to look about it for models, instead of looking inward for that native force which makes models, but does not follow them. This rose of originality which we long for, this bloom of imagination whose perfume enchants us—we can seldom find it when it is near us, when it is part of our daily lives.

James Russell Lowell.

CONTRASTS OF ENGLISH AND AMERICAN SCENERY.

HAVING lately visited England after a long absence, my mind, both there and since my return, has been busy with the subject of the relations between our scenery and that of the Old World. I visited a dull part of Hampshire; on leaving the house where I was staying, it was necessary to get up to an early breakfast to catch a train. Two young soldiers, very pleasant and friendly fellows, who went away at the same time, were in the cab with me. Reference was made to the scenery, and one of them, who had been in America, said, "You Americans may not always say you admire England, but in your hearts you know there is nothing like it." I looked out of the cab window at the flat and very rolled-out landscape, cut up into squares and plots by iron fences, which, however, with its sparse oaks standing here and there, was not without a classic grace, and thought of the fresh and magic outlines of the Virginian mountains. But the hour was much too early and too drowsy to allow of any expression of dissent. It is an old question, that between the scenery of the two worlds. It is a simple one, however, with an obvious answer. Here it is primeval and virgin nature; there, nature affected by man and art.

The difference between European and American trees and woodlands is significant of this. Early in September an acquaintance took me to look at a remarkable oak on his place in Essex, which he said had been thought by some persons to be a relic of the ancient British forest. This oak, which was not very high, threw its powerful arms straight out in all directions over a wide space of ground. Certainly such a tree could not have stood in an aboriginal forest. There would not have been sufficient sun to produce so great an amount of leafage, and there would have been no room for such a vast lateral extension. It so hap-

pened that only a few months before, in June perhaps, I had seen in Tennessee a good deal of a forest which was almost virgin. The trees went straight upward to a great height, the boles being clean of branches a long distance from the ground, and the leafage scant except at the top, where it received the sun. I rode into the middle of this forest. The trees were often so close together that it would have been hard for a horse to go between them, and my horse followed the bed of a stream which was so shallow that it scarcely more than wet his fetlocks, the rhododendrons being very thick on each side of me. Halting in the midst of the level floor of the forest, it was an impressive scene which I found. The pale and lofty trunks stood everywhere parallel, and with a stately decorum and regularity, except where, half-way up the adjacent mountain-side, some tumbling trees, leaning at angles against their surrounding fellows, which had arrested them in falling, varied the universal propriety with a noble confusion, the gray trunks looking like mighty fallen pillars of a ruined temple. The scene around me was without a voice—such faint, occasional twitter of bird life as there was serving only to deepen the stillness. Where was the voice of the place? There was continuous twilight, touched here and there by some stray sunbeam which a rift overhead had let through. At the foot of some vast column I found the morning-glory, surprised in such a place to come upon this ornament of the domestic sill, and companion of the bright face of childhood. But the hue of its glistening cup was as fresh and dewy amid these religious shadows as if in some sunlit and human garden spot; the flower, however, not without a sense of exile, and conscious, as it seemed to me, of the absence of those welcome voices and shining faces of the cottage door.

It is true that our scenery is not very rich

in its associations of human history. This source of interest we have here only to a slight degree. But the landscape has its own history. Is it not well to consider that history? Is not scenery made more impressive by the study of those sublime changes which have prepared the world which we see, and may not the disclosures of men of science, so far as the unlearned are capable of comprehending them, be brought to the service of the sense of natural beauty? There are, indeed, times when one fancies that the historic facts linger on the face of nature. Chautauqua Lake, in the southwestern part of the State of New York, not many miles south of Lake Erie, is a fine sheet of clear water, a few miles long, and perhaps a mile wide. One perfectly clear evening I sat in a boat on the lake, the quiet surface of which was encompassed by a crimson stain possessing the entire circle of the horizon, with the pale azure of the sky above without a cloud. The red hues were in the air and upon the bosom of the lake. The only other occupant of the boat was a young girl, whose youthful coloring was blended with, and was a part of, that in the air and upon the waters. We spoke of the mighty change of which this still lake had once been the scene. The lake's outlet was at one time northward into Lake Erie, and through the St. Lawrence to the ocean. But the Ice Age came, and dumped a lot of debris to the north of Chautauqua, which forced the waters of the lake southward into the Ohio, so that they now seek the Atlantic through the Mississippi and the Gulf of Mexico. A reminiscence of those boreal ages lingered on the chill shores and in the crystal heavens, a sense of the pole and of arctic scenes. Of this mighty event we talked, two waifs or motes floating in the atmosphere of the roscate evening, as transient as the diaphanous vapors which surrounded us.

Another contrast there may be in the scenery of the two lands. There is this to be said of English scenery: it is suitable to the luxury and comfort of English country life. It is appropriate to the English flesh-pots. There are plenty of country-houses throughout England in which material comforts are of the best, and which at certain seasons contain much agreeable company of both sexes. I had some experience of such a house in Surrey. The library was excellent; for a wonder the weather was good, the ephemeral British sunshine remain-

ing all day on the southern walls, and really lavish among those flowers of the garden you do not know by name. Easily detained by such an existence, you are not inclined to anything more active than some kind of pleasant reading, and are likely to lose your place at that, while your gaze rests upon the hills to the west. To such a life and such a state of mind the vague, soft aspect of the Surrey hills was most suitable—two impalpable ranges of hills, alluring to the eyes. Essences they seemed, rather than substance or matter, and unreal, save in their gentle, emerald coloring; and they were always lying there, quivering as in a dream—a mirage which did not go away.

If there is an agreement between luxury and English scenery, my sentiment is that, on the contrary, luxury does not suit our scenery. An iron foundry, strange to say, does no harm; a forge, a factory by the side of a pond filled with water-lilies (I have now in mind the New England landscape)—these are not unsuitable. But a fine house in some way is, and my sense of incongruity extends as well to those mansions which a friend describes as Queen Anne in the front and Mary Ann in the rear. Architecture, both private and public, should be such as is suited to the local requirements and history. A white spire, for instance, marking such a church as New England farmers have built for generations, what an eloquent object in a wide and undulating view! The manner of life should be simple also. An eight-o'clock dinner and champagne are out of place. People should dine in the middle of the day. The evening meal, however, should be late, for it is a serious mistake to take the hour of sunset, for which the twenty-four have been a preparation, as one in which to eat something. In our semi-tropical summer people should adopt the tropical habit of rising early; it will do, however, if they are out of doors, say, within an hour after sunrise, for it is not till then that the dawn becomes "incense-breathing"; this quality the air has not acquired when the sun first appears. And yet it seems a great pity that the sunrise, that most auspicious of nature's facts, should not be noticed, at any rate from one's bedroom window. Its advent is never so benign as in a sky without a cloud; the orb, as it emerges, kindling the rim of the verdant meadow with cheerful promise—irresistible sign of life and friend of man.

E. S. Nadal.

HUNTING AN ABANDONED FARM IN UPPER NEW ENGLAND.

DRAWN BY HARRY FENN, AFTER A PHOTOGRAPH BY E. A. MORLEY.

"THE PROFESSOR'S BARGAIN."

WHEN you look at the map you see a region in southwestern Massachusetts quite free from railroads. The points of departure for it, from below, are Canaan, Norfolk, or Winsted, Connecticut, by stage. I left Canaan post-office one day at 1 P. M., and arrived at Southfield, in the heart of the region in question, at half-past three. The stage was a two-horse wagon, with room for six, but the seating, as well as the freighting, space that day was occupied by kegs of nails and boxes of soap destined for an uncommonly prosperous store in the half ruinous village of Mill River, which we went two miles out of our way to visit. If one went directly to Southfield by private conveyance, one could do it much more quickly than we did. The drive back could be made inside an hour, for the way there is nearly all one long, gradual ascent.

My sole fellow-passenger was at first silent, but he grew voluble when the subject of farm-property was hit upon. It was a favorite topic, it appeared, with him as with me. He knew of a large old house over North Granby way, with seven acres of land—a place which had been run as a hotel for some sixty years, but I could have the whole for about \$700. In case that did not suit, he would sell me his own farm, a hundred and fifty acres, for \$1400; or if this were more land than I needed, then he would let the buildings and fifty acres of it go for \$800—fifty acres, he said, being enough to maintain a horse and four cows, and to furnish all the wood required.

"Reason for selling: I ain't no farmer," said he, "and I've made up my mind it's time for me to get out of it."

"How do you know you are not?" I asked. "On what grounds do you base the conclusion?"

"Well, I've tried it 'bout eighteen years, and I hain't succeeded. I guess that's basis enough."

But it appeared in conversation with him that he was one of the kind of men who never succeed in anything. He had been a miller, and had "swopped off" the mill for the farm, trusting to reap from agriculture the brilliant profits which he found the rumbling millstones and the flying grain-powder could never give.

Granby is a good deal of a horse-market; it has also some curious, disused mines, where prisoners were once kept before the State prison at Weathersfield was built. I was obliged to note the district as a promising field for further research.

The interest of the conversation did not prevent a diligent lookout on my part for such roughness as this back-country district might fairly be expected to present. Strangely enough, it was nowhere to be found. Traveling, after all, is merely a process of dissipating preconceived impressions, or of confirming them, and in this case preconceived impressions had to go. It is true that four ruined paper-mills at the village of Mill River were picturesque evidence of the shifting of an economic center, and their value to summer sketch-classes and the like can hardly be said to counterbalance it. But the roads in general were hard and good, marked at their intersections with fresh, neat guide-posts; and the pleasant, undulating farm-country was free from any trace of crudeness. Southfield, when we reached it, set in its cup-like hollow of the hills, might have been taken, from a distance, for some pretty little French village. Just at its entrance we saw great heaps of wholesome-looking cheeses staring out at us as best they could through the windows of a thriving creamery. The village had a convenient water-supply, piped into the houses from a generous spring on a hillside above, and, furthermore, it had telephone communication with Great Barrington, though this was now temporarily suspended through lack of sufficient patronage.

A single grassy street, and scarcely more, constituted this hamlet—a street of small, neat white or gray houses, with here and there one

cified with yellow ocher. Two small white meeting-houses show their Christopher Wren steeples complacently. Time has been when all these white country meeting-houses alike seemed to freeze the imagination with their coldness; but times change, and we with them. The charming grace and lightness of design that many of them possess have been recognized; their whiteness is a refreshing spot amid the greenery: in short, they are coming back into favor again, with the many other nice old-fashioned things of the period, and the invasion of Gothic chapels that succeeded them had better look well to the security of its domination.

A professor known to literary fame had made his summer home in this benighted village, and a group of Vassar College teachers were just taking an old house here, with the privilege of buying it if it suited them. Trusting he will never see these lines, I must tell you about the professor's bargain. It might fairly be considered the manor of the place. Through a screen of pleasant shade-trees, it faced the verdant open stretch of the public green. Its nearest neighbor was the village school-house, whose honest-faced, freckled little inmates would come out and play on the green with a merry clamor that ought to have given yet added value to the location. The owner appeared to have found his place after many researches like my own, and a diligent study of the official catalogues as heretofore described; and found it, too, at a highly reasonable price. It combined so many advantages that, for the nonce, it seemed quite useless to look for any other place, through fear of being devoured by envy in the retrospect. He was sufficiently retired, and yet was in the center where he might either keep a horse or not, as he chose. Fifteen acres of his own fell away behind him, down a slope to a little stream, a domain large enough to be garden, farm, and park combined, and which happily contained within itself nearly all the most desirable forms of rural charm. Distant Mount Everett rose upon the horizon blue and full of dignity. The upper field was rather wet, it is true, and needed draining. Then came a second pasture, with a few old pear-trees, apple-trees, and nut-trees scattered over it. It descended to a nearly level bench of land, with a fragrant pine-grove upon it, to breathe the odors of Araby the Blest about you on a summer day, and furthermore there were plenty of wild strawberries in the carpet of the pine-grove. Still a little farther down, there crossed the end of the property—in and out of and over its large stepping-stones—a fine, strong, babbling trout-brook, hazel-eyed and limpid. It was the kind of brook to lend itself readily to any hydraulic devices that affectionate ingenuity and the leisure of vacation might invent, though probably

the very best thing to do with such a brook is to leave it decidedly alone to its own natural charm.

In this property I looked on at some small inroads which that famous pest the hardhack had made. Its doings had almost an amusing human interest. The hardhack is the arch-enemy in certain rural districts. It is a shrub of about the general look of a huckleberry-bush. Its roots take hold on the lowermost hard-pan, and never let go if they can help it. It invades only fairly good soil, the really poor land being free from it. It must be burned over, or plowed under, or grubbed up, or fed upon by sheep, or the land must be planted with young pines. There is an irreconcilable conflict, it seems, between the pines and hardhack. You hear all of the above methods and others recommended, but, after all, certain people claim that it will take a hundred dollars an acre thoroughly to eradicate it. It is evident, therefore, that whether you pay five or fifty dollars an acre for land, you won't care to have much hardhack on it. A fight here was going on between the hardhack and the young pines wind-sown from the grove above mentioned. These were everywhere distinguishable by their yellowish tufts amid the darker green. It whimsically recalled one of those combats where the cavaliers of the lively painter Wouwerman slash and cut among the enemy in an inextricable *mêlée*. Beyond the area of the wind-sown pines, a swarm of hardhacks was charging the hill with the vigor of a storming-party or a football "flying-wedge."

One could catch, in the mind's ear, their yell of victory. But this misguided party reckoned without their host. My visit thither was in May; in the long vacation following, the professor arrived, and fell upon them with devastating ax and stump-grubber, and I have been given to understand since that the hardhacks were reduced to a becoming state of subordination.

I have now cited a number of cases going to show the material of the superior sort that is filling up the places of the absent on the "abandoned farms"; and more will follow as the narrative proceeds. The place here in question was got at a bargain, as I have said; yet this was not through the general argument of "farm decay in New England," but owing, I think, to some private and local necessity on the part of its owner. Desiring to remove to another town a small manufacturing business he was carrying on there, he realized upon his property, and sold out for what he could get. If all the property put upon the market from similar motives, even in town, were enumerated, it would make a formidable showing. What fallacious arguments, what pictures of gloom, for instance, might not be based upon

a catalogue of all the houses standing vacant, for any cause, in New York!

The success of residents for the summer would not naturally bear positively upon the problem of living with comfort in the country for a good part of the year, or even for the year through. I like to believe, and it was much kept in mind during these researches, that the ordinary plan should be reversed; people should spend nine or ten months in the country and two or three in town, instead of vice versa, as now.

A manufacture of whip-lashes was carried on in a small way in this hamlet, an industry sending a pleasant, quiet hum to the ear. Stepping into the "shops," you could see some small wheels, revolving in an iron caldron, throw the deer-skin thongs over one another, and braid them with a more than human deftness and speed. But there was only one store, and neither butcher nor baker. Some wagons used to come around with various supplies, but I learned that these were not to be depended upon as a resource for the winter. And though the stage-driver would do your commissions for a consideration, the most sagacious of stage-drivers could not be expected to have that infallible accuracy which would take the place of personal visit and inspection. I went out alone one evening, to try to realize how the place would seem supposing one were actually living there. What resources would be open to the promenader at the hour, say, of eight P. M.? The lights seemed already out in the houses, or if here and there they burned still, it was only in some obscure kitchen at the rear. The steady chirrup of tree-toad and cricket occupied the night, broken in upon occasionally by the note of the whippoorwill or the stamp of some horse in his stable. There was a light, however, in the country store, and I pushed the door open and entered. A postmaster was silently figuring his accounts at a desk in the corner, a couple of men were playing checkers at a table, overlooked by two or three others, while two half-grown country boys whispered confidentially together of things peculiar to themselves. But now a "traveler" for one of the whip-shops came in, and stirred up the men playing at checkers, and enlivened the place with some quite citified quips and pranks. This, however, could not always be expected; the young man had only "laid over" a few days, on a visit to his family. In general the sedate club must depend upon its own resources.

In midwinter, I learned, a weekly "sociable" is held among the inhabitants in a hall over the chief whip-lash shop. A long table is spread in picnic fashion with refreshments contributed by the members; "bean-bag" throwing and similar diversions are indulged in, but dancing

is against the general convictions, and not permitted.

Certain city people might not think that all this promised well; but indeed it promised very well as compared with certain other things — with the isolation of a farm shut in by the darkness of the hills, for instance. There should be nothing about it to discourage the aspirant for country life. Let the advantages and disadvantages of each state of life be properly kept in mind — a difficult thing to do, no doubt, since the disadvantages that are nearest are forever obtruding themselves in undue prominence. However, it promises well to the haggard man, distracted by cares, noises, his immense distances, weighed down by the bare mechanical obstacles of life in the metropolis that often render its all-alleged social advantages and amusements completely nugatory. For what would such a man retreat to the country? Why, for the restfulness of nature, for an opportunity to go early to bed, to get a proper acquaintance with his own family, to cultivate his own resources. And he would expect and desire to live chiefly by daylight instead of by lamplight.

A much more important matter would be the probable temper of one's new associates in all the little points of contact with them in practical every-day life. Might it not be that, used only to a certain limited routine of views and practices, they would look upon these as having something of the sacredness of the laws of the Medes and Persians, and, strong in their majority, would too severely expect the newcomer to conform? There is something formidable and repellent in such an attitude, and if it chanced to exist, it might easily ruin all hope of success. Not to go so far as Renan, who said he would even prefer an immoral community to a narrow one, one would wish to count upon a liberal construing for the best of all his variations from the local type. All questions of social distinctions apart, he would want to feel sure of an atmosphere of friendliness and approval as the proper background of the whole experiment. Have I said it already? Then let me repeat it again: the element of the unknown in the problem remains so large, even after studious efforts to solve it, that the prudent would find some means of trying rural life before committing himself to it irretrievably. He ought to hire one of these places for a year, with the privilege of buying. But I fear very few would rent him a place on such terms.

Southfield is remote, if you will, but it is in the southern Berkshires, and nothing over-primitive is now to be looked for in any of that Berkshire district, of which Lenox, Stockbridge, and Pittsfield, full of their opulent villas, are a part. Becket is yet more remote than Southfield, and

Sandisfield is more remote than Becket, the latter having no railroad connection nearer than fifteen miles. Farms were liberally catalogued in them all, but many had been sold, or withdrawn from sale, before my arrival. One vender, for instance, instead of selling out, had bought the advertised place adjoining his own, and thrown the two together.

"Chicago people" were coming in at Sandisfield, and were arranging great trout-breeding ponds and the like. Becket, on the other hand, was becoming popular for summer homes, especially among people from Springfield, Massachusetts. Let it be borne in mind that it is not New York alone that wants villas and country

the display of his own importance rather than reverence for the past. Not such, however, was the basis of the large stock-farm that had lately given a new life to the village of New Marlborough. This was composed of a number of abandoned, or in other words cheap, farms all thrown into one, under the proprietorship of a wealthy New York man. The prosperous new owner was fond of gathering around him his own kind. The horn of the four-in-hand was heard in the land, as they drove back and forth from Lenox and Stockbridge. Other city people, too, were coming in on a more modest scale. The red and yellow ochers that mark our latest modern stage of evolution in house-painting

DRAWN BY HARRY FENN.

AN ANCESTRAL FARM-HOUSE.

FROM A SKETCH BY THE AUTHOR.

homes, and that has the money to pay for them: every prosperous small city in the north adds its contingent to the demand. The district I treat of is to have its railroad after all, it seems, a fact which I state with no enthusiasm. No doubt capitalists looked at the map one day, and remarked with surprise what a considerable stretch there was without any. "This will never do," they said; so I am told they projected one. It is to start out from somewhere near Great Barrington, connect various of these disconnected points, and bring up somewhere about Westfield.

A distinct type of person who takes up the old farms is the prosperous son who comes back and "fixes up" the old homestead for his country residence. Him you find everywhere. Often he has no great taste or delicacy in his way of treating the old place. His best testimony of affection is generally to enlarge and make it over, winking, staring new, so that its best friend would never recognize it, and then to set up there some florid exhibition of stock-raising or other fancy farming. His motive, in short, is

were cropping out; every farmer had a new and shrewd appreciation of the worth of his acres and his mountain view; and this one circumstance of the establishment of the large stock-farm bade fair to banish "the timid spirit of inexpensiveness" from that locality permanently.

A measure of disappointment awaited me at the pretty town of Monterey, four miles farther on. My objective point there had been a certain twelve-room house, with its 200 acres of land, living springs, trout-brook, and maple-sugar grove (of 300 trees), the whole on the shore of Lake Garfield, and to be had for \$1200. But scarcely had I entered the town when my eye fell upon the following item in the local paper:

Real estate is booming in town, Mr. P— [I omit name] having sold one of his farms to Mr. Hawkins, and Mr. T— having sold the old homestead on Mount Hunger, where he was born, to New York parties. Immediate possession. The purchaser proposes building new, on a rise of ground west of the old buildings, where he can overlook the lake.

That was precisely the place, this latter one on Mount Hunger,—inauspicious name, to be sure,—and I have never known to this day whether it possessed half the attractions that the catalogue claimed for it. There were others. The country thereabouts was, all things considered, one of the most promising that I saw. An amiable, hospitable temper on the part of the people that I met added to this effect. I recall especially two very "sightly" places, as the expression goes. One, for only \$800, was opposite a little common, near which were

price was \$2000. Looking back upon it all now, I scarcely know why I did not return from the expedition under contract to buy not merely one but a dozen of the farms. In that sweet month of May, with the delicious apple-blossoms drifting slowly to the ground, each and every one of them had its moving attractions. This last is the one of those that I mentally bought, and then at once I mentally began to get into all the difficulties that provisions, the servant question, the horse question, the isolation, and the untried disposition

THE PLEASANT COUNTRY LIFE.

a district school and other neighbors. I did not look closely into the quality of land, some forty acres of it. It was suitably divided into mowing, pasture, and woodland, and sixteen acres of it were said to be proper for cultivation. Naturally, the buildings could not be expected to be wonderful for that money; something would certainly have to be expended upon them: yet they were of good size, they grouped well, and the group stood well back from the road. A discerning eye might see that it was a place you could make something of, whereas many others of far more pretensions and cost were so hopelessly commonplace and unfit in site and looks as to be beyond correction.

The second place mentioned had twice as much land; and the house had ten rooms, was considerably nearer the post-office, stood in a dignified way on a knoll of its own, shaded by fine maple-trees, and overlooked the lake. Its

of a city family would naturally involve us in. The people hereabout are favored with summer-boarders; their twelve or fourteen hundred feet elevation, their good air and water, and nearness to the heart of the Berkshire Hills, procure them this patronage. Whatever may be said of the summer-boarder otherwise, he has at least a certain liberalizing influence; the country district that he frequents is apt to shake off some of its narrowness, and to acquire the habit of treating the prejudices of strangers with comfortable consideration.

The persons with houses to dispose of had much confidence in them, for often they had them photographed with snow on the ground. The selling agent would have sent you a photograph of the one above mentioned, if you had asked for it, shown half-buried in the drifts of a great blizzard. Here indeed is the reverse of the shield; here the very antipodes of the

A WARM CORNER.

apple-blossoming. Yet I cannot say that even this picture gives me pause to any effectual extent: I rather think, as I look at it, of the healthful labor in those drifts, of the keen, bracing air, of the swift rush of the sleigh along the hard roads, and of the ring and scrape of the gliding skates over the black ice of the wintry ponds.

Monterey begins to be near a region of distinguished fashion. An eight miles' drive thence westward brings us to Great Barrington and a main artery of travel once more, the Housatonic railroad. Monument Mountain, inspiration to the poet Bryant, soon hove in sight as we advanced to Barrington, its native ruggedness veiled here by the delicate spring foliage, as if it were gently trying to prove an alibi. This was the termination of the long, roundabout, twenty-five-mile ride I had taken northward from Canaan. "Barrington" the country people call it for short. Perhaps even greater unceremoniousness would be desirable here for fear that all simple, natural feeling may be overpowered in time by the growth of a portentous grandeur, may be overawed by vast granite mansions and mammoth conventional inns. Bryant's early homestead makes part of the modish Berkshire Inn, but relegated to the rear, and now used as servants' quarters. You remember that French marquise, who, when she was bored in the country, and they asked her why she did not do this, that, and the other,

replied, "*Mais je n'aime pas les plaisirs incivils !*" Well, village improvement societies and mundane developments are all very well, but that is what many of our over-prosperous villages seem to be coming to.

A sprinkling of better-dressed and cosmopolitan-looking persons appeared in the town, perhaps taking a run up in the charming spring days for a look at their Lenox and Stockbridge villas. To inquire for cheap or abandoned farms in these localities would hardly seem a profitable enterprise, and yet I am not so sure a thorough investigation might ferret out some bargains even hereabout; just as frozen farms are always found in church even when the parson's house is full. There is a farm near Stockbridge of 225 acres, with an eight-roomed house and three barns, which had been offered before for \$3000 or less. Lenox lay only five miles distant from it, and Pittsfield only ten. With such excellent markets at hand, and at a low price, it seemed almost as if one might make a fortune out of them without touching them enough to reap a fortune.

Were I to devote even a brief mention to the farms visited that presented some points of interest, this account would be swayed by undue proportions. I pass a large number of them untouched. In a general way all fall into four classes. First, there was the poor, old dwelling, with some considerable structural

starved land, the price of which would be a few hundred dollars. Next, the story-and-a-half house, with from fifty to one hundred acres of ground, "run down," but not without tangible merits, for from \$1000 to \$2000. A number of good-sized village houses, out of repair and without land, would also come within this class. Thirdly, the two-story house, in good repair, its farm in good order, for from \$2000 upward — \$2500 being a fair average price for a place of this kind, something that was really worth while. Lastly comes the list of stock-farms, dairy-farms, and summer boarding-houses, with names of their own. These would be held at from \$5000 up to \$20,000, and their owners had no idea of selling them at a bargain, but put them into the catalogues only to snatch the opportunity for some free advertising. Apart from a few rare exceptions, the houses that were for sale cheap either were in

things, abandoned to decay, after the numerous pathetic stories to that effect with which we have grown familiar; and I returned from my trip finally in a very skeptical frame of mind about such stories.

I hasten northward now in Massachusetts, past the grave majesty of Graylock, eastward through the Hoosac tunnel, through sylvan Deerfield and Greenfield, and I cross the New Hampshire line just above Winchendon. They try to make you forget the Hoosac tunnel by lighting the lamps brilliantly, so that you may read your paper as you go through it,— as they do not for you in the Mont Cenis,— but they neglect to put these lamps out afterward, and if it is a summer day, the car is hot and stuffy the rest of the afternoon. Much fine agricultural country was passed, and there were many counties well-catalogued which I was able to study only from the car window, after the fa-

a condition of deplorable neglect, or else had never been good for anything from the first. In addition, they would lie away off on some forlorn back road, in places all but impossible of access. Not even once did I see any fine mansion or notable homestead, capable of better

vorite method of a leading statesman some years since. The farms seemed to grow larger as we went northward. Straight, formal pine-groves stood up here and there, like Puritan train-bands on parade. One Massachusetts village offered as an inducement to settlers a free omnibus

DRAWN BY HARRY FENN.

IN THE TWILIGHT OF ITS FORTUNES.

FROM A PHOTOGRAPH BY J. WELLS CHAMPNEY.

which would convey their children to and from school, and I think this idea has made some little progress elsewhere. The town of Miller's Falls offered the spectacle of a young bridal pair pelted with rice to the train — pelted by enthusiastic friends through the station to the very steps of their car. The couple bent before the unappeasable storm in a sulky way. As they stopped in the vestibule of the parlor-car to shake the rice out of their collars and to prepare to meet the awaiting audience within, one could but hope that such delicate social tact was more than rare in the region.

I had long since passed the limit of any preliminary engagements partly made by letter. The objective point now was Jaffrey, and the circle of villages that cluster as in reverence around the fine, isolated mountain of Monadnock, in southern New Hampshire. I bethought me of taking some opinions on my marked list of places at Winchendon before actually setting out to see them. I do not know why a town of the settled aspect of Winchendon should have such an influx of new people just then. My landlord was freshly arrived in the place, the druggist was new, the livery-stable keeper was new. A court clerk, who was also put down in the directory as a real-estate agent, could not be found after three or four visits to his office. An early settler was then obligingly hunted for

me, an oracle who was alleged to know everything that the mind of man was capable of knowing concerning the region.

"What do you think, then, of this first place on the list?" I asked, pointing it out to the oracle.

"I don't know as I know anything about that one," he returned, with a cautious air.

"What of this second one?"

"I guess I ain't much acquainted with that place."

The next question, the next, and still the next, met with no better response.

"Suppose we drop the list," I went on; "will you kindly give me a few points about *any* farms you have noticed as for sale that come within the conditions mentioned."

"Well, I don't know as I know of any — not just now," responded the vaunted oracle, uneasily. The oracle had proved a broken reed.

The livery-stable keeper said he was going to send out a man to bill the towns for a coming circus. If I cared to ride with this man, he said I would have an exceptional opportunity to see and to hear of any and all real estate that might be for sale in the country. This, indeed, seemed to promise well, and it certainly promised some amusing glimpses into life and character. But a condition precedent to it was the coming of the special railroad car contain-

ing the circus posters with other properties. The car was so much belated, that I could not wait for it, and thus I have never billed any town for a circus—in connection with light, sociological study, and the problem of modest country homes for persons of limited means.

There were catalogued farms in Rindge and East Rindge, in Fitzwilliam, in Peterboro', in Jaffrey, and Troy—such farms everywhere but in Dublin, which has been taken possession of by a colony of the élite, and grown fashionable and dear. Jaffrey is called "Jeffrey" on the spot. I was driven in all some twenty miles across the country, west from the station of East Jaffrey, to the little manufacturing town of Troy. My driver was a French-Canadian. I came to know he was a Canadian by his saying that his horse did not speak a word of English, though he himself, in speech, ways, and looks, was thoroughly assimilated to the indigenous Yankee type.

I had heard below some wonderful stories of the cheapness with which one could drive at Jaffrey, but I found that here, as elsewhere in these jaunts, driving about in the country cost but little less than city prices.

The fine, umbrageous, cathedral-like streets of the earlier part of my journey were much less frequent now. The sparse shade-trees along the main road at Jaffrey let in the sunlight freely, and a few young maples that had been set out about the three meeting-houses on the common—no Sir Christopher Wren steeples upon these meeting-houses, either!—would require many years before reaching a respectable maturity. Jaffrey had long been a familiar word; but here, once more, how rarely one gets the least idea what a place is like until one goes there. I was surprised to find Jaffrey rather a new-looking hamlet with a sandy soil. There is nothing striking about it in itself; it has for its sole attractions a dry, pleasant air, which the sandy formation favors, and the grand mountain always making a picture in the background. It is frequented by people from Boston and other parts of populous upper New England. The wayfarer from New York has to remember that the apparent remoteness to which he has withdrawn is only very relative; the farther he has got away from New York, the nearer he has come to a new and almost as busy a sphere of influence.

A New York man lately bought one of the local farms. It was in sight, on a hilltop, from the door of our inn. He was going in for something expensive, to take the place of his yacht or his four-in-hand, and was thus quite outside the pale of this inquiry, which may be considered more as devoted to outwitting destiny rather than dealing with her as one high contracting party with another. In that country

a hill-slope was called a "pitch"; we were always going up a pitch or down a pitch. They were pleasant pitches that took us down, then up again, to the cheap farm tenanted by a French-Canadian, a swarthy, pock-marked little man, with bead-like eyes, speaking English not merely broken, but pulverized, and much too full of profanity. You could perhaps have got that farm for six hundred dollars. You would have had to build a new house upon it, and the land was very likely no great affair; but, oh, what delightful boulders it had, and what a park-like screen of trees behind the house! The road through the pasture was a very painter's road, and it wound in part amid pine-trees that gave out their richest balsamic fragrance under the genial warming of the summer sun.

Going on, I cared much less for the hotel and 200 acres, on the shoulder of Monadnock, that \$4000, or, at any rate, \$6000, would have bought. I marked with special stars of admiration a well-kept place we passed which had been entered in the catalogue for \$4000, but had gone, at a recent auction-sale, for no more than \$1000. That was one of the chances that fall to persons born under a lucky star. Down in the bottom-lands, by a stream, was a house, not bad, but indeed rather good, with six acres of land for \$400. Both its well and spring were hopelessly plugged up, and the only resource for water was to bring it from a neighboring brook. Occasionally there would be a cabin and three or four acres on the market for \$150 or \$200—a poor dwelling, certainly, but the view of grand Monadnock was comprised in its title. How worthy, how even regal, it was, compared not merely with the abodes of the poor in the metropolis, but with those in which a larger part of the fairly well-to-do are, for their sins, compelled to live.

I regret, among others, a large old house on a hillock, with barns and woodsheds all joined to it in the same group, with a farm of sixty acres—the whole valued at \$1000. It had some strange inconsistencies. For instance, although there was classic ornament in its cornice, its upper story had never been "done off" into chambers; again, though the entrance-hall was wide and spacious, there were no balusters on the stairs. Its most particular lack, however, now seemed a pine-grove. I could hardly find it in my heart to forgive such a deficiency in a region where pine was so plentiful, and my taste had been set upon one ever since my stop at Southfield.

We passed at length the shoulder of scarred old Monadnock, and had left the white mountain-house showing high above like a patch of the last winter's snow. We came to a maiden sitting picturesquely under a tree by the road,

shelling peas. A house, standing far back from the border of the route, corresponded not a little to this its pleasing inmate and frontispiece. There comes a time in such researches — and it had come long before this — when you no longer adhere to any fixed list or especial program. "Is this place for sale?" we asked. She

wife would have let him. His talk of the inclemency of the winter prompted new speculations as to the desirability of the South instead of the North for the experiment. But in the South the negro problem would have to be met, and the lawlessness, the apparent insecurity of life and property, in certain sections. "Better,"

"HIGH COURT," CORNISH, N. H. LOOKING SOUTH FROM COURTYARD.

referred the query, by word of mouth, to the distant dwelling. A cross, elderly female figure at once appeared at one of the windows, bordered with apple-blossoms, and without further parley snapped back:

"No, 't ain't. 'T ain't for sale, not at no price."

But farther down the road we met the full owner, and he, leaning at ease on the cultivator with which he was encouraging the growth of young corn, said it was for sale. He would take \$2500 for it. This man was willing to chat and philosophize at length. We found that we had opinions in unison on the subject of that prevalent scourge, the "grippe." He had suffered from it greatly during the past hard winter. If he could sell out, he said, he would go South. He wanted a place in a warmer climate. He would have done it twenty years earlier if his

one says to one's self, "the harshness of nature than of man." But I have collected no data, made no investigations, in that region.

Here in New Hampshire one may fairly count upon eight months of favorable weather; the rest of the year one would be more or less snowed in. The Jaffrey mail-carrier started on horseback, last March, to make the short two miles to East Jaffrey. He was obliged to abandon his horse in the great drifts, and only succeeded in getting the mail-bags through, after prodigious effort, by carrying them on his back.

Troy town devoted itself to its blanket-mills and saw-mills, and I judged that its atmosphere was little ameliorated as yet by the summer-boarder. Changing conveyances there, I drove out two miles, almost up and down a break-neck hill, in the direction of Swanzev. I was

unable to resist going to see what a certain 150 acres, with house and barn, were like, which were offered at \$500. I did not expect very much of it, but the place proved even more disappointing than I had expected. It was even worse than the 200 acres, with buildings, for \$500, which I was to see later under the shadow of Mount Chocorua. It was abandoned, indeed.

were a conspicuous part of the view in each successive town. The multitude of such homes in our country at this day is a *marvel* which only the traveler is in a position to *feel*. Go where you will, they rise on every side; they give a new realization of the vast resources, the underlying power, the widespread prosperity, of the American people. The grandeur of the me-

DRAWN BY HARRY FENN.

"HIGH COURT." COURTYARD LOOKING TOWARD MOUNT ASCUTNEY.

FROM A PHOTOGRAPH.

It was a sort of "jumping-off place" that I arrived at—the last end of everything. The house was a poor squatter's shanty in a clearing of scrubby undergrowth. There was no shade; there was no fruit; there were no fences; there was no well, no spring, and you would have been so cut off from the world there as scarce ever to have seen even a country wagon go by.

And that was why—strike again the mournful lyre, O ye who love to lament over departed grandeur and economic decay!—this is why 150 acres of land, with residence and outbuildings upon the same, could be offered for \$500 in the heart of once happy New England.

It was a relief to take the train after this, and dismiss the whole subject from mind for a while. The ride along the banks of the upper Connecticut was a constant delight. Stretches of fair lawn, homes of comfort, good taste, and luxury

tropolis is, after all, only a limited incident of the whole. It was hard to believe in much serious depression in back-country of which this was the foreground, yet Bellows Falls, Charlestown, Claremont, and the rest, were all points of departure for districts of "abandoned farms"—by the catalogue. A New York acquaintance had bought one in the town of Alstead, which was reached from Cold River, and he was importing other friends. They assured me that \$10 per acre, including buildings, was a sort of standard basis for the sales thereabout. He had put a farmer on the place, and used to have part of the products sent down to him in New York.

Vermont furnished the most marvelous of all the stories I fell in with in this connection. Whitingham, Vermont, in the southern part of the State, I was told, was an absolutely deserted village. A commercial traveler declared that

he had twice driven through it without encountering a living soul, and that the houses all stood vacant, excellent houses, too, and some even with good furniture in them. When asked how he accounted for this, he said, in the usual way, that the old folks had died off, and the young folks moved away. Later on he wrote me that he understood the place had been "stocked" with Swedes — such was the rather irreverent expression — by a well-known capitalist of Bennington; but subsequent investigation showed that there was nothing in this unique story. The Whitingham postmaster writes, "This town has been quite prosperous for the past few years, and there are no Swedes settled here."

Thus there seems a chronic tendency in the human mind to invent such tales, following on after Atlantis, and Norumbega, and the Seven Cities of Cibola.

What was a reality, however, and a charmingly romantic one, were the places of artists, that I found at Windsor in Vermont. Windsor is the site of William M. Evarts's somewhat famous farm, and also of a villa of the late Judge Stoughton. The latter, I was told, after long standing idle, came to be sold for less than the cost of its plumbing. Windsor technically claimed the artist places: it was their post-office; but in reality they were across the river at Cornish Hill, on the New Hampshire side. One of them had bought an old farm-house as a basis, but he had completely disguised it by the addition of a studio and other features; his group of irregular constructions almost resembled a small village in itself. From one corner of his house projected — what shall I call it? It was not a veranda, not a loggia; it was a spacious, square, out-of-doors chamber. This was open on all sides, and simply roofed in against the weather. There the family would breakfast, dine, and pass most of the day in their various avocations, practically in the open air. One of the open sides looked out upon a garden expressly grown with flowers of the old-fashioned sort, — dahlias, phlox, and sweet-william, — and the other sides upon delicious glimpses of billowing, green mountains and the sylvan river. Others had built outright upon the ancient farm property. One dwelling was on a hilltop, somewhat bare and windy-looking at present, but likely to recall, when its formal avenues are grown, such effects as those of Palladio about Vicenza. One, whose especial fondness for the formal style in landscape has prompted his late beautiful book on the Italian gardens, had begun to carry out on his own ground some of the stately foreign ideas embodied in the book.

Strange destiny this, truly, for plain, homely old Yankee farm-lands to come to! How it must astonish their said soil, as it is turned!

Below a terrace containing geometrical flower-gardens was a delightful pine-grove of tall, regular trees, and the ground out of which it grew, carpeted with the ruddy pine-needles, was as level as a floor. This ground was being formed into a second terrace by bordering it with a formal balustrade, like a lesser Roman Pincian. Pensive, cinque-cento poets and blessed damosels should walk upon such a terrace and in such a wood. The landscape was seen directly through the wood; the distant, peaceful river, the bold, green hills, and the blue mountains, seemed woven in amid the fine, straight trunks of the pines like some original and exquisite pattern of tapestry.

The denizens of the neighborhood did not, as a rule, keep horses; they were rarely tempted from home, since scarce anything elsewhere was half as beautiful as what they left behind. The stage-driver performed their commissions. Such a nucleus for the propagation of love of beauty and rational living deserves a monograph to itself. But I draw near my limit: I must fly across the State of New Hampshire, and I pause next in the district of Lake Winnepesaukee.

The sign of the cottager and of the camper-out was on the face of the land along Lake Sunapee. The small towns, again, both before the State capital of Concord and after it, were full of the beautiful houses, and the tasteful red and yellow hues, of the current domestic architecture. At the typical farm I took from the catalogue for inspection at Plymouth a wolf-story was thrown in. The wolf had come down into the edge of the orchard, they said; they all saw him plainly, and he was as big as a dog. The white petals were falling in a veritable snow in the same orchard just then, and the end of the blossoming was at hand, but the skeptical scoffed at the wolf; they declared that it was a dog — just simply that and nothing more.

"Was you one of them that wrote?" the proprietor asked, with a quick, keen look, as I broached the object of my visit. The farm was lonely and primitive, although his prices did not seem to take those facts greatly into account; had he known all that I had seen, from New Canaan, in Connecticut, thither, he would, like enough, have been more artful and considerate with me.

The drive between Plymouth and Center Harbor is set down as a notable one, but take care to make it from Center Harbor to Plymouth, instead of the reverse, otherwise you will have the high mountains behind you, and will not see them as you go. A certain bridge was down, and we were forced to go round by Ashland, thus extending the already long drive to something like twenty miles. "There's some

folks that make farming pay," said my driver, pointing to a place we passed.

"How?" I demanded, thinking to hear of some new plan.

"They work," he replied.

The remark was intended as a fling at "lazy farmers," of whom, rightly or wrongly, one hears much. We passed Holderness, a pretty cross-roads, with some red-roofed summer cottages, an Episcopal church in stone, and a large hotel, on the knoll that commands the widest view of the charming Lake Asquam. A novel use to which some farm-land there had been put was the establishment of a permanent vacation-camp on the lake, for the benefit of boys whose families do not wish to take them about to the summer-resort hotels.

On the shores of limpid Lake Winipiseogee I came at length to the home of him whom I may call the father of the abandoned farm—the author of informing and entertaining letters which have appeared from time to time in the columns of "The Nation." It was in a remote spot some five or six miles from Center Harbor, and a considerable drive from the main road, even after you had turned out of that into the by-road. One would need a large, cheerful family, with its many interests, to counteract the isolation of the place, and fortunately that is just what its proprietor had. His caretaker, from a farm-house in the vicinity, said that he did not believe another family in the world enjoyed their place with the unflinching merriment and thorough happiness of this; no, he would not except a single one. The house was simplicity itself, a long, low, gray house, not even painted, and all the more picturesque for lacking paint. Its new owners had merely made it weather-tight, and thrown out a number of good-sized dormer-windows in the attic, which was converted into one continuous, well-lighted room or hall. Below was a spacious living-room with a fireplace, but, apart from that, no set distribution of the house to the usual formal purposes. The dining-room was, I fancy, as Rousseau pictures it, *un peu partout*; their music-room was the beach or the shade of some fine tree; and their easy chairs, sometimes, at least, the heaps of fresh-cut grass on the rustic lawn before the door. It was rather a camp than a villa, and purposely it held as little as possible to give a housekeeper any uneasiness.

I shall not say what the owner paid for it—the more especially as I really do not know. But in going around the two lakes, I found that prices were rising here, as elsewhere. You could come in on the first story, perhaps, or on the second, but no longer on the ground floor. People were getting an exalted idea of what their property was worth to "fancy farmers"

and seekers for villa-sites. Three thousand dollars was an average price for a farm, which as a farm alone was worth \$1000.

A son of the family above adverted to was settled about as far from Center Harbor, down Lake Asquam, as was his father from it on Lake Winipiseogee. His pastures rose steeply to the bold crag of Red Hill; in front of him lay long, slender islands, like black steamers at anchor, and across the lake rose upon the view Black Mountain, White-face, Rattlesnake Hill, and Chocorua, varying all their tones with the passing hours. The young proprietor was a college man, and had pursued for a while some city occupation; but he had taken to farming out of pure love of it, and not the worst severities of winter had been able to daunt him. He hoed with his men in planting-time, pitched hay with them in haying-time, and lugged his own heavy buckets of sap through the snow in early spring, in maple-sugar time. It was a vindication of the ideal, a testimony to the world of actual, hard physical labor, which, for us, despite the disparagement of the indolent and the maledictions of the working-man,—who gets something too much of it,—is most desirable, a beautiful, beneficent thing. We please to marvel when a city person goes off heartily into the country, and yet the following paradox is true; namely, that it is city people who are precisely the best fitted for the country. Your average denizen of the country has no appreciation of natural scenery, never raises his eyes to notice it, scarce knows that it exists; thus he suffers all the disadvantages of the country without its principal compensation.

When the pretty steamer took me down to Lake Winipiseogee, the last semblance of illusion had vanished: the abandoned farm did not exist; it was not to be found even in the neighborhood of him whom I have called its inventor. Next, I journeyed northwestward to Wells River; thence, eastward, to the high peaks of the White Mountains, and passing through them, came down to Albany, under Mount Chocorua. Few or no farms were catalogued in the northern counties of the State, or in those that contain the summer resorts. In the township of Albany, two hundred acres, a seven-room house, and a barn 25 by 40 feet, were advertised for \$500. That beat the record, and I made haste to go to the town of Conway, and addressed myself to the attorney who had the place in charge.

"Sold," said he, as soon as I had mentioned my business.

It had been sold some three years, and thus should have been omitted from the last edition of my catalogue. Further: more, the agent said it contained nearer three hundred acres than two hundred. He had had probably a hundred

letters about it. The inquiries had not come generally from the city, but from country persons of small means who asked if they could get a living out of it. The courteous attorney showed it to me, all the same, in connection with some others in the region. He threw into the wagon, as we started, fishing-rods, boots, and pennyroyal oil, against the mosquitos. He intended that we should take some trout on the way, without interfering with our errand.

Albany is a very back country, indeed. It has only a single road, so that you must come out again by the same way you go in. Its population has declined, and it is only lately that it has paid off its heavy debt in bounties, incurred during the war. Payment was made through distress by tax levies. The levy in one year was as high as 12½ per cent., and half the property in the town, including the piece we were going to see, passed under the hammer. The farm was in a miniature intervale below the beetling crags of Chocorua. It was precisely in the district covered by the legend of Chocorua's dying curse. The chief cursed all sheep or cattle of the whites, that they should never live or thrive there. This is the famous "Burton ail,"—the town was Burton before it was Albany,—and it is fact, owing to some peculiarity of the pasturage or what not, that cattle waste and die there, unless they can be fed on hay brought up from the Saco River.

In his stirring "Night on Mount Chocorua" which the late Albert Bolles of Harvard described for us, he must have looked directly down upon this farm. Old Chocorua himself, if he have any feeling for the fitness of things, would choose it as his place for revisiting the pale glimpses of the moon. In the midst of a small oval meadow, or prairie, encroached upon by the surrounding forests of which the greater part of the property consisted, stood a poor, lonely house and barn abandoned to the elements. I had the curiosity to note a few of the vagaries which years of ruin had occasioned. Doorsteps and main door were missing; the sill beneath had rotted away to a condition of red powder; a side door leaned against the outer wall, its panels all kicked in. Bricks from the chimney littered the floors. The parlor door had a panel out, and pistol-shots through it, the facetious doing of sportsmen who had happened that way. Gaps yawned in the roof and ceilings, as if shells had come through. One was forcibly reminded of nothing so much as the scene of *Détaille's* "Last Cartouche."

"You were right," said I to my companion; "it would not have suited me; it is dear at five hundred dollars."

"Dear at five hundred? But the price is fifteen hundred. The purchaser is holding it for a rise."

I paused there, and myriad mosquitos droned their unanimous opinion of this difference.

William Henry Bishop.

THE HEART OF THE WORLD.

THE great world's heart is old and sad,
 'T is long, long since the world was glad,
 For death falls fast and love must part,
 And wrong and sorrow drive men mad,
 And salt tears grieve the old world's heart.

And yet, dear soul, for whom alway
 My life has waited, as the May
 All April waits to bloom and bear,
 If we might meet and love some day,
 How glad a heart the world would wear!

W. P. Foster.

A LOAN OF HALF-ORPHANS.

A NARRATIVE IN TWO PARTS. PART I.

By Thomas A. Janvier, author of "Color Studies," "An Embassy to Provence," etc., etc.

I.

SHOWING HOW A BENEVOLENT LADY DEVOTED HERSELF TO AMELIORATING THE CONDITION OF HALF-ORPHANED CHILDREN AND DESTITUTE CATS.

IN philanthropic matters — being easily started, but stopped only with great difficulty — Mrs. Haverwood bore a close resemblance to a lady-like middle-aged locomotive with an inadequate brake.

Philanthropy was more than a hobby with Mrs. Haverwood; it was a passion. To say that her bonnets had to be specially bulged out in order to accommodate her organ of benevolence would be, of course, extravagant; but to say that the considerable circle of her friends had to bulge out in all directions, and usually in a hurry, to make room for her frequent and violent benevolent eccentricities would not be extravagant at all; it would be literally, and in many cases annoyingly, true.

At the period of her life to which attention here is directed, Mrs. Haverwood's dominant benevolence, if I may so phrase it, was the amelioration of the condition of half-orphaned children in the city of New York. A person of a less resolutely philanthropic temperament would have been satisfied to pool her good intentions toward half-orphans with one or another of the charitable institutions designed, directly or incidentally, for their benefit already in existence. But that sort of an arrangement did not suit Mrs. Haverwood at all. Not only in her dealings with half-orphans, but in her dealings with affairs generally, she wanted — if I may be permitted the use of a bucolic metaphor — a ten-acre lot in which she could flourish around and kick up her heels. In other words, she had a will of her own and liked to do things in her own way. In her experimental stage of benevolence she had allied herself at one time or another with very many of the charitable institutions of New York; but, as her experience grew, she gradually had relinquished them all: on the ground that every one of them was managed by a set of stubborn and unreasonable people whose natural tendency was to do everything wrong, and who obstinately refused to permit her to set them right.

I may add that, in addition to resigning from these several charitable societies because of the pig-headedness of their respective members,

Mrs. Haverwood would have resigned, on similar grounds, had this been practicable without creating a scandal, from the society of her husband. Possibly because he realized the strain of the situation, — and if he did not it was not because of lack of opportunity, — Mr. Haverwood most considerably relieved it by retiring, with a discreet complaisance by no means in keeping with his normal character, not only from his home, but from his planet, to another, and presumably a better, world. He probably felt certain that, temporarily, at least, — that is to say, until such time as Mrs. Haverwood should join him there, — it would be a quieter world, anyway.

It is only just to Mr. Haverwood's memory, however, to interpolate here the statement that, while he certainly was extremely positive in most of his opinions and acts, it was only in the line of his dominant hobby that he was an aggressive man. His hobby was the commendable one of desiring to pose as a patron of art; and the pertinent fact may be added that some of — indeed, most of — the art which he patronized was as queer as it possibly could be. But it would be very unfair to blame him for his artistic shortcomings. He was a product of his times: the period immediately preceding the development of the Hudson River School, when every New Yorker who aspired to high social position had to own enough old masters, in very gorgeous frames, to fill a picture-gallery of reasonable size. Because of this necessity, Mr. Haverwood built a more than reasonably large picture-gallery and stocked it with magnificently framed old masters — every one of which had faded almost to the vanishing point, and was as brown as a bun. To accompany him to this apartment, after one of his own heavy dinners, when he was all aglow with the factitious benevolence derived from his own Sillery, and there to hear him descant upon the merits of these immortal works, was decidedly better than going to the play. His untimely death was a bitter blow to the picture-dealers — even if it did result in giving his widow absolute freedom, and absolute control of one of the biggest and soundest fortunes in New York.

Being thus disengaged from both domestic and extraneous entangling alliances, and having the command of practically unlimited money, Mrs. Haverwood was in the position, as it were, to take what she wanted from the pack and to go it alone. And then it was, to pursue the simile, that she took half-orphans from the pack, and devoted herself to the amelioration of their con-

dition with all the energy of her very energetic body and soul.

That this benevolent lady entertained the most positive views in regard to the way in which a half-orphan's condition ought to be ameliorated, and that these views were utterly unlike anybody else's views on the same subject, are inferential truths which scarcely need to be stated in set terms; and because this was her attitude, and also because she was sick and tired of struggling constantly against stupid opposition, she adopted the radical course toward half-orphans of founding an institution for their succor, in the management of which she united in her own person all the functions of president and secretary and treasurer and board of advisory trustees. With a commendable desire to perpetuate in connection with so notable a charity the memory of her lamented husband (who, in point of fact, always had fought shy of charities; who, for some unknown reason, had manifested a peculiar antipathy toward half-orphans; and whose detestation of cats frequently was avowed in violent terms), Mrs. Haverwood gave to her institution the name of the John L. Haverwood Female Half-Orphanage and Destitute Cat Home.

The destitute cats were an after-thought. Mrs. Haverwood was quite devoted to cats, and since she was starting a charitable institution, as she very sensibly put it, there was no reason why she should not give the cats a show; and the more, she reasoned, because the scraps remaining after feeding sixteen half-orphans easily would suffice for the sustenance of thirty-two cats. The whole number of half-orphans that she had in view was twenty-four; and the whole number of cats was to be forty-eight; but her plan provided for harboring the half-orphans in relays of eight in her own home—where their condition was to be ameliorated by training them in the ways of domestic service—and for harboring a proportional number of cats with them. One of her objects being to inculcate among her human beneficiaries the habit of kindness toward the lower animals, each half-orphan was made responsible for the well-being of two destitute cats; and as each relay came from the institution to her private residence, the sixteen cats pertaining to that particular relay came with it.

Expense being a matter of secondary consideration with Mrs. Haverwood, she had caused to be constructed for this transportation service a vehicle, resembling a small omnibus, especially adapted to its needs. On the two inside longitudinal seats sat the eight neatly-uniformed half-orphans; while outside, firmly secured on the roof by a simple system of bolts and catches, the sixteen cages containing the sixteen cats were arranged (like the oars of a Roman galley) in a

double bank. Even in New York, where queer sights on the street are not unusual, this vehicle always attracted a good deal of attention as it made its weekly trips back and forth between Mrs. Haverwood's private residence and the John L. Haverwood Female Half-Orphanage and Destitute Cat Home.

II.

TELLING HOW MRS. HAVERWOOD TIRED OF HER CATS AND HALF-ORPHANS AND DECIDED TO THROW THEM OVERBOARD.

THAT the estimable founder of this excellent charity would continue for any considerable period of time to take an interest in it was not expected by even the most sanguine among her intimate friends. Mrs. Haverwood believed firmly that the spice of charity was variety, and she governed herself by this belief. Like a stout, but benevolent, butterfly she fluttered happily from one to another project for the alleviation of human misery; took a turn, as occasion offered, at reforming different breeds of heathen; and always was ready at a moment's notice to join any society for the suppression of any really interesting variety of vice.

In the course of a year or so, therefore, quite as a matter of course, half-orphans began to pall upon Mrs. Haverwood, and destitute cats to lose their charm: under which changed conditions she rejoiced rather than lamented when, for family reasons, sixteen of her twenty-four female half-orphans suddenly were reclaimed by their several remaining parents; and she even beheld with composure the outbreak of a fatal distemper among the destitute cats, by which two thirds of them were hurried prematurely into unwept graves. This rather startling shrinkage in both lines of inmates occurred in the early springtime, and Mrs. Haverwood almost came to the determination then and there to kill the remaining cats, send the remaining half-orphans packing back to their relatives, rent the half-orphanage, and so—in not much more than an eye-twinkle—bring her venture in this particular sort of charity definitely to an end.

Had it been possible to dismember and to obliterate her institution in fact as easily as in thought, it unquestionably would have disappeared without another moment of delay. But Mrs. Haverwood found that getting rid of her half-orphans would involve so much correspondence with their respective fathers or mothers, that to enter upon it at that time would keep her for half the summer in town. Therefore it was—all her plans having been made for a summer in Europe—that she conceived the project of transferring the eight half-orphans and the sixteen destitute cats still remaining on the foundation to her own home, thus enabling her to

discharge the matron and to close the half-orphanage; with the corollary project of offering for the summer the free use of her home, and the free usufruct of the half-orphans to carry on its domestic service, together with the supplies necessary for the maintenance of so large a household, to young Mr. and Mrs. Ridley Cranmer Latimer: in whom she had just begun to take a benevolent interest, and for whom, therefore, she could not do too much.

The arrangement thus outlined, Mrs. Haverwood perceived, would save in her own pocket a very considerable sum of money; would confer a substantial benefit upon two deserving young people; would continue to the latest possible moment the training of her charges in the ways of domestic servitude; and, finally, would enable her to arrange matters by letter with her half-orphans' whole parents in such a way that she could get rid of the entire bothersome business on the very moment of her return.

On the other hand, when this handsome offer of free lodging and board and service was made to Mr. and Mrs. Ridley Cranmer Latimer, these young people accepted the benefits tendered to them with a grateful alacrity; at least, to be quite accurate, Mrs. Latimer came forward briskly with her gratitude, while Mr. Latimer followed more temperately in her impetuous wake. The offer, truly, was made most opportunely. They had been married only a couple of months, and Mr. Latimer—who was an assistant designer to a firm of silversmiths—had taken his annual holiday of a fortnight in order to go upon his wedding journey. It was impossible, therefore, for him to have another holiday that summer; and what they had expected to do, until Mrs. Haverwood made them this liberal tender of her half-orphans and her home, was to board at a farmhouse in the Hackensack Valley—whence Mr. Latimer would come into town to his work every day. Mrs. Haverwood's plan was so much better than their plan, and she was so careful to make plain to them that they really would be doing her a great service if they would keep the house going, and so keep the half-orphans going too, that the upshot of the matter was their acceptance of her offer in the same spirit of frank friendliness in which it was made.

"I shall not burden you with many directions, my dear," Mrs. Haverwood said to Mrs. Latimer in the course of the talk which they had together when the matter finally was arranged. "In dealing with my charges my method is a very simple one: I am careful to select for the performance of each household task a half-orphan of a suitable age and degree of intelligence; and then, to give them that confidence in themselves which can be created only by encouraging them in self-resource and self-reliance,

I leave them to perform the task entirely in their own way. When it is completed I commend them or reprove them, as the case may be. This, I am confident, is the only rational method of instruction. All that I ask is that you exactly adhere to it."

"And when they are bad," Mrs. Latimer asked a little anxiously, "what do you do to them?"

"When verbal reproof is inadequate," replied Mrs. Haverwood, "I administer to them, in accordance with the gravity of the offense, one of the three punishments which the remaining parent of each of my charges has agreed to sanction, and which the rules of the half-orphanage prescribe. For light offenses, they are compelled to stand upon one leg, with the other leg projecting in front of them as nearly as possible in a straight line, for a length of time commensurate with the extent of the offense. As this attitude involves a considerable muscular strain, they are permitted to change from one leg to the other at intervals of one minute and a half. The children themselves," continued Mrs. Haverwood, "have given to this form of correction the name of 'going legetty'; and I confess," she added with a kindly smile, "I have fallen into the way of using that name for it myself. As I have said, it is only a punishment for offenses of a trifling sort; but for such, I assure you, it works admirably well."

"And when things get more serious what do you do?" Mrs. Latimer inquired with a good deal of interest.

"The second and more severe punishment," Mrs. Haverwood answered, "is what we call—using the children's name again—'all-four-ing.' In this case the culprit is compelled to go down on all fours, and to remain in that position for a period to be determined, as in 'going legetty,' by the gravity of the offense."

"But what do you do when they are really seriously bad—bad enough, I mean, to be regularly spanked if they were n't half-orphans, and could n't be?"

"Then," said Mrs. Haverwood, sternly, "they are bagged!"

"Bagged?" repeated Mrs. Latimer, in a tone of interrogation, "I don't quite understand."

"No, I suppose not. The punishment is an unusual one, but we find that it works to a charm. It consists simply in compelling the offender to get into a stout bag,—we have bags of various sizes, of course, to fit any size of half-orphan,—which then is tied closely around her neck with her arms inside. The bag is of such ample dimensions that she can raise her hand to her head in case her nose tickles or a fly bothers her, but the hand still remains within the covering. Even the small-

est of my charges feels keenly the ridicule which is the dominant quality in this form of punishment; and the larger girls—we have had several of sixteen and seventeen, you know—never have had to be bagged more than once.”

“I should think not!” exclaimed Mrs. Latimer, feelingly.

“And in inflicting any of these punishments, my dear,” Mrs. Haverwood said in conclusion, “you will do well to make them as public as possible. It is my custom, and I advise you to follow it, to punish in the drawing-room; then, if any one happens to call, the culprit suffers the additional mortification of being exhibited ‘going leggety,’ or ‘all-fouring,’ or ‘bagged,’ as the case may be, to a total stranger. The discipline, I assure you, is most salutary.”

“And what about the cats?” Mrs. Latimer asked.

Mrs. Haverwood smiled pleasantly as she answered: “Ah, there you will have no trouble at all. All that you will have to do is to see that each half-orphan feeds her two cats regularly and not too abundantly, and that they have ample liberty in the house and yard.”

III.

EXHIBITING MRS. LATIMER'S FIRST ACTUAL DEALINGS WITH HALF-ORPHANS AND CATS, AND HER INCIDENT MISERY.

AT ten o'clock of a June Wednesday morning—that is to say, coincident with the departure of Mrs. Haverwood for the steamer, which was to start at noon—Mrs. Latimer took over the entire establishment, and formally assumed the tripartite duties of her domestic, semi-parental, and feline trust; and before eleven o'clock of that same June Wednesday morning she began to realize with a good deal of emphasis that in thus endeavoring to run a cat-encumbered house by half-orphan power she had accepted a contract of rather appalling size. By six o'clock, when her husband came home to dinner, she realized the extent of her contract so fully that her very strongest desire was to abandon it altogether; but by that time the party of the first part, Mrs. Haverwood, was racing along well to the eastward of Fire Island (with the feeling that her interior department was traveling with even greater rapidity by a different conveyance), and the relinquishment of the trust was impossible.

“You see, Ridley,” Mrs. Latimer said,—and it was a very great comfort after such a day to be able to tell about it, and to be sure of sympathy,—“you see, the trouble is that it seemed simple before I began, but that instead of being simple, it's all as mixed up as it possibly can be!”

“How was it simple, and why is it mixed up?” Mr. Latimer asked, at the same time set-

ting her more comfortably upon his knee and kissing her—which affectionate encouragement caused her to give a little restful sigh of happiness, and to reply in much more spirited tones:

“What was simple, you dear boy, was Mrs. Haverwood's rule as to how I was to manage the half-orphans and the cats; and what is so dreadfully mixed up is what happens when I try to put this rule into practice. She said, you know, that the cats simply were to be fed regularly and given ample liberty in the house and yard, and that when I wanted anything done all I had to do was to pick out a half-orphan ‘of a suitable age and degree of intelligence,’—those were her very words,—and then to let the half-orphan go ahead and do it in her own way. That sounds simple enough, does n't it?”

“Yes,” Mr. Latimer answered; “it certainly does. It seems to me that even I could keep a house that way.”

“Suppose you try!” said Mrs. Latimer, with a touch of bitterness in her voice. “Oh, I don't want to be cross,” she went on repentantly; “but if only you knew the bothers I have been through with to-day, Ridley dear! Where the hitch comes in is in making both ends of Mrs. Haverwood's rule about the half-orphans apply. ‘Suitable age and degree of intelligence’ was what she said. Now, since you think it's so easy, tell me how old a girl you would set to such a piece of work, for instance, as cleaning the knives?”

“Why, quite a little girl ought to do that sort of thing, I should think,” Mr. Latimer replied considerably; “one about eight or ten years old. If I had a half-orphan of about that age in stock, that is the age that I should use.”

“Yes, that's just what I thought too. Well, Polly Carroon is just nine years old,—I have all their names and ages, and the addresses of their people, you know, in the list that Mrs. Haverwood left with me,—and so I set Polly at the knives. But what the list does n't say anything about is their intelligences. Polly, I don't think has any intelligence at all. Just as Mrs. Haverwood told me to, I let her go at her work without any directions beyond telling her to take the knife-board out of the kitchen so that she would n't be in our way. And then things got to going so badly that I forgot all about her, and it was n't until we wanted the knives for lunch that I went to hunt her up. And where do you suppose that child was?”

Polly Carroon's whereabouts evidently being extraordinary, Mr. Latimer declined to venture even a guess.

“In the drawing-room, with the knife-board on one of the blue satin sofas, and bath-brick dust scattered everywhere! She had cleaned just one knife, and then she had got her two especial cats for company, and had gone to one of the

front windows to look out into the street — and there she was ! ”

“ And what did you do ? ” Mr. Latimer asked, with a show of serious interest that was very creditable to him.

“ I all-foured her, of course ; but all-fouring her for the rest of her life won't get the iron-rust out of that sofa, and what Mrs. Haverwood will say about it I 'm sure I don't know.

“ But I give you just this one instance, Ridley dear, to show you how very hard it is going to be to make Mrs. Haverwood's rules work out in practice. Age and intelligence don't go in couples at all ; and leaving the children to do things in their own way may teach them self-reliance, but it is certain to make a mess.”

“ And do you mean to say that things have been going wrong like that all day, you poor child ? ”

“ Oh, that little trouble does n't really count. I spoke of it because it happened to be the first. Some of the things really were dreadful — like the way Susan Poundweight almost killed herself when I set her to washing the back-kitchen windows. Susan is one of the biggest, you know — she 's nearly seventeen, and quite pretty — so I thought that she would do to wash windows very well. I asked her if she knew how to sit outside on the sill, and she said she did ; and then I told her to go ahead. And then the first thing I knew I heard a dreadful scream, and I saw her legs rising up in the air inside the kitchen, and the rest of her going down backward outside, and I just had time to rush to the window and get hold of one of her feet as she was beginning to slide away. Fortunately, all of the half-orphans, except Polly Carroon, happened to be in the kitchen, and I made them all catch hold of her, three to each leg, and hold her with all their strength until I could get out into the back yard and grab her by the shoulders ; and then we all let her slide gently down to the ground. If I had started her at washing upstairs windows,” Mrs. Latimer added solemnly, “ Susan Poundweight would have been by this time a dead girl ! ”

“ It looks as if none of them had any intelligence at all — as if they 'd got nothing but age,” Mr. Latimer observed.

“ You won't say that when I tell you about Jane Spicer,” Mrs. Latimer answered. “ She has n't any size at all — at least none worth speaking about, considering that she 's over thirteen years old — but she 's got enough intelligence to supply all the half-orphans in the house if she only could divide it up and pass it around. And the coolness and presence of mind of that mite really are wonderful ! Just listen to the way she straightened out the worst tangle of trouble I got into all day.

“ A couple of hours or so ago, when we were

beginning to get ready for dinner, things all of a sudden went as wrong as they possibly could go. I had sent Sally Tribbles down cellar to the ice-chest for the meat,— Sally is a big stout girl nearly fourteen,—and somehow or another in coming up-stairs she had managed to stumble over one of the cats and had gone down backward with the joint flying right over her head into the ash-bin ; and I 'd just caught Biddy O'Dowd — she 's an untidy little thing — wiping out the soup-tureen with the hand-towel ; and the two little Wells girls, the twins, you know, Xenophona and Sophonisba, had got scalded both at once — they do everything together that way — while they were trying to fill the tea-kettle ; and Martha Skeat had just shaved off the ends of three of her fingers with the potato slicer ; and in the very moment that I turned my back on the kitchen table to tie up Martha's hand, three of the cats were up off the floor like a flash,— the cats are everywhere, Ridley, they make me perfectly desperate ! — and were eating the croquettes that I had just finished making up into forms.” Mrs. Latimer's voice broke a little as she recalled that culminating moment of agony, and Mr. Latimer had to kiss her repeatedly before she could go on.

“ Well, just as everything was in that awful way, Jane Spicer came into the kitchen,— I had sent her to get something from the store-room,— and the way that that child took in the whole situation at a glance, and then instantly began to make everything go right, was nothing short of a miracle ! She whisked the cats off the table and away from the croquettes as she ran across to the sink where the twins were howling together at the tops of their voices, and when she found what was the matter with them she was in and out of the store-room like a flash and had them sitting on the floor in one corner with their scalded hands in the starch-box — they are dreadful little objects now, for they got the powdered starch all over themselves. Then she dashed down cellar to Sally, and picked her and the beef out of the ash-bin,— you must n't mind about the beef, dear ; I washed it most carefully myself, and ashes are clean, anyway,— and brought them both up to the kitchen. Sally was n't a bit hurt, but she had the most shocking head you ever saw ; her hair full of ashes and all over cobwebs. And then, with the utmost coolness and presence of mind, Jane collected the cobwebs from Sally's head and gave them to me to bind on Martha's cut fingers, because cobwebs, she said, stopped bleeding better than anything else in the world. It was wonderful, Ridley, simply wonderful, the way that child attended to everything in just the right way — and Susan Poundweight, who is big enough to make two of her, all the while

standing stock still, like the sleepy goose that she is, and never raising a hand.

"It did seem as if this dreadful day never would come to an end, Ridley dear," Mrs. Latimer said in conclusion. "But it has ended at last, and you have come home, and now I can't have any more serious worries, I'm sure."

Mrs. Latimer's statement that the day had come to an end at six o'clock in the evening obviously was as loosely inaccurate as her assertion that she would have no more serious worries was a presumptuous essay in personal prophecy. But Mr. Latimer, who yearned over her as she told him her tale of woe, did not attempt to correct either of these errors although he perceived them both. On the contrary, rather did he endeavor to encourage her in her belief that this weary day was ended with its third quarter, and that in his sheltering arms she had found a secure haven of rest.

And, really, from the moment that Mr. Latimer crossed the threshold things went so swimmingly that Mrs. Latimer's right to rate herself as a prophetess seemed to be above dispute. Their dinner, served to a charm by the super-intelligent Jane Spicer, was quite the merriest dinner that ever they had eaten: for, after all, with every allowance for drawbacks, there was a good deal to exhilarate them in thus finding themselves in absolute possession of a large and luxuriously appointed dwelling, with a train of eight half-orphans ready (in theory, at least) to obey with a sparkling alacrity their lightest or their most severe commands.

After such a desperate sort of a day, Mrs. Latimer was glad to go very early to bed; but Mr. Latimer, whose day had not been desperate, was disposed to begin to get the good of his kingdom by sitting, for a couple of hours or so, in one of the vastly comfortable chairs in the library while he read the new magazine that he had brought home with him and smoked a refreshing cigar.

But in taking this pleasure which he had promised himself, Mr. Latimer was not betrayed by the zest of it into inconsiderate selfishness. Before he entered upon his own enjoyment, he attended punctually to certain matters which he knew were necessary to his wife's happiness—that is to say, he looked at the kitchen fire; tried the fastenings of all the doors and windows; went down cellar and made sure that there were no live-coals in the ash-bin, and that the plate covering the coal-hole was secure; and, finally, went up into the cock-loft and examined the bolts of the scuttle. It is but just to add that, in taking these several precautions, Mr. Latimer consulted not only his wife's comfort but his own—in view of the highly probable possibility that she might wake up at three or four o'clock in the morning and demand from him instant

and accurate information touching one or another of these points of danger, on the ground that she smelled smoke or heard a burglar. Smelling smoke and hearing a burglar were two things which Mrs. Latimer did with an energy and an inopportuneness that Mr. Latimer—although his knowledge of these peculiar traits was but two months old—already was disposed to regard as excessive.

He returned from his tour of inspection just as she had got to bed, and—after lighting and placing by the bed-head the dark lantern which she had bought that very day to the end that they might the better protect the valuable property confided to their care—he made his report as he sat beside her holding her hand. The smell of the Japan varnish on the new lantern was very strong indeed; but Mrs. Latimer, when he commented unfavorably upon this smell, declared that he would find it delightful if he would only think, as she did, that it was oriental incense, and that they were in some very far Eastern shrine.

Knowing that one of her greatest pleasures was to talk herself to sleep, he sat quietly beside her while she talked for a while about the journey that they hoped to make some day to Japan and India; and then on and on about anything that happened to come into her head until the animation in her voice gave way to a delicious drowsiness, her words came slowly and with less and less connection, and at last she gave a little sigh of satisfied weariness and so dropped away softly into sleep. When her breathing became long and regular, assuring him that her sleep was sound, he drew his hand very gently away from hers,—which resisted the withdrawal by little instinctive clutches, as the wakeful body tried to signal to the sleeping spirit that he was going away,—and so, on tip-toe, went softly out of the room. Even at a much later period of his married life—when he was getting, indeed, to be quite gray and elderly—Mr. Latimer still found in this little ritual of slumber a certain quality which touched and thrilled him with a tenderness so searching that his love was almost pain.

IV.

TELLING HOW MRS. LATIMER WAS AROUSED FROM HER SLEEP BY THE SOUND OF STRANGE VOICES, AND WHAT SHE DID ABOUT IT.

THE library to which Mr. Latimer retired—a large, gravely luxurious room in the rear of the house, with three back windows opening toward the south, and with two side windows (over the picture-gallery) opening toward the west—was on the same floor, the second, with their bedroom. On the floor immediately above, so that help would be near in case any-

thing went wrong, were the eight half-orphans—three of whom slept in the front room and four in the back room; while Susan Poundweight, in consideration of her age and size, had the hall-room to herself. The cats were provided with sixteen cushioned boxes in the rear cellar—whence a cat-hole gave access to the back yard, and so enabled them, at their pleasure, to take the air. To prevent their escape, and as a safeguard to their morals, the yard was roofed over with a netting of wire.

Having earned by his several acts of considerate kindness an unqualified right to seek his own happiness in his own way, Mr. Latimer, upon betaking himself to the library, both sought and found it in the conjunction of himself and his cigar and magazine and vastly easy chair in that delightful book-room which for the time being was all his own. So keen, indeed, was his enjoyment of this heretofore untasted combination of luxuries, that he was rather more than half disposed to believe that he was the victim of a momentarily agreeable but ultimately bitterly disappointing dream.

But this super-refined psychologic doubt increased rather than diminished his pleasure, and for an hour or more he continued to read and to smoke with an unruffled satisfaction; save that once, fancying that he heard a slight rustling in the passage and the soft tread of unshod feet, he was disturbed by the fear—which investigation proved to be groundless—that Mrs. Latimer had forsaken her bed and her slumber to seek his protection in some sudden exigency of fright. But at the end of this reposeful period, suddenly, he truly was aroused by hearing his name called in a penetrating sibilant whisper, and then by seeing his wife standing in the doorway,—like a singularly attractive semaphore clad in white, and with tousled golden hair,—pointing the bull's-eye lantern at him with one hand and with the other beckoning him to come to her at once. Upon beholding this engaging apparition, he naturally fell a prey to the emotion of very lively alarm. With a cry of anxious affection he sprang from his chair, and in two steps was across the room and had Mrs. Latimer, lantern and all, tight in his arms.

"My darling!" he cried, "what is it? Are you ill?"

"H-s-s-s-h!" Mrs. Latimer answered in a guardedly low tone which quivered with repressed excitement. "H-s-s-s-h! Don't speak out loud, and do what I ask you quickly and silently. Get your revolver, and then we will go down-stairs together. There's a burglar in the house!"

Mr. Latimer's clasp upon Mrs. Latimer's person relaxed instantly; the eager look upon his face gave place to a look of bored annoyance; and in a perfectly calm voice he replied:

"Oh, is that all! I thought that there really was something wrong. You'd better get back to bed now—you'll catch cold."

"Don't, *don't* take it that way, Ridley. I implore you not to take it that way. I heard him most distinctly, I assure you."

"Yes, yes, I know," Mr. Latimer answered, a little petulantly, "but remember how very often you've heard him before, and what a lot of time I've wasted in hunting for him without finding him, or anything remotely like him. Come, now, be a good child," his voice became tender again, "and let me put you back in bed. If it was anything at all that you heard, you know, it was only the cats. Indeed, you'll get a bad cold if you stay around in the night air like this."

"Ridley!" exclaimed Mrs. Latimer, in a whisper that had a righteously incensed tone, "do you mean to tell me that I cannot tell a burglar from a cat?"

"Frankly," replied Mr. Latimer, "I don't think you can. I don't mean to say, of course," he continued, "that if a real burglar and a real cat came and stood right up in front of you together, in broad daylight, you could n't tell which was which—under those circumstances I do believe that you could tell them apart. But I do mean to say, and I speak from experience, that when it comes to telling burglars from cats at night, and by their voices only, you're bound to get them mixed every time."

"I never, *never* shall forget these bitterly cruel words—the first cruel words you ever have said to me, Ridley," Mrs. Latimer answered in a broken whisper that was more than half a sob. "But this is not the time," she continued, tragically, "to consider my own personal misery. Just now the property for which we are responsible is in danger; probably a portion of it already has been removed. You doubt my word, and you treat me as though I were but a foolish child,—no, don't try to kiss me: all that is at an end,—and I must waste precious time in arguing with you before you will believe that what I tell you is true. But if it must be, it must—so be good enough to listen to me carefully, and be good enough to believe"—this with much scorn and bitterness—"that I am *not* altogether a fool, and that I *am* telling you the truth."

"What happened was precisely this: I waked up suddenly,—aroused, I suppose, by an instinctive knowledge that danger was near,—and the first thing I knew I was sitting straight up in bed, listening with all my ears. At first I did n't hear anything at all. And then in a moment I heard most distinctly the tread of his bare feet—though he may have had on stockings—coming down the stairs from the third floor. He must have gone up without arousing me; and, of course, when he found

only the half-orphans up there, he came right down again. And then—just as I was expecting to see the door open stealthily, and the awful creature come into the room—I heard him stepping softly along the passage and keeping on down-stairs; and then, a minute later, I heard him talking to his confederate through the front-kitchen windows. His confederate is a woman, I distinctly perceived that one of the voices was a woman's voice.

"And now," concluded Mrs. Latimer, still speaking in a stony whisper, "I have told you all; and I am quite willing, since you desire it, to go back to bed, and there await my doom. I do not doubt that in the morning, supposing you survive me, you will find me lying there murdered; and all of Mrs. Haverwood's silver and most of her other valuable possessions will be gone. It is very, very cruel of you, Ridley, to treat me in this way. But in the presence of impending death I cannot be harsh with you, as you are with me. Remember, Ridley, when all is over, that I did love you with all my heart," and with these words Mrs. Latimer's voice went beyond tremulousness into the inarticulate region of sobs.

His wife's great earnestness, and the unusual circumstantiality of her narrative, combined to convince Mr. Latimer that for once, perhaps, her burglar was not made absolutely out of the whole cloth; and he was the more strengthened in this belief by suddenly remembering, as she spoke of the noises which she had heard, that he also had heard, or had fancied that he heard, footsteps in the passage but a little while before. Under these circumstances, while still leaning decidedly to the cat hypothesis, he was willing to admit that the asserted burglar was not absolutely impossible, and that the case was one which reasonably might be investigated. Moved by which considerations, he answered:

"Well, since you're so dead sure about it this time, I'll take a look for him anyway. Now come back to bed, and then I'll go gunning for him down-stairs."

"Without me?" demanded Mrs. Latimer in a most resolute whisper. "Indeed you won't do anything of the kind. I'm going with you, of course!"

Of burglars in the bush, Mrs. Latimer had a most lively horror; but when it came to burglars in the hand, and that hand her husband's, her fear was cast out by her love.

"Come!" she said, detaching herself from Mr. Latimer's arms, and making a heroic gesture with the lantern. "Come! If necessary, we will perish together; but, whatever may be my fate later, you shall not die in the basement alone."

"Oh, rubbish!" exclaimed Mr. Ridley testily, "we're not going to perish together, nor on the instalment plan either. Anyhow, you can't go

down-stairs looking like that to meet a strange burglar. What are you thinking of; and what, I should like to know, would he think of you?"

"Oh!" said Mrs. Latimer, blushing like a delightful rose, "I did n't think—with a burglar, you know—it's—it's different, don't you see?"

"No," replied Mr. Latimer, with a great show of righteous severity, "I *don't* see. Even if he is a burglar, he is a man, all the same; and there's nothing about his profession—as there is about the profession of medicine, for instance—to give him special privileges. Really, I am ashamed of you! If you absolutely insist upon going down-stairs with me to receive him,—and I must say that I think you are over-punctilious in the matter: he certainly must be a total stranger to us, and obviously comes without an introduction,—at least do up your hair and put on your slippers and a wrapper."

The utterance of these sentiments of commonplace propriety in an entirely commonplace tone had the effect of putting the burglar at a different angle of Mrs. Latimer's mental vision, and, in spite of herself, her dread of him very sensibly decreased.

"Please hold the lantern—I'll only be a minute," she said, forgetting to whisper, and speaking, such is the force of association of ideas, in precisely the tone that she would have employed had any ordinary caller been waiting for her down-stairs.

"All right. There's not the least hurry, you know," Mr. Latimer answered; and his wholly matter-of-fact words and manner tended so much the more to bring Mrs. Latimer down from the high level of tragedy to the plane of every-day life that she went to the glass to do up her hair quite with her usual deliberation, and with her mind mainly occupied in deciding which of her two pretty wrappers she should put on.

V.

TELLING OF MR. LATIMER'S VAIN SEARCH FOR A BURGLAR, AND OF SUSAN POUNDWEIGHT'S EXTRAORDINARY BRAVERY.

THIS was Mr. Latimer's opportunity, and he promptly made use of it. Closing the slide of the lantern, that he might not be betrayed by the brilliant stream of light from the bull's-eye, and kicking off his slippers, that his steps might be noiseless, he stole softly down-stairs; and was fairly in the basement before Mrs. Latimer had much more than made a beginning at her hair.

In spite of his caution, he did not think that the chances in favor of his meeting a burglar were large. What he expected to meet was cats; and his intentions toward the cat or cats responsible for putting his wife into such a state of alarm, and for spoiling his own calm enjoy-

ment of his book and cigar, were not at all the sort of intentions proper to the acting head of a destitute-cat home.

And yet, convinced though Mr. Latimer was that he had come, as usual, upon a sleeveless errand, he certainly did have — as he tiptoed along the passage to the front kitchen — a curiously strong feeling that somebody was close beside him there in the dark. This feeling was instinctive rather than reasoning; but it was so overpowering that he actually backed up against the wall, and held his breath while he listened intently for some definitely convincing sound. On the score of prudence, he kept the lantern covered. The burglar, if there were a burglar, might have slipped away to either end of the long passage; and to let off the lantern in the wrong direction — thereby indicating his own whereabouts some seconds in advance of discovering the whereabouts of the intruder — might be productive of consequences of the most awkward kind. Many years before, when he was quite a little boy, some one had told him a story about a man who had killed a burglar by emptying a revolver into the darkness immediately behind the glare of a bull's-eye lantern — on the logical assumption that that was where the burglar ought to be. In the present instance, as he perceived with a rather chilling clearness, the conditions would be reversed but the principle would remain unchanged.

However, during the half minute or so that he thus stood rigid against the wall, the silence was absolute; and then, convinced that his instincts had got mixed with his imagination, and that the burglar was just as unreal as all the rest of Mrs. Latimer's burglars had been, he went on to the kitchen in a more rational frame of mind. The condition of the kitchen tended to restore his belief that the state of affairs in every way was normal. The locks and bolts of the doors, the fastenings over the window-sashes, the massive iron bars outside the windows — all were precisely as he had left them only a couple of hours before. Obviously, Mrs. Latimer's convincingly circumstantial statement had not even a cat back of it — the whole of it had come straight out of a dream.

And then, at the very moment that he had arrived at this quieting but not precisely soothing conclusion, there rang out upon the silence of the night a shrill scream of terror, which was followed in the same instant by another shrill scream of terror in a slightly different key, and simultaneously with this last came the sound as of two bodies — one rather heavier than the other — falling on the floor above!

Although Mr. Latimer never before had heard Mrs. Latimer's voice thus loudly raised and all a-thrill with fear, he knew very well that one of these screams of terror came from her. From

whom the other scream came he did not stop to consider — as the dreadful thought flashed through his mind that a burglar really had got past him in the dark, and that his defenseless wife was at the mercy of the ruffian in the regions above. Acting on the most natural impulse, the moment that this horrible possibility occurred to him he went up the kitchen stairs three steps at a time.

As he rounded into the hall above, he heard a sound of gasping breathing that seemed to come from near the foot of the front stairs; and when, reaching the spot, he brought his lantern to bear upon it, the sight that he beheld — while instantly abating his feeling of dread — filled him with a very lively surprise. There, seated upon the floor, with her legs sticking straight out in front of her, was Mrs. Latimer. Directly facing her, also seated upon the floor and also with straight-extended legs — the two evidently having collided in the dark and then fallen backward — was a pretty young girl, rather inclining to stoutness, whose neat gray frock and neat blue-and-white checked apron implied that she was one of their own half-orphans: an implication that was confirmed into a certainty, in the moment that the light from the bull's-eye lantern flashed upon her, by Mrs. Latimer's exclaiming:

"Why, Susan Poundweight! I thought you were a burglar! What *are* you doing here?"

"Oh, ma'am," answered the young person, "when you came bumping into me that way, and we both went down kerflump, I thought *you* were a burglar, and that I'd got to my last hour! And truly, ma'am, there is one down-stairs — for I heard him sort of snorking with his breath, and I know he a-most caught me, when I was down there a minute ago."

"No," put in Mr. Latimer, "that was n't a burglar; that was me. I was sure I heard somebody; and so it was you, was it? And what were you doing down in the basement at twelve o'clock at night, I'd like to know?"

"If — if you please, sir," Susan answered, arising briskly, but speaking with a strangely marked hesitation, and getting very red as she spoke, "I — I thought I heard a noise."

"Well, and what if you did hear a noise?"

"Why, sir, I thought that — that mebbe I'd better go down and see what it was."

"Faithful girl!" exclaimed Mrs. Latimer, before Mr. Latimer could reply to this avowal. "Just think of it, Ridley! She thought she heard a burglar, and her sense of duty made her peril her life by going down into that utter darkness to confront that great danger alone! Susan, I am proud of you! You are the very bravest girl I ever knew!"

"Oh, it was n't nothin', ma'am," Susan answered in still more constrained tones. "I did n't — I did n't know for sure that it was a

burglar. You see it might 'a' been the—the cats. And anyhow, ma'am, I 'm given to walkin' in my sleep."

In delivering this disjointed and also incongruous explanation, Susan Poundweight addressed the darkness behind the blazing bull's-eye, while she herself stood in the center of the circle of brilliant light, and looked very much like a blushing half-orphan projected from a magic-lantern upon a screen. These conditions were not favorable to self-possession; yet even when due allowance was made for them, and also for the strain due to the very unusual circumstances of the situation as a whole, it did seem to Mr. Latimer that her contradictory statements were so curious, and that her embarrassment was so much in excess of its apparent causes, that some additional disturbing element remained to be revealed.

When they got up-stairs again, and Susan had been sent off once more to bed, he exhibited to Mrs. Latimer this application of astronomical principles to domestic affairs; and he added that he considered Susan's conduct to be very suspicious indeed. But Mrs. Latimer would have none of his domesticated astronomy; and she resented his suspicions in energetic terms.

"I am ashamed of you, Ridley," she said warmly; "I am thoroughly ashamed of you! Susan has done a very noble and heroic act, and you are treating her as though you had caught her trying to make off with the spoons."

"No, I 'm not sure that she was after the spoons, exactly," Mr. Latimer answered, "but I do think that she was after something or another that she 'd better not have been. You must keep a sharp eye on that young woman. Unless we are very careful she certainly will get us into some sort of a scrape."

"Scrape, indeed!" responded Mrs. Latimer, indignantly. "Your suspicions are as ungenerous as they are utterly unjust. Instead of her getting us into scrapes, I consider that it is an honor to live in the same house with her. Really, Ridley, we must stop talking about her, or I shall get seriously angry with you. You see, nothing that you possibly can say can change my convictions. Susan Poundweight has shown herself nobly true to her duty, and the bravest of the brave. If ever there was one, she is a heroine. She deserves the Victoria Cross."

VI.

TREATING OF MRS. LATIMER'S LONGING FOR ORIENTAL TRAVEL, AND EXHIBITING HER ABILITY TO CHANGE FANCIES INTO FACTS.

As has been inferred, perhaps, from some of the facts already stated, Mrs. Latimer's disposition reasonably might be termed imaginative. That this romantic quality had its practical

drawbacks, no one was more ready to admit than Mr. Latimer—whose experiences in consequence of it at times were very intense indeed. To be cautiously but firmly awakened at two o'clock in the morning, and then hurriedly despatched upon a reconnoissance along such remote frontier passes as the kitchen windows or the scuttle in the roof,—to make sure that marauding parties were not pouring in through those exposed openings,—he found decidedly wearing; and scarcely less wearing did he find what he very offensively styled the smoke-smelling act: to perform which he usually was aroused just as he was dropping off into his first sleep, and was sent flying down-stairs in search of a fire in either the kitchen or the laundry, with supplementary instructions—should these apartments prove to be in their normal state of non-combustion—to keep on to the cellar and make sure that there was not an incipient conflagration in the ash-bin.

But Mrs. Latimer's imagination also had its good side. As has been exhibited, she was quite capable of exalting the smell of scorching Japan-varnish, consequent to the lighting of a new lantern, into an odor of incense burning in an Oriental shrine; and of continuing along the line of fancy thus indicated by imagining that she and Mr. Latimer were visiting not only that particular shrine but various adjacent places of interest in the far East.

This longing for Oriental travel was, indeed, Mrs. Latimer's most vigorously ridden hobby. When the circumstances would permit it, her intention was that they should go upon a long Eastern journey: visiting all the lands mentioned in the Arabian Nights, and conducting themselves, generally, like a prince and princess got at large from that delectable storehouse of romance. Pending their departure upon this expedition, she insisted that they should anticipate its delights by assuming that they actually were traveling in the Orient, and by fancying the adventures of one sort or another which were befalling them by the way.

In order to give a still livelier air of realism to her system of imaginary travel—and especially to brace up the imagination of Mr. Latimer, whose faculty for etherealizing himself into an astral shape and then going off with it was not large—Mrs. Latimer very ingeniously contrived, out of cheese-cloth, costumes of an Oriental sort for them to wear while taking their mental jaunts. These garments, very vivid in hue, were patterned after the woodcuts in an old edition of the "Arabian Nights"; and their enthusiastic maker, while not contending that as costumes they were critically correct, insisted that they were near enough to the right thing to help along the illusion tremendously.

"When you actually are dressed like the pic-

ture of the African Magician, you know, Ridley dear," she said very earnestly, "it is impossible for you not to feel like him—even if African magicians in real life are dressed totally differently: and for you to feel like him is all we want. With a true African feeling like that inside of you, everything that we are talking about instantly becomes entirely real. Indeed, the turban alone, with its queer little point coming up in the middle, is enough to make you feel that you are thousands of miles away in a very foreign land."

But even with the assistance of the costumes, Mrs. Latimer had difficulty in imagining, and still more difficulty in making Mr. Latimer imagine, some of the situations which were most after her own heart. The apartment in Irving Place which they had inhabited since their marriage consisted only of a little sitting-room, with a still smaller adjoining bedroom; and, excellent though her powers of mental fabrication unquestionably were, Mrs. Latimer found the strain rather excessive when it came to converting these contracted quarters into, for instance, the palace inhabited by the Prince of the Black Isles. Mr. Latimer, being confronted with this situation, squarely refused to meet it. The best that he could do, he said, was to imagine that the Prince of the Black Isles had rented his palace furnished for the season, and had taken lodgings for himself on Irving Place in the city of New York. Of course, this would not answer at all. As Mrs. Latimer pointed out, they were pursuing the fancy that they were traveling in the East, not that Eastern people were paying them visits in their own home; and the upshot of the matter was that they had to abandon their trip to the Black Isles and take a fresh start in another direction.

As in the case of the palace, so in a dozen other ways were they brought up constantly in the midst of their fancyings with a round turn—such as a papered ceiling intervening when they wanted to contemplate the moon and stars, or a conspicuous absence of slaves when they clapped their hands.

One of the principal reasons, therefore, why Mrs. Latimer had been eager to accept the loan of Mrs. Haverwood's half-orphans and home was the large opportunity which these possessions would afford for making their fanciful life in the Orient more real. At a stroke they would possess a very good imitation of a palace; eight slaves in the persons of the eight half-orphans to come in response to hand-clapping; and, best of all, absolutely unrestricted access to a roof on which they could sit and look at the moon and stars, if they wanted to, through the whole night long.

Being come into her kingdom, Mrs. Latimer found the roof part of it, at least, all that her fancy had pictured and that her heart had de-

sired. Nor was her enjoyment of the romantic pleasure which the roof afforded her appreciably diminished by the fact that in order to attain it they were compelled to overcome certain obstacles of a material and unromantic sort.

"I know perfectly well, Ridley dear," she said, in the course of their first ascent to the housetop, "that when the Caliph of Bagdad went on the roof of his palace with his wife—"

"Wives," interpolated Mr. Latimer.

"If you don't mind, Ridley dear, I prefer to speak of them in the singular. Customs are different in the Orient; but I am sure that their little collection of wives is just as dear to them—to the nice ones, that is—as one wife is to nice husbands here."

Mr. Latimer did not venture any reply to this handsome profession of faith in the existence of a collective monogamous sentiment among the better classes of polygamists, and Mrs. Latimer continued: "Of course I know that when the Caliph of Bagdad and his wife went on the roof of their palace,—to enjoy the coolness of the night and the beauty of the heavens, just as we are now,—they did n't have to climb up a horrid little ladder, and then go creeping across a smelly cockloft, and he did not have to pull her up through the scuttle by her hands as you pull me."

"No," responded Mr. Latimer, "I don't believe he did. Indeed, I don't believe he could. Pulling you up, you see, is easy enough, for there's only one of you to pull. But if you were the kind of wife the Caliph of Bagdad had,—in any number of parts, like a subscription book,—I'd get completely tired out long before I'd hauled you all up here: to say nothing of the fact that you would n't all be up before it would be time to begin to pass you down. Of course the Caliph did n't manage things that way. What he did, I suppose,—with him, of course, expense was no consideration,—was to put in a big elevator and bring her up a dozen at a time."

"Please don't spoil the romance of it all, Ridley dear, by talking that way—and about elevators, too! How many times must I tell you that the palaces, and the dwellings generally, in the Orient are only one, or at most two, stories high? In such a building an elevator would be an absurdity. But what I am trying to tell you, dearest, is that while the Caliph of Bagdad and his wife did n't have to get on their roof in the uncomfortable way that we do, they could n't have had a nicer time after they got there than we are having now."

"On that," answered Mr. Latimer, feelingly, "I am betting high. Indeed," he continued, "I am willing to bet that they did n't have as good a time. How could he manage, for instance, I should like to know, about putting

his head in her lap—when there was just one of him and half an acre more or less of her? Our little plan lays the Caliph's out cold—and, if you don't mind, I'll take off my turban; it's rather in the way."

Perhaps it was just as well that Mr. and Mrs. Latimer's immediate neighbors did not also frequent the housetops, for the effect produced by these young people as they wandered about their roof in the moonlight, clad in loose and flowing draperies which had uncommonly the look of nightgowns, was decidedly queer. And it was a good deal queerer when Mrs. Latimer succeeded in putting the half-orphans into garments of the same Far-Eastern sort, and got them upon the roof in the capacity of slaves.

Mrs. Latimer's first intention had been to maintain the slave fiction continuously by dressing the half-orphans always in Oriental garb. But on more mature reflection she decided that this plan, attractive though it was, must be abandoned. On the score of ethics, she feared that the laying aside of Mrs. Haverwood's uniform dress might have a subversive effect upon the system of half-orphanly training which that excellent woman had devised; and even more to the purpose was the fact that the half-orphans themselves absolutely refused to accept as a chronic garb what Martha Skeat described, disparagingly, as "floppy heathen cloze." Susan Poundweight was still more emphatic, protesting earnestly that if ever she knew that anybody was lookin' at her when she had on things like them loose pants, she'd have a fit and then die.

Being thus unable and unwilling to carry out her plan in its entirety, Mrs. Latimer compromised matters by decreeing that the Eastern dress should be worn only on Mondays; which day was to be known as Arabian Nights day in the household calendar. All the younger children, delighting in the fun of dressing up in queer clothes, of course approved of this arrangement rapturously; and even the elder girls—including Susan Poundweight, who was not ill-natured, though she was as pig-headed as she possibly could be—came into it with a fairly good grace. That the masquerading tended to excite mutinously high spirits among the masqueraders was undeniable, and Mrs. Latimer presently found that things always went more violently wrong on Monday, that is to say, on Arabian Nights day, than on any other day in the week.

VII.

TELLING HOW SUSAN POUNDWEIGHT WRECKED THE PLUMBING AND WAS SUSPECTED OF MYSTERIOUS MISDEEDS.

As the summer slowly moved onward, Mrs. Latimer perceived, with an ever-increasing clearness, that she was carrying a good deal

more of a load of half-orphans than her shoulders were strong enough to bear. All that sustained her was the knowledge that relief was certain at a fixed and not distant point of time. From Mrs. Haverwood there came a letter, about the middle of August, stating that she had arranged with all the surviving parents of her charges to meet her in New York on the day succeeding her return, and then to take them instantly and forever off her hands. But for this cheering light at the end of her dark vista, Mrs. Latimer was of the opinion—as she many times confided to Mr. Latimer—that she necessarily must go wild.

Yet, with a single exception, her half-orphanly tribulations were of a petty sort; mere gnat-stings of trouble which would have been supported easily had they not gathered about her in so dense a swarm. The serious exception to this rule of trivialities was Susan Poundweight. In a purely material way Susan's awkwardness and carelessness were productive of a good deal of annoyance. Her faculty for breaking things was quite phenomenal; and more than phenomenal in that her destructiveness was confined exclusively to the gas- and water-system of the house, and always was of such a nature as to require the immediate presence of a plumber in order to set it right. Advice and correction were thrown away on her. After Mrs. Latimer had shown her exactly how to use the faucets of the kitchen sink,—this was after she had broken one of them off,—she went right ahead in her slap-dash way, and within seven weeks had broken off one or the other of those faucets no less than five times. On top of all this, she broke the sink itself twice by dropping into it first a flat-iron and then a large iron pot; she wrenched off, in some unaccountable way, no less than three gas-brackets; she managed repeatedly to deposit obstructing substances in the waste-pipes of the permanent wash-tubs, and she even contrived to let a heavy gridiron fall in such a malignant fashion that it punched a hole in the big copper boiler beside the kitchen range.

When these catastrophes occurred, Susan always was dreadfully cut up about them, and accepted, with a pathetic penitence, her merited reproof. She always went herself post-haste for the plumber, and usually brought him back with her; and she even insisted—all the while blushing, and evidently very much ashamed of herself—on doing what she could, by holding the candle for him and handing him his tools, to help him repair the wreck which she had caused. He was quite a young plumber, just starting in business, and Mrs. Latimer was both surprised and delighted by the exceeding smallness of his bills. Another thing that surprised Mrs. Latimer in this connection, though it was

some little time before she noticed it, was the odd coincidence that never on Arabian Nights days did the plumbing sustain the smallest injury at Susan Poundweight's devastating hands.

Annoying though these aqueous and gaseous mischances undoubtedly were, however, they were but trifling matters in comparison with the really serious anxiety which Susan Poundweight caused (or was suspected of causing) in another and a much more perplexing way. The strange conduct of this young woman in the depths of the first night which she and Mrs. Latimer had passed together under the same roof never had been adequately explained. Neither of the three explanations, advanced hurriedly and inconsiderately at the moment, had been justified by the subsequent course of events. Mr. Latimer's explanation, that Susan had designs upon the spoons, had been disproved again and again as time went on by conclusive evidence that Susan was as honest as the sun; Mrs. Latimer's explanation, that Susan had gone down heroically to confront a burglar alone, and to capture him single-handed, had been disproved not less conclusively by repeated demonstrations of the fact that Susan was a pleasingly plump but entirely arrant coward; and as to Susan's own confused and contradictory explanation, that she was walking in her sleep, and had come down-stairs because she had heard a noise, its absolute absurdity was obvious from the start.

Yet, vexatious though it had been at the time, this unaccountable venture in nocturnal perambulation would have passed quietly into the realm of oblivion but for Mrs. Latimer's uneasy feeling that Susan's jaunts by night—in what obviously was a condition of dangerously wide-awake somnambulism—still went on. Of course, had she possessed positive knowledge in the premises she would have charged Susan squarely with the sin of misapplied migratory vigilance, and issue would have been joined. But she did not possess positive knowledge. All that she had to go upon certainly was a mass of indirect evidence of a suspicious but not demonstrating sort. Repeatedly she had been aroused from sleep as though by some slight but sudden noise. In almost every instance the noise had ceased before she had become sufficiently wide-awake to tell, with any degree of certainty, whence it came. Once, however, she fancied that she had heard a slight creaking of the stairs; again,—this was one warm night when the door leading into the passage was open,—that she had heard the faint sound of soft footsteps; and on several occasions it had seemed to her that the door of an upper room had been very cautiously opened or closed.

In the earlier stages of these manifestations, Mrs. Latimer regularly woke up Mr. Latimer,

and sent him cantering off into the lower or upper regions of the house—according to her fancied location of the fancied sound—to find out what was going wrong. But as the result of these expeditions invariably was to find that everything was going right, Mr. Latimer more and more resented being despatched upon such bootless errands; and on several occasions—by this time having been almost half a year married—he pained Mrs. Latimer deeply by the reprehensible hesitation that he manifested in getting out of bed, and still more pained her, on his return from hunting her supposititious sounds and smells, by denouncing in a brief but exceedingly forcible commination service of his own devising these acoustic myths and phantom odors of her mind.

It was because the alarming sounds continued without any alarming consequences, such as the murder of herself and Mr. Latimer and the disappearance of the plate, that Mrs. Latimer very unwillingly abandoned her burglar theory and took up in a tentative way the theory that, inasmuch as Susan Poundweight had been at the bottom of one nocturnal disturbance, she might be at the bottom of them all. But why Susan Poundweight thus should go careering around the house at night—supposing, that is, that she did career—was nothing less than an impenetrable mystery. Somnambulism would not account for it, for somnambulism was a product of the imagination, and Susan Poundweight was as conspicuously lacking in that refined mental attribute as Mrs. Latimer was conspicuously over-endowed with it. Nor was it reasonable to suppose that a person of Susan's dull nature would keep awake during the period divinely set apart for slumber save under stress of some motive of such exceptional energy that traces of it would be manifest, also, during the day; but during her waking hours—save for her continued demolition of the plumbing—Susan was as placid as a windless day in June.

In short, the situation was such that Mrs. Latimer could make neither head nor tail of it. Nor was Mr. Latimer able to give her any rational assistance when she exhibited to him her mystery for solution. All that Mr. Latimer did in the premises was to advance the inadequate and brutal opinion that, inasmuch as all the noises on which Mrs. Latimer rested her scheme of bewildering wonderment undoubtedly were the pure creations of her own fancy, there was no mystery to solve. Actually, of course, Mr. Latimer went off on this tack because he could not solve the problem either—as Mrs. Latimer promptly pointed out to him, with the comment (matrimony already had taught her something) that to do that “was so like a man!”

(To be concluded in the next number.)

ENGRAVED BY M. WOLF.

A LADY IN BLACK. PAINTED BY FREDERICK W. FREER.

VOL. XLVIII.—8.

OLD DUTCH MASTERS.

AELBERT CUYP (1620-1691).

AELBERT CUYP, born at Dordrecht, or Dort, in 1620, and not in 1605, as has been accepted until recently, was perhaps the most versatile of the Dutch masters. He was one of the first of

the school, beginning with its robust incipency, and living to witness its decline. He died in 1691. By the diversity of his talent he contributed greatly to enlarge the list of those homely observations which characterize the art of his period, and the variety of his subjects makes up almost a complete repertory of Dutch life, especially in its rural phases. Indeed, such is the multifariousness of his investigations, and the vigor and independence of his way of proceeding, that he must have been one of the most active promoters of the school. He painted landscapes, sunsets and moonlights, marines, cattle and horses, people of various condition, from those of wealth and refinement to shepherds, portraits, pictures of barn-yard fowl, and groups of "still life"; and all with admirable coloring and execution. He was well-to-do, living upon his own estate, and painting what he pleased and at his leisure, and according to the inspiration of the moment. Taking nature ever as his guide, he rarely fails to impress us by a charmingly naive conception, and an originality of handling quite his own.

Very little is known of his early life; he was the pupil of his father, Jacob Gerritsz Cuyp, an able landscape-painter. It is probable that he visited other parts of Holland before beginning to practise on his own account at Dort. He was little known or appreciated in his day, owing to the taste which sprang up at that time for the extreme finish that the works of Dou and his school exhibit. For this reason Rembrandt also suddenly lost favor, and other rare spirits like Ruisdael were misunderstood and neglected. Until 1750, the best examples of Cuyp were not valued at more than twelve dollars apiece. The English have the honor of first discovering him to the world, and consequently England possesses the majority of his works. The engraved example is one of his finest, and is to be seen in the Louvre at Paris. The picture is one of Cuyp's largest, measuring 5 feet 7½ inches high by 7 feet 6½ inches wide. The temperament of Cuyp led him to seek calm

and sunny scenes, and his rare faculty for rendering light, and the atmospheric effects of hazy morning, of glowing afternoon, and of golden evening, is well known. Dwelling on the banks of the placid Maas, he delighted to reproduce the warm skies of summer or autumn, and the amber-colored atmosphere that enveloped the surrounding hills, and found reflection in the dreamy water. To one proceeding directly from Italy to Holland, the difference in the sunlight of the two countries must appear a striking feature; that of the former is white and brilliant compared with the latter, which is soft and decidedly yellow. The brightest of summer days in Holland always impressed me as though the sun were veiled by yellow mists, and one's shadow upon the ground would not show clear-cut as in Italy.

Speaking of the painting here engraved, Fromentin, in his admirable work on the old masters of Belgium and Holland, has the following:

No one could go farther in the art of painting light, of rendering the pleasing and restful sensations with which a warm atmosphere envelops and penetrates one. It is a picture. It is true without being too true; it shows observation without being a copy. The air that bathes it, the amber warmth with which it is soaked, that gold which is but a veil, those colors which are only the result of the light which inundates them, of the air which circulates around, and of the sentiment of the painter which transforms them, those values so tender in a whole which is so strong—all these things come both from nature and from a conception; it would be a masterpiece if there had not slipped into it some insufficiencies which seem the work of a young man or of an absent-minded designer.

What these "insufficiencies" are may be seen in the proportion of the children to the shepherd playing upon the pipe, though this detracts nothing from the charm and poetry of the whole. Such, apparently, is the enchantment of the scene that I have come to imagine these little creatures as intended by the artist to represent the genii of the place, evoked by the music of the shepherd, and the harmony of this rarest of occasions, when all nature is attuned.

BOOKBINDINGS OF THE PAST.

NOTES OF A BOOK-LOVER.

"ERIZZO, DISCORSO SOPRA LE MODAGLIE ANTICHE," VENICE, 1559. IN 8VO (IMPRIMÉS EXPOSITION, NO. 526. PLAT RECTO). BOUND FOR GROLIER IN THE STYLE OF THOSE OF GEOFFROY TORV.

It is the only example known of work of this class bearing the name of Grolier. The device is on the verso. (From "Les Reliures d'Art à la Bibliothèque Nationale." By permission of Edouard Rouveyre.)

S I begin to set down here these rambling impressions and stray suggestions about the great bookbinders of the past, I am reminded of a pleasant saying recorded in Burton's "Book-Hunter," that storehouse of merry jests against those who love books not wisely but too well. Burton tells us that in the hearing of a certain dealer in old tomes and rare volumes a remark was ventured that such an one was "said to know something about books," which brought forth the fatal answer: "He know about books? Nothing—nothing at all, I assure you; unless, perhaps, about their insides."

The pertinence of this retort to myself, just now, I cannot but confess at once. What I know best about books is their insides. And yet, perhaps, it is not an unpardonable sin for

an author to concern himself also with the outside of books—if so be he love them, if he care for tall copies, if he be capable of cherishing the good edition, the one with the misprint. This is why I am emboldened to risk myself in a voyage of retrospection in search of the masters and the masterpieces of the bibliopegic art.

I.

GROLIER AND THE RENASCENCE.

In a letter written to a friend in April, 1518, Erasmus highly praised the civility, the modesty, the integrity, and the munificence of his correspondent, and added, "You owe nothing to books, but in the future books will give you an eternal glory."

The man to whom this was written was a Viscount of Aguisy, for a while treasurer of the army of Italy, then French ambassador to Rome, and afterward treasurer of France under Francis I., Henry II., Francis II., and Charles IX. "Born in 1479, dying in 1565, he lived eighty-six years,"—so M. Le Roux de Lincy, his biographer, tells us,—“during which he showed himself always a zealous protector of the learned, a lover of the good and beautiful books issued by the Giunti and the Aldi, or by the other publishers of the time, and also an ardent collector of coins and of antiquities.” Yet the prediction of Erasmus has so far come true that the name of the ambassador and treasurer of France would be forgotten were it not that the fame of the book-lover has lingered, and spread, until now, more than three centuries after the death of Jean Grolier of Lyons, there is a flourishing club called by his name here in New York, the chief city of a continent undiscovered when he was born.

Grolier had the good fortune to live through the glorious years of the Renaissance, when all the arts were reviving at once and flourishing together; and he had the good judgment to aid in the development of the art of book-binding, to which he attached his name inseparably. The art was not new when he began to collect the best works of the best printers, but it was about to have a new birth; and when it was born again, Grolier helped to guide its early steps. Perhaps the first book-binder was the humble workman who collected the baked clay tiles on which the Assyrians wrote their laws; and he was a bookbinder

BOOKBINDINGS OF THE PAST.

also who prepared a protecting cylinder to guard the scrolls of papyrus on which Vergil, and Horace, and Martial had written their verses.

Before the invention of printing, the choicer manuscripts, books of hours, and missals, were made even more valuable by sides of carved ivory, or of delicately wrought silver often studded with gems. Even after printing was invented, the binder was called upon only to stitch the leaves of the book, all further deco-

and again they were hollowed out to a crucifix or a pair of spectacles, although sometimes it was only to make room for an almanac. It is no wonder that when a thus ponderously begirt fell upon Petrarch so bruised his leg that for a while there was danger of amputation. Even when these boards were thin, they were thick enough to conceal a worm, that worst of all the enemies of books; and thus real boards, like the man *condottieri* in many an Italian city,

destroyed what they were meant to protect. In time the genuine leather was given up for a pasteboard, which was then made by pasting together sheets of paper, and myriads of books no longer in fashion were thus destroyed to stiffen the covers of newer volumes. In our day we have an interesting fragment of a forgotten author, and not a few curious and instructive engravings, which have been rescued from oblivion, where the decay of old book-covers has led to the picking apart of the pasteboard beneath the crumbling leather.

With the invention of printing and the immediate multiplication of books, there came an urgent demand for workmen capable of covering a volume in seemly fashion. In a monastery the binderies must have been increased hastily to meet the demand, and we can trace the handiwork of these monastic craftsmen in the designs they imprinted on the covers of the books they bound. The designs made up mainly of motifs from the manuscript missals, from the typographic ornaments of the printers, and from the transcriptions of those carvings in wood and ivory with which the churches of that time were abundantly enriched.

But the workshops in the monasteries did not suffice, and leather-workers of all sorts—saddlers, harness-makers, and those who made together the elaborate boots

shoes of the times—were impressed into service, taking over to the new trade of book-binding, not only their skill in dealing with leather, but also the tools and the designs which they had been wont to decorate boots, the saddles, the harness, and the carriages of fair ladies and lords of high degree. For the most part these were humble artisans, lacking even in the rudiments of learning. The authorities in France preferred the workman to be ignorant who was called in to bind the records of the State and the royal books.

BINDING EXECUTED FOR THO. MAJOLI, 1536. (FROM "MANUEL HISTORIQUE ET BIBLIOGRAPHIQUE DE L'AMATEUR DE RELIURE." BY PERMISSION OF LÉON GRUEL.)

ration being the privilege of the silversmith. Benvenuto Cellini was paid six thousand crowns for the golden cover, carved and enriched with precious stones, which he made for a book that Cardinal de' Medici wished to give Charles V. In France the silversmiths claimed the monopoly of binding, and also of dealing in the finer stuffs—not merely in cloth-of-gold, but even in velvet.

Certain of the books bound in the monasteries were incased in boards—veritable boards, of actual wood—so thick that now

account. The late Édouard Fournier, in his essay on the "Art de la Reliure en France," cites the contract of one Guillaume Ogier in Italy, 1492, as a binder of the registers of the treasury, in which the artisan "declared and made oath that he knew not how to read nor to write."

Perhaps one reason for the superiority of the early Italian bindings over the French of the same period was that the workmen employed

We know that Grolier was in Italy in 1512, and that he was still at Milan in 1525. He was a friend and a patron of Aldus. "No book left the Aldine press," M. Le Roux de Lincy declares, "without several copies, some on vellum," some on white or colored paper, being specially printed for the library of the French collector. Voltaire says that "a reader acts toward books as a citizen toward men; he does not live with all his contemporaries, he chooses a few friends." Grolier chose for his friends the best books and the most beautiful; he was fond of a good author no less than of a wide margin. As Dr. Holmes tells us, a library "is a looking-glass in which the owner's mind is reflected"; and it is a noble portrait of the man which we get when we look at the books of Jean Grolier. He was a lover of the New Learning. His praises are repeated in many a dedication from the scholars and the publisher-printers of the period. Many a book was brought out wholly, or partly, at his expense. The managers of the Aldine press often borrowed money from him, and never applied in vain. He quarreled once with Benvenuto Cellini, but he was a close friend of Geoffroy Tory. He was a scholar, as is attested by the elegant Latinity of his extant correspondence. He was an artist of not a little skill with the pencil, as a sketch in his copy of the "Maxims" of Erasmus proves.

Fournier thought that perhaps Grolier himself designed the graceful arabesques and interwoven bands which characterize the covers of his books. "Compared with the other bindings of the same time, and of the same country, those of Grolier are distinguished by an unequalled and unfailing taste." They are closely akin to the bindings executed for Aldus in Venice, and to the bindings then made by the Italian workmen elsewhere in Italy, in France, and even in England: but they are somehow superior; they have a note of their own; they are the result of a finer artistic sense; and the longer I study the books bound during the Italian renaissance, the more I am inclined to agree with Fournier when he asserts that Grolier, "with Italian methods, created a French art." Certainly he gave to his library so definite an individuality that the volumes which composed it three hundred years ago are now treated as veritable works of art; they have their catalogue, like the pictures of a great painter, or the plates of a great engraver; they are numbered. Every existing book bound for Grolier has its pedigree, and is traced lovingly from catalogue to catalogue of the great collectors.

The beauty of the Grolier bindings is in the lavish and tasteful ornamentation of the sides. In

"COLLOQUIES OF ERASMUS," BASEL, 1537. QUARTO, 7x4½ INCHES; BROWN CALF. (FROM BLENHEIM COLLECTION. OWNED BY MR. BRAYTON IVES.)

in Italy were more intelligent and better educated. In a book printed by Aldus in 1513, the notice to the binder is in Greek! Ambroise Firmin-Didot explained the anomaly of this apparently extraordinary culture on the part of the handicraftsmen of that era by suggesting that the workmen employed by Aldus—who was binder as well as printer—were many of them Greeks who had been driven to Venice after the taking of Constantinople by the Turks. Every reader of "Romola" will remember the influence exercised on the Italian renaissance by the personal presence of the Greeks, and in no art was this influence more immediate, more permanent, or more beneficial, than in the art of bookbinding.

BINDING EXECUTED BY CLOVIS ÈVE FOR LOUIS XIII.
(FROM "MANUEL HISTORIQUE ET BIBLIOGRAPHIQUE DE
L'AMATEUR DE RELIURE." BY PERMISSION OF LÉON
GRÉL.)

the early days of printing, and when the traditions of the days of manuscripts still were dominant, the shelves of a library inclined like a reading-desk, and the handsome volumes lay on their sides, taking their ease. Books then were not packed together on level shelves as they are now, shoulder to shoulder, like common soldiers; but each stately tome stood forward by itself singly, like an officer. So the broad sides of the ample folios seemed to invite decoration.

The first books which Grolier had bound in Italy are similar in their style of decoration to those then sent forth from the Aldine press; a few have elegant arabesques, setting off a central shield, but most of them have simple geometrical designs in which interlacing bands, formed by parallel lines gilt-tooled, are relieved by solid ornaments very like those with which the Aldus family then adorned the pages of the books they were printing, and which were suggested some, no doubt, by the illuminations of the old missals, but more, beyond question, by the Oriental traditions of the Greek workmen. The distinguishing quality of these ornaments,

familiar enough to all who know the Aldine style, was grace united to boldness.

Look at a specimen of the earlier of Grolier's bindings. Note the simplicity of the interlaced bands, the sharp strength of the enriching arabesques, the skill with which they are combined; and then remember that this, like every other design, was laboriously tooled bit by bit, and line by line, each separate ornament being stamped on the cover at least twice, once to impress the leather, and again to attach the gold. It is only an understanding of the technic of an art which enables us to appreciate its triumphs. The art of the bookbinder is limited by the "tools" he uses. A "tool," in the parlance of the trade, is the brass implement at the end of which is cut the little device, ornament, or part of an ornament, that is separately to be transferred to the leather. Every figure, every leaf, every branch, every part of the design, is made of one or more tools. The binder conceives his general scheme of decoration, knowing his tools; and it is by a combination and repetition of these tools that he forms his design. One might almost say that tools are style; certainly it is obvious that the tools changed form concurrently with every modification of taste in bookbinding; and a study of the tools, as they have been modified during the past three centuries, is essential to any understanding of the art of bookbinding. Thus we see that when Grolier began to gather his library the binder used tools copied from Aldine typographic devices, and impressed in gold on the cover of a book that figure which on the printed page was a solid black. But the finer taste of the Renaissance soon discovered that, although the broad black of the Aldine devices was pleasing on a

ALDINE TOOLS, SOLID.

ALDINE TOOLS, HOLLOW.

ALDINE TOOLS, AZURED

white page, an excess of solid gold was less satisfactory on the side of a book. So they made these tools sometimes hollowed,—that is, in outline merely, which lightened them

instantly,—and sometimes azured—that is, crossed by horizontal lines, as in the manner of indicating “azure” in heraldry. Then, having the same device in three different values where before they had but one, the adroit binder was able to vary and combine them as he needed solid strength or easy lightness.

The next step was to increase the variety and the complication of the interlacing bands—and it is these interlacing bands which are perhaps the chief characteristic of the Grolier bindings. Instead of being indicated by two fine lines of

On one or the other side of Grolier's books was the legend “Io. Grolierii et amicorum,” a form which M. Le Roux de Lincy thinks he may have borrowed from his friend Maïoli, an Italian collector, of whom almost nothing is known, although his books are greatly sought after—Grolier had several of them. M. Clément de Ris, the author of a pleasant volume on the “Amateurs d'Autrefois,” doubts whether Grolier ever lent his books, despite this altruistic declaration. But M. Le Roux de Lincy has been able to trace not a few duplicates

“PANDECTARUM JURIS FLORENTINI, VOL. II.” BINDING WITH THE ARMS OF FRANCE SURROUNDED WITH SCROLLS, AND WITH THE CIPHER OF HENRY II. AND DIANA OF POITIERS. IN THE MAZARIN LIBRARY. (FROM “LA RELIURE FRANÇAISE,” BY M. MARIUS MICHEL. BY PERMISSION OF DAMASCÈNE MORGAND.)

gold, the bands were marked out by three lines. Finally, the bands traced by plain gold tooling were enriched by paint. Adroitly contrasted colors were chosen to fill up the hollow bands which twisted above and below one another all over the cover of the book. To-day these painted ribbons and the gilding of the design are sadly dulled by the years, but when they were fresh, nothing could have been more magnificently resplendent than this polychromatic decoration.

and triplicates from Grolier's collection,—he has even found five copies of the same Aldine edition of Vergil,—whence it is fair to conclude that the book-lover meant the legend to be interpreted in the most liberal manner, in that he stood ready to give his books to his friends, even though he was not willing to lend them. Indeed, to lend a beloved volume is the last thing a true bibliophile can be coaxed to do, although the lending of books was a form of charity specially recommended by a Council

of Paris so far back as 1212. We know that Grolier gave four of the best of his books to the father of J. A. de Thou.

The books bound for Maioli are almost as beautiful as the books bound for Grolier, but, as M. Marius Michel remarks, Maioli had some poor bindings, and Grolier had none. Perhaps it was also due to the example of Maioli that Grolier chose a motto, which ran, "Portio mea, Domine, sit in terra viventium," modified from Psalm cxli. Maioli's was, "Inimici mea michi, non me michi." Marc Laurin of Watervliet, a friend of Grolier and of Maioli, and a book-lover like them, had for his motto, "Virtus in arduo." In as marked a contrast as may be with the friendly legend on Grolier's books is the motto which the learned Scaliger borrowed from the Vulgate, "Ite ad vendentes"—"Go rather to them that sell" (Matthew xxv. 9).

scrollwork flowing through it"; and the Grolier was said to be "an interlaced framework of geometrical figures, circles, squares, and diamonds, with scrollwork running through it, the ornaments of which are of Moresque character, and often azure." A classification of this sort is lacking in scientific precision, since all three of these styles existed at the same time, and are to be found on books bound for Grolier, although there is no doubt that he most often affected the interlacing geometrical patterns. That three styles different enough to bear distinct names should flourish side by side is evidence, were any needed, of the extraordinary artistic richness of the Italian renaissance.

Nor is this the whole story. While Grolier and his fellow-collectors were developing a French art in Italy, and with Italian workmen, the art was taking root in France, and

BINDING OF THE SIXTEENTH CENTURY. (FROM "HISTOIRE DE LA BIBLIOPHILIE." BY PERMISSION OF J. TECHENER.)

PREFIXED to the "Catalogue of an Exhibition of Recent Bookbindings, 1860-1890," held at the Grolier Club in New York in December, 1890, was a note on styles, in which there was a division of the best known work of the Renaissance into three classes rather arbitrarily designated as "Aldine or Italian," "Maioli," and "Grolier." The Aldine was said to have ornaments of solid face without any shading whatever, and these ornaments were of Arabic origin, and such as were used by Aldus and the other early Italian printers; the Maioli was said to be composed generally "of a framework of shields or medallions, with a design of

flourishing lustily. Born in the reign of Louis XII., Grolier died in the reign of Charles IX., and he was a witness of the sturdy development of art in France under Francis I. and Henry II. While he was having books bound in one or another of the three contemporary styles of Italian origin, two styles were in process of evolution in France, without his assistance, and perhaps without his approval. Certainly there is now extant no volume known to have belonged to Grolier decorated either with a *semé* (as the French call it), a "powder," frequently used by Francis I., or with the elaborately enriched central rec-

tangle, surrounded by a frame of rolling arabesques, such as we find Henry II. to have been fond of. In the *semé* there is, perhaps, a lightly tooled fillet around the side of the book, and perhaps a coat of arms, or some other vignette, in the center, and even at each corner, but the binding derives its decorative richness from the sowing broadcast of the king's initial, or of the royal lily, or of some other single tool, repeated regularly in horizontal and perpendicular lines. Sometimes it contains but one device thus repeated geometrically, and sometimes two or three devices are alternated, and agreeably contrasted. In the hands of a feeble binder the "powder" degenerates easily into stiff and barren monotony; but when the devices are adroitly varied, and made to sustain each other skilfully, it is capable of indisputable dignity and strength.

A kindred artful employment of monogram and personal emblem it is which gives distinction to the beautiful bindings which bear the double H of Henry II., and the triple crescent of Diana of Poitiers. The famous Henri Deux ware, for which the lover of ceramic art longs in vain, has not a rarer charm than that of some of the bindings executed at the same time and under the same inspiration. M. Marius Michel, bringing to the study a highly trained understanding of the technic of bibliopegic art, declares that there were in France under Henry II. three, and perhaps four, binders of extraordinary merit. Their work survives to this day, and is more and more admired, but their names have perished forever. It is a pity that we cannot do honor to the memory of the noble craftsman who executed some of the most splendid bindings with no other implements than the

straight fillet and curved gouge, disdaining aid of any engraved tools whatsoever. To him we owe the transcendent folio, "*Pandectarum Juris Florentini*," now in the Mazarin Library at Paris. M. Marius Michel

asserts that no binder had ever such skill of hand. "As clay is transformed under the fingers of the clever sculptor, so the learned arabesques, the graceful volutes, seemed to be born under his instruments; no one has ever carried to such a degree the exquisite sentiment of form."

CURVED GOUGES.

II.

DE THOU AND LE GASCON.

IN the history of the bibliopegic art the names of book-lovers and of bookbinders are inextricably entangled. At one moment the dominant individuality is seen to be a collector like Grolier or Maioli, and at the next it is an artist-artisan like Le Gascon or Derome. After the death of Henry II., the great binders of his reign disappear absolutely; there is no trace of their handiwork or of their tools. Perhaps they were Huguenots, as French historians of the art have surmised, and were done to death, or fled the country, before the promulgation of the Edict of Nantes in 1598.

BINDING EXECUTED BY NICOLAS ÈVE, 1579. (FROM "MANUEL HISTORIQUE ET BIBLIOGRAPHIQUE DE L'AMATEUR DE RELIURE." BY PERMISSION OF LÉON GRUEL.)

A "POWDER" (*SEMÉ*) WITH THE DEVICE OF THE DAUPHIN.

Whatever their fate, the tradition was broken, and the art of bookbinding developed on other lines than theirs; and the personality which next comes into view is that of a collector—Jacques Auguste de Thou.

When Grolier was in danger of his life De Thou's father saved him, and Grolier gave the elder De Thou four of the best books of his library. The son was then only nine years old, but perhaps this was the beginning of his love for books—a sacred fire which thus passed from Grolierius to Thuanus by a sort of apostolic succession. Born in 1553, De Thou travelled from 1573 to 1582, paying a visit in 1576 to Plantin. In 1593 he was appointed to the custody of the books of the king, Henry IV., succeeding Jacques Amyot, the translator of Plutarch's "Lives," and of the "Daphnis et Chloe" of Longus. In his new post De Thou was able to save for the nation the library of Catherine de' Medici. Swift says that "some know books as they do lords; learn their titles exactly, and then brag of their acquaintance"; and there are always book-collectors of this sort. But De Thou was a book-lover of another kind; he knew his books, he used them well, he lived with them; and to-day he lives

"OFFICE DE LA SEMAINE SAINTE." BOUND BY N. PADELOUP. (FROM "REMARKABLE BINDINGS IN THE BRITISH MUSEUM," BY HENRY B. WHEATLEY.)

by the fame they have given him since he died in 1617. It is the love of books which has saved his name from oblivion, as M. Clément de Ris declares in his pleasant gossip about the "Amateurs d'Autrefois." "Distinguished magistrate, remarkable writer, historian of rare merit, statesman of exceptional common sense and of great foresight, what survives is the bibliophile. Who remembers that he took part in the abjuring of Henry IV., or that he was one of the most active negotiators of the Edict of Nantes? No one. Who reads the 'History of his Time?'—'that grand and faithful history,' as Bossuet called it. Again, no one. But ask any petty dealer in second-hand books what the emblem was with which he marked his books. He will answer you without the error of a letter. A collector, if he have but an elevated taste, is moved by respect for the past; he seeks the driftwood of time, which the present despises. The future pays the debt of the past"—and hands the collector's name down to posterity.

It was toward the end of the reign of Charles IX., after the death of Grolier (1565), that we find the first specimens of a new style. The side of a book was now covered by a framework of small compartments formed by double-filleted bands. At first these compartments were

empty, and Henry III. added to the barren severity of the design by filling the central space with a stamp representing the crucifixion. As Henry II. put the bow and arrows and triple crescents of the unchaste Diana on the royal bindings, so the somber Henry III., taking life sadly because of his lost love, Mary of Cleves, was fond also of a powder of tears and of death's heads scattered through the lilies of France. So solemn a style of decoration did not tempt his sister Margaret of Valois, afterward known as Queen Margot, and she preferred a powder of marguerites, each flower being framed in an oblong wreath.

For her, also, the cold austerity of the geometrically distributed compartments was done away with, and, while the same regular framework was retained, all the hollow spaces within and without the figures, formed by the double fillets, were filled with

THE LITTLE BRANCHES.

twisting branches, with spiral vines, and

with a multitude of little tools, light, airy, and graceful. These are the bindings which we find on the best of the books of De Thou. These are the bindings which are credited to the Èves, Nicolas and Clovis, two brothers who were the royal binders from 1578 to 1627. Whether or not they are entitled to the credit for the many beautiful bindings rather rashly attributed to them is one of the many moot points in the history of the art. These are the bindings now known as "fanfares," because that was the chief word in the title of an old book which Thouvenin bound in this style for Charles Nodier, during the Restoration. These are the bindings which served as models to that greatest of binders, who is known to us as Le Gascon, and who, so M. Marius Michel surmises, may have been a pupil or apprentice of the binders who worked for De Thou.

TOOLS USED
IN THE
"FAN-
FARES."

AFTER Grolier, perhaps Le Gascon is the foremost personality in the history of bookbinding. Grolier was not a binder himself; he was a collector, an art-patron, and when applied to him the term has no taint of the offensiveness which may attach to it nowadays; and, as it happens, we do not know the names of any of the artist-artisans who worked for Grolier, and to whom we owe the many masterpieces of the most magnificent collection ever yet attempted. Le

Gascon was himself a binder, but this is all we know about him. We do not know for sure whether or not it was he who covered the immortal "Guirlande de Julie"; we do not even know whether Le Gascon is his patronymic, or a mere nickname. Probably it is a sobriquet recalling his Gascon origin. M. Léon Gruel, in his "Manuel Historique et Bibliographique de l'Amateur de Reliure" (Paris: Gruel & Engelmann. 1887),—one of the most valuable of many volumes the present writer has placed under contribution in the preparation of these pages,—reproduces a binding signed by Florimond Badier (now in the National Library in Paris), and draws attention to the extraordinary resemblance in style which this binding bears to the bindings generally ascribed to Le Gascon. M. Gruel ventured the hypothesis that Florimond Badier might be the real name of the man whose nickname was Le Gascon. But M. Marius Michel, a practical binder himself (as is M. Gruel), in his book about "La Reliure Française" (Paris: Damascène Morgand et Charles Fatout. 1880),—another book to which the writer owes more than he can here confess,—M. Marius Michel had declared this binding of Florimond Badier's to be the handiwork of some clumsy imitator of Le Gascon, who had copied even the dotted outline of a human head which some have taken to be in some sort the trade-mark of the master. Who shall decide when decorators disagree? If a layman may hazard an opinion, it would be to the effect that although Florimond Badier might well be the true name of Le Gascon, yet the binding in question is not equal to the best of those accredited to the supreme artist of bibliopegy, those marvels of taste and splendor wherein the utmost luxury of gilding is never allowed to become vulgar, tawdry, or even glaring.

That Le Gascon is the foremost of all the artists who have embellished a book-cover is the verdict of his fellow-craftsmen. M. Gruel does not yield to M. Marius Michel in admiration of the magnificent masterpieces which came from the hands of Le Gascon. In all that M. Marius Michel has written about Le Gascon there is a glow of devoted enthusiasm. Mr. William Matthews is as swift in praise; and Mr. Cobden-Sanderson, when I asked him whom he held to be the greatest of all binders, did not hesitate, but answered promptly and positively, "Le Gascon." As Keats has been called the poets' poet, so is Le Gascon the bookbinders' bookbinder. But it does not need the trained eye of the expert to discover his surpassing charm, the richness of his gilding, and the unfailing delicacy and distinction of his design. Yet the most characteristic of his bindings differs but little from those of his im-

mediate predecessors—in so far at least as the mere structure and outline of the decoration are concerned. It was only by slow degrees that he developed his own individuality, and to the end of his career he employed the formal framework of the fanfares whenever he had to do a binding of exceptional importance.

Now and again, however, he preferred a

placed the simple fillet. The full-face device of the Aldine bindings was first azure, to lighten it a little, and then hollowed out, leaving it in outline only; and now it was made still airier, when it appeared only as a string of tiny gilt points. This dotted line is the characteristic of Le Gascon, and it gives their incomparable brilliancy to the best of his bind-

"ARIANUS, DE VENATIONE." PARIS, 1644. IN QUARTO. (IMPRIMÉS EXPOSITION, NO. 619. PLAT RECTO.)

Bound in the arms of Gaston of Orleans, which is often attributed to the mysterious Le Gascon, but which is Eve's, nevertheless. This piece is curious in this respect, that it marks the transition between the flowered decoration of Eve and the pointed foliages of Le Gascon. (From "Les Reliures d'Art à la Bibliothèque Nationale." By permission of Édouard Rouveyre.)

less complicated design, and he used a lace-like border and a broad rectangular framework, boldly tooled, and almost filled with a dazzling array of coruscating spirals, which set off the red leather of the smaller central space, containing generally the coat-of-arms of the fortunate owner. It was only by degrees that he introduced what was almost his only innovation—tools in which a dotted line re-

ings. But it is merely one of the implements at the command of his skill and taste, and he would be almost as great an artist if he had not happened on this particular improvement.

M. Marius Michel thinks that Le Gascon in his youth must have been familiar with the best bindings in the library of De Thou. In his manhood he worked for Cardinal Mazarin, and it is worthy of note, as a proof of the mas-

TOOLS OF
LE GASCON.

tery of France in an art borrowed from Italy, that when Cardinal Mazarin (himself an Italian) was in Rome in 1643, he sent to Paris for workmen to bind his books. Barely a century and a quarter earlier, Francis I. and Grolier had been forced to import Italian binders into France. Perhaps Le Gascon lent the cardinal some of his own apprentices. That he had assistants is obvious. No one man could satisfy the demands of the book-lovers of his time. M. Marius Michel thinks that he can pick out certain bindings—four volumes of Thomas Aquinas, for example, now in the Mazarin Library—which were the work of these apprentices, as he believes that he can discern in these books the tools of the master, but not his skill of touch. The tools of Le Gascon are graceful in themselves, but to use them as he used them — *ne fait ce tour qui veut*.

III.

PADELOUP AND DEROME.

WHEN Louis XIV. succeeded to the throne of France, and began the long reign which opened in splendor and ended in sadness, probably Le Gascon was still binder to the king; but the influence of the greatest of bibliopgraphic artists diminished as the years went on, and as the proud king sought to dominate every art, and to center all things in himself as the sun from which all things were to draw light. The reign of Louis XIV. was the golden age of French literature; it was but the over-gilt age of French binding. The characteristic of the art toward the end of the long rule of the Grand Monarch was a brutal luxury of heavy gilding. The king's own books were bound in a fashion as leaden as the architecture of Versailles, and as expressive of the royal pride. The royal arms, exaggerated out of all proportion, were stamped on the center of the side of a book, and they were girt about by a broad border, equally emphatic and equally dull. These borders were often imprinted by a roulette, a wheel on which a pattern was incised in the same way that the cylinder-rings of the Egyptians were engraved. The use of a roulette, repeating the same motive indefinitely as it is rolled over the leather, is indefensible; it is the negation of art; it destroys the free play of hand which is the very essence of handicraft.

The fashion set by the king was copied by

"ARIOSTE, ORLANDO FURIOSO." VENICE, 1584. BINDING OF DEROME THE YOUNGER. EIGHTEENTH CENTURY. (BY PERMISSION OF DAMASCENE MORGAND.)

the courtiers, and on most of the books bound under Louis XIV. we find little more than a border around the margin, and a coat-of-arms in the center. Sometimes a roulette was prepared broad enough to imprint a heavy wreath three inches in width; sometimes there would be two or three borders one within the other, the corners forming themselves as best they could, haphazard and happy-go-lucky. Sometimes huge and heavy corner-pieces were employed. Sometimes even the whole side of a book was engraved in the same heavy style, thus reducing the binder's task almost to the level of a day-laborer's. When the public accepts a mechanical and lifeless substitute for artistic and individual handicraft, the result is a deadening of the artistic impulse, and a decadence into the inertia of commonplace.

Possibly we may fairly charge this decline to the inexorable self-assertion of the king; certainly there was no great bookbinder in France while Louis XIV. was on the throne, and no great book-lover. His reign is not distinguished by the development either of a Grolier or of a Le Gascon. Yet it was while he ruled that, under the influence of the traditions

THREE SEVENTEENTH-CENTURY BORDERS.

bequeathed by Le Gascon, the tools known to book-lovers as the *fers du dix-septième siècle*, these seventeenth-century tools, were brought into use; and these lovely tools continue in use to this day, and form the basis of the stock in trade of the best binders of the nineteenth century. And in the reign of Louis XIV., also, by sheer reaction against the leaden showiness of the fashion set by the king, there arose the simple style of binding called after Jansen, and adopted by the sect of Port-Royal. The Jansenists bound their books soberly, with no gilding whatsoever on the sides, relying on the simple beauty of the leather in which their volumes were clad, and decorating only the inside border—the “dentelle,” as it was called, from its resemblance to delicate lacework. These under-decorated books were better bound, in a technical sense, than those of an earlier day, however much more beautiful the older books were to the eye. The books bound by Boyet, for example, toward the end of the seventeenth century, were more solidly prepared, more carefully sewn, more cautiously covered, than those sent forth from the workshops of his immediate predecessors. The Boyets, one of whom in 1733 was binder to the king, kept alive the traditions of Le Gascon; and although they were not encouraged and sustained in their more artistic endeavors, as their indisputable skill deserved, yet they are the bridge from the days of Le Gascon to those of the Padeloups and the Deromes.

Shortly after the death of Louis XIV. was produced one of the most remarkable bindings in the history of the art—the “Daphnis et Chloe” of 1715, which is adorned with the arms of the regent, and which was recently in the Quentin-Bauchard collection. Its chief characteristic is that it is a mosaic—that it has a polychromatic decoration formed by inlaid leathers of various colors. The colored bindings of Grolier’s time owed their varied tints to bands of paint, and although there had been now and again attempts at inlaying, there had been no such bold effort as this “Daphnis et Chloe,” attributed generally to Nicolas Padeloup, one of a long family of binders, existing for more than a century and a half. A binding in mosaic of the regency, or of Louis XV., is generally credited to Padeloup, just as a picture with a white horse is often ascribed to Wouwerman without further warrant. The decoration of the “Daphnis et Chloe” was obviously inspired by the designs of the contemporary potters.

And here occasion serves to say that the interdependence of all the decorative arts, their varying influence one upon the other, can be seen in the history of bookbinding, perhaps, more clearly than anywhere else. The modern

art of bookbinding began boldly in the fifteenth century in Venice, which had close relations with the Orient, and to which many Greek and Arab workmen had been attracted, bringing with them their theories and habits of decoration. Geometric designs of Arabic origin are abundant on all the objects made by Venetian handicraftsmen at this time, especially on the fragile glassware for which the city of islands is still famous; and M. Marius Michel reproduced a decorative band taken from the tiles which adorned the interior of a mosque in Constantinople, and applied also the Venetian embroideries, then given as a model in a volume of Andrea Guadagnino, promptly copied by the Italian bookbinders, and soon borrowed by their French brethren.

At first, very naturally, the decoration of the outside of books was influenced by the decoration of their insides, and we find bindings the design of which was obviously suggested by the rich and lavish embellishment of medieval manuscripts, and others adorned with patterns modified but slightly from the elaborate typographic ornaments of the early printers. The Aldi were binders as well as printers, and the same devices decorated their noble folios both within and without. Geoffroy Tory, the author of “Champ Fleury,” who reformed the art of type-founding and brought about the abandonment of black-letter, was a printer who was also a binder. He is supposed to have worked for his contemporary, Grolier. Mr. Story makes Raphael declare:

It seems to me

All arts are one—all branches on one tree,
All fingers, as it were, upon one hand.

The solidarity of the decorative arts, at least, is indisputable. Even the casual observer cannot but note the hints of design borrowed and lent, and paid back with interest, and borrowed again. Under Louis XIII., for example, when lace-making flourished, the bookbinders took over not a few of the lace-makers’ designs, modifying them to suit the conditions of the bibliopegic art. Perhaps it is not fanciful to see something of the formal grace of the stately gardens of Le Nôtre reflected in the covers of the sumptuous tomes of Louis XIV., influenced for the worse, as these were, by the heavy hand of Lebrun.

As we turn the pages of M. Marius Michel’s instructive and interesting essay, we note that Le Gascon used tools one design of which was suggested by contemporary embroideries; that Padeloup, with a duller sense of fitness, found models in ecclesiastical stained-glass; and that Derome was influenced by the remarkably varied and skilful work of the master iron-workers of the day.

The close interaction of the decorative arts is made obvious again when we find experts like M. Marius Michel seeking for the source of certain of the florid designs attributed to Padeloup in the painted pottery of the regency, and in the symmetrically disposed parterres of the great gardens of Louis XIV. and Louis XV. Perhaps the mosaics of Padeloup (or at any rate the turning of his attention to mosaic) are due to the example of Boule, who died only in 1732, and who carried to the highest perfection the art of incrusting in wood designs of gold and of brass, of shell and of ivory.

The main defect of Padeloup was an insufficient sense of form. Some of these floral designs in mosaic are as unrelated to the shape of the book they decorate as though they had been cut out of an embroidered silk or a printed calico. Some of them have a monotonous repetition of the same framework, as though they were torn from a roll of wall-paper. Form and symmetry, composition and balance—these are essentials of decorative art. Most of Padeloup's designs are fragmentary; they lack unity of motive; they have no center to which the rest of the decoration is duly subordinate. Some of them, less pretentious than others, have a quality of their own. Beyond all question they are characteristic of their period. In the main they are heavy, and they lack skill, style, grace. Style they lack most plentifully, for Padeloup was as eclectic as a quack-doctor. He would mingle in the cover of any one unfortunate book tools and methods borrowed from the whole history of the art.

I confess to having fallen into a popular error here, in speaking of Padeloup as though he were a single entity, despite the fact that there were, first and last, twelve of the Padeloups. And of the Derome dynasty, which for a while was contemporaneous, there were no less than

EIGHTEENTH CENTURY TOOLS.

fourteen who were more or less known as binders. Perhaps the greatest of these was Nicolas Denis Derome, who was received master in 1761, and who is generally known as the Younger Derome. The Younger Derome was a rapid binder, a merit most rare in those who practise this craft; and he was an honest workman, loyally following the mandates of his customers. His bindings have solidity and substance. But he was too fond of the knife, and, like a cruel surgeon, too careless in its use. He cut to the quick, and many a beautiful book has died under his treatment. Margins and edges were shorn away with merciless persistence; no tall copies ever left his shop. Dibdin cries out against Derome again and again, and we cannot but feel that the cutting-iron of the binder had pierced the soul of that traveling book-lover. The Englishman declares that a folio of "Priscianus," printed by John of Spire in 1470, had lost a head and shoulders, and that a good half of the miniatures are cut into at the top. This is a crime for which the guillotine itself is the only fit punishment.

As it is the custom to attribute to Padeloup all the mosaics of the period, so to Derome are credited

A DEROME BORDER.

all the bindings whereon we see the *fer à l'oiseau*, a gracefully cut tool wherein a tiny bird with outstretched wings gives life and vivacity to the decoration of the book. In Derome's hands this decoration consisted generally of a dentelle, a lacework border obviously modeled on the marvelously easy and varied wrought-iron of the French smiths of the middle of the eighteenth century. Nothing could be at once lighter and firmer, and of its kind more charming, than the best of the open-work borders of Derome, solidly tooled on broad morocco. And the motives, borrowed from the artist-artisans who were forging the gates and making the locks of the French connoisseurs of that century, are capable of infinite variation. Probably there are no two bindings of Derome's exactly alike.

I confess that I have here praised Derome more warmly than do the French critics at whose feet I sit, and whose learned taste I envy. Derome's work seems to me to be preferable at all points to Padeloup's; easier, more graceful, more appropriate—in a word, more decorative. After Padeloup and Derome the eighteenth century had no binder in France over whose work we need dwell now. The art was getting clumsy and sluggish. Strangely enough, the vignettists, even at the height of their vogue, did not inspire those who decorated the outsides of the volumes, the insides of which they had illustrated with such dainty and delicious fantasy. Eisen was a friend of a

binder named Dubuisson, but the friendship had no appreciable effect upon Dubuisson's handiwork. Gravelot designed the tools to be used on the sides and back of the volumes of his "Contes" of La Fontaine (1762), of his Racine (1768), and of his Corneille (1771); but his hand seems to have lost somewhat of its cunning when it undertook a task for which it had no training. At least so M. Marius Michel thinks, and his is a trained taste which a layman may wisely follow. Cochin did not suggest a chaste disorder to those who bound the books he had adorned with his delicate plates; nor did Moreau—and if a French decorative artist of the last century could not be stimulated by Moreau, then the effort was hopeless.

It is not a treatise on bookbinding that I have here attempted, or a history of the art, or even a set and formal essay. All I have sought to do is to jot down a few stray notes—to gossip about those who have helped to make the Book Beautiful. What I have tried to show in my rambling paragraphs, and in the illustrations chosen to accompany them, is the sequence of styles, and the way one style was evolved from another, and their relations one to the other. At first we find almost simultaneously the Aldine and the Maïoli, the Grolier and the Henry II., styles. Then followed the *semé* (which probably suggested the wreaths), the fanfares of the *Èves*, and the brilliant fantasies of Le Gascon. Finally came Padeloup with his polychromatic mosaics (some of them deriving their monotonous framework from the wreaths and the *semé*), and Derome with his vigorous borders. And as I wandered down the history of bookbinding, I have tried to show that the key to any understanding of the succeeding styles is to be found in a study of the tools of each epoch.

That the names of the gifted bookbinders

and devoted book-lovers which came to the end of my pen in the course of my stroll down the vista of bibliopegy were nearly all French is not wilful on my part, but inevitable. The art of bookbinding was cradled in France, even if it was born elsewhere, and in France it grew to maturity. Italy shared the struggle with France in the beginning, but soon fell behind exhausted. Germany invented the book-plate to paste inside a volume, in default of the skill so to adorn the volume externally that no man should doubt its ownership. England has had but one binder—Roger Payne—that even the insular enthusiasm of his compatriots would dare to set beside the galaxy of bibliopægic stars of France. The supremacy of the French in the history of this art is shown in the catalogues of every great book sale and of every great library; the gems of the collection are sure to be the work of one or another of the Frenchmen to whose unrivaled attainments I have once more called attention in these pages. It is revealed yet again by a comparison of the illustrations in the many historical accounts of the art, French and German, British and American; nearly nine tenths of the bindings chosen for reproduction are French. And, after enjoying these, we are often led to wonder why a misplaced patriotism was blind enough to expose the other tenth to a damaging comparison. These remarks, of course, apply only to the binders whose work was done before the beginning of the nineteenth century. Of late years the superiority of French binders has been undisputable, but it has not been overwhelming. There are at present in Great Britain and in the United States binders whom no one has a right to pass over in silence, and about whom I hope to be allowed to gossip again in these pages; but in the past it was France first and the rest nowhere.

Brander Matthews.

A DEROME BORDER.

THE KEARSARGE.

IN the gloomy ocean bed
Dwelt a formless thing, and said,
In the dim and countless eons long ago,
"I will build a stronghold high,
Ocean's power to defy,
And the pride of haughty man to lay low."

Crept the minutes for the sad,
Sped the cycles for the glad,
But the march of time was neither less nor more;
While the formless atom died,
Myriad millions by its side,
And above them slowly lifted Roncador.

Roncador of Caribee,
Coral dragon of the sea,
Ever sleeping with his teeth below the wave;
Woe to him who breaks the sleep!
Woe to them who sail the deep!
Woe to ship and man that fear a shipman's grave!

Hither many a galleon old,
Heavy-keeled with guilty gold,
Fled before the hardy rover smiting sore;
But the sleeper silent lay
Till the prey and his prey
Brought their plunder and their bones to Roncador.

Be content, O conqueror!
Now our bravest ship of war,
War and tempest who had often braved before,
All her storied prowess past,
Strikes her glorious flag at last
To the formless thing that builded Roncador!

James Jeffrey Roche.

"THEIR EXITS AND THEIR ENTRANCES."

THOSE who had been at luncheon had gone away, and the first of the usual Sunday-afternoon throng had not appeared.

"I thought, Florence," said Miss Valence, seating herself, after she had kissed her friend, and the servant had shut the door,

"that at this hour I might find you alone."

"Yes, Winifred. I don't know what I am going to do about it," sighed Mrs. Outton; helplessly. "I never have any time. All the week it is some one, and when it is n't some one, it is something. I have a few *entr'actes*, as it were; just moments between things, as it is now, but nothing else."

"I understand and pity you," assented Winifred; "a poor, hard-worked woman of the world."

"So are you," retorted Mrs. Outton; "and do you have such an easy time of it?"

"Oh, I!" exclaimed the girl. "I am not married, and a personage."

"But still you are quite as much a slave to others—"

"Yes," sighed Winifred; "there is a great deal that one must do, and I get so tired of it. There must be something else."

"Ah!" mused Mrs. Outton, "that 'something else'—that fair, glittering something that is always troubling the minds when it is n't troubling the hearts of womankind. What a nuisance it is—"

"But there must be something else," insisted the girl.

"Certainly," laughed Mrs. Outton; "there always is. It's the Golden Fleece after which we are always setting out, the Grail for which we are always going in search. But what particular form does that 'something else' take with you at the present moment?"

"I don't know," answered Winifred, weakly.

"Are you quite sure?" demanded Mrs. Outton. "You are dissatisfied."

"I am sure of that," said Miss Valence, promptly.

"You want—want, and don't know what you want."

"I am twenty-six," said the girl, abruptly, "and I am tired of doing just what I have done—always."

"Ah!" said Mrs. Outton, softly, "who is the man? Really, this seems serious?"

"There is n't any man—honestly," replied the girl, quickly; and then she added, with a

slight flush of color on her pale fine face: "Frankly, I suppose that is the matter as much as anything—that there is n't any."

She rose impatiently, and with an abruptness very unusual with her leaned her elbow on the mantel, and stood looking into the fire.

"Don't kick that log," said Mrs. Outton; "you 'll make it smoke. Now tell me more."

"There is n't any more to tell," continued Winifred, wearily and a little sullenly.

"So the S. S. S.—" began Mrs. Outton.

"What do you mean?" interrupted the other.

"Why, don't you know what you are called—S. S. S., 'the Stupendous Social Success'?"

"Yes. That was some time ago; I had forgotten—and I thought it was so amusing then," commented the rebellious young woman, again viciously kicking the end of one of the sticks of burning wood.

"And all your glories are as nothing now?"

"Yes. Is n't it silly that I cannot be satisfied with what I have? But really I do not know that it is, after all. Year after year I have gone on doing the same thing—and I am twenty-six."

"And there is n't any man?" prompted Mrs. Outton.

"Yes," said the girl, with another quick flush.

"Why not recognize the truth? I am sure that if some one were in love with me with whom I was in love then I should be happy."

"But there have been very many in love with you."

"And what good was that," said the girl, contemptuously, "if I was n't in love with any one of them? When you are young—when you are just out—it is amusing enough to have almost any man in love with you; but after you have gone on a bit, there is no earthly use in it; it is only an annoyance—unless you can be in love with him."

"And you never have been in love?" asked Mrs. Outton.

"No; never," answered Winifred, deliberately. "I am sure, and I should so like to be. It seems to me that if I could it would make me feel that I had a reason for being—that it would justify the past, and satisfy the future. Does what I say seem so very strange?"

"No," said Mrs. Outton.

"Let her say what she pleases," continued Winifred, "it's what every girl who's worth the flowers that have been sent to her really expects. Of course, when you have just started you are distracted by other things; you are

dazzled a little bit, and dizzy. Then, too, you always insensibly expect that it is coming. But at twenty-six,—when it has not come,—you begin to think and to question."

"And you have never seen any one who made you think—it was coming?"

"No," replied Winifred. "And this is n't because I am different from any other girl. I only ask to meet some one who is strong, and brave, and truthful, and true—"

"Is that all?" asked Mrs. Outton.

"And—and sympathetic," continued Miss Valence.

"Yes; and sympathetic," said Mrs. Outton, with an inflection that clearly indicated that the gist of the whole matter had, in her opinion, at length been reached.

"Yes; I suppose that is it—and sympathetic," sighed Winifred.

"In short, you have n't found the other half of the apple," observed Mrs. Outton.

"What do you mean?" asked the girl.

"Has n't any one told you that *yet*?" exclaimed Mrs. Outton in astonishment. "Why, men always do it; it's part of their stock in trade. But I understand; I imagine they generally keep it for married women. Well, you must know, my dear, that once upon a time,—long ago,—in India, men and women grew on trees like apples, and, what is singular, each man and each woman grew together. That was all very nice, but one day some god—some Vishnu, or Siva, or somebody—felt particularly mischievous, so he gathered all the apples, and proceeded to cut them in two, and then shook up all the halves in a basket, the result being that each half has gone about the world searching for the other half ever since."

"Yes?" said the girl.

"It is a pretty tale," commented Mrs. Outton, meditatively; "it has been told to me at least three times by different men in the last two months."

"I see what you mean," said Miss Valence, wearily.

"But there must be some reason for this," Mrs. Outton went on. "Something has happened."

"Nothing has happened," said Winifred. "If only something had happened I could understand; but it came suddenly,—the night before last,—and I have been blue and bothered."

"The night before last?" repeated Mrs. Outton.

"I was at the opera,—in the Auchenleck box, and you know they are not exciting,—and little Prince Rittenburg would insist upon showing me how well he could speak English, and I was bored, and it was the third act of 'Faust'—"

"Ah," murmured Mrs. Outton.

"Florence," interrupted Miss Valence, "I

shall not be daunted by your very opprobrious 'Ah.' 'Faust' always does affect me, and that night it set my heart beating—not to say the blood running through my veins—as usual. I began to think: seven years had I been out, and seen all that in a young-lady-like manner it was possible for me to see of the world, and this was all there was of it, that I should be doing in my twenty-seventh year exactly what I had been doing in my twentieth. I am going to retire—as gracefully as possible. Either I am a failure or life is a failure, but which does n't make the least difference; the result is the same."

"And what do you purpose to do?"

"I thought," said Winifred, a little diffidently, "that I should study kindergartens in Chicago."

"You!" exclaimed Mrs. Outton.

"Yes," the girl hurried on; "I know that it is horribly commonplace and usual, but I can't think of anything else. I don't care for very small children, but I am sorry for them, and perhaps I should do."

"O Winifred," said Mrs. Outton, "it would be so dreary for you!"

"No," said the girl, evidently trying to be cheerful. "Perhaps you would ask me to dinner sometimes, and I should have one decent frock. Oh, if I were rich it would be different; but I am horribly poor, and the alternative—"

"There is an alternative?" inquired Mrs. Outton.

"Yes," shuddered the girl.

"And the alternative offers—*solid* attractions."

"Yes," said the girl in a low tone.

Mrs. Outton was silent for a moment; then she looked up quickly at her companion:

"Winifred," she said, "you have nothing to do, and I want you to stay here until four o'clock."

"Certainly," assented the other, but with an accent of astonishment.

"And you are not going to carry out this preposterous kindergarten scheme at once?"

"I shall not begin this afternoon," answered Miss Valence, smiling sadly.

"You know what I mean—not for some little time."

"I have two visits to make this week and the next—to the Chetwodes's at Cedarhurst, and to the Kempschotts's at Tuxedo. They both have house-parties, and I have promised."

"Where do you go first?" asked Mrs. Outton, eagerly.

"The Chetwodes's this week, the Kempschotts's the next," replied Miss Valence.

"How very provoking!" cried Mrs. Outton, disappointedly.

"Why?" demanded Winifred.

"Oh, nothing," answered the other.

Here Outton entered the room, and, having spoken to Winifred Valence, stood irresolute.

"Sidney," said Mrs. Outton, "you look like a person going through the agonizing process of making up his mind."

"I want to see Cuthbert Clarges," he replied, "and I don't know where to find him."

"Then," said Mrs. Outton, "I don't mind in the least telling you that your own fireside

"And I 'll come back," said Outton, going out.

Left alone, both women were silent for a moment.

"O Florence, Florence," murmured Winifred, at length, "it's fearful to have made such a failure of my life, and when I thought that I knew it all!"

"I know," said Mrs. Outton, "that you have always tried to be an artist in existence —"

DRAWN BY W. L. METCALF.

"'I THOUGHT,' SAID WINIFRED, A LITTLE DIFFIDENTLY, 'THAT I SHOULD STUDY GARDENING IN CHICAGO.'"

will be the very best place. He is to be here at four exactly."

"Oh!" exclaimed Winifred, "that is the reason —"

"Yes," interrupted Mrs. Outton; "that is the reason: I want you to meet him; you might like him."

"The best fellow in the world," Outton assseverated warmly, "and with the warmest heart, in spite of his apparent coldness and stiffness."

"I have heard about him," said Miss Valence; "he has not been in the country for a long time."

"Only got back a month ago after being away years," said Outton.

"You *must* stay," said Mrs. Outton.

"I said that I would," assented Winifred.

"And then to come out this way! When I wanted my life to be a masterpiece, to have it come down to being merely a 'pot-boiler'!"

"How very trying," said Mrs. Outton, irrelevantly, "that Cuthbert Clarges should be going this week to the Kempschotts's when you are going to the Chetwodes's, and next week to the Chetwodes's when you are going to the Kempschotts's."

"Is he?" asked the girl, indifferently.

A servant entered the room as she spoke, and stood at the door with a note.

"Give it to me," said Mrs. Outton.

"It is for Miss Valence, madam," said the man.

"Really?" exclaimed Winifred, receiving the missive. "They knew at home, I suppose, that

"I was coming here, and sent it." She tore open the envelop hurriedly, and glanced along the lines. "What a pity, Florence—I can't wait! My Great-aunt Matilda is at the house, and wants to see me."

"Bother!" cried Mrs. Outton. "And I wanted you here so very much."

"Mama says that she cannot stay very long," continued Winifred, glancing at the note. "You know she is at our place up the river, and she has to catch a train."

"The very thing," responded Mrs. Outton. "What o'clock is it now? Three. Go immediately; you can easily get back by four."

"Perhaps," said the girl.

"You *must* come," urged Mrs. Outton.

"Very well," said Winifred, rising. "But I must hurry now."

After Miss Valence had hastily departed, Mrs. Outton remained for some time gazing at the fire; then she rose and moved uneasily about the room. With a dissatisfied air she picked the withered petals from some flowers, looked at a book here and there, and finally, taking up a magazine, returned to her place, and began to cut the leaves.

"Mr. Clarges," announced the servant, slowly opening the door.

The knife fell from Mrs. Outton's hand, and she glanced quickly at the clock and then at a young man who immediately entered.

"I hope I have not done wrong," he exclaimed, advancing.

"I sincerely hope not," said Mrs. Outton, severely. "Still, I am not by any manner of means sure."

"I mean in coming now instead of later. I knew that you were always at home all Sunday afternoon, and if I could n't have come at this time I should have had to give up coming at all."

"But I thought you said that you were coming at four?"

"I did," he said, in evident distress; "but let me explain. Jack Seaton, you know, is a very ill man—I have been unable to see him since I came back, and he's my oldest friend. Just a few moments ago, I got a note from his physician, saying that I could see him at four and at no other time, and that he believed that it would do him the greatest possible good. I knew that I should have to go almost as soon as I told you, but I was n't going to lose a chance of seeing you, and therefore I ventured to call so much earlier."

"But I wanted you at four," said Mrs. Outton, plaintively.

"I imagined that it would make no difference; but if I am in the way, I'll run off now."

"No," she said; "it is n't that I don't want you now, but that I wanted you particularly *then*."

"As I go back so soon, and might not have another chance, I came," he pleaded.

"Go back so soon?" repeated Mrs. Outton.

"Yes," he replied; "I go to the Kempsschotts's, as you know, this week, and the Chetwodes's the next, and then I sail immediately."

"But I thought you were going to remain a long time—all winter," she said disapprovingly.

"Please don't speak to me in that way. I really would do better if I could. I came back with the very best intentions. I have tried to make it go, but it's no use."

"What is the matter?" she asked severely.

"There is no place for me," he replied. "I have been wandering around the world so very long that I come back only to find myself completely cut off from everything. All I knew before are either married, divorced, or dead, and have new interests in which I am entirely 'out.' I have been torn up for so many years that I find I cannot strike root again."

"And you don't mind?" asked Mrs. Outton.

"But that is just it," he answered very seriously. "I do mind a great deal. I am tired, and I want a change."

"You should fall in love," said Mrs. Outton. "I don't mean in the way you have probably always been doing it, but really, *irrevocably*—with one woman."

"I am only too eager and anxious," said Clarges, decidedly. "I have felt it coming on for some time—an attack of creeping sentiment that renders me quite useless. The symptoms have been noticeable for several months, but the full effect surprised me only the night before last."

"At the opera?" suggested Mrs. Outton.

"Yes," he answered; "but how do you know?"

"Curious, is n't it?" she said, laughing.

"They were giving 'Faust,'" he continued, "and the music made me think and feel. I was with the Kerchevals, and they must have found me stupid enough. I sat there dreaming. I don't know what it was, but I seemed to see the past in a different light, and the future—in no light at all. It was so very dark and cheerless. You said I should fall in love: if only there were a Marguerite—"

"With modern improvements," corrected Mrs. Outton. "You never could endure a little middle-class German maiden."

"Yes," he said doubtfully; "I suppose that I do mean some one a little different; but I do mean some one as real as Marguerite—as tender and true and impulsive, and withal distinguished—"

"Why not say Juliet at once," suggested Mrs. Outton. "She was a swell, and yet she had a heart."

"Yes; Juliet," assented Clarges, eagerly.

"And if there were such a one," asked Mrs. Outton—"a Juliet with a brain as well as a heart, as anxious to be won as Capulet's daughter, what then?"

"It would solve every problem for me," he replied. "I would not rest until she listened to me—until with ring, wedding-march, and all, I had made her mine."

"Ah," murmured Mrs. Outton, reflectively.

"You may laugh at me," he continued; "I laugh at myself. It is all so very different from anything that I ever expected to feel." He paused a moment, and then went on rather shamefacedly: "I'm pretty rich, you know,—not that I have anything to do with that,—and it seems to me that if I only knew how I could do more with the money than I have—I think that if there were only some nice, bright girl who would be willing to help me, that I might be of some use—do my fellow-beings a little good—and—all that sort of thing."

His face was burned a deep brown, but as his words straggled, and "tailed" off ineffectively, it grew distinctly redder.

"Dear me!" exclaimed Mrs. Outton, solicitously, "what a very great pity!"

"What?" he asked.

"That you have got to go and see your friend. Now, if I asked you to do something for me, particularly, would you do it?"

"Certainly," he replied.

"Then," she said, "I will tell you what I want. You will not remain long with a man who is ill, and I want you to come back here at five."

"At five?" he repeated.

"Yes," she said; "I have a reason."

"I shall be delighted," he agreed. "And you are not disgusted with my maudlin state of sentimentality?"

"I think," she laughed, "that it does equal honor to your head and to your heart."

"And you don't dismiss me utterly from your consideration because I have wearied you with such a long description of the inadequacy of my existence?"

"I'm very glad you told me."

"There is no mistake about it; my life is incomplete; there is something lacking—"

"I thought it was somebody," she interrupted.

"Perhaps you are right," he said, rising. "You know the legend about the apples—"

"Oh, horrors!" cried Mrs. Outton; "and you too! However, I forgive you, as you have not tried to imply that I was the other half. Good-by for the present," she continued, holding out her hand. "And don't forget—at five exactly."

"At five," he said, kissing her fingers, and immediately departing.

As Clarges left the room, Mrs. Outton glanced

at the clock, and then, picking up the paper-knife, began vigorously to divide the still uncut leaves of the magazine. Across her smooth forehead was a small, soft fold—not a wrinkle—of thought, and her lips were pinched together firmly. For some time she was alone, the noise made by the knife as it tore through the paper being the only sound in the silent room; but as the three quarters struck, the door was again opened.

"Clarges not come yet?" said Outton, entering.

"But that is just it," she exclaimed, recklessly casting book and knife from her; "he has come and gone."

"Gone!" said her husband.

"I never knew anything so altogether maddening," she lamented. "Winifred Valence was here, as you remember, at three. I expected that she would stay, but she was called away by her bothersome old Great-aunt Matilda, so I made her promise to come back at four. At that time I expected Cuthbert Clarges; but what must he do but have a friend who is ill, and who sends for him, and can see him only at that hour! The result is that he arrives here five minutes after Winifred goes out."

"But what is the difference?" he demanded blankly.

"What is the difference!" she exclaimed impatiently. "Sidney, how stupid you are! They are both in a most unfortunate state of mind, dissatisfied and miserable,—you should hear them talk,—tired with what they have always been doing, and just pining for a change. He is going back to Europe, and she—just think of it!—Winifred Valence talks of 'kindergartening'."

"And you think that if they met—" began Outton.

"They are made for each other," asserted Mrs. Outton. "If they only came together it would be a case of love at first sight, and they are just living for something of the kind."

"And can't you do anything?" asked Outton.

"I have made Cuthbert promise solemnly that he would be back here at five, and when Winifred returns I shall keep her until then. Of course I could n't tell him why I wanted him, because that would have spoiled everything. If I had recommended her to him he never would have looked at her. Men have such a mania for *discovering* girls."

"Then it's all right," said her husband.

"It's nearer right than I thought it would be, for all that will be necessary will be for them to see each other." She was silent for a moment, and then she continued: "Is n't it strange the way the world is managed! Now here are two people who have been complaining bitterly to me this afternoon, and yet have happiness al-

most within their grasp, if they only knew it. I wonder if Fortune is often waiting for us around the corner without our knowledge. It is perfectly maddening to think that at any moment we may be throwing away the chance of a life, and not be in the least aware that we are doing it. And if we can't tell what is best to do, why do anything?—because when we are doing what may seem the very best, it may be the very worst possible; and if that is so, what is life anyway?"

"I say," cried Outton, appealingly, "don't! You make me quite dizzy. Do leave me something or—a somewhere."

"There is n't any," said Mrs. Outton, solemnly.

"And all because two people have missed each other in your drawing-room!"

"Such a thing is so upsetting—two people who would complete each other—"

"The two halves of the apple," said Outton, glibly. "I wonder if you've ever heard the little legend—"

"Heard it!" exclaimed Mrs. Outton. "I've heard nothing else. But really, I will not endure that from my own husband."

Both were silent for a moment.

"I am very cross and altogether disagreeable, I know," said Mrs. Outton, contritely; "but I am provoked. If one is to be thrown about like this one might as well be a mere molecule, or some speck of meteoric dust. What is human will and voluntary agency if fate can play us such tricks?"

"That is only the way it sometimes appears."

"You easy-going optimist, and what do you say about this case?"

"Are n't they going to see each other at five?"

"Yes," assented Mrs. Outton, unwillingly.

"And I'll come back again," said Outton, turning.

He had hardly taken half a dozen steps toward the door when it was opened, and the servant admitted Miss Valence.

"You see," she said, entering swiftly, "I'm in time. I am even before time."

"It's nice of you, dear," said Mrs. Outton, helplessly, "but it's no use."

"I am glad you've come," said Outton. "Florence is n't exactly satisfied this afternoon with the way that the universe is managed. I've done what I could to say a good word for it, but I don't appear to have been very successful."

"Don't you agree with me, Winifred?" demanded Mrs. Outton. "Is n't it perfectly humiliating to consider how much one is the creature of circumstance?"

"I have n't thought," said the girl. "Am I?"

"My dear," said Mrs. Outton, impressively, "we none of us can do anything; we just merely drift."

"Really," observed Miss Valence, "it has always seemed to me that I have managed my own affairs."

"You poor blind plaything in the hands of Fate!" murmured Mrs. Outton, pityingly.

"You see how it is," commented Outton; "Florence is in one of her despondent moods."

"But I did right to come?" asked Winifred.

"If you had n't," said Mrs. Outton, "I never could have forgiven you. I only meant that it was no use your being here on time. He has been here and gone."

"And I am not needed to amuse the distinguished stranger."

"But you are," said Mrs. Outton, quickly; "he is coming back again, and you must help me. There will be other people here, and I absolutely must have you."

"Oh, but," began the girl, "when will he be here?"

"At five," replied Mrs. Outton.

"Then it is quite impossible," said Winifred. "I ran away only because you were so decided about my returning, but I promised that I should be ready to go in fifteen minutes. Aunt Matilda is to stop for me as she drives up-town, and I have got to go—absolutely got to go and see that she gets off all right on her train."

"There," said Mrs. Outton, triumphantly; "what do you say now?"

"What do I say about what?" asked her husband.

"What do you say," demanded Mrs. Outton, "when the casual appearance of an Aunt Matilda—forgive me, my dear," she continued, glancing at Winifred; "I have as great a respect as any one for your very worthy aunt, but really she is not an exciting person. What do you say," she resumed, again looking at her husband, "when the innocent presence of a harmless old lady can be so important?"

"Aunt Matilda's presence—important?" said Winifred, blankly.

"Never mind what I am saying," commanded Mrs. Outton; "you do not know what I am talking about," and she added, again addressing Outton, "What do you say?"

"It's an accident," he answered.

"That is just it," she insisted. "And everything is an accident; and that being so, what is the use—and where are we, and why are we doing it—"

"Anything else?" demanded Outton.

Winifred stood looking from one to the other in evident perplexity.

"I'm sorry," she said, "that I can't stay."

"But you *must*," insisted Mrs. Outton; "I can't allow you to go. It would n't be right. I owe it to you to keep you by brute force, if necessary."

"It can't be done," said Miss Valence, decidedly.

"And you are going away to-morrow?" mourned Mrs. Outton.

"On a ten-o'clock train," answered Winifred. "The first thing in the morning."

"And to the Chetwodes's?" lamented her friend.

"Oh, no—no," said Winifred; "I forgot to tell you. All that has been changed since I left you."

"Changed?" inquired Mrs. Outton.

"Yes; the Chetwodes's have written me—you remember that I know them awfully well—that they would much rather have me on the following week, and so I am going to the Kempschotts's—"

"You are going to the Kempschotts's to-morrow?" cried Mrs. Outton, jumping up, and embracing Miss Valence excitedly.

"Yes," answered the girl.

"And you are going on to the Chetwodes's for the house-party there the week afterward?"

"Yes," replied the girl in evident astonishment.

"Thank goodness!" cried Mrs. Outton, fervently. "It's all right, and Aunt Matilda may come and take you away as soon as ever she pleases."

"She may be here at any moment," said Winifred.

"I don't care," continued Mrs. Outton; "it does n't make any difference now."

"I don't understand."

"Very likely. But that does n't make any difference either. You will some time, and that is quite enough. If you don't see yourself why I'm so delighted, then I'll tell you."

Faintly through the heavy windows could be heard the noise made by a carriage as it drove up before the house.

"There's the brougham now," said Winifred. "I must not keep her waiting—she always hates that, you know."

"But when am I going to see you again?"

"I don't exactly know," replied Miss Valence, pausing. "I won't be in town, except for a day, in two weeks." Then she added a little sadly, "If I am going away kindergartening—"

Mrs. Outton laughed merrily.

"Kindergartening, my dear!" she said. "I don't think that you will go kindergartening, and I am sure that I shall see you soon, and we shall have a long talk. And I am so glad," she concluded, impulsively kissing her astonished friend. "Now run along quickly, and don't keep Aunt Matilda waiting."

She hurried the girl out of the room with many protestations and endearments, and then returned to her husband, almost breathless.

"Well," he said, looking at her exultingly, "what do *you* say now?"

"I don't know," she replied; "I don't say anything. Is n't it all right?"

"But the principle involved?" he remonstrated.

"Oh, bother the principle involved!" she cried joyously. "Winifred is going to the Kempschotts's first, and that is much more to the point."

"And you take back all that you said about Fate?"

"I don't take back anything," she went on, rising and falling on her toes as she walked gaily across the room; "all I know is that they are going to be shut up first in one country-house for a week and then in another house for another—"

"And you think that will settle it?" said Outton.

"A country-house—just think!" she exclaimed—"of all places, and when they have so much in common—"

"Mr. Clarges," said the servant, abruptly opening the door.

Mrs. Outton had hardly time to glance at the clock before Clarges spoke.

"Mrs. Outton," he said, "how can I hope that you will ever forgive me for my very abrupt reappearance?"

"What is it now?" she asked.

"I could n't see Seaton, after all. He's better, but he was asleep, and they thought best not to disturb him, and therefore I came directly on here; but I shall have to go back immediately."

"It does n't make so much difference now," said Mrs. Outton, still intent upon the subject in her mind.

"Not so much difference?" observed Clarges, evidently a little puzzled.

"Oh, don't think I'm rude!" cried Mrs. Outton. "I was thinking of something else. Of course I'm glad to see you."

"How are you, Cuthbert?" said Outton, advancing. "You see, the truth is that Florence this afternoon has plunged rather heavily into abstractions, and what with taking the cares of Fate upon her shoulders, and playing after a fashion the part of a small *dea ex machina*, she is, to say the least of it, thoughtful."

"Don't let him make fun of me," interrupted Mrs. Outton, "for, really, I am awfully glad to see you."

"Please be," went on Clarges, "because I can stay only a moment, as I must run directly back to Seaton, and you know that he is away up-town. I came in only to say good-by. I knew that I should n't have another chance. I sail immediately after I have got through the visits I am going to make, and shall not be in town

more than an hour or two. As this is going to be farewell for a long time, I want to thank you and Sidney for all your great kindness to me."

"But perhaps it won't be farewell, after all," said Mrs. Outton.

"But it will be," he said. "I am really going. As I tell you, there is nothing to keep me here, and I shall just go back,"—he hesitated a moment, and then added with a certain weariness in his tone,—“and wander as I have always done."

"I don't believe it," she said.

"Yes," he maintained, holding out his hand; "there 's no other way for it. I can't stand it here with every one else with interests and homes and belongings—"

"I should be so sorry for you," she said, "if I were not sure —"

"It is n't," he interrupted, "a very cheerful lookout for me, as you may imagine—the same old round, the same old grind. But there 's no help for it, and—good-by."

"Good-by," she responded, smilingly shaking his hand.

"I 'm going with you to the door," said Outton, as Clarges retraced his steps across the room.

"Good-by, again," exclaimed Clarges, pausing at the threshold. "You 've been awfully good to me,—you and Sidney,—and I 'm going to write to you, and try to tell you all that I feel—"

"I firmly expect," maintained Mrs. Outton, "that you will not write, but that you will come yourself and inform us—that you think we have been nice people."

"I certainly should," Clarges replied, "if I was n't off the first thing in the morning for the Chetwodes's—"

"But," gasped Mrs. Outton, "I thought it was the Kempschotts's."

"Oh, that 's all been changed since I 've been away," he replied, carelessly. "I got a telegram from the Kempschotts's—you remember I know them very well—saying that the plans for the party were different, and therefore I am going to the Chetwodes's this week, and to the Kempschotts's the week after. Good-by."

WHEN Outton again entered the room, he did not speak, but went and stood before the window, with his hands deep in his pockets, looking out at the bright, quiet Sunday avenue.

"What do you say now?" said Mrs. Outton, at length.

Outton did not answer, and only thrust his hands deeper into his coat.

"I say," continued Mrs. Outton, "that it is a perfect tragedy."

"But how can it be," he urged, "when people have never seen each other—and nothing has happened?"

"I don't care," said Mrs. Outton, decidedly; "I maintain that it is a perfect tragedy."

George A. Hibbard.

LOVE AND MAY-TIME.

LOVE, gentle Love, I am weary of waiting!
Why hast thou lingered so long on the way?
Birds 'mid the boskage are wooing and mating:
It is May!

Cold was the Winter, with snow-plumy pinions,
Holding our hearts in his insolent sway;
Now he is gone to his icy dominions:
It is May!

Brooks down the hillsides are leaping and singing,
What makes their laughter so rollicking gay?
Why are the hedges with merriment ringing?
It is May.

Love, gentle Love, I would welcome thee gladly,
Yet far aloof from my roof dost thou stray;
I cannot sing, for my song would fall sadly:
It is May!

Love, gentle Love, bring me joy without measure!
Make me thy debtor this jubilant day;
Here is my heart in exchange for thy treasure:
It is May! It is May!

Nathan Haskell Dole.

THE DONKEY BOYS INSPECT THE "DEVIL'S CARRIAGE."

ACROSS ASIA ON A BICYCLE.

THE JOURNEY OF TWO AMERICAN STUDENTS FROM CONSTANTINOPLE TO PEKING.

I.—BEYOND THE BOSPORUS.

ON a morning early in April the little steamer conveying us across from Stamboul touched the wharf at Haider Pasha. Amid the rabble of Greeks, Armenians, Turks, and Italians we trundled our bicycles across the gang-plank, which for us was the threshold of Asia, the beginning of an inland journey of seven thousand miles from the Bosphorus to the Pacific. Through the morning fog which enveloped the shipping in the Golden Horn, the "stars and stripes" at a single masthead were waving farewell to two American students fresh from college who had nerved themselves for nearly two years of separation from the comforts of western civilization.

Our guide to the road to Ismid was the little twelve-year-old son of an Armenian doctor, whose guests we had been during our sojourn in Stamboul. He trotted for some distance by our side, and then, pressing our hands in both of his, he said with childlike sincerity: "I hope God will take care of you"; for he was possessed with the thought popular among Armenians, of pillages and massacres by marauding brigands.

The idea of a trip around the world had been conceived by us as a practical finish to a theoretical education; and the bicycle feature was adopted merely as a means to that end. On reaching London we had formed the plan of penetrating the heart of the Asiatic continent, instead of skirting its more civilized coast-line. For a passport and other credentials necessary in journeying through Russia and Central Asia we had been advised to make application to the Czar's representative on our arrival at Teheran, as we would enter the Russian dominions from Persia; and to that end the Russian minister in London had provided us with a letter of introduction. In London the secretary of the Chinese legation, a Scotchman, had assisted us in mapping out a possible route across the Celestial empire, although he endeavored, from the very start, to dissuade us from our purpose. Application had then been made to the Chinese minister himself for the necessary passport. The reply we received, though courteous, smacked strongly of reproof. "Western China," he said, "is overrun with lawless bands, and the people themselves are very much averse to foreigners. Your extraordinary mode of locomotion would subject you to annoyance, if not to positive danger, at the hands of a people who are naturally curi-

ous and superstitious. However," he added, after some reflection, "if your minister makes a request for a passport we will see what can be done. The most I can do will be to ask for you the protection and assistance of the officials only; for the people themselves I cannot answer. If you go into that country you do so at your own risk." Minister Lincoln was sitting in his private office when we called the next morning at the American legation. He listened to the recital of our plans, got down the huge atlas from his bookcase, and went over with us the route we proposed to follow. He did not regard the undertaking as feasible, and apprehended that, if he should give his official assistance he would, in a measure, be responsible for the result if it should prove unhappy. When assured of the consent of our parents, and of our determination to make the attempt at all hazards, he picked up his pen and began a letter to the Chinese minister, remarking as he finished reading it to us, "I would much rather not have written it." The documents received from the Chinese minister in response to Mr. Lincoln's letter proved to be indispensable when, a year and a half later, we left the last outpost of western civilization and plunged into the Gobi desert. When we had paid a final visit to the Persian minister in London, who had asked to see our bicycles and their baggage equipments, he signified his intention of writing in our behalf to friends in Teheran; and to that capital, after cycling through Europe, we were now actually *en route*.

Since the opening of the Trans-Bosporus Railway, the wagon-road to Ismid, and even the Angora military highway beyond, have fallen rapidly into disrepair. In April they were almost impassable for the wheel, so that for the greater part of the way we were obliged to take to the track. Like the railway skirting the Italian Riviera, and the Patras-Athens line along the Saronic Gulf, this Trans-Bosporus road for a great distance scarps and tunnels the cliffs along the Gulf of Ismid, and sometimes runs so close to the water's edge that the puffing of the *kara vapor* or "land steamer," as the Turks call it, is drowned by the roaring breakers. The country between Scutari and Ismid surpasses in agricultural advantages any part of Asiatic Turkey through which we passed. Its fertile soil, and the luxuriant vegetation it supports, are, as we afterward learned, in striking contrast with the sterile plateaus and mountains of the interior, many parts of which are as desolate as the deserts of Arabia. In area, Asia Minor equals France, but the water-supply of its rivers is only one third.

One of the principal agents in the work of transforming Asia Minor is the railroad, to which the natives have taken with unusual readiness.

The locomotive is already competing with the hundred and sixty thousand camels employed in the peninsula caravan-trade. At Geiveh, the last station on the Trans-Bosporus Railway, where we left the track to follow the Angora highway, the "ships of the desert" are beginning to transfer their cargoes to the "land steamer," instead of continuing on as in former days to the Bosporus.

The Trans-Bosporus line, in the year of our visit, was being built and operated by a German company, under the direct patronage of the Sultan. We ventured to ask some natives if they thought the Sultan had sufficient funds to consummate so gigantic a scheme, and they replied, with the deepest reverence: "God has given the Padishah much property and power, and certainly he must give him enough money to utilize it."

A week's cycling from the Bosporus brought us beyond the Allah Dagh mountains, among the barren, variegated hills that skirt the Angora plateau. We had already passed through Ismid, the ancient Nicomedia and capital of Diocletian; and had left behind us the heavily timbered valley of the Sakaria, upon whose banks the "Freebooter of the Bithynian hills" settled with his four hundred tents and laid the foundation of the Ottoman empire. Since leaving Geiveh we had been attended by a mounted guard, or *zaptieh*, who was sometimes forced upon us by the authorities in their anxiety to carry out the wishes expressed in the letters of the Grand Vizir. On emerging from the door of an inn we frequently found this unexpected guard waiting with a Winchester rifle swung over his shoulder, and a fleet steed standing by his side. Immediately on our appearance he would swing into the saddle and charge through the assembled rabble. Away we would go at a rapid pace down the streets of the town or village, to the utter amazement of the natives and the great satisfaction of our vainglorious *zaptieh*. As long as his horse was fresh, or until we were out of sight of the village, he would urge us on with cries of "Gell-chabuk" ("Come on, ride fast"). When a bad piece of road or a steep ascent forced us to dismount he would bring his horse to a walk, roll a cigarette, and draw invidious comparisons between our steeds. His tone, however, changed when we reached a decline or long stretch of reasonably good road. Then he would cut across country to head us off, or shout after us at the top of his voice, "Yavash-yavash" (Slowly, slowly). On the whole we found them good-natured and companionable fellows, notwithstanding their interest in *baksheesh* which we were compelled at last, in self-defense, to fix at one piaster an hour. We frequently shared with them our frugal,

and even scanty meals; and in turn they assisted us in our purchases and arrangements for lodgings, for their word, we found, was with the common people an almost unwritten law. Then, too, they were of great assistance in crossing streams where the depth would have necessitated the stripping of garments; although their fiery little steeds sometimes objected to having an extra rider astride their haunches, and a bicycle across their shoulders. They seized every opportunity to impress us with the necessity of being accompanied by a government representative. In some lonely portion of the road, or in the suggestive stillness of an evening twilight, our Turkish Don Quixote would sometimes cast mysterious glances around him, take his Winchester from his shoulder, and throwing it across the pommel of his saddle, charge ahead to meet the imaginary enemy. But we were more harmful than harmed, for, despite our most vigilant care, the bicycles were sometimes the occasion of a stampede or runaway among the caravans and teams along the highway, and we frequently assisted in replacing the loads thus upset. On such occasions our pretentious cavalier would remain on his horse, smoking his cigarette and smiling disdainfully.

It was in the company of one of these military champions that we emerged on the morning of April 12 upon the plateau of Angora. On the spring pasture were feeding several flocks of the famous Angora goats, and the *karamanli* or fat-tailed sheep, tended by the Yurak shepherds and their half-wild and monstrous collies, whose half-savage nature fits them to cope with the jackals which infest the country. The shepherds did not check their sudden onslaught upon us until we were pressed to very close quarters, and had drawn our revolvers in self-defense. These Yuraks are the nomadic portion of the Turkish peasantry. They live in caves or rudely constructed huts, shifting their habitation at will, or upon the exhaustion of the pasturage. Their costume is most primitive both in style and material; the trousers and caps being made of sheepskin and the tunic of plaited wheat-straw. In contradistinction to the Yuraks the settled inhabitants of the country are called Turks. That term, however, which means rustic or clown, is never used by the Turks themselves except in derision or disdain; they always speak of themselves as "Osmanli."

The great length of the Angora fleece, which sometimes reaches eight inches, is due solely to the peculiar climate of the locality. The same goats taken elsewhere have not thriven. Even the Angora dogs and cats are remarkable for the extraordinary length of their fleecy covering. On nearing Angora itself, we raced at

high speed over the undulating plateau. Our *zaptieh* on his jaded horse faded away in the dim distance, and we saw him no more. This was our last guard for many weeks to come, as we decided to dispense with an escort that really retarded us. But on reaching Erzerum, the Vali refused us permission to enter the district of Alashgerd without a guard, so we were forced to take one.

HELPING A TURK WHOSE HORSES RAN AWAY AT SIGHT OF OUR BICYCLES.

We were now on historic ground. To our right, on the Owas, a tributary of the Sakaria, was the little village of Istanas, where stood the ancient seat of Midas, the Phrygian king, and where Alexander the Great cut with his sword the Gordian knot to prove his right to the rulership of the world. On the plain, over which we were now skimming, the great Tatar, Timur, fought the memorable battle with Bajazet I., which resulted in the capture of the Ottoman conqueror. Since the time that the title of Asia applied to the small coast-province of Lydia, this country has been the theater for the grandest events in human history.

The old mud-houses of modern Angora, as we rolled into the city, contrasted strongly with the cyclopean walls of its ancient fortress. After two days in Angora we diverged from the direct route to Sivas through Yüzgat, so as to visit the city of Kaisarieh. Through the efforts of the progressive Vali at Angora, a macadamized road was in the course of construction to this point, a part of which — to the town of Kirshehr — was already completed. Although surrounded by unusual fertility and luxuriance for an interior town, the low mud-houses and treeless streets give Kirshehr that same thirsty and painfully uniform appearance which characterizes every village or city in Asiatic Turkey. The mud buildings of Babylon, and not the marble edi-

fices of Nineveh, have served as models for the Turkish architect. We have seen the Turks, when making the mud-straw bricks used in house-building, scratch dirt for the purpose from between the marble slabs and boulders that lay in profusion over the ground. A few of the government buildings, and some of the larger private residences are improved by a coat of whitewash, and now and then the warm spring

showers bring out on the mud roofs a relieving verdure, that frequently serves as pasture for the family goat. Everything is low and contracted, especially the doorways. When a foreigner bumps his head, and demands the reason for such stupid architecture, he is met with that decisive answer, "Adet" — custom, the most powerful of all influences in Turkey and the East.

Our entry into Kirshehr was typical of our reception everywhere. When we were seen approaching, several horsemen came out to get a first look at our strange horses. They challenged us to a race, and set a spanking pace down into the streets of the town. Before we reached the *khan*, or inn, we were obliged to dismount. "Bin! bin!" ("Ride! ride!") went up in a shout. "Nimkin deyil" ("It is impossible"), we explained, in such a jam; and the crowd opened up three or four feet ahead of us. "Bin bocale" ("Ride, so that we can see") they shouted again; and some of them rushed up to hold our steeds for us to mount. With the greatest difficulty we impressed upon our persistent assistants, that they could not help us. By the time we reached the *khan* the crowd had become almost a mob, pushing and tumbling over one another, and yelling to every one in sight that "the devil's carts have come." The innkeeper came out, and we had to assure him that the mob was actuated only by curiosity. As soon as the bicycles were over the threshold, the doors were bolted and braced. The crowd swarmed to the windows. While the *khanji* prepared coffee we sat down to watch the amusing by-play and repartee going on around us. Those who by virtue of their friendship with the *khanji* were admitted to the room with us began a tirade against the boyish curiosity of their less

fortunate brethren on the outside. Their own curiosity assumed tangible shape. Our clothing, and even our hair and faces, were critically examined. When we attempted to jot down the day's events in our note-books they crowded closer than ever. Our fountain-pen was an additional puzzle to them. It was passed around, and explained and commented on at length.

Our camera was a "mysterious" black box. Some said it was a telescope, about which they had only a vague idea; others, that it was a box containing our money. But our map of Asiatic Turkey was to them the most curious thing of all. They spread it on the floor, and hovered over it, while we pointed to the towns and cities. How could we tell where the places were until we had been there? How did we even know their names? It was wonderful — wonderful! We traced for them our own journey, where we had been and where we were going, and then endeavored to show them how, by starting from our homes and continuing always

in an easterly direction, we could at last reach our starting-point from the west. The more intelligent of them grasped the idea. "Around the world," they repeated again and again, with a mystified expression.

Relief came at last, in the person of a messenger from Osman Beg, the inspector-general of agriculture of the Angora vilayet, bearing an invitation to supper. He stated that he had already heard of our undertaking through the Constantinople press, and desired to make our acquaintance. His note, which was written in French, showed him to be a man of European education; and on shaking hands with him a half-hour later, we found him to be a man of European origin — an Albanian Greek, and a cousin of the Vali at Angora. He said a report had gone out that two devils were passing through the country. The dinner was one of those incongruous Turkish mixtures of sweet and sour, which was by no means relieved by the harrowing Turkish music which our host ground out from an antiquated hand-organ.

Although it was late when we returned to the khan, we found everybody still up. The room in which we were to sleep (there was only one room) was filled with a crowd of loiterers, and tobacco smoke. Some were playing games similar to our chess and backgammon, while others were looking on, and smoking the gurgling narghile, or water-pipe. The bicycles had been put away under lock and key, and the crowd gradually dispersed. We lay down in our clothes, and tried to lose consciousness; but the Turkish supper, the tobacco smoke, and the noise of the quarreling gamblers, put sleep out of the question. At midnight the sudden boom of a cannon reminded us that we were in the midst of the Turkish Ramadan. The sound of tramping feet, the beating of a bass drum, and the whining tones of a Turkish bagpipe, came over the midnight air. Nearer it came, and louder grew the sound, till it reached the inn door, where it remained for some time. The fast of Ramadan commemorates the revelation of the Koran to the prophet Mohammed. It lasts through the four phases of the moon. From daylight, or, as the Koran reads, "from the time you can distinguish a white thread from a black one," no good Mussulman will eat, drink, or smoke. At midnight the mosques are illuminated, and bands of music go about the streets all night, making a tremendous uproar. One cannon is fired at dusk, to announce the time to break the fast by eating supper, another at midnight to arouse the people for the preparation of breakfast, and still another at daylight as a signal for resuming the fast. This, of course, is very hard on the poor man who has to work during the day. As a precaution against oversleeping, a watchman goes about just before daybreak, and makes a rousing clatter at the gate of every Mussulman's house to warn him that if he wants anything to eat he must get it instant. Our roommates evidently intended to make an "all night" of it, for they forthwith commenced the preparation of their morning meal. How it was despatched we do not know, for we fell asleep, and were only awakened by the muezzin on a neighboring minaret, calling to morning prayer.

Our morning ablutions were usually made *à la* Turk; by having water poured upon the hands from a spouted vessel. Cleanliness is, with the Turk, perhaps, more than ourselves, the next thing to godliness. But his ideas are based upon a very different theory. Although he uses no soap for washing either his person or his clothes, yet he considers himself much cleaner than the *giao*ur, for the reason that he uses running water exclusively, never allowing the same particles to touch him the second time. A Turk believes that all water is purified after running six feet. As a test of his faith we have often seen him

lading up drinking-water from a stream where the women were washing clothes just a few yards above.

As all cooking and eating had stopped at the sound of the morning cannon, we found great difficulty in gathering together even a cold breakfast of *ekmek*, *yaourt*, and raisins. *Ekmek* is a cooked bran-flour paste, which has the thinness, consistency, and almost the taste of blotting-paper. This is the Turkish peasant's staff of life. He carries it with him everywhere; so did we. As it was made in huge circular sheets, we would often punch a hole in the middle, and slip it up over our arms. This we found the handiest and most serviceable mode of transportation, being handy to eat without removing our hands from the handle-bars, and also answering the purpose of sails in case of a favoring wind. *Yaourt*, another almost universal food, is milk curdled with rennet. This, as well as all foods that are not liquid, they scoop up with a roll of *ekmek*, a part of the scoop being taken with every mouthful. Raisins here, as well as in many other parts of the country, are very cheap. We paid two piasters (about nine cents) for an *oche* (two and a half pounds), but we soon made the discovery that a Turkish *oche* contained a great many "stones"—which of course was purely accidental. Eggs, also, we found exceedingly cheap. On one occasion, twenty-five were set before us, in response to our call for eggs to the value of one piaster—four and a half cents. In Asiatic Turkey we had some extraordinary dishes served to us, including daintily prepared leeches. But the worst mixture, perhaps, was the "Bairam soup," which contains over a dozen ingredients, including peas, prunes, walnuts, cherries, dates, white and black beans, apricots, cracked wheat, raisins, etc.—all mixed in cold water. Bairam is the period of feasting after the Ramadan fast.

On preparing to leave Kirshehr after our frugal breakfast we found that Turkish curiosity had extended even to the contents of our baggage, which fitted in the frames of the machines. There was nothing missing, however: and we did not lose so much as a button during our sojourn among them. Thieving is not one of their faults, but they take much latitude in helping themselves. Many a time an innkeeper would "help us out" by disposing of one third of a chicken that we had paid him a high price to prepare.

When we were ready to start the chief of police cleared a riding space through the streets, which for an hour had been filled with people. As we passed among them they shouted "*Oorooglar olsun*" ("May good fortune attend you"). "*Inshallah*" ("If it please God"), we replied, and waved our helmets in acknowledgment.

DESIGNED BY GEORGE W. CHAMBERS.

AN ANGORA SHEPHERD.

ENGRAVED BY GEORGE BARTLE.

At the village of Topakle, on the following night, our reception was not so innocent and good-natured. It was already dusk when we reached the outskirts of the village, where we were at once spied by a young man who was driving in the lowing herd. The alarm was given, and the people swarmed like so many rats from a corn-bin. We could see from their costume and features that they were not pure-blooded Turks. We asked if we could get food and lodging, to which they replied: "Evet, evet" ("Yes, yes"), but when we asked them where, they simply pointed ahead, and shouted, "Bin, bin!" We did n't "bin" this time, because it was too dark, and the streets were bad. We walked, or rather were pushed along by the impatient rabble, and almost deafened by their shouts of "Bin, bin!" At the end of the village we repeated our question of where. Again they pointed ahead, and shouted "Bin!" Finally an old man led us to what seemed to be a private residence, where we had to drag our bicycles up a dark narrow stairway to the second story. The crowd soon filled the room to suffocation, and were not disposed to heed our request to be left alone. One stalwart youth showed such a spirit of opposition that we were obliged to eject him upon a crowded stairway, causing the mob to go down like a row of tenpins. Then the owner of the house came in,

and in an agitated manner declared he could not allow us to remain in his house overnight. Our reappearance caused a jeering shout to go up from the crowd; but no violence was attempted beyond the catching hold of the rear wheel when our backs were turned, and the throwing of clods of earth. They followed us, *en masse*, to the edge of the village, and there stopped short, to watch us till we disappeared in the darkness. The nights at this high altitude were chilly. We had no blankets, and not enough clothing to warrant a camp among the rocks. There was not a twig on the whole plateau with which to build a fire. We were alone, however, and that was rest in itself. After walking an hour, perhaps, we saw a light gleaming from a group of mud huts a short distance off the road. From the numerous flocks around it, we took it to be a shepherds' village. Everything was quiet except the restless sheep, whose silky fleece glistened in the light of the rising moon. Supper was not yet over, for we caught a whiff of its savory odor. Leaving our wheels outside, we entered the first door we came to, and, following along a narrow passageway, emerged into a room where four rather rough-looking shepherds were ladling the soup from a huge bowl in their midst. Before they were aware of our presence, we uttered the usual salutation "Sabala khayr olsun." This startled

GIPSIKS OF ASIA MINOR

FROM A PHOTOGRAPH.

some little boys who were playing in the corner, who yelled, and ran into the haremlük, or women's apartment. This brought to the door the female occupants, who also uttered a shriek, and sunk back as if in a swoon. It was evident that the visits of giaours to this place had been few and far between. The shepherds returned our salutation with some hesitation, while their ladles dropped into the soup, and their gaze became fixed on our huge helmets, our dog-skin top-coats, and abbreviated nether garments. The women by this time had sufficiently recovered from their nervous shock to give scope to their usual curiosity through the cracks in the partition. Confidence now being inspired by our own composure, we were invited to sit down and participate in the evening meal. Although it was only a gruel of sour milk and rice, we managed to make a meal off it. Meantime the wheels had been discovered by some passing neighbor. The news was spread throughout the village, and soon an excited throng came in with our bicycles borne upon the shoulders of two powerful Turks. Again we were besieged with entreaties to ride, and, hoping that this would gain for us a comfortable night's rest, we yielded, and, amid peals of laughter from a crowd of Turkish peasants, gave an exhibition in the moonlight. Our only reward, when we returned to our quarters, was two greasy pillows and a filthy carpet for a coverlet. But the much

needed rest we did not secure, for the suspicions aroused by the first glance at our bed-cover proved to be well grounded.

About noon on April 20, our road turned abruptly into the broad caravan trail that runs between Smyrna and Kaisarieh, about ten miles west of the latter city. A long caravan of camels was moving majestically up the road, headed by a little donkey, which the *devede-gee* (camel-driver) was riding with his feet dangling almost to the ground. That proverbially stubborn creature moved not a muscle until we came alongside, when all at once he gave one of his characteristic side lurches, and precipitated the rider to the ground. The first camel, with a protesting grunt, began to sidle off, and the broadside movement continued down the line till the whole caravan stood at an angle of about forty-five degrees to the road. The camel of Asia Minor does not share that antipathy for the equine species which is so general among their Asiatic cousins; but steel horses were more than even they could endure.

A sudden turn in the road now brought us in sight of old Arjish Dagh, which towers 13,000 feet above the city of Kaisarieh, and whose head and shoulders were covered with snow. Native tradition tells us that against this lofty summit the ark of Noah struck in the rising flood; and for this reason Noah cursed it, and prayed that it might ever be covered with snow.

It was in connection with this very mountain that we first conceived the idea of making the ascent of Ararat. Here and there, on some of the most prominent peaks, we could distinguish little mounds of earth, the ruined watch-towers of the prehistoric Hittites.

Kaisarieh (ancient Cæsarea) is filled with the ruins and the monuments of the fourteenth-century Seljuks. Arrow-heads and other relics are every day unearthed there, to serve as toys for the street urchins. Since the development of steam-communication around the coast, it is no longer the caravan center that it used to be; but even now its *charshi*, or inclosed bazaars, are among the finest in Turkey, being far superior in appearance to those of Constantinople. These *charshi* are nothing more than narrow streets, inclosed by brick arches, and lined on either side with booths. It was through one of these that our only route to the khan lay — and yet we felt that in such contracted quarters, and in such an excited mob as had gathered around us, disaster was sure to follow. Our only salvation was to keep ahead of the jam, and get through as soon as possible. We started on the spur; and the race began. The unsuspecting merchants and their customers were suddenly distracted from their thoughts of gain as we whirled by; the crowd close be-

hind sweeping everything before it. The falling of barrels and boxes, the rattling of tin cans, the crashing of crockery, the howling of the vagrant dogs that were trampled under foot, only added to the general tumult.

Through the courtesy of Mr. Peet of the American Bible House at Constantinople, we were provided with letters of introduction to the missionaries at Kaisarieh, as well as elsewhere along our route through Asiatic Turkey, and upon them we also had drafts to the amount of our deposit made at the Bible House before starting. Besides, we owed much to the hospitality and kindness of these people. The most

MILL IN ASIA MINOR

SADDLE AT A GREEK INN

striking feature of the missionary work at Kaisarieh is the education of the Armenian women, whose social position seems to be even more degraded than that of their Turkish sisters. With the native Armenians, as with the Turks, fleshiness adds much to the price of a wife. The wife of a missionary is to them an object both of wonderment and contempt. As she walks along the street, they will whisper to one another: "There goes a woman who knows all her husband's business; and who can manage just as well as himself." This will generally be followed in an undertone by the expression, "*Madana satana*," which means, in common parlance, "a female devil." At first it was a struggle to overcome this ignorant prejudice, and to get girls to come to the school free of charge; now it is hard to find room for them even when they are asked to pay for their tuition.

The costume of the Armenian woman is generally of some bright-colored cloth, prettily trimmed. Her coiffure, always elaborate, sometimes includes a string of gold coins, encircling the head, or strung down the plait. A silver belt incloses the waist, and a necklace of coins calls attention to her pretty neck. When washing clothes by the stream, they frequently show a gold ring encircling an ankle.

In the simplicity of their costumes, as well as in the fact that they do not expose the face, the Turkish women stand in strong contrast to the Armenian. Baggy trousers *à la Bloomer*, a loose robe skirt opening at the sides, and a voluminous shawl-like girdle around the waist and body, constitute the main features of

DRAWN BY G. WRIGHT.

FROM AUTHORS' PHOTOGRAPHS.

1, EATING KAISARIEHAN (EKMEK) OR BREAD; 2, A TURKISH (HAMAAL) OR CARRIER; 3, TURKISH WOMEN GOING TO PRAYERS IN KAISARIEH; 4, GRINDING WHEAT.

the Turkish indoor costume. On the street a shroud-like robe called yashmak, usually white, but sometimes crimson, purple, or black, covers them from head to foot. When we would meet a bevy of these creatures on the road in the dusk of evening, their white, fluttering garments would give them the appearance of winged celestials. The Turkish women are generally timorous of men, and especially so of foreigners. Those of the rural districts, however, are not so shy as their city cousins. We frequently met them at work in groups about the villages or in the open fields, and would sometimes ask for a drink of water. If they were a party of maidens, as was often the case, they would draw back and hide behind one another. We would offer one of them a ride on our "very nice horses." This would cause a general giggle among her companions, and a drawing of the yashmak closer about the neck and face.

The road scenes in the interior provinces are but little varied. One of the most characteristic features of the Anatolian landscape are the storks, which come in flocks of thousands from their winter quarters in Egypt and build summer nests, unmolested, on the village house-tops. These, like the crows, magpies, and swallows, prove valuable allies to the husbandmen in their war against the locust. A still more serviceable friend in this direction is the *smar-mar*, a pink thrush with black wings. Besides the various caravan trains of camels, donkeys, horses, and mules, the road is frequently dotted with ox-carts, run on solid wooden wheels without tires, and drawn by that peculiar bovine species, the buffalo. With their distended necks, elevated snouts, and hog-like bristles, these animals present an ugly appearance, especially when wallowing in mud puddles.

Now and then in the villages we passed by a primitive flour-mill moved by a small stream playing upon a horizontal wheel beneath the floor; or, more primitive still, by a blindfolded donkey plodding ceaselessly around in his circular path. In the streets we frequently encountered boys and old men gathering manure for their winter fuel; and now and then a cripple or invalid would accost us as "Hakim" ("Doctor"), for the medical work of the missionaries has given these simple-minded folk the impression that all foreigners are physicians. Coming up and extending a hand for us to feel the pulse they would ask us to do something for the disease, which we could see was rapidly carrying them to the grave.

Our first view of Sivas was obtained from the top of Mount Yildiz, on which still stands the ruined castle of Mithridates, the Pontine monarch, whom Lucullus many times defeated, but

1, THE "FLIRTING TOWER" IN SIVAS; 2, HOUSE OF THE AMERICAN CONSUL IN SIVAS.

never conquered. From this point we made a very rapid descent, crossed the Kizil Irmak for the third time by an old ruined bridge, and half an hour later saw the "stars and stripes" flying above the U. S. consulate. In the society of our representative, Mr. Henry M. Jewett, we were destined to spend several weeks; for a day or two after our arrival, one of us was taken with a slight attack of typhoid fever, supposed to have been contracted by drinking from the roadside streams. No better place could have been chosen for such a mishap; for recovery was speedy in such comfortable quarters, under the care of the missionary ladies.

The comparative size and prosperity of Sivas, in the midst of rather barren surroundings, are explained by the fact that it lies at the converging point of the chief caravan routes between the Euxine, Euphrates, and Mediterranean. Besides being the capital of Rumili, the former Seljuk province of Cappadocia, it

is the place of residence for a French and American consular representative, and an agent of the Russian government for the collection of the war indemnity, stipulated in the treaty of '78. The dignity of office is here upheld with something of the pomp and splendor of the East, even by the representative of democratic America. In our tours with Mr. Jewett we were escorted at the head by a Circassian *cavass* (Turkish police), clothed in a long black coat, with a huge dagger dangling from a belt of cartridges. Another native cavass, with a broadsword dragging at his side, usually brought up the rear. At night he was the one to carry the huge lantern, which, according to the number of candles, is the insignia of rank. "I must give the Turks what they want," said the consul, with a twinkle in his eye—"form and red tape. I would not be a consul in their eyes, if I did n't." To illustrate the formality of Turkish etiquette he told this story: "A Turk was once engaged in saving furniture from his burning home, when he noticed that a bystander was rolling a cigarette. He immediately

stopped in his hurry, struck a match, and offered a light."

The most flagrant example of Turkish formality that came to our notice was the following address on an official document to the Sultan:

The Arbiter; the Absolute; the Soul and Body of the Universe: the Father of all the sovereigns of the earth; His Excellency, the Eagle Monarch; the Cause of the never-changing order of things; the Source of all honor; the Son of the Sultan of Sultans, under whose feet we are dust, whose awful shadow protects us; Abdul Hamid II., Son of Abdul Medjid, whose residence is in Paradise; our glorious Lord, to whose sacred body be given health, and strength, and endless days; whom Allah keeps in his palace, and on his throne with joy and glory, forever. Amen.

This is not the flattery of a cringing subordinate, for the same spirit is revealed in an address by the Sultan himself to his Grand Vizir:

Most honored Vizir; Maintainer of the good order of the World; Director of public affairs with wisdom and judgment; Accomplisher of the important transactions of mankind with intelligence and good sense; Consolidator of the edifice of Empire and of Glory; endowed by the Most High with abundant gifts; and "Moushir," at this time, of my Gate of Felicity; my Vizir Mehmed Pasha, may God be pleased to preserve him long in exalted dignity.

Though the Turks cannot be called lazy, yet they like to take their time. Patience, they say, belongs to God; hurry, to the devil. Nowhere is this so well illustrated as in the manner of shopping in Turkey. This was brought particularly to our notice when we visited the Sivas bazaars to examine some inlaid silverware, for which the place is celebrated. The customer stands in the street inspecting the articles on exhibition; the merchant sits on his heels on the booth floor. If the customer is of some position in life, he climbs up and sits down on a level with the merchant. If he is a foreigner, the merchant is quite deferential. A merchant is not a merchant at all, but a host entertaining a guest. Coffee is served; then a cigarette rolled up and handed to the "guest," while the various social and other local topics are freely discussed. After coffee and smoking the question of purchase is gradually approached; not abruptly, as that would involve a loss of dignity; but circumspectly, as if the buying of anything were a mere afterthought. Maybe, after half an hour, the customer has indicated what he wants, and after discussing the quality of the goods, the customer asks the price in an off-hand way, as though he were not particularly interested. The merchant replies, "Oh, whatever your highness pleases," or, "I shall

BARINGO HALL IN A VILLAGE.

be proud if your highness will do me the honor to accept it as a gift."

This means nothing whatever, and is merely the introduction to the haggling which is sure to follow. The seller, with silken manners and brazen countenance, will always name a price four times as large as it should be. Then the real business begins. The buyer offers one half or one fourth of what he finally expects to pay; and a war of words, in a blustering tone, leads up to the close of this everyday trade.

The superstition of the Turks is nowhere so apparent as in their fear of the "evil eye." Jugs placed around the edge of the roof, or an old shoe filled with garlic and blue beets (blue glass balls or rings) are a sure guard against this illusion. Whenever a pretty child is playing upon the street the passers-by will say:

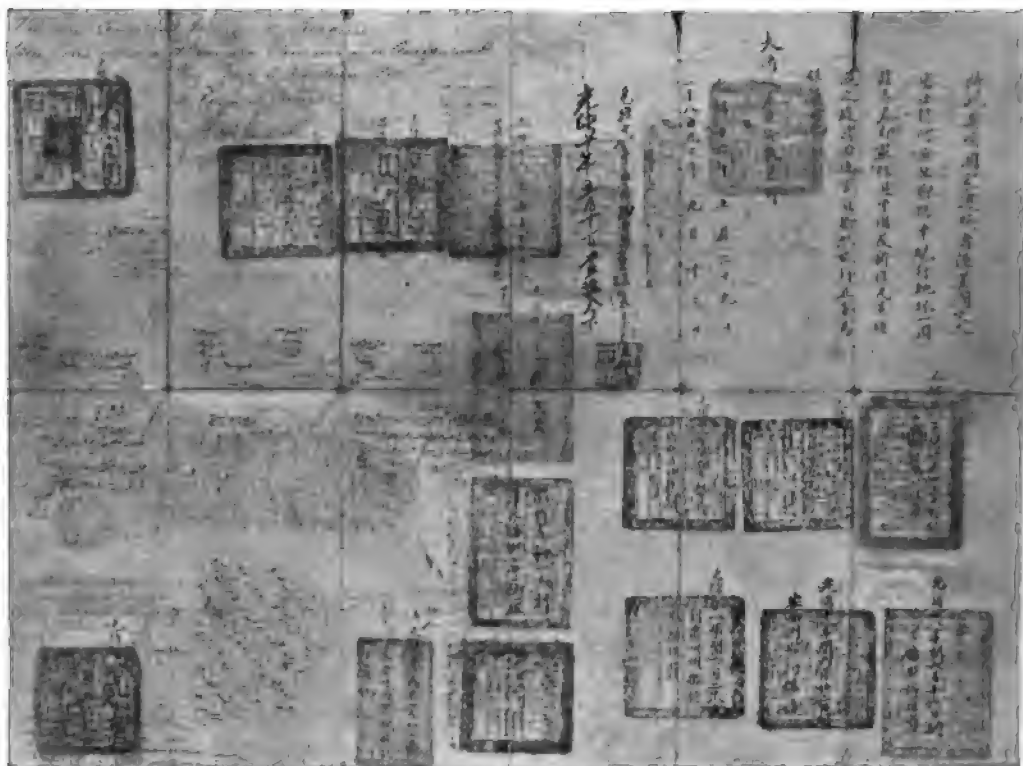

"Oh, what an ugly child!" for fear of inciting the evil spirit against its beauty. The peasant classes in Turkey are of course the most superstitious because they are the most ignorant. They have no education whatever, and can neither read nor write. Stamboul is the only great city of which they know. Paris is a term signifying the whole outside world. An American missionary was once asked: "In what part of Paris is America?" Yet it can be said that they are generally honest, and always patient. They earn from about six to eight cents a day. This will furnish them with *ekmek* and *pilaff*, and that is all they expect. They eat meat only on feast days, and then only mutton. The tax-gatherer is their only grievance; they look upon him as a necessary evil. They have no idea of being ground down under the oppressor's iron heel. Yet they are happy because they are

contented, and have no envy. The poorer, the more ignorant, a Turk is, the better he seems to be. As he gets money and power, and becomes "contaminated" by western civilization, he deteriorates. A resident of twenty years' experience, said: "In the lowest classes I have sometimes found truth, honesty, and gratitude; in the middle classes, seldom; in the highest, never." The corruptibility of the Turkish official is almost proverbial; but such is to be expected in the land where "the public treasury" is regarded as a "sea," and "who does not drink of it, as a pig." Peculation and malversation are fully expected in the public official. They are necessary evils — *adet* (custom) has made them so. Offices are sold to the highest bidder. The Turkish official is one of the politest and most agreeable of men. He is profuse in his compliments, but he has no conscience as to bribes, and little regard for virtue as its own reward. We are glad to be able to record a brilliant, though perhaps theoretical, exception to this general rule. At Koch-hissar, on our way from Sivas to Kara Hissar a delay was caused by a rather serious break in one of our bicycles. In the interval we were the invited guests of a district kadi, a venerable-looking and genial old gentleman whose acquaintance we had made in an official visit on the previous

day, as he was then the acting *caimacam* (mayor). His house was situated in a neighboring valley in the shadow of a towering bluff. We were ushered into the *selamlük*, or guest apartment, in company with an Armenian friend who had been educated as a doctor in America, and who had consented to act as interpreter for the occasion.

The kadi entered with a smile on his countenance, and made the usual picturesque form of salutation by describing the figure 3 with his right hand from the floor to his forehead. Perhaps it was because he wanted to be polite that he said he had enjoyed our company on the previous day, and had determined, if possible, to have a more extended conversation. With the usual coffee and cigarettes, the kadi became informal and chatty. He was evidently a firm believer in predestination, as he remarked that God had foreordained our trip to that country, even the food we were to eat, and the invention of the extraordinary "cart" on which we were to ride. The idea of such a journey, in such a peculiar way, was not to be accredited to the ingenuity of man. There was a purpose in it all. When we ventured to thank him for his hospitality toward two strangers, and even foreigners, he said that this world occupied so small a space in God's dominion, that

we could well afford to be brothers, one to another, in spite of our individual beliefs and opinions. "We may have different religious beliefs," said he, "but we all belong to the same great father of humanity; just as children of different complexions, dispositions, and intellects may belong to one common parent. We should exercise reason always, and have charity for other people's opinions."

From charity the conversation naturally turned to justice. We were much interested in his opinion on this subject, as that of a Turkish judge, and rather high official. "Justice," said he, "should be administered to the humblest person; though a king should be the offending party, all alike must yield to the sacred law of justice. We must account to God for our acts, and not to men."

The regular route from Sivas to Erzerum, passes through Erzinjan. From this, however, we diverged at Zara, in order to visit the city of Kara Hissar, and the neighboring Lidjissy mines, which had been pioneered by the Genoese explorers, and were now being worked by a party of Englishmen. This divergence on to unbeaten paths was made at a very inopportune season; for the rainy spell set in, which lasted, with scarcely any intermission, for over a fortnight. At the base of Kosse Dag, which stands upon the watershed between the two largest rivers of Asia Minor, the Kizil Irmak and Yeshil Irmak; our road was blocked by a mountain freshet, which at its height washed everything before it. We spent a day and night on its bank, in a primitive flour-mill, which was so far removed from domestic life that we had to send three miles up in the mountains to get something to eat. The Yeshil Irmak, which we crossed just before reaching Kara Hissar, was above our shoulders as we waded through, holding our bicycles and baggage over our heads; while the swift current rolled the small boulders against us, and almost knocked us off our feet. There were no bridges in this part of the country. With horses and wagons the rivers were usually fordable; and what more would you want? With the Turk, as with all Asiatics, it is not a question of what is better, but what will do. Long before we reached a stream, the inhabitants of a certain town or village would gather round, and with troubled countenances say, "Christian gentlemen—there is no bridge," pointing to the river beyond, and graphically describing that it was over our horses' heads. That would settle it, they thought; it never occurred to them that a "Christian gentleman" could take off his clothes and wade. Sometimes, as we walked along in the mud, the wheels of our bicycles would become so clogged that we could not even push them before us. In such a case we would take the nearest shelter, whatever

it might be. The night before reaching Kara Hissar, we entered an abandoned stable, from which everything had fled except the fleas. Another night was spent in the pine-forests just on the border between Asia Minor and Armenia, which were said to be the haunts of the border robbers. Our surroundings could not be relieved by a fire for fear of attracting their attention.

When at last we reached the Trebizond-Erzerum highway, at Baiboot, the contrast was so great that the scaling of Kop Dag, on its comparatively smooth surface, was a mere breakfast spell. From here we looked down for the first time into the valley of the historic Euphrates, and a few hours later we were skimming over its bottom lands toward the embattled heights of Erzerum.

As we neared the city, some Turkish peasants in the fields caught sight of us, and shouted to their companions: "Russians! Russians! There they are! Two of them!" This was not the first time we had been taken for the subjects of the Czar; the whole country seemed to be in dread of them. Erzerum is the capital of that district which Russia will no doubt demand, if the stipulated war indemnity is not paid.

The entrance into the city was made to twist and turn among the ramparts, so as to avoid a rush in case of an attack. But this was no proof against a surprise in the case of the noiseless wheel. In we dashed with a roaring wind, past the affrighted guards, and were fifty yards away before they could collect their scattered senses. Then suddenly it dawned upon them that we were human beings, and foreigners besides—perhaps even the dreaded Russian spies. They took after us at full speed, but it was too late. Before they reached us we were in the house of the commandant pasha, the military governor, to whom we had a letter of introduction from our consul at Sivas. That gentleman we found extremely good-natured; he laughed heartily at our escapade with the guards. Nothing would do but we must visit the Vali, the civil governor, who was also a pasha of considerable reputation and influence.

We had intended, but not so soon, to pay an official visit to the Vali to present our letter from the Grand Vizir, and to ask his permission to proceed to Bayazid, whence we had planned to attempt the ascent of Mount Ararat, an experience which will be described in our next article. A few days before, we heard, a similar application had been made by an English traveler from Bagdad, but owing to certain suspicions the permission was refused. It was with no little concern, therefore, that we approached the Vali's private office in company with his French interpreter. Circumstances

augured ill at the very start. The Vali was evidently in a bad humor, for we overheard him storming in a high key at some one in the room with him. As we passed under the heavy matted curtains the two attendants who were holding them up cast a rather horrified glance at our dusty shoes and unconventional costume. The Vali was sitting in a large arm-chair in front of a very small desk, placed at the far end of a vacant-looking room. After the usual salaams, he motioned to a seat on the divan, and proceeded at once to examine our credentials while we sipped at our coffee, and whiffed the small cigarettes which were immediately served. This furnished the Vali an opportunity to regain his usual composure. He was evidently an autocrat of the severest type; if we pleased him, it would be all right; if we did not, it would be all wrong. We showed him everything we had, from our Chinese passport to the little photographic camera, and related some of the most amusing incidents of our journey through his country. From the numerous questions he asked we felt certain of his genuine interest, and were more than pleased to see an occasional broad smile on his countenance. "Well," said he, as we rose to take

leave, "your passports will be ready any time after to-morrow; in the mean time I shall be pleased to have your horses quartered and fed at government expense." This was a big joke for a Turk, and assured us of his good-will.

A bicycle exhibition which the Vali had requested was given the morning of our departure for Bayazid, on a level stretch of road just outside the city. Several missionaries and members of the consulates had gone out in carriages, and formed a little group by themselves. We rode up with the "stars and stripes" and "star and crescent" fluttering side by side from the handle-bars. It was always our custom, especially on diplomatic occasions, to have a little flag of the country associated with that of our own. This little arrangement evoked a smile from the Vali, who, when the exhibition was finished, stepped forward and said, "I am satisfied, I am pleased." His richly caparisoned white charger was now brought up. Leaping into the saddle, he waved us good-by, and moved away with his suite toward the city. We ourselves remained for a few moments to bid good-by to our hospitable friends, and then, once more, continued our journey toward the east.

*Thomas G. Allen, Jr.
William L. Sachtleben.*

WITHERLE'S FREEDOM.

HIS little world was blankly astonished when Witherle dropped out of it. His disappearance was as his life had been, neat, methodical, well-arranged; but why did he go at all?

He had lived through thirty-seven years of a discreetly conducted existence with apparent satisfaction; he had been in the ministry for fifteen years; he had been married nearly as long; he was in no sort of difficulty, theological, financial, or marital; he possessed the favor of his superiors in the church, the confidence of his wife, and he had recently come into a small fortune bequeathed him by a great-aunt.

Every one regarded him as very "comfortably fixed"—for a minister.

Of all the above-enumerated blessings he had divested himself methodically, as a man folds up and lays aside worn garments. He resigned his charge, he transferred his property to his wife, and wrote her a farewell note in which he said in a light-hearted way which she mistook for incoherence that she would never see him again. These things done, he dropped out of the sight of men as completely as a stone falls into a pond.

His friends speculated and investigated, cu-

riously, eagerly, fearfully, but to no purpose. What was the motive? Where had he gone? Had he committed suicide? Was he insane? The elders of the church employed a detective, and the friends of his wife took up the search, but Witherle was not found. He had left as little trace whereby he could be followed as a meteor leaves when it rushes across the sky.

Presently, of course, interest in the event subsided; the church got a new minister; Witherle's wife went back to her own people; the world appeared to forget. But there was a man of Witherle's congregation named Lowndes who still meditated the unsolved problem at odd moments. He was a practical man of affairs, with the psychological instinct, and he found the question of why people do the things that they do perennially interesting. Humanity from any point of view is a touching spectacle; from a business standpoint it is infinitely droll. Personally Lowndes was one of the wholesome natures for whom there are more certainties than uncertainties in life, and he felt for Witherle the protecting friendliness that a strong man sometimes has for one less strong. He advised him as to his investments on weekdays, and listened patiently Sunday after Sunday, as the lesser man expounded the mysteries of creation and the ways of the Creator, sustained by the reflection that Witherle was better than his sermons. He did not consider him an interesting man, but he believed him to be a good one. When Witherle was no longer at hand, Lowndes counseled and planned for his wife, and otherwise made himself as useful as the circumstances would permit. He felt sorry for Witherle's wife, a nervous woman to whom had come as sharp an upheaval of life as death itself could have brought about, without the comfort of the reflection that the Lord had taken away.

Fate, who sometimes delivers the ball to those who are ready to play, decreed that, in May, about a year after Witherle's disappearance, Lowndes should be summoned from the Pennsylvania village where he lived to one of the cities of an adjoining State. His business took him along the dingy river-front of the town. Crossing a bridge one evening toward sunset, he stopped idly to note the shifting iridescent tints that converted the river for the hour into a heavenly waterway between the two purgatorial banks lined with warehouses and elevators black with the inexpressibly mussy and depressing blackness of the soot of soft coal. His glance fell upon a coal-barge being loaded at the nearest wharf. He leaned over the rail, wondering why the lines of the figure of one of the workmen looked familiar to him. The man seemed to be shoveling coal with a peculiar zest. As this is a species of toil not usually performed for the love of it, his manner natu-

rally attracted attention. While Lowndes still stood there pondering the problematical familiarity of his back, the man turned. Lowndes clutched the rail. "By Jove!" he said excitedly, for he saw that the features were the features of Witherle. Their expression was exultant and illuminated beyond anything ever vouchsafed to that plodding gospeler. Moving along the bridge to a point just above the barge, he took out his watch and looked at it. It was nearly six o'clock.

The next fifteen minutes were exciting ones for Lowndes. His mind was in a tumult. It is no light matter to make oneself the arbiter of another man's destiny; and he knew enough of Witherle to feel sure that the man's future was in his hands. He looked down at him dubiously, his strong hands still clutching the rail tensely. For a minute he felt that he must move on without making his presence known, but even as he resolved, the clocks and whistles clamorously announced the hour.

When the men quitted their work, the man whom Lowndes's eyes were following came up the stairs that led to the bridge. As he passed, Lowndes laid a hand lightly on his shoulder.

"How are you, Witherle?" he said.

The man stared at him blankly a second, recoiled, and his face turned livid as he shook off the friendly hand. The other men had passed on, and they were alone on the bridge.

"I 'm a free man," said Witherle, loudly, throwing back his shoulders. "Before God, I 'm a free man for the first time in my life. What do you want with me?"

"Don't rave," said Lowndes, sharply. "I sha'n't hurt you. You could n't expect me to pass you without speaking, could you?"

"Then you were n't looking for me?" asked Witherle, abjectly.

"I have business on hand," Lowndes spoke impatiently, for he did not enjoy seeing his old friend cower. "I am here for the Diamond Oil Co. I was crossing the bridge just now, when I saw a man down there shoveling coal as if he liked it; and I delayed to look, and saw it was you. So I waited for you. That is all there is of it. You need n't stop if you don't wish."

Witherle drew a deep breath. "My nerves are n't what they were," he said apologetically. "It played the mischief with them to—" He left the sentence hanging in the air.

"If you were n't going to like the results, you need n't have gone," observed Lowndes in an impartial tone. "Nobody has been exactly able to see the reasons for your departure. You left the folks at home a good deal stirred up."

"What do they say about me there?"

Lowndes hesitated. "Most of them say you were crazy. Your wife has gone back to her people."

"Ah!"

Lowndes looked at the man with a sudden impulse of pity. He was leaning against the rail, breathing heavily. His face was white beneath the soot, but in his eyes still flamed that incomprehensible ecstasy. He was inebriated with the subtle stimulus of some transcendent thought. But what thought? And what had brought him here? This creature, with his sensitive mouth, his idealist's eyes, his scholar's hands, black and hardened now, but still clearly recognizable, was at least more out of place among the coal-heavers than he had been in the pulpit. Lowndes felt mightily upon him the desire to shepherd this man back to some more sheltered fold. The highways of existence were not for his feet; not for his lips the "Song of the Open Road." He did not resist the desire to say meditatively:

"You have no children—"

"God in his mercy be praised for that one blessing!" Witherle muttered. But Lowndes went on as if he did not hear:

"But you might think of your wife."

"I have thought of her—too much. I thought about everything too much. I am tired of thinking," said Witherle. "I wonder if you understand?"

"Not in the least."

Witherle looked at him restlessly. "Come where we can talk—down there on that pile of boards. I think I'd like to talk. It is very simple when once you understand it."

He led the way to the opposite end of the bridge, and down an embankment to a lumber-pile at the water's edge. Up the river the May sun had gone down in splendor, leaving the water crimson-stained. Witherle sat down where he could look along the river-reaches.

"Hold on a minute, Witherle. Don't talk to me unless you are sure you want to."

"That's all right. There's nothing much to tell. I don't seem to mind your understanding."

Witherle was silent a minute.

"It is very simple," he said again. "This is the way I think about it: either you do the things you want to do in this world or else you don't. I had never done what I wanted until I left home. I did n't mean to hurt anybody by coming away in that style, and I don't think that I did. I'd rather not be selfish, but life got so dull. I could n't stand it. I had to have a change. I had to come. The things you have to do, you do. There was a Frenchman once who committed suicide, and left a note that said, 'Tired of this eternal buttoning and unbuttoning.' I know how he felt. I don't know how other men manage to live. Perhaps their work means more to them than mine had come to mean to me. It was just dull, that was all, and I had to come."

Lowndes stared. Truly, it was delightfully simple. "Why, man, you can't chuck your responsibilities overboard like that. Your wife—"

"When I was twenty-one," interrupted Witherle, "I was in love. The girl married somebody else. Before I met my wife, she had cared for a man who married another woman. You see how it was. We were going to save the pieces together. As a business arrangement that sort of thing is all right. I have n't a word to say against it. She is a good woman, and we got on as well as most people, only life was not ecstasy to either of us. Can't you see us tied together, snaking our way along through existence as if it were some gray desert, and we crawling on and on over the sand, always with our faces bent to it, and nothing showing itself in our way but the white bones of the men and women who had traveled along there before us—grinning skulls mostly? Can't you see it?"

Looking up, he caught an expression in Lowndes's eyes the meaning of which he suspected. "Oh, you need n't be afraid," he added hastily, "that this is insanity. It's only imagination. That's the way I felt. And my work was only another long desert to be toiled through—with the Sphinx at the end. I was n't a successful preacher, and you know it. I had n't any grip on men. I had n't any grip on myself—or God. I could n't see any use or any meaning or any joy in it. The whole thing choked me. I wanted a simpler, more elemental life. I wanted to go up and down the earth, and try new forms of living, new ways of doing things, new people. Life—that was what I wanted: to feel the pulse of the world throb under my touch, to be in the stir, to be doing something. I was always haunted by the conviction that life was tremendous if only you once got at it. I could n't get at it where I was. I was rotting away. So when that money was left me, it came like a god-send. I knew my wife could live on that, and I did n't think she'd miss me much, so I just came off."

"And you like it?"

The man's eyes flamed. "Like it? It's great! It's the only thing there is. I've been from Maine to California this year. I wintered in a Michigan lumber-camp—that was hell. I was a boat-hand on the Columbia last summer—that was heaven. I worked in a coal-mine two months—a scab workman, you understand. And now I'm at this. I tell you, it is fine to get rid of cudgeling your brains for ideas that are n't there, and of pretending to teach people something you don't know, and take to working with your hands nine hours a day and sleeping like a log all night. I had n't slept for months, you know. These people tell me about themselves. I'm seeing what life is like. I'm getting down to the foundations. I've

learned more about humanity in the last six months than I ever knew in all my life. I believe I've learned more about religion. I'm getting hold of things. It's like getting out on the open sea after that desert I was talking about—don't you see? And it all tastes so good to me!" He dropped his head into his hands, exhausted by the flood of words he had poured rapidly out.

Lowndes hesitated long before he spoke. He was reflecting that Witherle's exaltation was pathological—he was drunk with the air of the open road.

"Poor little devil!" he thought. "One might let alone a man who finds ecstasy in being a coal-heaver; but it won't do."

"Life is big," he admitted slowly; "it's tremendous, if you like; it's all you say—but it is n't for you. Don't you see it is too late? We're all of us under bonds to keep the world's peace, and finish the contracts we undertake. You're out of bounds now. You have got to come back."

Witherle stared at him blankly. "You say that? After what I've told you? Why, there's nothing to go back for. And here—there is everything! What harm am I doing, I'd like to know? Who is hurt? What claims has that life on me? Confound you!" his wrath rising fiercely, "how dare you talk like that to me? Why is n't life for me as well as for you?"

This Witherle was a man he did not know. Lowndes felt a little heart-sick, but only the more convinced that he must make his point.

"If you did n't feel that you were out of bounds, why were you afraid of me when I came along?"

The thrust told. Witherle was silent. Lowndes went on: "Bread is n't as interesting as champagne, I know, but there is more in it, in the long run. However, that's neither here nor there—if a man has a right to his champagne. But you have n't. You are mistaken about your wife. She was all broken up. I don't pretend to say she was desperately fond of you. I don't know anything about that. But, anyhow, she had made for herself a kind of life of which you were the center, and it was all the life she had. You had no right to break it to pieces getting what you wanted. That's a brutal thing for a man to do. She looked very bad when I saw her. You've got to go back."

Witherle turned his head from side to side restlessly, as a sick man turns on the pillow.

"How can I go back?" he cried, keenly protesting. "Don't you see it's impossible? I've burned my ships."

"That's easy enough. You went off in a fit of double consciousness, or temporary insan-

ity, or something like that, and I found you down here. It will be easy enough to reinstate you. I'll see to that."

"That would be a lie," said Witherle, resolutely.

Lowndes stared at him curiously, reflecting upon the fastidiousness with which men pick and choose their offenses against righteousness, embracing one joyously, and rejecting another with scorn.

"Yes; so it would. But I have offered to do the lying for you, and you *are* off your head, you know."

"How?" demanded Witherle, sharply.

"Any man is off his head who can't take life as it comes, the bad and the good, and bear up under it. Suicide is insanity. You tried to commit suicide in the cowardliest way, by getting rid of your responsibilities, and saving your worthless breath. Old man, it won't do. You say you've learned something about religion and humanity—come back and tell us about it."

Witherle listened to his sentence in silence. His long lower lip trembled.

"Anything more?" he demanded.

"That's all. It won't do."

The man dropped his head into his hands, and sat absolutely still. Lowndes watched the river growing grayer and grayer, and listened to the lapping of the water against the lumber, remembering that one of the poets had said it was a risky business tampering with souls, and matter enough to save one's own. The reflection made him feel a little faint. What if Witherle had a right to that life in spite of everything—that life for which he had given all?

Witherle lifted his head at last. "You are sure my wife was broken up over it?" he demanded despairingly.

"Sure."

Witherle cast one longing glance across the darkening river to the black outlines of the barge. There, ah, even there, the breath of life was sweet upon his lips, and toil was good, and existence was worth while.

"I thought no soul in the world had a claim on me. Curse duty! The life of a rat in a cage!" he cried. "Oh, Lord, I have n't the head nor the heart for it!"

The words were bitter, but his voice broke with compliance. He rose to his feet, and stretched out his arms with a fierce gesture, then dropped them heavily by his side.

"Come on," he said.

Lowndes, watching him with that curious, heart-sickening sympathy growing upon him, was aware that he had seen the end of a soul's revolt. Rightly or wrongly, Witherle's freedom was over.

XI.

OUT OF THE GULCH.

It is safe to say that if every ransomed Christian in the Cœur d'Alene had lived, according to the word that we preach to the heathen, as simply, as fearfully as Wan pursued his timorous way by the glimmer of his perfumed joss-sticks, there would have been no call for martial law. Yet Wan was destined to be one of the chosen victims of the labor question, his part in which, as a proletarian, was little more considered than that of the pony in the doctor's corral.

It fell out as the doctor had predicted. The case of Mike and Darcie had been postponed; it was not forgotten. There came a moment, in that hour of insane victory, when it did occur to some of the Big Horn men that there was a little job unfinished at the mine. One or two of them who had been concerned in the shooting on Tuesday night were burning to avenge that silly failure.

The trains were still running on the narrow-gage track between Gem and the mines of Big Horn Gulch, but they were in the hands of the strikers, and carried chiefly armed men and munitions of murder. They brought the posse of fifty men who had detailed themselves for special duty at the mine.

Faith witnessed this ill-omened arrival from the second-story gallery, where she was walking alone in the starlight, herself being unseen in the shadow of the roof. She watched the movements of the men with anxiety, and saw them in threatening consultation with Abby. Even as she listened to the sound of their bodeful voices, her own name was under discussion, and the men were proposing to put her to the question concerning the whereabouts of the spy.

"Don't bother with her; it 's time wasted for nothing," Abby advised. "She was asking Wan about him herself this morning, and Wan was sulky and scared, and pretended he did n't know. 'But I saw you going away somewhere with him,' says she. That 's what she said; I heard her myself. You bet he knows all there is to know! You go find Wan."

The doctor also had witnessed the ominous

arrival, and was that moment in the cellar, warning the refugees to be ready, and to have out their light, in case it should be seen when the cellar door opened to admit the unhappy girl who was going with them.

Darcie's heart was in his mouth with fear and joy, and Mike's blood was bounding at the thought of the wild night's flight in the free, open darkness, and the deeds of daring he might have occasion to display; for Mike had a warm Irish imagination, and he was as vain of his valor as he was sure of it. The doctor had omitted to mention, as a detail of his plan, that he had not as yet presented the same to Faith. He was deliberately conspiring with the cruel circumstances that beset the girl to capture all her scruples at once; there was no other way but to harden his heart against doubts and compunctions, and to put confidence in the men he had chosen in the place of her natural protectors. The doctor was no bungling judge of male character, and, in his opinion, a man may be a young girl's natural protector in other than the established way; but the doctor was not yet a father.

As he left the cellar, his ear was shocked by a sound of pitiable screams and hoarse, brutal cries, and, looking across the gulch, he saw, as in a vision of the "Inferno," a wretched, struggling figure haled along at the end of a rope, towed by a mass of men, as fast as they could go over the rough ground, in the direction of the secret tamaracks. The person of the victim was scarcely distinguishable, but the doctor knew it could be only the miserable Chinaman; and a strange familiarity with the fact crossed him, as if he had beheld the shameful scene before in some moment of prophetic consciousness, and had always known that such would be the end of Wan.

In that horror-stricken moment Faith had flown to her father, forgetful of the breach between them, and confident of his protection for the wretched Wan. She could not yet count him as naught, or quite believe, for all the doctor's unrelenting summing up of facts that were sadly in evidence, what a string of shreds and patches was the manager of the Big Horn.

At this after-dinner hour he was usually clothed on with his evening liquor, and incommunicable to the pitch of surliness. It was thus

that she found him. He had risen from his chair, and was moving with circumspection from the table to the sideboard, when his daughter's excited entrance startled him. He let fall the key which he held—that very precious duplicate key of the sideboard closet where his liquors and brandies were kept, the possession of which he had thus far been able to conceal from the vigilant Abby. As it slipped from his fat, smooth, shaking fingers, all that was left of his intelligence groveled after it upon the floor.

"Father, father!" cried Faith, rushing upon him. "Come, come with me! Oh, rouse up, do! Come out, and stop this fearful thing!"

Seeing no hope of comprehension in his glassy, floating eye, which tried to fix hers with a reprehensive frown, she seized him and shook him passionately, trying to awaken in that dead heart some spark of warmth from the indignation that burned in her own.

"Will you listen to that poor thing begging for his life! Do you want to have your people murdered!"

But the late Mr. Bingham simply stared, working his empty fingers, feeling for the lost key; his mind was concentrated solely on that interrupted journey to the sideboard.

"Keep 'way—don't talk sho' lou'; where-sh it? Only key I got. Abby fin' she—I—wha' sh'll I do?" he whimpered.

"Oh, oh!" shuddered the girl.

Mr. Bingham groped for the chair he had imprudently forsaken, and seated himself majestically upon the arm. The heavy chair tipped with his weight. Faith helped him to regain his seat. She stooped to search for his key, dashing the tears from her eyes.

"Here it is, poor father," she said, putting the key back into his hand. "There; have you got it? Let me put it into your pocket. See, you will lose it again."

It was all that he cared for; so let him have it, and find his way to the sideboard, and so find his way out of the world, where he was no longer of any use. Faith could not have reasoned in this cold-blooded fashion; she acted on the impulse, simply, to do one little thing for him that he wanted done before she left him. If not that night, yet she must leave him soon; she could not afford to be harsh with what was already a memory, a grave.

There was yet one man in his senses in that distracted place whose courage and humanity could be counted on; the doctor, Faith knew, had returned to the mine. But as she flew to seek him at his office he was on his way to her, and thus they missed each other by contrary paths in the dark.

The office was locked. Faith beat upon the door with her bare hands, but got no answer. Then she ran around to the kitchen door, which

stood open, showing a light burning in an empty house.

The doctor could not be far away, she thought, and, stepping outside, she stood on the platform and shrieked, "Oh, doctor, doctor!" in a voice of anguish, which brought, not the doctor, but Darcie Hamilton out of the cellar where her piercing cry had reached him. He sprang to her side, and put his good arm around her as the simplest way of answering that there he was if she needed him.

"What do you want of the doctor? What has happened? Dear, what is this horror in your face?"

"I thought you were gone," she said, "days ago!" She had forgotten that it was only the night before that he had left her father's house: it seemed as if it might have been years.

"We are going to-night," he answered.

"Have you not seen the doctor?"

"No, no; I cannot find him. They are doing something dreadful to Wan, to make him tell where you are; and they are not done with him. I must find the doctor!"

"They *are* done with him," said Darcie, listening. "Hark! it's all quiet up the gulch."

"What do you mean? He is dead?"

"He has told."

"*What!* Does he know?"

"Why, it was he who brought me here. He'll tell, you know, if that will save him," Darcie explained.

The shock of this discovery, and its self-evident consequences, left the poor girl no strength wherewith to "counterfeit" any longer, for pride's sake. It was the simple truth that Darcie read in her face as their sad eyes met, in the sincerity of a moment that might be their last on earth together.

"Go this instant! Why do you stay here? Oh, mercy! where *can* he go?"

She tried to push him from her, while he held her in a dream, hardly daring to believe what her pale face told him.

"We were waiting for you, Faith dear. The doctor said you were to go with us; but I said you would never go—with me. But would you go?" he implored.

Here Mike's double bass interrupted, lamenting in a suppressed roar, "Musha, musha! the docther has not towld her a word!"

"If it's about my going—don't say another word," pleaded Faith. "I would n't go for all the world. I should only keep you back. You'd have no chance at all with me along."

"And do you think that I am going if you stay here?" said Darcie, half beside himself with joy.

"But there's no danger here for me."

"It would be parting soul and body," he said.

"Ye'll not keep soul an' body long together av ye stay," said Mike.

"You break my heart," Faith cried distractedly. "Those men will have no pity — and you have none — to refuse me this one chance for your life. Once more, will you go?"

"Arrah, here comes the docther! He's the man we want," said Mike.

It was the doctor, in a panting hurry, half choked for breath.

"Well, young woman! So here you are, and I've been all over the country looking for you. Well, boys, have you got this thing all fixed?"

"It's bechune her an' him," said Mike, in despair. "She'll not go for fear she'd delay us, an' he'll not go an' l'ave her, an' I'll not shtr widout him; an' there ye have it—a caucus av fools if iver there was one!"

"Tut, tut! what a waste of time! If she won't go, she won't, and there's an end of that. Your legs are your best friends now, boys. Get in there; all ashore that's going.

"Come, Darcie, don't make this kick now, and ruin everything. I know it's hard," the doctor whispered, with his hand on Darcie's shoulder, "but, Lord! man, you're not the only friend she's got! Trust me, we'll get her safe out of this; they don't exterminate the girls. I'll bet you fifty dollars you cross the lake with her to-morrow night. How's that? Do you want any better chance than that to plead for your sins? Give her a kiss now, and get along with you! They are headed down the gulch," said the doctor to Mike. "In about five minutes you can break cover. I'll delay them all I can."

XII.

THE EXPULSION.

MR. BINGHAM was very weary of his paternal joys. If a selfish motive had been at the bottom of his sudden late demand for his daughter's society in the West; if he had fancied that it would impart a trifling zest to his jaded existence to have youth and beauty near him, and increase his popularity with his brother mine-owners at a critical time, he had been properly disappointed in the sequel. The cloud of suspicion that rested on the mine had never lifted; the time had not been suited to an exchange of hospitalities, even with a beautiful young daughter to be introduced to the society of the camps; and all the brightness Faith had brought with her to the Big Horn, and that promise of adaptability that her father had welcomed in her, had been extinguished under the burden of himself and his elderly failings which she had taken upon her virgin conscience. It was simply keeping a recording angel in the house for his sole and

personal benefit; one who wept, perhaps, but never "dropped a tear" upon the page where her father's slips were unfalteringly set down. The grief of his angel had never interfered with the strictness of her record. It was preposterous! He smiled with sardonic enjoyment of the joke that he was to be reformed, at his time of life, according to the "maiden aunt" school of training. But it was also a beastly annoyance; it sent him, more than often, to the society of those familiars which he kept under lock and key in his sideboard closet. With his daughter presiding, conscience-wise, over his personal habits, and with Darcie Hamilton investigating his business management, it was no wonder that a frail-minded old gentleman, with a rather darkling record, should have gone off somewhat in his temper. Heaven and earth! was he to be baited by children?

He had said to Faith that she could not go, without extraordinary precautions for her safety, in the excited state of feeling at the mines; but this had been merely for the purpose of reminding her that she was not quite mistress of the situation—free to repudiate her father, and depart from him whenever he should have paid for her ticket eastward. As a fact, she was not half so anxious to go as was he to have her: he did not desire her presence in his house, either as monitor or witness, any longer. She had seen too much already, considering her general intelligence and her uncompromising way of looking at things. She must go back to the East, where in a short time such frank incidents as the ordeal of Wan and the ambushing of Darcie Hamilton in the tamaracks would appear to her as incredible as the nightmare visions of a fever. And that she might not unwisely recall her visions in speech, he had, in that last painful interview in the library, taken measures to make her very tired of the subject of Darcie Hamilton. On this point at least he was easy.

As to Darcie, that young gentleman had been vastly busy at the manager's expense: he had formulated some dangerous discoveries; incidentally he had made rapid love to his daughter. Between business and pleasure he had been going very much at large. But he had been careless, as the too sure-footed are apt to be. If the Big Horn directors chose to send their younger sons, masquerading as honest miners, into the Cœur d'Alene, they must post them better upon the local institutions. "Monkeying with the buzz-saw" was pastime for children compared with a conflict of opinions with the Miners' Union in the summer of 1892. Mr. Bingham proposed to shift his personal responsibilities frankly upon the Union. If Darcie should never reach London with his verbal report (the documents were in Mr. Bing-

ham's hands), and an international correspondence, transcending questions of business, should ensue, the manager was prepared to wash his own hands, and to point to the guns in the hands of his irrepressible allies of the Union. The trade-unions have thus suffered always, and ever will suffer most, at the hands of their so-called friends.

And now we come to the last scene before the close of the war—the deportation of the "scabs," including a few non-combatants, among whom was Faith. Recording angels, recorders of the truth of any sort, were not in demand at that time in the Cœur d'Alene; the victors proposed to record matters to suit themselves.

On the twelfth day of July there were gathered at the Mission some sixty or seventy non-union miners, prisoners from the surrendered mines, awaiting transportation across the lake, and out of the Cœur d'Alene. The fast little lake-boat *Georgia Oakes* was unaccountably many hours behind her usual time, and there were no officials at the landing, in her service, who could be interviewed on the subject of this delay. Rumors passed from mouth to mouth, and it was whispered, "She is held back under military orders; she will bring the troops!" But so many contradictory telegrams had been flying across the wires, which were now controlled by the Union, that the hope was barely breathed—so many were the counter-doubts and fears.

The old Mission is one of the most dream-like spots ever chosen by travel as the trysting-place of a steamboat and a railroad. The Northern Pacific lake-steamer and the narrow-gauge railroad, a noisy adventurer from the mountain camps and roaring cañons of the Cœur d'Alene, here transact their daily meetings with the utmost publicity; yet, to land upon the wharf-boat and to step aboard the train is to stroll (by steam upon a steel pathway) between the "fields of sleep," beside the "waters of forgetfulness." The charming place, in its deep, sweet, sunshiny seclusion, seems to have been half-reluctantly yielded by nature long ago to the temporary occupation of man, and then fondly reclaimed into her own wild tendance. The Mission meadows are as rich as those upland pastures where the milk-white hulder maidens of the northern legend fed their fairy herds. The wild flowers in their beauty unite the influences of the West and the North, with the breath of the soft chinook to atone for the neighborhood of snow-slides. The river slips in silence past bowers of blossoming shrubs and leaning birches, and somber pines lift their dark spires out of the tender mass of deciduous green.

In it all there is an effect of abiding peace strangely in contrast with some of the scenes

which the historic Mission has been called to witness. Needless to say, it is the ideal resort of the summer excursionist, whether he come for fishing or flirtation, or to search the poetic past, or merely from the common gregarious instinct of a people that loves to do everything in crowds. But it was no holiday company gathered this day at the Mission. The greater number were men who carried their worldly goods in their hands: they wore their best clothes, and their latest-earned wages were in their pockets: but the thought was not wanting that safety, and life itself, had been risked for those few dollars which they were taking with them, and that they were passing out of the country under a shameful ban. There was no Traveler from Altruria to ask: Who are these decent poor men? Why have they come here, and why do they go, by a common, sad impulse, as if through fear and force? And if so, who compels them? And what is their offense that they should be looked at askance and herded apart, like tainted cattle? A deeper question, this would be, than most of us are prepared to answer. Even the facts can hardly be trusted to answer; for facts are cruel, and they frequently lie, in the larger sense of truth. Hence it is with extreme reluctance that one approaches the story of what was done at the Mission on the night of July 12, during the labor troubles of 1892. The inferences must speak for themselves; no one would dare to be responsible for the logic of these cruel facts, which seem to accuse generally, yet really accuse only a few—the blind guides and faithless shepherds who were condemned in the communities where they are best known, and were brought to an inadequate punishment, but were afterward set free, through a technicality of the law, which in effect pronounced them guiltless. These are not "laboring-men"; but they are clothed and fed by laboring-men, who in turn are betrayed by them through injurious counsels.

The rank and file of the non-Union prisoners were of the ordinary class of Western miners who "pack" their blankets from camp to camp; but among the number were several men of better condition, and of more than average ability and intelligence, who had held responsible positions at the mines; and these, as if conscious of unfriendly observation,—both aboard of the train, where Union men, armed with Winchesters, sat in the same car with them, and at the Mission, after the guards had left them and returned,—kept apart by themselves, and were quiet and wary.

Michael Casson, ex-foreman of the Caltrop, one of the upper-country mines, had his wife and children with him on the train. The wife, a comely, high-spirited woman, with well-seasoned nerves, but a soft heart in trouble, kept

a motherly watch upon Faith, coming down in the same car with her from Wallace. Faith was known to be Manager Bingham's daughter, leaving the country under the special protection and guarantee of the Union leaders; but the signs of recent trouble in her tear-flushed face aroused Mrs. Casson's sympathies, and that neighborly woman soon discovered that the manager's daughter, notwithstanding her fashionable dress, prosperous connections, and look of delicate pride, was very much alone, and very warmly disposed toward the ostracized portion of the laboring community to which Mrs. Casson and her "man" belonged. Hence a sudden and, on Faith's part, rather hysterical intimacy. The voice of the kind woman, speaking with the rich, sympathetic, Irish intonation, touched the chord that vibrates in sobs or laughter. Sometimes Faith's eyes filled, sometimes she laughed, at Mrs. Casson's delicious, hearty talk; and the train rumbled on between the river and the mountains, thundering over its bridges; and the green, fair vista of the Mission opened; and the outbound passengers gathered in groups, or scattered till the moment of departure.

At the Mission Mrs. Casson's children had to be fed. Faith was not enticed by the sort of meal that the Mission set forth that day to its seventy visitors: anything at all, at a good round price, was right for the scabs; the Mission did what it could to retain a little of that apostate money in the land of the faithful. But Nature offered them her own refreshment—flowers, and deep, soft grass to lie upon, and shed the light of her jocund sunshine upon their recent troubles, and upon the anxious future before them; and the habit of making the best of a bad outlook was the habit of them all.

Faith had idly extended her acquaintance to a chatty little lad, one of the rising hopes of the Mission, who, having his time much at his own disposal, was pleased to bestow it largely upon her. He was a wise child in the happiest sort of knowledge—that of the "foot-path way." He took her across the meadows, where the blue camass flower was just falling from over-bloom. They crept under the boughs along the river, and loaded themselves with wild roses, pale and red, and every shade of pink between. He told her the names of the new flowers, as he knew them, and she likened them to other flowers at home. She noted the strange character of the river, which here at the Mission is not like a mountain stream, but cuts into the rich bottom-land, deep and still, like a Southern bayou, and has no beaches, but only banks, which drop off suddenly into thirty feet of water, or put forth a toe of tree-roots overlaid with dried mud, where drift-wood gathers, or great logs, traveling down-stream,

halt as at a landing-place. Lovely reflections line the shores, binding the land and water together in an inverted borderage of green, with a clear sky pattern down the middle stream, dashed out of sight by the breeze, or returning again like a smile.

They crossed to the knoll, where stands the old church of the Mission, built in the days of intrepid zeal, where, in the deep forest wilderness, want of skill or want of tools was no detriment, and men wrought with faith and their bare hands in the sincerity of wood and imperishable stone. The priest's house, adjoining the church, and a shabby modern foil to its ancient dignity, was closed, and Faith was forced to abandon her desire to enter the church of the fathers; but they sat upon the steps, the odd young pair, and talked of the past. The little boy was not much of an historian: Faith did not put implicit confidence in his tales of Father de Smet, who was dead,—that at least was true,—and of Father Josette, who was still of the living. She knew, perhaps, quite as much about the history of the "old church" as he did, born in its shadow. But there were other subjects of contemporaneous and imperative interest on which he could offer her a few surprises. He had gathered that he was talking with no less a personage than the young lady of the Big Horn, and, for reasons which we know, the name of her father's mine inspired this wise child of the Union with the fullest faith in her as a partizan, notwithstanding that he had seen her consorting with scabs. So he poured forth his tale without hesitation—to behold her stare at him in incredulous horror!

What was this he was saying? she demanded; but the child drew back, and would not repeat his words. He had made a very great mistake; he now became confused, distrustful, and unhappy; they were no longer company for each other.

Faith sought an opportunity, later, when they were out of hearing of the other prisoners, to repeat the child's astounding confidence to Mr. Casson.

"Do you think such a thing could possibly be true?" she cried excitedly.

"Why, you may say, after what we've seen, that anything is possible," Mr. Casson began guardedly. "There's bad men everywhere, and in a time like this they naturally get bold, like thieves at a fire; but it's a thing the Union leaders would try to prevent, I'm sure, if they got wind of it. They have the whole thing in their hands now, and whatever happens, the blame of it lays at their door. They have done the preachin', and they'll get the credit for whatever sort of practice it'll lead to. They can't afford to let such a thing happen. No, miss;

it's more likely some mean talk the child has heard, and is givin' it away for earnest; else he was just tryin' it on for fun, to see if he could frighten you."

"Oh, no; he did n't think I would be frightened," said Faith. "He thought I would be pleased. That was the dreadful part of it. It was I that frightened him. I could n't make him say it over again after he'd seen how I took it. I suppose he thought that no one belonging to the Big Horn could have a spark of sympathy for a non-Union man."

"Call them 'scabs,' miss; don't spare the word on my account. It's a name I bear in honest company. If any of them dynamite divils should fall upon us to-night,—and we without a weapon on us, leavin' the country peaceable under promise of our safety,—why it makes no matter to me what name they choose to kill me by. The law has a name for them that's as old as the commandments; and maybe the law will be heard from again, some day, in the Co'r de Lane."

"Then you will not make light of it, Mr. Casson, even if you can't believe it?"

"I will not make light of it, miss; neither will I spread it, to make a panic. And I'll ask you, if you please, not to breathe a word of it to Mrs. Casson; she's easy excited, and no wonder, after what she's been through. I would n't mention it to any one, for fear it would get about."

"I shall see no one to repeat it to," said Faith. "I shall stay here until the boat gets in."

They were walking under the trees that interspersed the wild, park-like common, between Mission station and the landing, where the river makes a sharp bend. To the right, between the railroad track and the dark-blue shadows of Fourth of July Cañon, stretch the beautiful Mission meadows, bathed in sunlight, where the deep summer grass, ripe for mowing, was lazily rolling in the breeze.

"And what would you be stayin' here for, miss, if I might make so bold?" Casson inquired.

"I am looking for two friends of mine who are coming down the river, hoping to get here in time for the boat," said Faith. "I can see them from here as soon as they pass the bend."

"And would n't they be stopping above by the station?"

"No," said Faith; "they must not be seen. I must tell this to them, Mr. Casson, for they are hunted men; they have not even the safeguard of disarmed prisoners."

"Do ye mean that they are fixed to fight?"

"I do; and they would fight if they saw these poor men attacked. How could they help it, even if they threw their lives away! They must not be seen, and they must not see. But they

must know all that there is to tell. I must tell them."

"That's right," said Casson, gravely; "but there's others can tell them. What might be their business in the Co'r de Lane?"

"Mining. That is, one is a miner. The other is a sort of miner—an amateur."

"I would n't advise any man to be minin' in the Co'r de Lane this year, unless minin' is his business; there's neither love nor money in it for fancy miners, and it's not healthy for them—that's sure!" said Mr. Casson.

"Yes," Faith assented. "He fell under suspicion of the Union from the first, and they warned him to leave, but he would not go. And then they took means to get rid of him quietly, but they did not succeed the first time. Do they ever give such a thing up?"

"'T would be safer for them to finish the job," said Casson.

"What should you advise them, Mr. Casson, supposing—anything—even that this story cannot be true? What should you say they had better do?"

"I would advise them to stay with their boat, and not set foot on shore till the steamer's at the landin'."

"Mr. Casson?" Faith implored, studying his face. He was as inscrutable as if he were talking to a child. Still, she was sure that she could trust him.

"Ye need not be questionin' me, miss. I know the men," he answered to her look. "But it's just as well not to be namin' names. The very leaves of the trees will whisper it."

"I call them my friends," Faith needlessly explained, "because they were very good to me once—I would do anything in the world!"

"Surely ye would," Mr. Casson interrupted easily; "and if they were not your friends, a life is a life, though it's only the life of a 'scab' or a 'spy.'" Faith colored hotly at the word. "Ye need not fear me, Miss Bingham. I've had a taste of their language myself. I'm a 'thraitor,' a 'wage-slave,' I'm 'bought an' sold' for the bread that goes into me children's mouths. I'm an excrescence on a healthy laborin' community, to be sloughed off like the foulness of disease. I'm as fond of the Miners' Union that's bossin' this country as Mike McGowan is, and they'll make as much out of me, just, if they come askin' me questions. Now ye leave me to watch out for the boys, and I'll tell them anything at all ye want."

"Thank you, Mr. Casson; I trust you perfectly, but I cannot let you do it. They stood by me, and I will stay by them. It may be the one thing I am here to do; and you have your wife and children."

"They're not meddlin' with women and children. Ye had better leave the men to me."

"I could n't, Mr. Casson," said the girl, with sad persistence. She was distressed by his questioning regard, and blushed for her own disingenuousness. "We have had a fearful time at the mine," she went on, leading him away from the tenderer subject. "Did you hear about our poor Chinaman?"

"I did, miss; and a wonder they left the life in him so long. Sole an' lone he was, the only Chinaman in the Co'r de Lane, so I hear; and only for Abby Steers not wantin' to do her own work he 'd have been fired, they say, the same as all the rest, before he 'd barely set foot in it. For what that woman says is law with the Union boys."

"Oh, she 's a terror!" exclaimed Faith. "The times have brought her out. But we have some very bad men at the mine, and they are the ones who seem to have all to say. I suppose it would not be safe to discharge them, now. My father simply has to endure the things they do, until he can get support for his own authority." Outwardly, Faith was still on the defensive in regard to her father's position. "Did you hear about the shooting?" she asked in a low voice.

"I did," said Casson, shortly. He did not admit her plea for the martyred authority of Manager Bingham; he conceived him quite as did the rest of the mining community, in his mixed character of the bat in the fable, posing between bird and beast till the outcome of battle should decide to which kingdom it was safest to belong. A bat he was, and nothing but a bat; and neither birds nor beasts would own him.

"One of the men I am watching for is he—the one who was wounded," said Faith, averting her face. "I don't know what state he may be in, after such a journey. It would be hard upon a well man, last night, through the timber, across those wild divides, and around Sunset Peak before it was light; and to-day, in the hot sun, coming down Beaver Cañon; and then in some sort of boat on the river! Do you think that Mike McGowan can row?"

"They 'd be polin', not rowin', in a dugout, whilst the river is shallow; and below they 'll come fast enough with the current, just keepin' her head down-stream. Ye would n't maybe like to have Mrs. Casson bide here with ye? She 'd be as good as a doctor for him—and I 'm loth to leave ye wanderin' here by yourself."

In reply to this fatherly suggestion Faith only blushed miserably, and shook her head.

"I hope we shall all be together, crossing the lake to-night," she said—"all of us for whom the Cœur d'Alene has no use." But she did not move from her post.

"Well," said Mr. Casson, who saw that she was bent on having her own way with her friends, "I wish them safe out of this, and all

of us the same. But don't you let that child's prattle be runnin' in your head. It 's not a thing any one could believe—not even of them."

"Not of the men who blew up the Frisco Mill?" asked Faith, with a woman's partizan relentlessness.

Mr. Casson would not admit the thought, or pretended that he would not. "Think of it!" said he. "Think how a massacre would sound in print! We 're not quite bad enough for that, Union or non-Union; men has their feelin's. They 'd draw the line at promiscuous shootin' at unarmed men."

"I think dynamite and giant powder are tolerably promiscuous," bitterly argued Faith. But she was comforted, nevertheless, by Mr. Casson's pretense of unbelief.

He walked away toward the landing to watch for a sight of the boat. Once he looked back at her and seemed to hesitate, but then he walked on. "They 'd never touch a woman," he said to himself.

Faith continued to pace the short grass under the trees, watching for her friends.

XIV.

THE MASSACRE.

THE shadows, at this hour, had gained a portentous length; they laid long fingers across the fields, pointing darkly toward the cañon. "About sunset," the child had said.

Up at Wallace and at Gem the rumor was flying that the negro troops from Missoula had marched around the burned bridges, and were coming in by way of Mullan, to gather the non-Union men, and to bring them back and protect them in their places; and the Union had sworn that the thing should not be. Therefore there should be bloodshed that night at the Mission; not a "scab" should be left for the "niggers" to bring back. For "scabs" to be forced upon them by "niggers" was an aggravation of injury by insult which the pride of these valiant Irish leaders could not brook.

This was the story of the confiding little boy at the Mission, told in the simple faith of one who believes that his friends can do no wrong; all the bad men were on the other side. Not a shadow or a stain of its cruel meaning seemed to have touched his childish apprehension.

Faith was unhappy and fearful in her mind; yet—she tried to comfort herself—the thing was, as Mr. Casson had said, too monstrous, too suicidal, a disgrace for the Union leaders to permit to touch their organization, still less to invite as a means of discipline. The sun was getting low. Faith rebuked her impatience by turning her back on the up-stream view, and, taking a longer stroll toward the landing, resolved not to look around again till the sounds

she yearned to hear announced her friends; but no new sound broke the quiet stir of the leaves and the softly moving water. She grew sick with suspense. They would not come in time to get her warning; else they would not come at all—and what could have happened! This was a day when one might not talk of a morrow.

Suddenly, close inshore, making for the next bend across a loop of the river, a long, sharp canoe, or dugout, shot by, loaded with disaster; for Mike stood balanced, alone, guiding the slim craft, and along the bottom, stretched upon his back, lay a man, helpless, motionless, a shape with the face hidden. What did the coat conceal that covered the face? Was it death? There was enough of Darcie there for Faith to recognize. He was coming to meet her at the Mission, and this was the fate he had encountered on the way.

"Oh, Mike—oh, stop!" she groaned, upon her knees on the bank, stretching her arms out above the water. The breeze shook the bushes; the dismal load shot by. Mike had not heard her choking cry or seen her gesture of anguish. Gathering herself up, she stumbled through the grass, past the trees, that delayed her like idle, curious persons crowding upon one in a moment of extreme distress; but by the time she had rounded the loop by land, Mike had crossed it by water—as the bow-string measures the bow, had landed his freight under the bushes in the shade, and was already out of sight beyond the lower bend.

A wind was rising, spreading the rapid coolness that precedes a summer gale. The bushes were beating wildly, leaves and dust and blossom petals were flying, and dark wind-tracks streaked the meadows; but the waveless river only shuddered, and crept by in silence.

Darcie was lying on his back, staring at the green boughs overhead; the coat lay over his chest, and its folds perceptibly rose and fell. This was Faith's first assurance that he breathed. In the shock of so sudden, so complete a release from so great a fear, for the moment she forgot her warning.

He looked at her stupidly at first, then a little wildly, and then with an eager smile he flung his hand out toward her upon the grass. Yet something in his manner she missed—something that she had looked to see on their meeting again; missed it, and drew back from her instinctive first advances.

He knew her, but had placed her at the beginning of their brief, intense acquaintance; all between was oblivion. His love spoke, and his need of love, in his dumb eyes; but he was silent, troubled, and took nothing for granted. It was useless to question him as to how he had arrived at this phase of his condition. Investigating, as his nurse, Faith dis-

covered that there had been a fresh hemorrhage from his wound; the sleeve and breast of his shirt beneath the coat were soaked with blood. Weakness, thirst, and delirium had followed, but not fever, so far as she could judge. He was bareheaded, and she looked in vain for his hat to fetch him water in the brim of it, as she had seen the hunters do, but was forced to use her handkerchief, feeding him with drops dripped between his lips. His face and hands and all his clothing down in front were grimed and scratched and earth-stained, as though Beaver Cañon had been literally wiped up with him; when he spoke it was a rapid muttering in a voice devoid of expression. There was no hope that they could come to any understanding now on those delicate points that remained to be settled between them. This was a piteous complication, that at this last hour before the boat came in—the hour that must decide how they should leave the boat and meet the world of strangers on the other side of the lake, when the one word must be said, and he alone could say it—he should be out of his senses, calling her Miss Faith, and babbling flat courtesies, saying nothing but with his eyes! She could not give him even the love he dumbly craved.

No; it was strangely cruel. They were meant for each other; this she believed as a new, inexplicable fact not to be reasoned about, yet she was powerless to act upon it. Could any girl follow a sick and crazy youth, a conspicuously adorable young man, whom any stranger would be good to, once he was out of this terrorized land; appear at his side, and assume the right to care for him on the strength of some wild love-passages in impossible places, under circumstances the least binding and most exceptional that could be imagined?

She had made up, poor child, a number of perfectly sane and commendable answers and arguments, which she had thought she should have need of, crossing the lake that night. He was to have done some very pretty pleading; he was to have prevailed in the end—even in her best arguments she had provided for that. But where now were the strong, delicious pleadings, the weak extenuations, the explanations which pride insists on, the conditions which feminine prudence declares for, ere it be too late? No; she was helpless, in the face of this pitiful estrangement: here it must end, their sad, little, crazy romance of the Cœur d'Alene. His world would be seeking him, would presently call him back; but the ocean could not part them farther than they were parted now. "Good-by, my love, good-by!" she whispered. But the warning! For him it was useless; she must instantly find "poor good Mike," as she called the great fellow in her

thoughts. She was so weak-hearted that she felt like distributing epithets and words of useless affection, as one who is taking leave of life.

She met Mike coming up the shore; and seeing her a long way off, he broke into a hilarious trot.

"Arrah, by the Blessin'! an' have ye seen him? An' was n't he the pictur' of peace, lyin' on the barren stones!"

This was an irrepressible figure of speech, for Darcie was very softly bedded on the grass, as Mike had left him. "Sure it's the big luck for us that the boat's behind her time! Musha, darlin'! what has hurted ye, to put up your lip like that?" he cadenced, seeing that the girl's eyes were filling with tears.

"O Mike, he does n't know me!"

"Av coorse he does n't, the craythur; his mind is takin' a bit av a rest. He's better without any sinse, the way he was goin' on. An' see how happy he is! He does n't care for a blessed thing!"

"No," said Faith; "he does n't. But how came he to be so?"

"'T was along av a nasty fall he got comin' around Sunset Pake, which the thrail is the widt' av your hand. He would n't have me come anigh him for fear I'd jostle him, he was that nervous. 'Wan at onct,' says he, 'and don't, for God's sake, blow your breath on me!' He caught holt av a juniper whin he felt the ground was lavin' him; but the bloody bush let go by the roots, an' he wint down. Ah, don't faint away, miss! 'T was a child's tumble, only for the jar it gev his arrum: it shtarted the wound bleedin' on him, an' that tuk his stren't'; and I think it was bad for him goin' widout a hat. Yis, the fool wind lifted it off his head, an' he but the wan hand to grab for it, an' kape his grip o' the rock; an' it's hung up in the top of a big pine-tree. I was for makin' him wear me own hat, for the sun it was powerful bad on his head; but he'd cast it in me face wheniver I'd try to put it on him—he was that silly. He was singin' like a canary in the boat, comin' down, till I put the coat over him, an' that quinched him. Was he qui't, miss, when ye left him?"

Faith could not speak to answer him.

"Saints above! now what are ye cryin' about? D'ye think the lad'll not make it? Sure, here we are, an' the boat comin' in, an' Spokane, the city of refuge, will see us in the mornin'. He has 'wore out the candle'; he can 'bide the inch'!"

"O Mike, but it's the last inch of the candle that will cost," cried Faith; and forth from her convulsed lips came the child's story, too long delayed, of the dark deed that threatened the prisoners at the Mission that night.

Mike leaped as if he had been hit by a bullet.

"Why was n't this the first word ye said to me?" he roared. "Go back and bide beside him whilst I go for the boat. Please God no wan has helped himself to it, an' me danderin' here!"

"Do you believe it?" Faith exclaimed in a voice of awe.

"Do I believe there's divils in hell? I'll pack him out av this, if I have to shwim wid him on me back."

Darcie was asleep. He rested, after pain, and excitement, and thirst, and weary journeyings. Faith watched beside him, and listened to his mutterings, and held her own breath in the pauses of his inconstant breathing. Sometimes he panted "like a dog that hunts in dreams;" his features twitched, he plucked with his hands; then his troubled spirit would exhale in a long sigh, and gradually, in climbing intensity, the travail of delirium would resume its sway. His eyes glittered between half-parted lids; the yellow-green light under the trees, mingling with the reflection from the river, made his ashen color ghastly. Faith hung upon his breathing, hurried and fast or deep and slow, as the one sure contradiction of his death-like aspect.

The strange wind, which brought no rain, kept blowing and blowing, as if it would blow out all the last red sparks of sunlight; the dull sunset embers began to glow. She could hear no sounds but sounds of wind striving with the trees, or of water heavily flapping as it coursed along the bank. She wished for utter stillness that she might project, by ear, her knowledge of what was coming, beyond her powers of sight; but nothing could be heard above the crisp, gallant roar and rustle of the summer gale. All nature seemed to call to her, to be up and ready! to fly, fly! But those that can neither fight nor fly must hide, must hush, as she was hushing her sleeper by the darkling stream.

She sat in silence, and her thoughts drifted in trite phrases, and in fragments of old songs, as unguided wheels slip into old ruts of the way that the crazed or grief-blind driver goes.

O hush thee, my baby, the hour may come
When thy sleep shall be broken by trumpet and drum,

she found herself crooning over and over senselessly to herself; but where were the trumpets and drums, that call to arms in the name of peace—the law-and-order music? Far from the old Mission that night, and its dark, empty sanctuary, and its helpless prisoners of labor, waiting, as unconscious as sheep that have been fed and folded at dusk, to be harried at midnight by a pack of masterless dogs!

At about half after seven o'clock, as the

story of this evening goes, a hand-car, black with men, came down the track, and stopped within half a mile of Mission station. The number of men on the car is not known. It is supposed that they were assisted by others who were expecting them at the Mission; and these men, so it is said, were armed with Winchester sent down on the prisoners' train. But all were armed, in one way or another, with weapons furnished by the Miners' Union of the Cœur d'Alene, or by their brothers of Butte.

The hand-car brigade ran down the track on both sides, and opened fire upon the surprised groups at the station. One or two of them went through the cars that stood upon the track, shouting to the "scabs" within, "Git out of here, you—" There was never a word too bad for a "scab." They were likewise driven forth from the shelter of the hotel by the prudent landlord, whose windows were being smashed by bullets. The bounds were loud in the mouth, but the sheep were silent and ran. Some of them ran across the track, and jumped into the river; some struggled desperately through the long grass of the Mission meadows. The cool-headed ones hid in the grass, or crept into the bushes, or made their way along the shore in the shelter of the river bank. Of the fate of those who fled up into the wild defile called Fourth of July Cañon much has been asserted and denied on both sides, but little will ever be known; the cañon and the river have been deeply questioned, but they bear no witness, and they tell no tales.

Faith sat beside her unconscious sleeper, listening to the sounds which reported all that she ever knew of those incredible scenes that have gone down on the annals of this region as "the massacre of Fourth of July Cañon." Her senses were blunted, her mind refused to act; her heart crushed the life out of her with its beating.

Now was the time to say good-by — not the potential good-by she had bidden him an hour ago, but the actual parting, now at the brink of the river of death. Many were crossing the dark waters to the city of refuge who would never return. She bent over her sleeper, and kissed him softly, but the sob that forced her heart against his aroused him, and he spoke to her suddenly in his natural voice:

"God bless me!" he murmured, while she held her breath in horror of his coming to himself at this fatal moment. "I thought that you kissed me! I must be dreaming. Oh, let it be true! Faith, dear, make it true before I lose you again."

"It is true," said the girl, hoarsely, "and ~~nothing else is true—nothing.~~ I will never

doubt you; I never did doubt you. Now go to sleep! Good-night, dear; good-night!"

He held his breath, and looked at her keenly. "Your lips are cold; your hands are cold. Why are we saying good-night?"

"The boat is late," said Faith in a hollow voice. "We cannot go till the boat comes. You are sick: rest now — do rest; this is your only chance!"

She put her hands upon him, with soft, shuddering touches, trying with all the strength of her love to master her fear, that she might have power to lull him into oblivion of the awful sounds of the night. Under the trees it was quite dusk; he could see nothing, but she felt that he was listening.

"What is that firing?"

"Only some men," gasped Faith.

"But what are they shooting at?"

"Shooting? Oh, at a mark."

"Oh, I say! in the dark!" laughed Darcie, softly. He was drifting off again, as his speech betrayed. "Are they drunk? What are they shouting about?"

"It's the other men who are shouting," Faith lied to him, feebly.

"What other men? Is this a stag picnic? O Lord! O Faith dear!"

Faith did not know what he was saying, but she welcomed any wildness, profanity — anything but his own low, steady tones.

"Be quiet, Darcie dear!" she whispered.

"Darcie dear!" he repeated foolishly. "God bless me, but this is nice — what a sweet girl you are! Heavens! what a brute I was! Are you ever going to be friends with me again?"

He nestled his sick head close to her lap, contentedly, and gave himself up to the exquisite sense of her cold, soft touch moving over his hand in the dark.

"Mother of Grace, the pass is difficult!" whispered the tortured girl. It was the mother instinct, which can look on death, that taught her calmness at this moment, and gave her strength to exert her love, else one of nature's miracles was wrought; for out of the anguish of her deadly fear came supreme rest to him she loved, and Darcie slept. His hand slipped from hers, lower and lower, and touched the sand; softly she saved the contact from disturbing him. He sighed, and breathed more deeply; he was gone, even beyond the consciousness of her.

She moved a trifle, cautiously; drew away her dress, and noiselessly raised herself upon her knees. All along the shore she seemed to hear stealthy footsteps and furtive, leafy rustlings, as of a hunter stalking big game. The rapid firing had ceased, but scattering shots came infrequently, one at a time, from a distance. Step by step she moved a little way

past the bushes, and looked out. Overhead the clouds were blown in wild masses; the stars in the dark blue lakes of sky, between, winked peacefully, while the torn and flying cloud-signals altered from moment to moment. So did the peace of heaven abide this senseless, passing hour, that proved nothing, changed nothing, simply added its score to the wrong side, the side of human passion, which must miss the mark a thousand times before one true aim shall raise the record a little higher as the centuries pass.

Faith was quieted; she had reached the limit of emotional fear, and now a species of insensibility crept over her—the reaction after the shock. She wondered why she could not feel as she ought the peril of all those other men who were strangers to her affection. Where was Mike—always rash with himself? Was he safe? And how was it with the honest Cassons—the wife waiting with her little sleepy brood about her, to learn perhaps that they were fatherless?

She started back from her relaxed outlook and hid herself as a man came running, like one pursued, out from a group of black birch-trees that stood together shivering in an open windy space. He ran uncertainly, this way and that, as if crazed with fear. His dog-hearted pursuer covered him with deliberate aim. It was pitiful to see him waver between the chances of the river and of the broken plain below. He was exhausted with running; his chest labored in hard, painful gasps; his legs were giving under him. The next moment he stumbled and fell. The other came up and turned him over with his foot, keeping the muzzle of his rifle close to his chest. He said something brief, which Faith did not hear. The "scab" never spoke, but threw out his hands expressively on the sod. The other searched his clothes, and took all that he had in money or small valuables, and, stirring him with his foot, said:

"Git—git out from here! I 'll give you till I count sixty."

The hunted man sprang up and ran. Once he turned his head over his shoulder, and saw his pursuer following him with cool aim. He plunged into the bushes, cleared the bank, and splashed into the river.

The man with the rifle stood on the bank and waited. Faith could have touched him where he stood. He watched till the swimmer's head showed plainly beyond the shoreward shadow, a black spot parting the current in mid-stream; then a bullet went clipping through the wild-rose thicket. The black spot turned toward the light; it was the man's face; he was taking his last look at the sky; his hands went up; he sank; and a coil of ripples unbound in widening circles toward the shore.

The hunter of "scabs" stood still a moment while the smoke of his rifle drifted away among the trees. Then he set his feet upon the bank, slid down, and stooped at the river's brink. He laid his face to the water, and drank; and the river did not refuse to quench his thirst.

Faith crept back to her place; her sleeper still slept. The man by the river turned her way, and set his feet again upon the bank. She slipped the mantle from her shoulders, and laid it, as soft as the rose of silence, upon Darcie's face. The silk-lined folds settled into place; he did not move. So he had looked when she had thought him dead. She clasped her hands upon her knees, and bent her head upon them. Steps came up the bank, and paused close beside her; she merely breathed. There was silence; then a voice said:

"Who is your man, my dear?"

She did not answer. Dan Rafferty studied the two figures attentively a moment.

"Is this you, Miss Bingham? and our folks lookin' for you high an' low! And who 's this party you are hidin' out with?"

Faith raised her head, but she did not speak.

"Show me his face! What 's the matter with him?" Rafferty made a step forward.

"Keep your hands off the dead!" said Faith.

"Dead, is he? I don't think you can play that on me. If he 's dead, it 'll not harm him to show me his face."

"There is a dead man whose face you will see in the day you go to meet your God. Oh, you are a villain!" Faith had risen, and placed herself between Rafferty and her sleeper; she was aware that Darcie was stirring; her flesh rose in horror; she had no hope, only to postpone the moment of discovery.

"I know you, Rafferty," said the desperate girl. "I will bear witness against you, to this thing you have done. Coward! you took his money, and then you took his life!"

"Come, now, that 's no way for a lady to talk! I want to see who 's your best feller. Pull that thing off his face! I bet I know who it is. Don't I know them English shoes? Well, if you won't, then stand aside. See here, now; I don't want to put me hands on you."

"Ah!" cried Faith, simply shuddering at him.

Rafferty gave a coarse laugh. "Come off the nest now, me little chicken! It 's your own doin's if I have to hurt you."

Suddenly Faith felt that she was free. Rafferty had loosed her, and stood listening.

"Quit that!" came Mike's great battle-roar. "Put up your bloody hands! I have the drop on ye."

Rafferty had not been the last to perceive that this was true. It settled the situation between him and Mike once more, and for the

"SHE SLIPPED THE MANTLE FROM HER SHOULDERS."

last time. Mike walked slowly forward, hurling taunts at his old enemy:

"Chuck me your weppins, Raffy, me boy. You 'll not want them where you 'll be goin' shortly; you 'll not be huntin' scabs in Boise City."

At the mention of Boise, which is the city of approximate justice and of occasional punishment, Rafferty gave Mike a bitter look; but he offered no retort.

"I hope the climate will agree with ye," Mike proceeded. "I hear it's a nobby buildin', the Pen, an' the boys is doin' a little gard'nin'. Ye 'll make a fine gar'ner, Rafferty; I doubt ye 'll run out a bigger fraction of a man."

As he came opposite to the spot where his

prisoner stood, Mike raised his rifle and lowered his head, and suddenly he opened cry, like one mad school-boy defying another:

"Run, Rafferty, me bould boy!" he yelled. "The scabs is after ye! Get a move on you! Shake it up, man! *Hit* the road!" and as Rafferty ran, Mike, roaring with laughter, leaped upon the top of the bank, and sent his big voice after the fugitive:

"The boat is in, Rafferty! And the throops is on board! That's right, I'm tellin' ye! The throops is on board! They're flyin' light, two comp'nies from Sherman, an' Gin'ral Carlin in command. Will ye try the river, or will ye try the cañon? Tell our boys if ye meet 'em that martial law—is out—in the Co'r de Lane?"

Long after Rafferty was clean out of hearing Mike continued to disperse his soul in barbaric hoots and howls, till Darcie, rising on his elbow to listen for another sound, bade him hold his infernal riot.

A quarter of a mile away the troops were disembarking. The orders demanded a quiet landing, but Mike had heard the roll-call on board the boat before she touched the shore. And now the tramp of feet could plainly be distinguished treading the deck of the wharf-boat; now they were mustering on the ground. Two by two, in column of twos, the companies were marching as one man. Steady, through the night, on came the solid, cadenced tread. As sharp as pistol-shots rang the words of command. The white stripes, the steel points, gleamed through the trees. Silence; and "piercing sweet," O voice of rescue, in the dark distance the bugles sounded:

"Attention!"

It sent the blood to the hearts of all who heard that midnight call. Darcie thrilled, and was himself again in that moment of strong excitement. Faith broke down like a child, and wept. A word at last had been spoken to which even anarchy, red-handed, paused to listen. That brief order would carry through the night; it would fly from camp to camp through the mountain gorges, and every man who caught but the echo of that word would understand. Those who will not heed the voice of law, or soften to the stiller voice of kindness, must pause at last when the bugle sounds:

"Attention!"

FROM A PHOTOGRAPH.

ALL QUIET IN THE CŒUR D'ALENE.

THERE was no "weddin' in Spokane," as Mike had generously predicted; but there was a doctor in Spokane, which was more to the immediate purpose.

The wedding was some months later, when the war was over, and the trials were over, and the technicalities of the law had done much to retract the ringing lesson which the clear-voiced bugles taught. The mines had resumed; Mr. Frederick Bingham had "resigned," and was investigating the Keeley cure; and Darcie Hamilton was sent over as manager of the Big Horn. This time he did stop in New York long enough to protect his claim to the virgin lode he had located, under trying circumstances, the previous summer in the Cœur d'Alene. (The name of it was not the Black Dwarf.) But the complications between that early, rash location and the subsequent patent under law would make another story, with a very different scene-setting. The family discussions, in Darcie's opinion, were far worse than any miners' war. He never knew on which side his best friend would turn up. His mother, for instance, was inflexibly against him, while his father, the most positive of men, was inclined—especially after seeing Faith's picture—to look upon the young man's adventures in the Cœur d'Alene as very much what might have been expected, so why make a row about a thing that was a mistake all around? Darcie by no means considered that any of it was a mistake; but if his father chose to call it so, and to give his consent to his wishes on that understanding, he was willing to yield the point, in name. But Faith declined to go to England, into a family that gave her so cold a welcome. Therefore Darcie came to America as manager of the Big Horn, and the intrepid young pair went westward on their conquering way, and left age and opposition behind them. And if they have disappointed each other's high expectations of happiness, the fact has not as yet transpired to the knowledge of their relatives.

Faith celebrates in her letters the wonderful wild flowers of the Cœur d'Alene, the grandeur of its mountains, the softness of its sudden spring. Other persons maintain that the spring has been very late in the Cœur d'Alene this year. Her aunts wonder if the climate has changed. Something has changed: the girl has found her heart of youth again, and with it the courage to be glad. The premature, crushing experiences of the year before, its shocks and shameful surprises, have taken their due place in relation to larger experiences and more vital discoveries. She has parted with one sacred illusion, but she is fortified against that irreparable loss by a deeper knowledge of life and its inevitable shortcomings. Greater joy than hers no woman, she believes, has ever known. She cannot look to have all the joys, and all the strengths, of a woman's perilous life of the affections.

Her mother she lost before she ever knew her. A father she never had; he died the spir-

itual death before his child was born. The body of Frederick Bingham still walks the earth, but his soul will never be cured by the Keeley or any other mundane cure; it expired too long ago. When the will is dead, the man is dead. His children can only mourn him, and pay what respect they may to the dreary remains.

Darcie has his enemies in the Cœur D'Alene,

but he has also his staunch friends. Mike is foreman of the Big Horn in place of Peter Banning, deposed; and Kitty Tyler, now Kitty McGowan, makes the surly Big Horn kitchen a realm of perpetual sunshine. She is spoiling her young mistress for whosoever her successor may be when she and Mike go to housekeeping in the fall.

THE END.

THE CHASE.

ENGRAVED BY HENRY WOLF.

CAPTURE OF THE SLAVE-SHIP "CORA."

THE LAST SLAVER TAKEN BY THE UNITED STATES.

ON my graduation at the United States Naval Academy, I was ordered to the African Squadron in June, 1859. In the summer of 1860 the United States steamer *Constellation* was cruising on the station as the flag-ship of that squadron, bearing the broad pennant of Flag-Officer Inman. While eccentric to a degree, Flag-Officer Inman was remarkable for his energy, and was a gentleman of high standing in his profession and in the world. Out of the generosity of his heart, he placed me on his staff, after a "trivial matter of which I was very soon afterward gave him the straps as acting-master of the steamship *Marion*, which

position then carried with it the duties of navigating-officer in addition to those of watch officer. In the course of service, I was ordered to the United States steam-frigate *Niagara*, which carried home the first embassy Japan ever sent abroad. The *Niagara* on her outward voyage touched at St. Paul de Loando, the headquarters of the African Squadron, for water. Here we found the *Constellation*, and several of the ships of that squadron. On an official visit to the *Niagara*, all the officers being drawn up in line, my old commander spied me out, and with his usual eccentric warmth, stopped and shook my hand with a look of pleased surprise. About an hour after he left

the ship, I received a note from the *Constellation*, saying the flag-officer wished me to return to his ship, and that if I so desired he would place me as junior watch-officer and his acting flag-lieutenant. This note concluded by saying I had better come back to old friends. In another hour I found myself once more on the *Constellation*.

In President Monroe's administration, the United States and Great Britain by treaty agreed to maintain each a squadron carrying at least 80 guns, on the African coast, to suppress the slave-trade, which to that time had received no real check. Each nation could search and might capture the merchant vessels of either, upon proof which satisfied the naval officer of the violation of the laws. In point of fact, while this right was occasionally used by British men-of-war, still they seldom exercised it against American vessels, and it became almost the rule that American men-of-war should perform the duty. This fact came about because the slave-trade was largely carried on by American vessels. And strange as it may seem, by way of parenthesis, the American vessels were invariably fitted out and despatched from northern ports, only one in many years immediately preceding the war having southern ownership—the schooner *Wanderer*, which landed slaves on the coast of Georgia; but these slaves were at once gathered in by the United States Government, and sent back to Africa on the steam-frigate *Niagara*.

Engaged in this duty, the *Constellation* was cruising on the African coast, the men finding relaxation only at long intervals in a short rest at Madeira, or the Canaries; or perhaps at one of the islands in the Bight of Benin. After one of these cruises, when off the Ambriz River, near the Congo, in August, 1860, the calm gave way to a refreshing breeze, and the *Constellation*, with all squaresail to royals, had just shaped her course for St. Paul de Loando. It was about 7 P. M., the sea was calm as a floor, and a beautiful moon lit the waters with a splendor rarely seen. The crew and officers were all on deck enjoying the refreshing change. Songs were heard forward, messenger boys were skylarking in the gangways, officers were pacing the lee quarter-deck. Suddenly from the foretopsail-yard rang out the cry, "Sail ho!"

Instantly laughter ceased, songs ended, men jumped to their feet—all was now expectancy. "Where away?" came sharply through the speaking-trumpet from the officer of the deck. "About one point forward of the weather beam, sir." Every eye caught the direction indicated. Sure enough, bright and glistening in the reflected moonlight, the sails of the stranger were seen, hull down, with the upper parts of the courses in view. She looked like a white phan-

tom outlined against the clear-cut horizon. Glasses showed her to be a bark standing on the starboard tack, close-hauled to the wind, with every stitch of canvas drawing, royals, skysails, and staysails. The *Constellation* was at this time on the port tack, with royals, running with the wind about abeam. In a moment came the order, "Lay aft to the braces! Brace sharp up! Down main-tack and -sheet! Haul the bowlines!" This brought the *Constellation* close up to the wind, ready for further evolutions in chasing. For nothing on the African coast went unexamined, and every sail meant a chase and examination. The ship now felt the wind, and had the slight heeling which was one of her great peculiarities, but which only meant that she was like a thing of life, instinctively ready for the race. By this time came the quick, sharp, and clear notes of First-Lieutenant Donald McN. Fairfax (afterward rear-admiral), "All hands tack ship!" The first-lieutenant had taken the deck, and the chase was to begin. The sounds of the boatswain's whistle, and those of his mates, gave shrill notice throughout the ship, and their deep-toned voices, one after the other repeating the order, like rolling echoes of hoarse thunder in mountain glens, had not died away before three hundred men stood silent and expectant at their posts of duty, showing the discipline of the ship, and the eagerness of the men, for there was always excitement in a chase. "Down helm! Let fly head-sheets! Rise tacks and sheets! Let go the lee main and weather mizzen-braces! Clear away the bowlines! Haul well taut! Mainsail haul! Stand by! Let go and haul!" came quick, clear, and ringing from Fairfax, on the horse-block of the quarter-deck. The *Constellation* was simply superb in tacking, and round she came, raising her sharp bow from the sea like a racer ready for the signal.

Soon the ship was dashing along on the starboard tack with royals and staysails drawing. This evolution brought the chase on our weather beam. The *Constellation* was a remarkable sailer by the wind, and few ships were ever known to equal her when everything was braced sharp up and bowlines taut. The yards were now so sharp up that she ran nearer than the usual six points to the wind. In no long time the courses of the stranger began to rise, showing the gain we were making; and in an hour she was nearly hull up. It was as clear as day; but the light was that wonderfully soft light which the moon gives only in the tropics. The stranger's sails were as white in that light as a pocket-handkerchief. The breeze had freshened, so that we were running at least nine knots. Men had been sent aloft to wet down the topsails, and every thread was stretched with its duty, the leeches of the topsails just quivering. At this time a gun from

MR. FAIRFAX ON THE HORSE-BLOCK

our weather-bow was fired — a signal for the stranger to heave to, but on she sped, silent as a dream. We could now plainly see through the glasses that there was not a light about the ship, a most significant sign. Another gun was fired. As the white smoke came pouring over our deck, we lost sight of the chase, but as it was swept to leeward, there she ran silent and glistening, with no tack or sheet started. Suspicion now amounted almost to a certainty that we had a slave-ship at hand.

Our distance was yet too great to reach her with a shot. Soon her jib fluttered, her bow swung to the wind, the main-yards were hauled — altogether, she seemed to turn upon her very heel, and with the quickness, and almost the precision, of a man-of-war she had gone on the other tack, hoping doubtless to beat to windward. The *Constellation* followed her movement, and again fired a gun. We were both doing our utmost, and the two ships cut the brilliant waters on an apparently even course; but the *Constellation* was gaining. Nothing could prevent our overtaking the chase, unless a sudden squall should arise. This, possibly, was the stranger's hope. Again and again she tacked ship: we followed like Fate itself. About 11:30 we had the fleeing vessel within long range, and began a steady fire from one or two guns, shot, and full of command. The orders were to aim at her upper spars, as all were now convinced that the hull was filled with slaves.

But little did we know the spirit of the slave-captain. He had determined to take every chance for escape, even to the sinking of the ship. This he subsequently told me. He saw that we were beating him to windward. Suddenly he executed a movement which evinced the determination of the man. It was rash, perhaps — because he lost ground; but he knew his vessel, and hoped by increased speed to prolong the chase, awaiting the chapter of accidents.

He deliberately put his helm up, brought the wind abeam, and set all his starboard studding-sails from lower to royals. Never did I see a more daring evolution. I myself since that night have had to run the gauntlet of thirteen men-of-war in broad daylight, taking their tremendous broadsides, — six on one side, seven on the other, — pouring thunderbolts upon our three poor little Confederate gun-boats, carrying provisions to beleaguered Pualaski. But here was a slave-captain who, with a daring worthy of admiration, took the chances of having his ship blown out of the water to prolong the chase. His movement brought him within easy long range, but almost justified his risk; for the slave-bark, as she must now be called, appeared to fly like a frightened sea-bird, with a speed which challenged our best efforts, for we too had followed the movement,

and were rushing through the water full ten knots under starboard studding-sails.

The slaver was well on our starboard bow. Mr. Fairfax called me to go with him on the gun-deck, where we ran two heavy 32's out to our bridle-ports ready for a chase dead ahead, which soon occurred. I was directed to carry away the upper spars and rigging, and under no circumstances to hit the vessel's hull! "Aim high and make your mark," he continued. I touched my cap and smiled; it was so like the admonition of an ambitious mother to her son. Soon one gun was sending round-shot whirling through the rigging. The bark edged away still further from the wind, and now rounding in her weather-braces, she had nearly crossed our bow, bringing the wind directly astern and setting her port studding-sails aloft and aloft. She now went flying over the sea like a great white bird with her wings widely extended, with the *Constellation* following suit. We could have sunk her or raked her fore and aft. Every moment we hoped to bring down some of her spars or upper masts. At this time the chase was not a mile distant, but in the moonlight her distance seemed not half that. Suddenly our attention was attracted by dark objects on the water ahead of us. The slaver was lightening ship by throwing overboard casks, spars, and even spare masts. The sea appeared as if filled with wreckage in a long line. All at once boats were seen. "They are filled with negroes," I heard some one cry on deck. "Steady on your course," I heard the flag-officer shout on the fore-castle just above my head. Sure enough they were boats, and as we sped they seemed to be coming swiftly to us. My heart beat with quick emotion as I thought I saw them crowded with human forms. Men on deck shouted that they were crowded with people, but we swept by, passing them rapidly. The slaver hoped we would stop to pick up his boats, and thus gain more time, but his ruse made us even more eager. Now, our guns redoubled, we knew the end must come soon, but there seemed no way to stop the chase without sinking her, and humanity forbade a shot in her hull. Her captain realized the situation, but even then his courage was wonderful.

On we went. Suddenly I saw her course begin to change; she was coming to windward — her studding-sails came fluttering down, her skysails and royals were clewed up, her foresail also, and as she rounded up to the wind and backed her maintopsail, the *Constellation* had barely time to get in her canvas, and round to under her maintopsail, scarcely two hundred yards to windward. "Away there, first cutters, away!" called the boatswain's mates, as their shrill whistles ceased. I had barely time to get

“THE FIRST CUTTER SPEEDING LIKE AN ARROW TO THE VESSEL.”

on deck, after the guns had been secured, before I saw the first cutter, with our gallant first-lieutenant himself as the boarding officer, speeding like an arrow to the vessel, her oars scattering sparkling diamonds of phosphorescent water as they rose and fell. Every officer and man was leaning over our low hammock-rails, breathlessly waiting and watching. We saw the cutter round up to the gangway. "In bows; way enough!" we could hear Fairfax say distinctly, though his orders were low. Then came the rattling of the oars as they were tossed, and the grating of the cutter alongside. Fairfax's active figure could be seen quickly mounting the side, and then he disappeared as he leaped over the gangway into the waist. For two or three minutes the stillness was painful. One could hear men breathing in their excited anxiety. Suddenly there was a hail, in tones which I can recall as if heard to-day—clear, distinct, and manly, "*Constellation*, ahoy! You have captured a prize with over seven hundred slaves."

For a second the quiet still prevailed, and then the crew forward of the mainmast spontaneously gave three loud, ringing cheers. Only the sanctity of the quarter-deck prevented the officers from joining, but they shared the feelings of the crew. Aside from the natural feeling which success in a chase brings, there was large prize-money in prospect, for in every such capture the law divided among officers and men a sum equal to half the value of the ship and her outfit, and an additional sum of \$25 for each slave captured, amounting in this case to at least \$30,000. To a practical mind there was reason for cheering. The prize, however, was not surrendered by her captain, of whom we will speak again, but by the crew, who in terror of our guns hove-to the vessel.

It was about 2 A. M. when, by order of the flag-officer, I went on board the slaver with a prize-crew, consisting of nine men all told, one being a negro servant—all hastily selected, which accounted for some serious dangers to be spoken of hereafter. Closed lanterns here and there were now needed, for the breeze had died away almost to a calm, and the sky was covered, leaving only a faint glimmer of moonlight at intervals. The deck was covered with articles of all kinds, which were to have been cast overboard to lighten the ship. The crew could only be seen as called to me. They were a set of cutthroats—bearded, dark-looking, scowling Spaniards and Portuguese, not a native American among them. The slaves were nearly all on the slave-deck, shouting and screaming in terror and anxiety. I leaned over the main hatchway holding a lantern, and the writhing mass of humanity, with their cries and struggles, can only be compared in one's mind to the horrors of hell as pictured in former days. But I paid

dearly for that sight. The sickening stench from hundreds of naked beings crowded into a space so small, in so warm a climate, without ventilation, was frightful. Overcome by horror at the sight and smell, I turned faint and sick at heart, and hastened to the stern. Here, seated on campstools, sullen and gloomy, were the officers; they made no sign of rising, or any offer of civility, though they recognized me with scowls as I passed among them, holding my lantern to examine their features. Two—the second and third mates—I saw at once were Danes or Swedes, not ill-looking, and having more honesty of countenance than I would have expected to see. I passed them by, and held my lantern so as to look into the face of another—such a face, cunning, cowardly, cruel, brutal, with duplicity written in every feature. This man was the first mate—a Russian, a villain below the grade of pirate, a murderous scoundrel, full of Satanic malice. One look in his face was enough. I felt danger for me, unceasing danger, in that man. Time verified my intuition, for mutiny and attempted murder of myself made every moment I passed with that man as my prisoner an unceasing and straining watch. I had been looking for the captain, and passed on to a large, powerfully built man who sat apart. As I held my light near his face, he rose—full six feet or more, splendidly proportioned, dressed somewhat in the sailor style of a man-of-war's man, with blue frock shirt and wide sailor trousers. His face was that of a man of intelligence and force, handsome, and covered with a full beard and a large, rounded mustache. "I am an Englishman, sir," he said, "and I protest against any indignity in the name of my queen, whose protection I claim. I hold you responsible for such protection; I am only a passenger." His voice was full-toned and manly, and his manner so earnest that for a moment he nearly deceived me. A slave-captain can't be found on board a slaver.

"What is your name?" I asked.

"Campbell, at your service, and were I not a British subject, I'd be an American gentleman."

"Well, you are the captain," I replied; "and now, Captain Campbell, take your men and quiet the slaves; put the decks in order for working the ship, and then we will talk about your queen."

I was only a boy of twenty-one. He was forty-three or -four years of age. As I gave the order, I saw a surprised, and even amused, look in his eyes. It was a new thing to be ordered to duty. He looked me in the face for a moment—then a kindly light shone in his eyes, and he laid his hand on my shoulder,—a powerful hand it was too,—and said, "Boy in years, but—you are an American gentleman. Well, so be

INTERVIEW WITH THE CAPTAIN.

it. I 'll lighten your duties." Turning to his officers, he gave the necessary orders, and soon the din ceased, and the decks were once more sufficiently cleared to work the ship. I had been ordered simply to follow the motions of the flag-ship till daylight.

When I had divided my small crew into watches, and had put a man at the helm, I had a moment's time to look into the cabin which was to be my home. There were two cabins adjoining each other, with four state-rooms in the forward one, and two in the after. Here, in each of these rooms, I found one or two negro maidens, while several hovered in the corners, and crouched upon the sofa and on the floor. Like the rest of the slaves they were as nude as when born. They looked terribly frightened, and evidently considered me a sort of "lord high executioner." When daylight appeared, they were taken to the quarters of the other negroes.

The next morning found us rolling in a dead calm, and as the day grew on, the intense heat and glare made the slave-ship a den of indescribable horror. The slaves, of course, were brought on deck, or they would have suffocated and died — a course which was followed every day from early light till sunset, as long as I had them with me. They filled the waist and gangways in a fearful jam, for there were over seven hundred men, women, boys, and young girls. Not even a waist-cloth can be permitted among slaves on board ship, since clothing even so slight would breed disease. To ward off death, ever at work on a slave-ship, I ordered that at daylight the negroes should be taken in squads of twenty or more, and given a salt-water bath by the hose-pipe of the pumps. This brought renewed life after their fearful nights on the slave-deck. After their first bath under my charge, Mr. Fairfax came aboard bringing carpenters, boatswain's mates, and sail-makers; for the ship's rigging, sails, and spars had been badly injured aloft by our fire. That broiling day, and the next, these gangs were at work repairing damages, while the *Constellation* remained rolling near at hand.

In the mean time, I had been busily engaged in having an open lattice bulkhead put up on the slave-deck, close enough to prevent passing, and yet sufficiently open to give what ventilation could be obtained. The object was to make a complete separation of the sexes, which were about equal in numbers. Windsails were provided for ventilation, but with all this, no one who has never seen a slave-deck can form an idea of its horrors. Imagine a deck about 20 feet wide, and perhaps 120 feet long and 5 feet high. Imagine this to be the place of abode and sleep, during long, hot, breathless nights, of 720 human beings! At sundown, when they

were carried below, trained slaves received the poor wretches one by one, and, laying each creature on his side in the wings, packed the next against him, and the next, and the next, and so on, till, like so many spoons packed away, they fitted into each other, a living mass. Just as they were packed, so must they remain, for the pressure prevented any movement, or the turning of hand or foot, until the next morning when from their terrible night of horror they were brought on deck once more, weak, and worn, and sick. Then, after all had come up and received the bath mentioned, there was the invariable horror of bringing up the bodies of those who had died during the night. One by one, they were cast overboard — a splash the only ceremony. For thirty odd fearful nights and days this routine was endured before I finally landed these creatures. At the time I write of, I was a slave-owner, but I had only known happy, well-fed, and carefully attended people, who were as a part of a large family. Since that service on the *Cora*, I have known how much it cost to Christianize the negroes, and I often see in reverie the rigid forms as they fell day by day into the tropic waters.

At four o'clock in the afternoon of the second day, a light breeze sprang up, and the flag-ship sent a boat alongside with orders to sail when the signal pennant was hoisted. At the same time I was ordered to send the slave-captain aboard the *Constellation*. They were afraid to let him go with me. I must say something about my two days' intercourse with this man. He had apparently conceived as quick and kind a feeling for me as his first mate had at once shown me his hatred. The captain took his meals with me in the after-cabin, and I found him full of information, well acquainted with the world, bright, witty, and full of vivacity, abounding in anecdotes and original remarks. He had become very friendly in manner toward me, told me all the qualities of the ship, the characters of the crew, and the methods of dealing with them and the slaves. Though seated in his own cabin, he seemed to yield in a most natural manner to the logic of circumstances. He laughingly explained that he had lost \$50,000 by this ship and its capture — saying that he would never have surrendered if he had been the captain, instead of a mere passenger and a British subject — though he "admired an American gentleman, yes, loved an American gentleman." Yet he did not hesitate to tell me that he heard the ship had been fitted out in New York, and he winked at me merrily as he told me how he "would like to see that town and great Broadway, and talk with the American gentlemen." I knew that he was an American of course, and that he was only playing the usual part. When I laughingly asked why he

"I LEANED OVER THE MAIN HATCHWAY HOLDING A LANTERN."

refused to acknowledge himself the captain, he replied with a twinkle in his eye, "Why, don't you see this is an American ship? Her captain must be an American — an American gentleman, while by law he is only a pirate! I'm a British subject — but I rely on my queen for protection, and on you as an American gentleman."

When he had been directed to get ready for his transfer to the *Constellation*, he came to me and said, "The boat officer tells me to give you a list of such of my effects as I take." I saw that he was hurt, and begged him to take whatever he wished without any such list, as I had confidence in him. His face brightened, and he said, "I love an American gentleman, and hope to show you so some day." And, indeed, he did show me that he was in earnest, for in the dark days of the beginning of the civil war I met my friendly slave-captain, and he proved his honesty of heart and kindness of feeling in a manner conclusive to "American gentlemen."

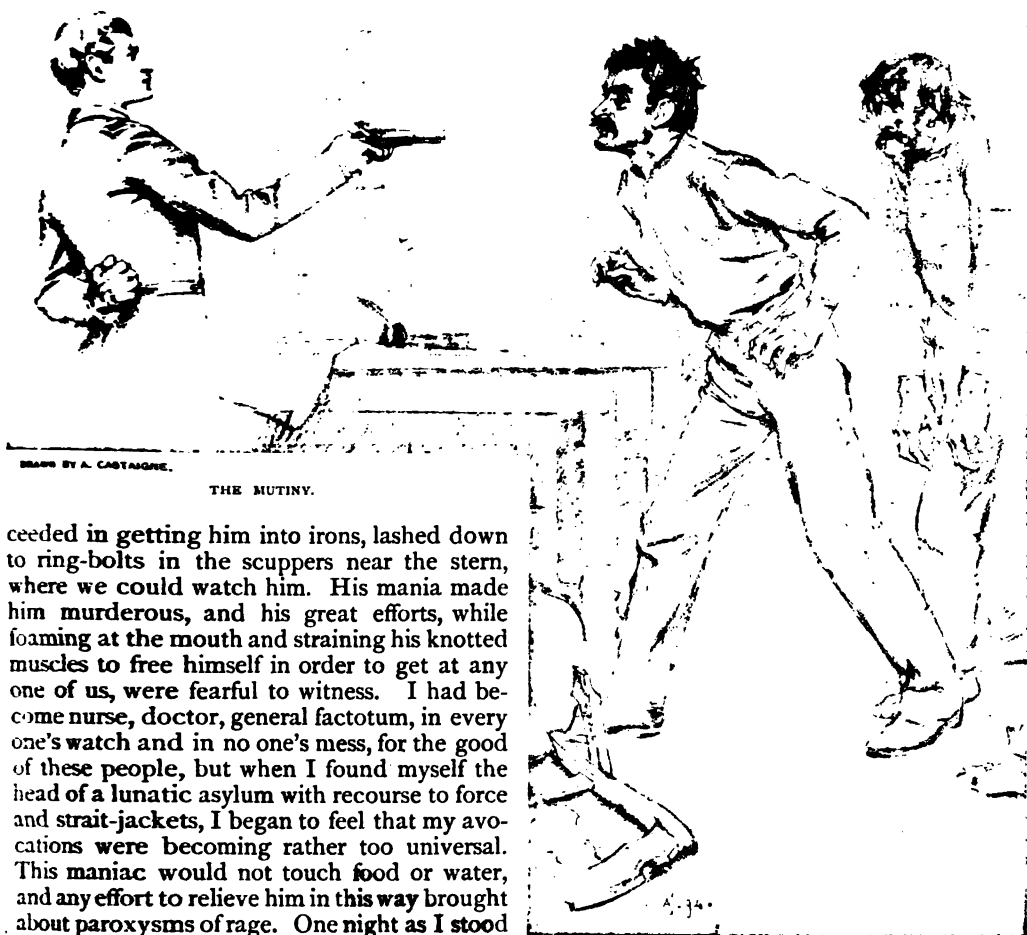

Just before parting he cautioned me against the first mate, bade me watch him, that "he was not a gentleman," and, calling the second and third mates, bade them always "stand by" me. When I looked at the faces of his crew, I asked him, "Can I trust them?" His answer was, "Treat them right; though only a boy you are an American gentleman, and will get on well enough with them." Then he called up one of them — the worst-looking rascal of the whole crew, and said, "José, be true to this young officer. Do all you can to help him." "Si, señor," said the man without a look or gesture. But José did help me like a man, and so did the two Danes. The ship would have been lost, and even a worse fate would have been mine, had not these men been true and faithful when the need arose — for I had thirty desperate prisoners, and my prize-crew soon became reduced in numbers by events which will be told.

As it neared sunset, my slaver captain left me with a shake of the hand and a hearty God-speed — saying as he went down the ship's side: "You may have trouble — probably will; but act the American gentleman, and all will be right." As the cutter pulled away, he waved his handkerchief, and then a gun was fired from the *Constellation*, and the signal pennant fluttered at the mizzen. I squared away the yards, set the courses with a free wind, and the *Constellation* did the same on the opposite course. Soon it was night and I had gone out into the darkness with my prisoners and slaves. For some days without any incident we followed the coast to get the land and sea breezes. In the mean time, having found the decks too crowded to work the ship, during the day-time, with the

slaves on deck, I devised a method which worked well. I selected an intelligent negro boy about twelve years of age, and, with the assistance of some of the men who could sew, rigged him up in a full suit of navy blue, gave him a naval cap with its broad band of gold, and a large flexible ratan, and christened him "Boatswain Tom." Tom's duties were to precede me wherever I went on deck, while working ship, and open a path for us to pass, with his ratan. The boy was very proud of his finery and authority, and he performed his duties well, the slaves always giving way with good humor to Tom. One duty Tom did not like. I had found a large hand-organ on board, brought evidently for the amusement of the slaves. Whenever the weather was clear, I had the organ on the poop, and Tom was organist. He thought it at first a very distinguished honor to be grinding out "The girl I left behind me," "Yankee Doodle," and comic minstrel songs; but by degrees Tom's African dislike of labor showed itself, and he often petitioned for an assistant.

In the mean time much sickness had begun to appear — stomach and other similar troubles, and many distressing and unsightly contagious diseases. I did all I could, but I had no medicine-chest. I found some alcohol well diluted, which I used where I thought it would prove effective. One case attracted my attention and sympathy. A boy about ten years old had a most terrible case of ophthalmia, which some of the slaves told me was the result of a contagious trouble, communicated to the child by close contact. I took him in the forward cabin, and had his eyes bathed frequently with a very weak wash of water and alcohol. At last he died. The slaver's admonition that this fearful disease was to be found among these wretched people put me on my guard to prevent ill to my prize-crew. In a short time one of my men was incapacitated for any duty, and became an additional care.

The daily duties were pressing upon us. In each watch there were only four men. One of these had to be stationed always at the cabin door armed with a revolver, with orders to shoot any slave-officer conversing with one of his men. This man on guard attended also to the main-sheet and topsail-halyards. There was one man at the helm, one forward, and one in the gangway. I attended the after-braces and the spanker gear. I had in my watch a gallant young seaman, with as brave a heart and active a body as ever reefed a topsail, or hauled out a weather-earring in a gale. He was a Scotchman — Burns by name. This young fellow was omnipresent on deck, and true in all cases of trouble. Among our slaves, one, a Hercules in size and strength, became insane, and was soon a raving maniac. We had suc-

MADE BY A. CASTAGNE.

THE MUTINY.

ceeded in getting him into irons, lashed down to ring-bolts in the scuppers near the stern, where we could watch him. His mania made him murderous, and his great efforts, while foaming at the mouth and straining his knotted muscles to free himself in order to get at any one of us, were fearful to witness. I had become nurse, doctor, general factotum, in every one's watch and in no one's mess, for the good of these people, but when I found myself the head of a lunatic asylum with recourse to force and strait-jackets, I began to feel that my avocations were becoming rather too universal. This maniac would not touch food or water, and any effort to relieve him in this way brought about paroxysms of rage. One night as I stood on the poop just over his head, I was startled by seeing him rise with a frantic effort. He had released his hands from the manacles, and had unlashed those on his legs from the ring-bolt to which they had been secured. It was a moment of life and death. I shouted for Burns and the watch, and sprang down the ladder. The maniac was endeavoring to go forward, his huge body swaying and his great arms held aloft, one of his hands holding the untasted irons ready as a terrible weapon. Burns jumped upon him from the front, I from the back—the other two men as they came. He tossed and threw us about as a lion would toss whelps, and not till all the men had been aroused by the cries of the man at the wheel did we finally secure the madman. A day or two after, early in the morning, Burns came to me and said, as he touched his cap, "The devil is dead, sir." "You mean the madman," I asked. "He was the devil himself," persisted Burns, quite respectfully.

One incident in which Burns roused the ship

in earnest will be given here, though not in the exact order of time. The first mate had given great cause at all times for anxiety, and had finally made an effort to win over some of my men. In one case he had so far succeeded as to cause one, an able seaman, but always a mutinous man, who had been tried for striking the boatswain of the *Constellation*, to rebel against my orders to cease his private communication with the slaver's mate. This man carried his mutiny so far as to threaten me personally, and to call upon the mate to stand by him when I ordered him to be put in irons. The mate advanced upon me from his cabin with oaths and threats, calling loudly upon others. He was quieted by my revolver in his very teeth, and submitted to being ironed only when he felt his head would be blown off. I had these men put into separate state-rooms, after being ironed—the rooms made more secure by heavy oaken battens on the doors, and the doors themselves secured by strong padlocks. The two

rascals received notice that they would be shot if seen outside these rooms, except at stated intervals. I wonder now that I did not shoot these villains without delay, for I realized their plot, the details of which I learned later. It had been discussed by them to murder several of the prize-crew — myself included, seize the ship and slaves, and then, by the aid of the other prisoners, carry the slaves as originally intended to Cuba. My sailor's mutiny broke the plan before it had matured, for the two Danes and José had not been brought to give their consent to a matter which would certainly have placed all their necks in the halter, sooner or later. Burns was now for "a drumhead court-martial and a military execution, without frills or trimmings," as he expressed it. I endeavored to calm his fears, while urging renewed vigilance. It would only have required a glance at any moment to have made Burns act like the courtiers who took it upon themselves to "rid their monarch of so great a worry as Thomas a Becket." He assured me "that he and one or two others who were true to me and their duty would settle the business." I told him not to think of such a thing, except in case of another overt outbreak, for if we could only land the slaves in Monrovia, all danger of an uprising would most likely be over, since the real incentive to mutiny and murder could only be found in the hope of selling the slaves.

While filled with these cares one night, tired, worn, drenched by the rain of a squall which came furiously but was soon over, I had thrown myself on the sofa in the after-cabin. Burns was lying down, tired out with watching, care, and anxiety, on the floor of the forward cabin, where he always slept like a watch-dog, guarding me from the dangers which he knew were real enough, and which grew greater by revolving them so constantly in his tired head. I had been asleep only a few minutes, it seemed to me, but fully an hour in reality, when I was aroused by sudden and startling cries of "Murder! Help! Murder!" I jumped up, revolver in hand, and rushed through the cabin. That the few men on deck were being murdered and thrown overboard was my only conclusion. I could see them running aft on the lee side, toward the cabin door. I raised my revolver, and was in the act of firing, when my wrist was strongly seized and held. It was the man on duty at the cabin door. He pointed to Burns, who still lay on the floor, rolling uneasily in his slumber and calling "Murder!" Poor fellow; he had had a terrible nightmare, which came near ending the lives of some of the men on deck.

The squall to which I have alluded had been succeeded by almost a calm, and yet there was

an electrical disturbance which was very remarkable. At times the dense darkness was lighted up by sheet lightning covering the sky, almost crimson in color. Another feature which the electricity assumed was a weird and ghost-like exhibition of St. Elmo's lights. At each yard-arm, or point, there seemed to hang a canny white lamp, outlining the yards and masts. The effect was not pleasant after the night's excitement, and all these conditions gave evident uneasiness to the negroes on their crowded, damp, and hot deck. Their voices in tones of terror, and their groans and lamentations, indicated that their superstitious natures were wrought to a high tension. I trimmed the wind-sails to give them air, and relieve their sufferings; but the next morning there were five or six bodies to be given to the sea.

One of our chief sources of danger was the want of a chronometer. It was necessary to navigate the ship by dead reckoning and observations for latitude. This danger was especially shown a few nights later under conditions very similar to those just described. There had again been one of those furious night-squalls, succeeded by the same moist, hot calm. We had been running so as to keep clear of the coast, but not so far as to lose the land and sea breezes in this region of calm. On this night, however, there was no lightning afterward, and the silence on the rolling vessel was only broken by the creaking of yards or the lazy flap of the topsails. While watching and waiting, I fancied that I heard another sound which startled me. My "faithful Achates" Burns came to my side and suggested "surf." "Get a cast of the lead, quick!" I said. He jumped into the chains and threw the lead. "By the mark, five," he called. There was not a moment to lose. With all our efforts we only had time to get out an anchor and clew up the topsails, as we swung round and distinctly heard the angry roar of the heavy surf near at hand. At daylight we could see how close to wreck we had been — not a mile away the heavy surf was breaking high upon the gray, barren land. We had been carried in by a temporary current, and by compass errors, which I had had no opportunity to correct.

Such incidents as these, with increasing work, poor food irregularly taken and never relished, badly cooked and worse served, made life on the slave-ship a very severe strain. As we got further to the north, it became necessary to bear away from the coast to avoid being caught by the strong currents setting to the eastward into the Bight of Benin, and the northern part of the Gulf of Guinea. In doing so we were often compelled to hold on to our canvas longer than seemed safe — a thing almost necessary, since my prize-crew was now reduced to six men.

One night, in the first watch with the ship under square-sail, I saw a squall working from windward, and reduced the canvas to topsails fortunately, but hung on to the courses, thinking the squall would pass astern. I had a landsman, Simmons, stationed to tend maintop-sail-halyards, and also the main-sheet when ordered, and I carefully instructed him what to do. Burns was forward with a man, so I felt safe there, as he knew my plans: I was to tend the spanker-sheet. I intended to let go the fore- and main-sheets and spill the sails, settle the topsails if absolutely necessary, luff the ship and keep her so till the squall passed, in case it struck us and should prove too heavy. But however good our plans, neither care nor prudence can always command success. Unfortunately I misjudged the force of the squall. It came upon us with fury. I gave the necessary orders, but Simmons, in terror at the violence of the wind and its frightful noise, was too paralyzed with fear to obey. The ship did not come to the wind, but did come near to capsizing. She heeled till the green water came rolling over the rail in white foam. I leaped into the scuppers, now filled with water, let go the main-sheet and the topsail-halyards by the run. I jumped on the poop to put the helm down, for I knew the man at the wheel must have put it hard up. Imagine my surprise at hearing José's voice in the darkness in his broken English shout into my ear "All right, it is hard allee now," and soon the ship was shaking in the wind, sails and blocks flapping with noise like thunder in the howling blast. José had heard my order, had seen it disobeyed, and while I cast off the main-sheet and topsail-halyards, he righted the helm and brought the ship to the wind, where his steady hand held her till the danger was over. From that night for four long, dangerous months José always had the helm in my watch. He was a faithful, true, and brave man, always obedient, ever watchful, quiet, and attentive; and yet, if ever there was a pirate in countenance, it was that dirty, ragged Spaniard. In many serious dangers to come, before we reached America, he was steady and true.

The following day, while we ran smoothly along in a bright sea, with a clear sky overhead, I watched the naked slaves as they sat chattering around tubs filled with boiled rice and peas, which I always carefully examined before serving, to test the cooking, and felt a deep sense of thankfulness that they had not been lost by me. They were fed twice a day, at 9 A. M. and 4 P. M., when large buckets of water were carried around, and each one given a liberal drink.

During all these days I had not sighted a sail, but one bright morning the smoke of a steamer was seen by us. She had evidently sighted us, and we could perceive that her course

was changed, we at once knew her to be an American or English man-of-war who wished to examine us. This offered me the only recreation I had on board the *Cora*; I determined to give her a race. Clapping on everything which would draw, the *Cora* made her best through the bright water sparkling under the sun of a clear sky. From the maintopmast cross-trees, by the aid of glasses, I soon identified her. She was the United States' steamship *Mohican*. We gave her a delightful race, and when at last she drew near enough to hoist the United States flag and fire a gun, there was no excuse but to obey promptly. We ran up our flag and hove to. Soon a boat came to board us. Lieutenant Crossman, "little Crossman" of the 1851 date, stepped aboard. It was quite delightful to meet him, and equally so to enjoy his surprise. It was our last meeting.

After more than thirty days since parting with the *Constellation* we reached Monrovia, Liberia, where we were to land the slaves. The United States had an arrangement with Liberia, which, however, we had not then recognized as a government, by which provision was made for the support of liberated slaves by the Liberian authorities for one year. These authorities bound the slaves to their citizens, and good results were supposed to come from the transaction. Our stay at Monrovia was prolonged by the need of fumigating and cleansing the ship. I had been generally broken down, and was now quite sick. I shall not soon forget the faithful service of Dr. Roberts, given me with a dignity which rather surprised me, a young slave-owner. This physician was the brother of Liberia's first president — a dark mulatto, educated, I think he told me, at Oberlin College, Ohio. At all events he was skilful, considerate, and attentive. It was necessary to perform a simple operation, which he did with care and success; and a scar on my neck reminds me to this day of the Liberian doctor.

The long voyage from Monrovia was filled with suffering, want, and danger. Heavy gales of winter followed the *Cora* across the Atlantic. One of my men was lost overboard in a furious gale, though we made great efforts to save him, and now the two Danes came to the rescue. One terrible night in a raging winter's storm, while close reefing the maintop-sail, by the lightning's glare I saw one on the weather, and the other on the lee maintop-sail-yard, the ship rolling almost to her yardarms. In this gale we were hove to for many days, with two other ships, the *Cora* being in the middle. One, to windward, went down in a terrible night, and when the light came, the sea was strewn with her wreckage; the other and the *Cora* afterward drifted apart. Our water-supply had failed, and now we were driven to the necessity of replenishing our supply by catching rain-water in tarpaulins, and our

provisions were only a small supply of beans. The ship had crossed the Gulf Stream, and we had sighted Long Island, when we were again driven far seaward by one of those terrible winter gales which make everything a mass of ice. When we were once more able to make sail and shape a course, one dark afternoon, in half a gale of wind, we sighted a vessel which we knew to be a Maine-built ship. Running close on our opposite courses, I hailed: "What news from

importance. One bitter cold night about the middle of March, 1861, just as my mission was nearing success, in passing down Broadway I stepped into the lobby of one of the large hotels. As I stood waiting for a friend, I saw near at hand, in the rear of the hall, three or four well-dressed men, such as you may see on Broadway any fine day. One was tall, handsome, fashionably attired. He had a face clean-shaven except a large, curling, and well-shaped mus-

AN UNEXPECTED MEETING.

the United States?" "Abraham Lincoln is elected President," came back the reply in tones of joy, and a paper tied to an iron bolt was thrown safely on our deck. I felt that days of gloom hung over our country; nor was I wrong. Many days later, late one evening about Christmas, 1860, in the midst of a snow-storm, and steering through heavy masses of broken ice, I anchored the *Cora* under the stern of the receiving-ship at the Brooklyn navy-yard — a prize to a country no longer united.

I had chosen sides with the South, and, after resigning from the United States Navy, was on duty in New York on a special mission of

tache. At some remarks which brought out his patriotism, for the country was then ablaze from Canada to Mexico, he curled his whalebone stick with graceful poise above his head, and apostrophized, in language both humorous and pathetic, the American flag. As he ceased, he turned and caught my eye. My friend came up at this moment, and we started to go. I had not taken three steps, however, before I heard the voice of this man call, "Stop, stop, there — I want to speak to you!" I did not turn my head, but continued straight for the door, fearing lest some trouble should involve the important trust committed to me. Indeed, I

had been under espionage, and New York at that time was blazing with excited passions. I had not gone far, however, before I heard his quick step following me. I turned my head neither to the right nor to the left, but marched steadily on. In a moment more I felt a strong, heavy hand laid upon my shoulder. I stopped and turned. "What will you have, sir?" I asked. He bent down, and looked over my shoulder from behind well into my face. Then he asked, after his keen scrutiny, "Don't you know me?" "No," I said. He laughed in a pleased manner. "Don't you know Campbell of the *Cora*? — a so-called British subject, but really an American gentleman?" He spoke this in a whisper. I started with surprise. There was nothing in this rather distinguished looking man to recall the slave-captain. "Heavens!" I cried; "are you Campbell?" "The same, my young commander — the same," he answered. Then putting his arms around my neck with gentleness, he called his friends to us. "Gentlemen," he said in low tones, "this is the youngster I told you of, who captured me when I was after 'black-birds.' These are my friends — American gentlemen," he said to me by way of introduction. He seemed as glad to meet me as if I had done him some great service. The next day he called to see me at the Astor House, where I was staying. He told me that he had escaped from the *Constellation* at St. Paul de Loando, through masonic friends; from thence he had gone to the Congo River; there had joined as a bona-fide passenger a slave-ship bound for Cuba, having nine hundred slaves aboard. He had only lately returned to New York. "And now," he said, "I know the government is in arrears to all its officers," — a sad and very true fact at that time, — "and I want to offer you any means or funds you may need." I was greatly astonished at his generous offer, and having assured him that I did not need any assistance, I asked, "Why do you feel so kindly to me, who was one of the instruments of such heavy loss to yourself?"

"Do you remember, my boy," he said, "that I told you I loved an American gentleman, and hoped some day to show it? Well, you treated me as an American gentleman, and put confidence in me when I was a technical pirate. That's why I love you and will serve you at any time as an 'American gentleman.'"

The sad four years of war followed. About a year after its close, I sat one afternoon, in the city of Charleston, South Carolina, with a former naval comrade, on the bare boards in a circus tent, waiting the afternoon performance. We had gone early, and there were probably not half a dozen persons yet assembled. As we sat talking over old times and past events, we saw the clown in his full uniform of paint, cap, and stripes come out from the dressing-room, pass into the ring, cross over, and then, to my surprise and confusion, step briskly over the benches directly up to me. He seized my hand — "God bless you, my boy. How glad I am you have escaped all the dangers of war. Oh, I 'm Campbell," he explained, seeing my surprise, "not a British subject, but well — an American gentleman. Meet me after the performance is over. The ring-master calls me — adios." Then he vanished till his watch on deck was called, when with his "Here we are now, sir," to the ring-master, he made speeches to the riding young lady, joked with the ring-master, sang his comic songs, pretended to turn somersaults and failed, then outdid all in gymnastic feats — in short he made all the world laugh. I met him as agreed — and what a change! Once more the tall handsome man, a little older, perhaps a little more rugged, but strong and manly in figure, and winning in manner and word. He told me much of himself now, and gave me his real name, which was Donaldson. He had been sailor, lounge, and pseudo-gentleman of leisure on Broadway, negro minstrel, clown, slave-captain — perhaps the list had better be closed; but he had a faithful, generous heart. He was a brave man, even though a statutory pirate.

About fifteen years ago I read with sadness in an American paper, while as one of the American officers of the Egyptian Army I was serving as major of engineers on the staff of the Khedive of Egypt, a telegram from the city of Washington: "Died suddenly last night in this city, the celebrated clown, William B. Donaldson."

Nature intended this American slaver to be a chivalrous hero; Fate led him by a rugged path to a height where he could at least see and admire that embodiment of manhood, which he fain would have been — "an American gentleman."

Wilburn Hall.

ZMAI IOVAN IOVANOVICH.

THE CHIEF SERVIAN POET.

HARDLY is there a nation which has met with a sadder fate than the Servian. From the height of its splendor, when the empire embraced almost the entire northern part of the Balkan peninsula and a large portion of the territory now belonging to Austria, the Servian nation was plunged into abject slavery, after the fatal battle of 1389 at the Kosovo Polje, against the overwhelming Asiatic hordes. Europe can never repay the great debt it owes to the Servians for checking, by the sacrifice of their own liberty, the barbarian influx. The Poles at Vienna, under Sobieski, finished what the Servians attempted, and were similarly rewarded for their service to civilization.

It was at the Kosovo Polje that Milosh Obilich, the noblest of Servian heroes, fell, after killing the sultan Murat II. in the very midst of his great army. Were it not that it is a historical fact, one would be apt to consider this episode a myth, evolved by contact with the Latin and Greek races. For in Milosh we see both Mucius and Leonidas, and, more than this, a martyr, for he does not die an easy death on the battle-field like the Greek, but pays for his daring deed with a death of fearful torture. It is not astonishing that the poetry of a nation capable of producing such heroes should be pervaded with a spirit of nobility and chivalry. Even the indomitable Marko Kraljevič, the later incarnation of Servian heroism, when vanquishing Musa, the Moslem chief, exclaims, "Woe unto me, for I have killed a better man than myself!"

From that fatal battle until a recent period, it has been black night for the Servians, with but a single star in the firmament — Montenegro. In this gloom there was no hope for science, commerce, art, or industry. What could they do, this brave people, save to keep up the weary fight against the oppressor? And this they did unceasingly, though the odds were twenty to one. Yet fighting merely satisfied their wilder instincts. There was one more thing they could do, and did: the noble feats of their ancestors, the brave deeds of those who fell in the struggle for liberty, they embodied in immortal song. Thus circumstances and innate qualities made the Servians a nation of thinkers and poets, and thus, gradually, were evolved their magnificent national poems, which were first collected by

their most prolific writer, Vuk Stefanovich Karajich, who also compiled the first dictionary of the Servian tongue, containing more than 60,000 words. These national poems Goethe considered fit to match the finest productions of the Greeks and Romans. What would he have thought of them had he been a Servian?

While the Servians have been distinguished in national poetry, they have also had many individual poets who attained greatness. Of contemporaries, there is none who has grown so dear to the younger generation as Zmai Iovan Iovanovich. He was born in Novi Sad (Neusatz), a city at the southern border of Hungary, on November 24, 1833. He comes from an old and noble family, which is related to the Servian royal house. In his earliest childhood he showed a great desire to learn by heart the Servian national songs which were recited to him, and even as a child he began to compose poems. His father, who was a highly cultivated and wealthy gentleman, gave him his first education in his native city. After this he went to Budapest, Prague, and Vienna, and in these cities he finished his studies in law. This was the wish of his father, but his own inclinations prompted him to take up the study of medicine. He then returned to his native city, where a prominent official position was offered him, which he accepted, but so strong were his poetical instincts that a year later he abandoned the post to devote himself entirely to literary work.

His literary career began in 1849, his first poem being printed in 1852, in a journal called "Srbski Letopis" ("Servian Annual Review"); to this, and to other journals, notably "Neven" and "Sedmica," he contributed his ~~only~~ ^{early} productions. From that period until 1870, besides his original poems, he made many beautiful translations from Petefy and Arany, the two greatest of the Hungarian poets, and from the Russian of Lermontof, as well as from German and other poets. In 1861 he edited the comic journal, "Komarac" ("The Mosquito"), and in the same year he started the literary journal, "Javor," and to these papers he contributed many beautiful poems. He had married in 1861, and during the few happy years that followed he produced his admirable series of lyrical poems called "Giulich," which probably remain his masterpiece. In 1862, greatly to his regret, he discontinued his beloved jour-

nal, "Javor"—a sacrifice which was asked of him by the great Servian patriot, Miletich, who was then active on a political journal, in order to insure the success of the latter.

In 1863 he was elected director of an educational institution, called the Tekelianum, at Budapest. He now ardently renewed the study of medicine at the university, and took the degree of doctor of medicine. Meanwhile he did not relax his literary labors. Yet, for his countrymen, more valuable even than his splendid productions were his noble and unselfish efforts to nourish the enthusiasm of Servian youth. During his stay in Budapest he founded the literary society Preodnica, of which he was president, and to which he devoted a large portion of his energies.

In 1864 he started his famous satirical journal, "Zmai" ("The Dragon"), which was so popular that the name became a part of his own. In 1866 his comic play "Sharan" was given with great success. In 1872 he had the great pain of losing his wife and, shortly after, his only child. How much these misfortunes affected him is plainly perceptible from the deeply sad tone of the poems which immediately followed. In 1873 he started another comic journal, the "Ziza." During the year 1877 he began an illustrated chronicle of the Russo-Turkish war, and in 1878 appeared his popular comic journal, "Starmali." During all

this period, he wrote not only poems, but much prose, including short novels, often under an assumed name. The best of these is probably "Vidosava Brankovicheva." In recent years he has published a great many charming little poems for children.

Since 1870 Zmai has pursued his profession as a physician. He is an earnest advocate of cremation, and has devoted much time to the furtherance of that cause. Until recently he was a resident of Vienna, but now he is domiciled in Belgrade. There he lives the life of a true poet, loving all and beloved by everybody. In recognition of his merit, the nation has voted him a subvention.

The poems of Zmai are so essentially Servian that to translate them into another tongue appears next to impossible. In keen satire free from Voltairian venom, in good-hearted and spontaneous humor, in delicacy and depth of expression, they are remarkable. Mr. Johnson has undertaken the task of versifying a few of the shorter ones after my literal and inadequate readings. Close translation being often out of the question, he has had to paraphrase, following as nearly as possible the original motives and ideas. In some instances he has expanded in order to complete a picture or to add a touch of his own. The four poems which follow will give some idea of the versatility of the Servian poet, but come far short of indicating his range.

Nikola Tesla.

PARAPHRASES FROM THE SERVIAN.¹

AFTER ZMAI IOVAN IOVANOVICH.

THE THREE GIAOURS.

IN the midst of the dark and stormy night
Feruz Pacha awakes in fright,
And springs from out his curtained bed.
The candle trembles as though it read
Upon his pallid face the theme
And terror of his nightly dream.

He calls to his startled favorite:
"The keys! the keys of the dungeon pit!
Cannot those cursed Giaours stay
There in their own dark, rotting away,
Where I gave them leave three years ago?
Had I but buried their bones! — but, no!
They come at midnight to clatter and creep,
And haunt and threaten me in my sleep."

"Pacha, wait till the morning light!
Do not go down that fearful flight
Where every step is a dead man's moan!
Mujo to-morrow will gather each bone
And bury it deep. Let the Giaours freeze
If thy bed be warm."

"Nay, give me the keys.

Girl, you talk like a wrinkled dame
That shudders at whisper of a name.
When they were living, their curses made
A thousand cowards: was I afraid?
Now they are dead, shall my fear begin
With the Giaour's curse, or the skeleton's grin?
No, I must see them face to face
In the very midst of their dwelling-place;
And ask what need they have of me
That they call my name eternally."

As groping along to the stair he goes
The light of the shaking candle shows
A face like a white and faded rose;
But if this be fear, it is fear to stay,
For something urges him on his way —
Though the steps are cold and the echoes mock —
Till the right key screams in the rusted lock.

Ugh! what a blast from the dungeon dank! —
From the place where Hunger and Death were wed;
Whence even the snakes by instinct fled,
While the very lizards crouched and shrank
In a chill of terror. 'T is inky black,

And icy cold, but he cannot go back,
 For there, as though the darkness flowers —
 There sit the skeletons of three Giaours
 Ghost-white in the flickering candle-gleam ! —
 (Or is it the remnant of his dream ?)
 About a stone that is green with mold
 They sit in a group, and their fingers hold
 Full glasses, and as the glasses clink
 The first Giaour beckons him to drink.

"Pacha, here is a glass for thee!
 When last on me the sunlight shone
 I had a wife who was dear to me.
 She was alone — no, not alone;
 The blade in her hand was her comrade true,
 As she came to your castle, seeking you.

"And when she came to your castle gate
 She dared you forth, but you would not go.
 Fiend and coward, you could not wait
 For a woman's wrath, but shot her, so.
 Her heart fell down in a piteous flood.
 This glass is filled with her precious blood.

"See how fine as I hold it up!
 Drink, Feruz Pacha, the brimming cup!"

Spellbound the Pacha now draws nigh;
 He empties the glass with a sudden cry:
 The skeletons drink with a laugh and toss,
 And they make the sign of the holy cross.

Then speaks the second of the dead:

"When to this darkness I was led,
 My mother asked, 'What sum will give
 Your prisoner back to the sun?' You said,
 'Three measures of gold, and the dog shall live.'
 Through pinching toil by noon and night
 She saved and saved till her hope grew bright.

"But when she brought you the yellow hoard,
 You mocked at the drops on her tired brow,
 And said, 'Toward the pay for his wholesome
 board

Of good round stones I will this allow.'
 She died while her face with toil was wet.
 This glass is filled with her faithful sweat.

"See how fine as I hold it up!
 Drink, Feruz Pacha, the brimming cup!"

Haggard the Pacha now stands by;
 He drains the glass with a stifled cry:
 Again they drink with a laugh and toss,
 And the third one says, as his comrades cross:

"When this black shadow on me fell,
 There sang within my mountain home
 My one pale lad. Bethought him well
 That he would to my rescue come;
 But when he tried to lift the gun
 He tottered till the tears would run.

"Though vengeance sped his weary feet,
 Too late he came. Then back he crept,—
 Forgot to drink, forgot to eat,—
 And no slow moment went unwept.
 He died of grief at his meager years —
 This glass is laden with his tears.

"See how fine as I hold it up!
 Drink, Feruz Pacha, the brimming cup!"

The Pacha staggers; he holds it high;
 He drinks; he falls with a moan and cry:
 They laugh, they cross, but they drink no more —
 For the dead in the dungeon-cave are four.

THE GIPSY PRAISES HIS HORSE.

You're admiring my horse, sir, I see.
 He's so light that you'd think it's a bird,
 Say a swallow. Ah, me!
 He's a prize!
 It's absurd
 To suppose you can take him all in as he passes
 With the best pair of eyes,
 Or the powerful aid
 Of your best pair of glasses:
 Take 'em off, and let's trade.

What! "Is Selim as good as he seems?"
 Never fear,
 Uncle dear,
 He's as good as the best of your dreams,
 And as sound as your sleep.
 It's only that kind that a gipsy would keep.
 The emperor's stables can't furnish his mate.
 But his grit and his gait,
 And his wind and his ways,
 A gipsy like me does n't know how to praise.
 But (if truth must be told)
 Although you should cover him over with gold
 He'd be worth one more sovereign still.

"Is he old?"
 Oh, don't look at his teeth, my dear sir!
 I never have seen 'em myself.
 Age has nothing to do with an elf;
 So it's fair to infer
 My fairy can never grow old.
 Oh, don't look — (Here, my friend,
 Will you do me the kindness to hold
 For a moment these reins while I 'tend
 To that fly on his shanks?) . . .
 As I said — (Ah — now — thanks!)
 The longer you drive
 The better he'll thrive.
 He'll never be laid on the shelf!
 The older that colt is, the younger he'll grow.
 I've tried him for years, and I know.

"Eat? Eat?" do you say?
 Oh, that nag is n't nice
 About eating! Whatever you have will suffice.
 He takes everything raw —
 Some oats or some hay,
 Or a small wisp of straw,
 If you have it. If not, never mind —
 Selim won't even neigh.
 What kind of a feeder is he? That's the kind!

"Is he clever at jumping a fence?"
 What a question to ask! He's immense
 At a leap!
 How absurd!
 Why, the trouble's to keep
 Such a Pegasus down to the ground.
 He takes every fence at a bound
 With the grace of a bird;
 And so great is his strength,
 And so keen is his sense,
 He goes over a fence
 Not across, but the way of its length!

"Under saddle?" No saddle for Selim!
 Why, you've only to mount him, and feel him
 Fly level and steady, to see
 What disgrace that would be.
 No, you could n't more deeply insult him, unless
 You attempted to guess
 And pry into his pedigree.

Now why should you speak of his eyes?
 Does he seem like a horse that would need
 An eye-glass to add to his speed

Or, perchance, to look wise?

No, indeed.

Why, not only 's the night to that steed
Just the same as the day,
But he knows all that passes —
Both before and behind, either way.
Oh, he does n't need glasses!

"Has he any defect?" What a question, my friend!
That is why, my dear sir, I am willing to sell.

You know very well
It is only the horse that you give or you lend
That has glanders, or springhalt, or something to mend:
'T is because not a breath
Of defect or of death
Can be found on my Selim that he 's at your pleasure.
Alas! not for gipsies the care of such treasure.

And now about speed. "Is he fast?" I should say!
Just listen — I 'll tell you.

One equinox day,
Coming home from Erdout in the usual way,
A terrible storm overtook us. 'T was plain
There was nothing to do but to run for it. Rain,
Like the blackness of night, gave us chase. But that nag,
Though he 'd had a hard day, did n't tremble or sag.
Then the lightning would flash,
And the thunder would crash
With a terrible din.

They were eager to catch him; but he would just neigh,
Squint back to make sure, and then gallop away.
Well, this made the storm the more furious yet,
And we raced and we raced, but he was n't upset
And he would n't give in!

At last when we got to the foot of the hill
At the end of the trail,
By the stream where our white gipsy castle was set,
And the boys from the camp came a-waving their caps,
At a word he stood still,
To be hugged by the girls and be praised by the chaps.
We had beaten the gale,
And Selim was dry as a bone — well, perhaps,
Just a little bit damp on the tip of his tail.¹

MYSTERIOUS LOVE.

INTO the air I breathed a sigh;
She, afar, another breathed —
Sighs that, like a butterfly,
Each went wandering low and high
Till the air with sighs was wreathed.

When each other long they sought,
On a star-o'er-twinkled hill
Jasmine, trembling with the thought,
Both within her chalice caught,
A lover's potion to distil.

Drank of this a nightingale,
Guided by the starlight wan —
Drank and sang from dale to dale,
Till every streamlet did exhale
Incense to the waking dawn.

Like the dawn, the maiden heard;
While, afar, I felt the fire
In the bosom of the bird;
Forth our sighs again were stirred
With a sevenfold desire.

These we followed till we learned
Where they trysted; there ere long
Their fond nightingale returned.
Deeper then our longings burned,
Deeper the delights of song.

Now, when at the wakening hour,
Sigh to sigh, we greet his lay,
Well we know its mystic power —
Feeling dawn and bird and flower
Pouring meaning into May.

Jasmine, perfume every grove!
Nightingale, forever sing
To the brightening dawn above
Of the mystery of love
In the mystery of spring!

TWO DREAMS.

DEEP on the bosom of Jeel-Begzad
(Darling daughter of stern Bidar)
Sleeps the rose of her lover lad.
It brings this word: When the zenith-star
Melts in the full moon's rising light,
Then shall her Giaour come — to-night.

What is the odor that fills her room?
Ah! 't is the dream of the sleeping rose:
To feel his lips near its velvet bloom
In the secret shadow no moonbeam knows,
Till the maiden passion within her breast
Kindles to flame where the kisses rest.

By the stealthy fingers of old Bidar
(Savage father of Jeel-Begzad)
Never bloodless in peace or war
Was a handjar sheathed; and each one had
Graved on its handle a Koran prayer —
He can feel it now, in his ambush there!

The moon rides pale in the quiet night;
It puts out the stars, but never the gleam
Of the waiting blade's foreboding light,
Astir in its sheath in a horrid dream
Of pain, of blood, and of gasping breath,
Of the thirst of vengeance drenched in death.

The dawn did the dream of the rose undo,
But the dream of the sleeping blade came true.

Robert Underwood Johnson.

¹ Readers will be reminded by this conclusion of Mark Twain's story of the fast horse as told to him by Oudinot, of the Sandwich Islands, and recorded in "The Galaxy" for April, 1871. In that veracious narrative it is related that not a single drop fell on the driver, but the dog was swimming behind the wagon all the way.

MR. PATE'S ONLY INFIRMITY.

Yet hath my night of life some memory, . . .
My dull deaf ears a little use to hear.

Comedy of Errors.

LD Mr. Pate, until his late and only infirmity, was the most even-tempered man in all our neighborhood. As well as I can remember, nobody knew or heard of his having been thrown at any time into a rage, at least

with one of his own race. His resentment—what there was in it that was at all deadly—may have been kindled momentarily, now and then, by a sheep-killing hound, a fence-breaking steer, or some sneaking, four-footed invader of his wife's hen-house; but that was all. Things might go awry outside or inside of his family, at which some people might be tempted to use a bit of profane language, yet, although he could maintain his rights with sufficient judicious firmness, he did so with equal mildness. Wrapping himself in virtues known to himself, as well as to others, he used, when hearing of a stormy passion into which a neighbor had been flung, to smile calmly, and comment upon the uselessness, not to call it foolishness, in a person punishing his own self for other folks's doings.

He habitually spoke of the Creator in terms of much praise, and even expressed himself as thankful for what, if he had not done it for him pointedly, he had kindly allowed him to do for himself. He liked to see others join the church, and on revival occasions was known sometimes gently to urge young persons of both sexes to heed calls for mourners. He might have become a member long ago, except that for such a thing in a man like himself he felt that there was no earthly necessity. Contemplating his exemplary deportment, observed through the successes of seventy years and more, he was living in serene trust of many more as placidly felicitous as those now sitting lightly upon his honored head. One of his calm boasts was that he had enjoyed the society of two as good wives as the one wife of any other man under the sun, the former up to fifty, at her demise another, between whom—except as to a few details of no sort of importance, but rather operating as interesting, pleasant foils—he could never see, as he expressed it, “one single, blessed ioty of diff’ence.” Fond both of the hearing and the imparting of news, good, bad,

and indifferent, he wished to know as much as was possible of things occurring outside of his own experience, and it had been a strong support to what few troubles he had had, to note that other people had theirs also, and especially that they made more complainings than he did. All of his children were now grown, married, and living near in peace and prosperity.

Yet the prophecy of labor and sorrow to come after three score and ten! How insidious often, yet always how inevitable! A slight cold taken one day, like hundreds and hundreds that during the last sixty years he had known how to knock speedily into cocked hats with pepper-tea and hoarhound candy, after yielding to those efficacious remedies at all points save one, fastened upon that, and refused obstinately to go away. This was his left ear, and I regret to have to add that his right, whether from too intense sympathy with its twin brother, or reduced by continual loanextended to it, declined in time to like condition.

Mr. Pate, brave man as he was, scornful of trifles, went ahead for a while just the same as ever, ignoring a state of things which, unexpected and undeserved, a man of his energy and resolve was bound to overcome in no great while. But one day his daughter, Mrs. Betsey Runnells, who dwelt a mile distant, came over to see them all, and, after receiving several inaccurate answers—once or twice none at all—to her questionings, was moved to remark thus:

“Pa, what in this world is getting to be the matter with you since you had that last cold, that you answer people's questions so curious, and sometimes don't seem to know they've asked you anything? It's either that you've got to paying mighty little attention to people when they're talking to you, or the fact is you're getting deaf. One of the things is certain, and no doubt about it.”

“Nosech a thing, Betsey. It's nosech a thing. It's that you all don't speak cle'r and distinct like you used to do; but you've all got to mumbly'n' and chawin' your words to that that a body can't always tell what 's it you're talkin' about. I can hear well as I ever did when people open their mouth, and let their words come out cle'r. The fau't's not in my years. It's in your all's mouth, and I wish you all jest stop it, that I do. Nonsense!”

"Yes, sir; true as gospel. And it's because people, as a gen'l thing, is good to blind people, and they'll not only git out of their way, but they'll actuall go out of their own way to help 'em to find whare they're a-movin' to git to. And, sir, they'll even take holt of their hand,

and be as proud as a jay-bird when they do it, and they 'll lead 'em, same as a baby jest learnin' to walk, to their best, comfortablest cheer, a hustlin' out any body else that 's in it. And then they 'll ask 'em all about their healths, when nine times out o' ten they ain't a-keerin' any more about it than other people's. And they 'll talk soft to 'em, and help 'em to cut up their victuals, and beg 'em to keep on takin' some more when they positive know that they 've already eat the greatest plenty, and has no earthly need of one single 'nother mouthful. And not only that, but they 'll do a whole lot of things for 'em to that — well, jest betwixt me and you and this tree we 're settin' under, I have positive knowed of some o' that sort that could-jest see to git about, and a-makin' out they could n't do that conven'ent, that the fact of the whole business were, they was n't any manner of account in the beginnin', before they got so, and they would n't be if they got over it. And, sir, they were so proud of bein' waited on in that kind o' style, that they would n't give a bawbee nor a continental red cent to have their eyes put back cle'r, so they 'd be expected to go back to work, and be treated like other people. Yes, sir; that 's the way blind people is treated. But when you come to people that is deaf in their year,—that is, you mind, people that is half-and-half like me,—people has not only no respects of 'em, but they has nothin' but contemp', and sometimes, as I know by expe'unce, they despise 'em in their very sight. Now, as for me, I always were a man that like to hear what 's goin' on, and a-knowin' other people was the same, it 's always been my rule to gether all I could, and let other people sheer in it, as well as the ideas I have on matters and things in gen'l, and then to give 'em free my advices, whether they got the gumption to take it or not, which is their lookout, and not mine, you understand."

He paused briefly, as if in respectful review of a past so signally benignant, then continued:

"But sence I 've got in the fix I 'm in, in the hearin' of my year, people have got to dodgin' me, and runnin' away from me, same as if I had the eech or even the smallpok, whensomever I come where they are. Or if they set down to swap a few words with me, time we 've got through with how our families is, and about the weather, they git up, and they shoot off, albe some of them do have the manners to give out that their business is a-callin' of 'em som'er's else, and they are obleeged to go an' 'tend to it. And all that after the life I 've led, and the useful it 's always been my aim to be, and to do accordin' as the good Lord let it lay in my power. Now don't sech as that look like a pity to this generation of people? Seem to me like it do."

He sniffed long and audibly, and did not seem to note the few assuring words which I could employ in sympathy with his suffering from general ingratitude. Indeed, I was almost sure that he could not have heard them, because what I said was:

"But, Mr. Pate, everybody loves and respects you."

"Yes, yes," he said, with some impatience; "that 's what they all tell me; but I don't want advices. I ain't a man to need people's advices. What I want is for people to talk to me and to listen to me. Don't you understand?"

"Yes, sir," I answered quickly.

After a moment he said:

"But, my son, it 's things in my own family that hurts me the worst. If people outside think they can do without my opinion and without my advices in their business and their matters and things in gen'l, why, that 's their perfect right, and I 'm not a-denyin' of it; but when it come to my own folks, there 's where the shoe pinch. As to what my people has been to me, the good Lord know I can't complain, nor I don't. I 've had two as good wives as the sun ever ris or sot on. My first one were before your day; but people that 's old enough 'members what a high, splendid woman she were; and my second, well, everybody sees how if she 's low in heighth, she 's buncy, and she make up for stren'th by bein' active. As for my childern, if I say it myself that maybe ought n't, they 've been raised to be as reason'ble good and respectable childern as the common run of anybody else's childern in this whole neighborhood of people, accordin' to — yes, I may say accordin' to the — to the society we live in at the present time, you — you understand — ahem."

"Oh, yes," I tried to interpolate; "everybody says that your children —"

"But," ignoring my attempt, he went on, "what hurts me to the very bone sometimes is the disrespects that 's putt on me in my own family, the not expectedest of all. Why, sir, I used to be lively at home, and keen as a brier to make things interestin' about the house; and now it look like I ain't so mighty much more than our old Dominicker rooster, that the young ones got to runnin' over him, and stopped all his usefulness; and so they put him up in the coop, and they fattened him, and then they killed him, and they baked him, and 't were n't he were so fat, and cooked so brown, stuffin' and all, and gravy accordin', I could n't of teched him. And I actuil felt solemn when I were a-eatin' one o' his drumsticks, and a slice or two of his breast, and some pickin's on his sidebone; I tell you, I felt positive solemn to think what everything have to come to in the course o' time, more or less; that the poor old

fellow used to wake me up every mornin' at the crack o' day with his crowin'; and it's got to that I can't hear a single rooster on the place, and I hain't the words to tell how my feelin's inside o' me was hurtled when I found it out."

He put his handkerchief momentarily to his eyes, as if to warn back any weak tear that might feel itself impelled to the front, and then continued:

"But the thing is, my son, that I'm a-beginnin' to suspicion 'em o' dodgin' me in my own house, like they do everywhere else, and that it make 'em tired, and sometimes it even fret 'em, to have to talk to me. And then I git fretted too, after all I've been to 'em. And it's got so I try my level best to not want to know about things like I used to do. Yit, when I see them a-workin' o' their mouth in a way that make me certain in my mind somethin' interestin' is up, I can't help, to save my life—I can't help from wantin' to know what it's about. And then when one of 'em comes and bawls it in my year, frequent it's not worth talkin' about, and then I suspicion 'em of foolin' me by a-tellin' me the poorest, insignificantest part, and a-holdin' back the rest. Then, 'casionally the idee takes holt on me that they 're a-talkin' about me, and a-sayin' they wish I were n't so troublesome, and all that, and it sting me mighty nigh the same like anybody was to run a pin in me."

After another pause, turning his face all about, as if to be sure that none other were in hearing, with a look of grave apprehension, almost of alarm, in lower tones he said:

"And, sir, don't you know, sir, that the suspicionin' o' them in that kind o' style have got so it have begun to make me ruther deceitful myself? It jest skeers me to think about it. You must n't let on I told you so. I was positive

obleeged to tell somebody, it lay so heavy on my mind, and I tell it to you because you 're always good, respectable to me, and you never dodges me, nor runs away from me when I'm a-talkin' to you. Fact, sir, sometimes when my years ain't quite as cloudy as common, special when the a'r is on my side, I can gether what they 're sayin', and they don't know it. But I jest know I've got not to let on, to keep 'em from suspicionin' me of makin' out I'm worse off than what I actual am. Now, ain't sech as that a pity for a man of my cha-rec-ter, that 's if they is any thing I ever did hate, it was deceitful, and special when I caught people a-tryin' to put it on me, and make a fool of me? I jest declare, I git so sorry for myself sometimes a-thinkin' about it, that I can but hope the thing will let up on me after a while, so I can git back to the usefulness I had before I got in this fix."

At this juncture, one of the neighbors, who had just arrived, after alighting, and fastening his horse at one of the racks, approached, in order to pay his respects. Mr. Pate, after a look of incipient resentment toward the comer, turned to me, and in low, hurried tones said:

"There, now, my son, that 'll do; you can go now; but *don't you let on what I told you.*"

To his injunction of silence regarding his confession I paid what respect was possible, limiting disclosure to my parents and a few other intimate acquaintances. After observations through many years among the aged, to say nothing of even more reliable sources, I seem to recall, what I was then too young to discern in my old friend's droll words, some real pathos, and if not some wisdom, a pathetic simulation of wisdom, felt to be necessary to one in his condition; and so his case, feeling at this late day I may be held excusable, I now, for the first time, make public.

Richard Malcolm Johnston.

THE IMITATIVE FUNCTIONS, AND THEIR PLACE IN HUMAN NATURE.

HAVE been led of late, in connection with certain philosophical inquiries, to begin the study of a subject the general interest of which, for teachers, for students of any region of art, and for lovers of human nature at large, seems to me so considerable, that I am now disposed to ask for the coöperation of a larger public in the pursuit of the research. At the same time, I may as well take

plain, as well as I can, why I have begun this task, and why I see so much reason to hope for good results from the further consideration of the matter.

I.

THE object of this study is, directly speaking, psychological, and relates to the nature, the scope, and the significance of what may be called, in general, the imitative functions of mankind. No functions are, in one sense, more familiar. None are more frequently interesting. We all are aware that children are imitative,

that both among children and among adults virtue and vice alike are, under favorable circumstances, "catching"; that fashion has, in certain matters, an irresistible sway; that not only commercial panics, and mobs, and "fads," but also great reform-movements, and disciplined armies, and such historical events as the conversion of nations in the old days from heathenism to Christianity, all illustrate, in their several ways, the potency of imitative tendencies; and that art itself, at least according to Aristotle's famous definition, is essentially imitation. We know that there are sometimes epidemics of crime or of suicide. We know that the doleful prevalence of the current popular melody is due, not to a love of music, but to the insistent force of the imitative tendency. Turn, thus, which way we will, the familiar presence of the imitative functions in human life impresses itself upon us.

"Verily," says M. Tarde, an eminent French sociologist, in his remarkable book, "*Les Lois d'Imitation*" — verily, "*La société, c'est l'imitation*," or as one may freely translate, "Imitation of imitations," saith the professor, "in society all is imitation." In this extreme form, of course, the assertion does indeed remind us of many qualifications; but of these we shall speak further on.

Were I anxious, then, for mere illustrations of the frequency of the imitative functions in the life of man, I should indeed have no trouble in getting my fill of them, without other aid than that of my own eyes. But with the mere confirmation of their frequency, the question of their real significance is first brought really to the front. And along with this question there come before us a vast number of others, all interesting to the student of human nature. How, in the growth of the individual, do these imitative functions arise? Are any of them truly instinctive, or are all of them, as Alexander Bain has contended, acquired functions, due to experience? Or, in other words, does man learn to imitate because he is brought up in a social environment; or, on the contrary, is he capable of life in a social environment only because he is first, by nature and instinct, an imitative animal? What is the history of the imitative functions in childhood? When, and in what order, do they appear? How are they related to the growth of the childish reason, conscience, imagination, insight, skill? Of what use can the imitative functions, at any age, be made for the development of the child's intellect and will? Such are the first psychological questions that come to one's mind in this connection. It may already, in general, be clear how serviceable the study of such problems can become both to teachers and to all others interested in the psychology of childhood.

II.

BUT a wider scope still has of late been given to the psychological study of the imitative functions by the results of research in the domain of hypnotism. How deep-seated the imitative functions are, it has needed hypnotic research not so much to demonstrate as to illustrate, and to bring, through illustration, to our clearer scientific consciousness. The principal positive value of hypnotism for psychology, up to the present time, has consisted in the fact that the apparently marvelous, and, at first sight, even miraculous-seeming, phenomena of the hypnotic state have served to make the familiar facts of the prevalence of imitation in human life look, for the time, in these singular illustrations, unfamiliar; so that, in consequence, the attention of psychologists has been attracted to the matter in a new way and from a new side. That this is the principal service rendered by hypnotism to psychology was first pointed out at some length by the aforesaid M. Tarde, who herein, I believe, followed up a suggestion of Taine's. In a paper first published in 1884, early in the history of hypnotic research, — a paper which was later incorporated into the book called "*Les Lois d'Imitation*," — M. Tarde asserted and developed the interesting formula that what the individual hypnotizer is to his sleeping and abnormally plastic subject, such, almost precisely, is society to the waking and normally plastic man.

The hypnotized subject believes what the hypnotizer says, and supposes this belief to be his own conviction; does what his hypnotizer suggests, and believes, or may believe, that he does this of his own free will; has suggested hallucinations of taste, sight, smell, or suggested emotions, and believes these to be his own independent and individual experiences. Well, just so the waking man usually believes, concerning politics, concerning the state of business, concerning religion, whatever the people of his party, or set, or faction, or profession, or sect, declares to be the truth; and he supposes, nevertheless, that his mind is his own. The waking man, moreover, as to all the endlessly numerous deeds of convention and custom, does what his portion of society declares to be the proper thing, and fancies all the while that he is choosing of his own free will. Finally, the waking man's emotions — as, for example, his esthetic emotions — are usually at the mercy, or, at all events, deeply under the influence, of social suggestion; and even his sensations and perceptions are not exempt from this influence.

Illustrations are here easy. What is beautiful in decorative art the community at large learns by social suggestion. Esthetic tastes as to domestic interiors, and as to the appearance of

private dwellings, are subject in every generation to changes which work upon individuals in almost precisely the same way as hypnotic suggestions made to sleeping subjects work during experiments in hypnotism. One hears that this or this is admirable in the way of house-building or of decoration. Society declares the fact; and forthwith one perceives with one's own eyes, if one is but an average man, that this is indeed beautiful, just as the people say; and one is naively unaware that if all the people had said that it was ugly, one would equally have observed that fact instead. Even so, too, as to our sensations, or, at all events, as to our immediate reaction of liking or of dislike in presence of our sensations. Everybody has many acquired tastes. Some people, to be sure, have liked olives from the first taste of them; but many have not. Yet, as the saying goes, if you eat in succession seven olives, you will henceforth like them. It would be more psychological to say that after you have received seven quasi-hypnotic social suggestions from your neighbors, each suggestion being strong enough to make you try to behave toward olives as the rest do, then, at length, your immediate sensations may yield, and henceforth the olives will taste as the other men say that they taste—namely, good. It is in such a fashion that one becomes a connoisseur in the world of mere sensations of taste and of smell, just as before in the world of art. The connoisseur as to wines, teas, perfumes, dinners, and other such sensory experiences, is a person of fairly keen native sensory discrimination, whose actual discriminations, and expressions of like and dislike, have been subjected to a long course of quasi-hypnotic social training. His tastes are never purely, or even largely, his own, although it is his game, as connoisseur, to pretend, and often his fate, as social bondman, to believe, that they are his own. Were they, however, original, he would not be reckoned as a connoisseur, but as a barbarian.

Such are some of the possible illustrations of M. Tarde's interesting thesis. In bringing them forward here in my own way, and with my own choice determining their selection, I am of course well aware that there are other factors at work besides the conventional or suggested factors, and that, too, even in the most conventional regions of life — factors which, despite all our imitativeness, determine our individual varieties of taste. We never reach perfect agreement with our neighbors as to these things of convention. A certain stubborn variety of individual caprice consciously forms a pleasant social contrast to our more imitative judgments. And so for the rest, despite all conformity, there are many social conventions which themselves regulate the individual, within certain

limits, a certain degree of individuality and of nonconformity.

But here is only one of the many cases where the imitative functions become, as we shall later more fully see, beautifully, and almost inextricably, entangled with the "temperamental" varieties of function in the individual. And it is this entanglement, as we shall find, that constitutes the very soul of the significance of the imitative functions, which, when properly developed, do not lead at all to the suppression of originality, but may actually form the condition of the growth of individuality, and of the only true independence of opinion and of ideals that is possible to man. But of this hereafter. Moreover, it is this same endless entanglement of imitative or "suggested" factors in taste and in belief with individual factors that makes the psychology of the imitative functions of man so complex and fascinating a problem for the student of human nature.

If the social phenomena in themselves, considered thus, serve to indicate by their universality, as it were, the breadth, the extent, of the imitative functions of humanity, certain of the well-known phenomena of hypnotism, viewed apart, tend especially to bring to mind the depth, the inner potency, of these functions in the life of each individual. It is true, as we have seen, that, viewed on the whole, the plasticity of the hypnotic subject is not something essentially novel, but is substantially the normal social plasticity of a man set at work under somewhat abnormal conditions. It is, however, also true that, under these abnormal conditions, there appear some unexpected special consequences of the general imitativeness of man — consequences that startle us by the indications which they give of the depth to which the imitative tendency reaches in its influence upon our unconscious, yes, upon even our lower physiological, life.

That by suggestion you can make a man notice what he would otherwise overlook is a strictly normal and familiar fact. Much, if not all, of that marvelous acuteness of senses which is often shown by hypnotic subjects seems, in the opinion of many observers, to be only a case of this directly or indirectly suggested concentration of attention upon his own fainter experiences on the part of the hypnotized subject. And so far the anomalies of hypnotism would seem to be related only to the peculiar conditions under which the hypnotic subject is influenced, and to the extraordinary source of the influence, which is here not, as normally, the authority of society in general, but the voice of his hypnotizer. Yet, in addition, it is indeed true that, in case of hypnotism, there also appear certain other aspects of the imitative functions — aspects which, in the case of the normal social influences, may also be present, and which prob-

ably are present, but which are there masked by their more obvious and conscious accompaniments; while, in case of the hypnotic subject, these other aspects come to light. Hypnotic suggestion, namely, is found to influence not only the acuteness of one's perceptions and the course of one's conscious habits, but the performance of a good many bodily functions that usually seem to have small relation to the will. Circulation, digestion, and general functional nervous conditions of a decidedly manifold sort, have been found to be more or less subject to hypnotic suggestion. To be sure, this sort of influence is seldom without very decided limits, which vary endlessly from person to person. But the fact remains that, in a given person, the imitative plasticity which leads him to follow out so faithfully the ideas which his hypnotizer suggests may lead him also to alter relatively deep and unconscious organic functions, such as he has never explicitly learned to influence by his will, and such as, normally, neither he nor his fellows would be aware of influencing. Yet, as many considerations make probable, what the hypnotic experiment thus brings to light cannot well be anything new in kind. Doubtless our organisms are at all times deeply plastic to suggestions; only this plasticity, on account of the complexity of our normal functions, remains masked until the hypnotic experiment, working upon a much simplified state of affairs, brings it to light.

But if our imitativeness thus actually extends far beyond the region of our conscious and voluntary life, one sees at once that one has to do with functions the basis of which probably lies deep down among the inborn and instinctive tendencies of our nature. And of such probably instinctive and original imitativeness childhood gives us many indications. For children often appear to sympathize imitatively with the expressed emotions of their elders even when there is no adequate basis in the previous childish experience for the emotions in question. A young child, taken unkindly to a funeral, or forced by unhappy fortune to witness one in the family, has suggested to him, in the faces and behavior of his elders, emotions of a depth and intensity for which his own experience can give no basis. These elders themselves know why they sorrow. The young child knows very dimly, or perhaps realizes not yet at all, why death is what it is, and means what it does. Yet sometimes he shows on such occasions an overwhelming sense of the horror of the situation, a sense which people usually refer to his direct and inborn dread of death and of his surround-

ings. There is, in fact, probably present some such original instinct concerning death; but very likely this instinct does not account for the whole of the child's horror, or yet perhaps for the larger part of it. This larger part is probably due rather to a contagion of emotion, the origin of which lies in another instinct—that of imitation. The child, without consciousness of the reason, assumes, by instinctive imitation, the expressive bodily states and attitudes of his elders, and accordingly, since our emotions are, in part at least, the results rather than the causes, of our bodily states of emotional expression,¹ the child, having imitated the organic expression, consequently in some measure imitates the emotion, without at all well comprehending why the emotion ought to be felt. If everybody else at the funeral conspired with his fellows to seem gay and to talk merrily, it is unlikely that the child's own original instincts about death would be enough to terrify him. He would then very likely look at the corpse rather with wonder than with horror.

Just so, too, it is in youth, or even throughout life, so long as we retain any freshness of sympathetic experience. With the aid of certain deep and instinctive tendencies to assume imitatively the bodily attitudes or the other expressive functions of our fellows, functions which may be in part internal as well as external, we are able to share the emotions of others even when these emotions relate to matters that lie far beyond our own previous experience. When one first witnesses a serious accident, or attends another through a painful illness, or sees a friend suffering from some tremendous personal grief, one gets a sense of what this calamity means—a sense which may far transcend one's power to recall similar experiences in one's own life. There are some people, to be sure, who sympathize, like the maids of Andromache when she parted from Hector, or like the comforters of Gudrun when she sat tearless over Sigurd's body, or like Polonius himself, only by recalling, in the sufferer's presence, their own present or past griefs. "Truly, I in youth suffered many things of love—very near this." But such sympathy is not the only sort or the most spontaneous. The emotions of the theater carry the sensitive spectator, especially when he is young, far beyond any memory of his own experiences. Notice such a spectator, and you will see him imitating unconsciously, by play of feature, or possibly even by gestures of hands, arms, or body, the actor whose skill absorbs him. But meanwhile, through this imitation, he is ex-

¹ To this fact Professor James has recently given an expression in his now well-known theory of the emotions—a theory according to which "we do not cry because we feel sorry, but feel sorry because we cry."

This theory, in its extreme form, may be inadequate. There can be little doubt that it expresses an important part of the truth.

perceiving something of emotions before unknown to him — the sorrows of *Lear*, the remorse of *Macbeth*, the agony of *Othello*. To him these experiences seem as novel as if they had been original happenings in his own life. Such are the quasi-hypnotic suggestions of the stage. They often give us, as we say, wholly new insights into life.

As for other instances of the depth of such imitative emotions, there will be known to many of us cases of sensitive young women who, at the sight of accidents, or bodily ailments (say in elder women), misfortunes the causes of which they themselves have never yet experienced, are quite capable of feeling suggested internal pangs, or serious, if temporary, physical derangements, of the imitative, and at the same time partly instinctive, character of which there can be little reason to doubt. Nor are women alone in such imitative sufferings. Many men have felt such, and have been surprised at their vigor. The emotions of mobs, moreover, have the same character of imitative contagion, going much beyond the previous personal experiences of many, or perhaps, most members of the mob. In an important sociological monograph, entitled (in its French translation) "*La Foule Criminelle*," an Italian criminologist, Signor Scipio Sighele, has recently treated at length the problem of the psychology of mobs, and has dwelt much on the analogy between these phenomena, and those of hypnotic suggestion. It seems impossible to interpret such cases without supposing that the imitative functions of man have a very profound instinctive basis, and are by no means as purely secondary and acquired functions as Alexander Bain has supposed. So much, then, for the lessons derived from hypnotism, and from daily life, concerning the depth and significance of imitation in man.

III.

BUT now, as regards the uses and the results of the imitative functions in human life, the foregoing general indication of their breadth and their depth is only the merest beginning of a comprehension of the part they play in our education and in our consciousness. It is not because they are common, or because they are, in deepest origin, partly instinctive, that I lay such stress upon them. It is because they are, in their proper and almost inextricable entanglement with our individual or temperamental functions, absolutely essential elements of all our rationality, of all our mental development, of all our worth as thinkers, as workers, or as producers; it is, too, because this value of imitation as the necessary concomitant, and condition, and instrument, of all sound originality is still so inadequately understood by teachers,

by critics of art, by students of human nature generally — it is on these accounts that I deem the study of the imitative functions probably the most important task in the psychology of the immediate future. The mental relations of the imitative functions are what I therefore have, next, briefly to indicate. This I may here do in the most summary form, thus:

It is a commonplace that most of our rational thinking (some psychologists incorrectly say, *all* of our rational thinking) is done in language. Well, language is very obviously a product of social imitation; is, therefore, a case of human imitativeness in every individual who learns it. So, then, without imitativeness, no higher development of rational thought in any of us. Only the imitative animal can become rational. So much for a beginning. But the fruitfulness of the imitative functions does not cease here. It is, in the second place, well recognized that our social morality, whatever else within or without us it implies, is in one direction dependent upon our regard for the will, the interest, the precepts, or the welfare of our fellows. Now such regard is, in its turn, dependent upon our power, by imitation, to experience and to comprehend the suggested will, interest, authority, and desires of those about us. So, then, without imitativeness, no chance for the development of the social conscience.¹ The imitative functions, in combination of course with other functions, but still with essential significance, as factors in the whole process, are thus at the basis of the development of both reason and conscience. Nor yet is this all. Reason not only uses language as an instrument, but it aims at a certain well-known goal; it aims at the imitation in conscious terms of the truth of things beyond us. Reason thus not only depends upon imitative functions; it is explicitly imitative in its purposes. Just so, too, conscience is not only based, as to its origin, upon social imitations, so that you educate the childish conscience through obedience and through authority; but conscience, too, is in its goal explicitly imitative. It sets before us ideals of character, and then bids us imitate them. These ideals are, in general, personal. Conscience says: Such and such a self, thus and thus employed in reasonable service, is the right sort of self for you. You conceive such an ideal self. Now, in your practical life, imitate this conception. One imitates the ideal — precisely as, in childhood, the little boys imitate the big boys. Man the imitative animal is thus at the very heart of man the rational and man the moral animal, no matter how high in the scale the developed man may rise.

Yet the psychological importance of the imitative functions is not even thus to be exhausted. It is an odd fact, and one of vast sig-

nificance, that all of us come by our developed personal self-consciousness through very decidedly imitative processes. Of this fact a later discussion may give a fuller account. It is enough now to remind observers of children how full of proud self-consciousness is the little boy who drives horse, or who plays soldier, or who is himself a horse, or a bird, or other creature, in his play. To be what we call his real self is, for his still chaotic and planless inner consciousness, so long as it is not set in order by his imitativeness, the same as to be nobody in particular. But to be a horse, or a coachman, or a soldier, or the hero of a favorite story, or a fairy, that is to be somebody, for that sort of self one first witnesses from without, or finds portrayed in the fascinating tale, and then imitatively assimilates, so that one thereupon conceives this new self from within, and rejoices in one's prowess as one does so.

Nor does this process of acquiring one's selfhood vicariously, as it were, cease with childhood. My various present social functions I have, in the first place, imitatively learned. Others, my guides and advisers, first showed me the way to these functions; for it was thus that I learned to move in company, to speak, to assume the outward forms of my calling, to conduct myself as just this particular kind of social organ. Now I myself, as what the psychologist calls an "empirical ego," am just now, for myself as well as for my fellows, the man who possesses, among other things, such and such a calling, position, office, rights, and aptitudes. Of all these things I had no knowledge in childhood. I had to learn my whole social trade; I learned it by imitations. But now that I have got such a calling and place, my knowledge of it determines for me, all the while, my current notion of who I am. I am what my profession and my social relations define me to be. Thus it is actually true that just as my social guides — my parents, teachers, advisers, friends, critics — together gave me, through my love of imitating them and of being influenced by their characters, by their conduct, and by their ideals — just as they, I say, gave me a knowledge of my calling, so too they have furnished me with the very material of my present self-consciousness. Self-consciousness itself, in each one of us, is a product of imitation.

Reason, conscience, self-consciousness — these are significant possessions. Yet without imitativeness we should never have come by any one of them. They are results, and, as they stand, are even now embodiments of imitation. Such is my present thesis. Nor is this statement itself more than the beginning. As a fact, I hold that far more specific mental products than have yet been named — for instance, spe-

cific beliefs of reason, such as the so-called "axioms" at the basis of science — can be explained as determined in their nature by the special conditions under which the imitative functions of mankind have been developed. But herewith, indeed, I reach topics that lie far beyond the scope of the present paper, and within the domain of the deepest problems of philosophy.

IV.

AND now for the announcement of the immediate practical purpose of this paper. I have written it for the sake of getting aid in the collection of facts. I venture, then, herewith to invite teachers, other observers of children, and observant persons generally, to communicate to me, either through letters addressed to the editor, or through letters addressed direct to me, their own past or future observations of certain classes of facts which may be accessible to them, and which, if collected, compared, and kept on record, may prove of service in studying the still much neglected question of the psychology of imitation. What is most needed is the coöperation of many independent observers; and owing to the nature of the facts concerning which I shall here ask, such observers will be able to contribute many useful data for comparison, even where the observers themselves are not experts in psychology. Meteorological societies have derived much assistance from non-expert observers, who, scattered over wide regions of country, have agreed to take the trouble to note such simple phenomena as the time of the first clap of thunder heard at the beginning of a thunder-shower at a given place, the direction whence and whither a thunder-cloud came and went, the duration of the attendant shower, and similarly obvious phenomena of the weather. Just so, could I get many psychological data of certain kinds from various independent observers, widely sundered in place, and widely differing in their opportunities, I should be aided in guiding certain of my intended investigations into the nature, the development, and the factors of these imitative functions of mankind.

In answer to any of the following questions, I ask, then, for independent observations, drawn as directly as possible from life, and described as fully as possible. Teachers and observant parents will be most likely to have such information to give; but in some cases my questions call for observations made by a person upon himself, and in these, as well as in most of the other cases contemplated by my questions, there will be other persons besides teachers and parents who may have facts to offer. All plain statements, written with the internal evidences of interest and of watchfulness, will be

welcome, whether made by persons acquainted with psychology or not. The use that can be made of such data, when once they come to hand, is capable of being submitted to pretty careful tests, such as the individual writers cannot well know in advance. The specific purposes of some of my questions will not at once be obvious to every reader. It is enough to say, in general, that all my questions bear upon some topic connected with the natural history of imitation.¹

SCHEDULE OF QUESTIONS ON IMITATIVE FUNCTIONS.

1. *The General Question of the Place of Imitation in Child-Life.* Throughout our country there are now to be found a considerable number of groups of parents or of teachers who, in one way or another, are engaged in organized observations of children on the lines laid down by Preyer, in his well-known book on "The Mind of the Child." I shall be glad to receive, as time goes on, from any persons or circles engaged in this kind of definite and organized labor, information of any and every sort bearing upon the first appearance, and later development, of the imitative functions of infants and young children. For the benefit of all such persons, I may add that the best special observations of the imitative functions in their early stages, so far as I know, are those published by Professor J. Mark Baldwin in the journal "Science," for 1891 (p. 113), for 1892 (p. 15), and that these papers of Professor Baldwin's have been of great service in directing attention to the theoretical importance of this topic, and will be an excellent guide to any future observer of the imitative functions of children. In a future paper I hope to return to the mention of Professor Baldwin's work, to which I already owe much.²

2. *Imitative Games.* All the games of childhood are of course in general due to imitation. But there is one sort of game that deserves to be called above all the imitative game. It is the type that I have mentioned, in passing, already. But I am especially anxious to get as many descriptions as possible, drawn from the life, of just such games, and of the children that play them. In Professor James's larger "Psychology," Vol. II. p. 409, the type of sport in question is thus described:

The dramatic impulse, the tendency to pretend one is some one else, contains this pleasure of mimicry as one of its elements. Another ele-

ment seems to be a peculiar sense of power in stretching one's own personality, so as to include that of a strange person. In young children this instinct often knows no bounds. For a few months in one of my children's third year, he literally hardly ever appeared in his own person. . . . If you called him by his name, H—, you invariably got the reply; "I'm not H—, I'm a hyena, or a horse-car," or whatever the feigned object might be.

Now, what is psychologically important about games of this sort is, first, that they are usually relatively *original imitations*. They are not, like the traditional childish games, handed down from an immemorial antiquity. Each child chooses, as it were, his own dramatic games of personation. The more the child's own private experience determines the thing, the more individual, eccentric, or stubborn the choice, the more characteristic is an imitative drama of this sort. The second importance of this type of mimicry lies in its before-mentioned deep, and, as I think, momentous relations to the whole development of character and of self-consciousness in the child. A third element of significance consists in the wonderful fixity and almost delusional persistence and vividness with which a mimicry of this sort is often kept up by a given child. But very transient, if vigorous, fits of such mimicry also have great interest.

I am accordingly extremely anxious to get all the fresh and exact accounts that I can of cases of this phenomenon of personation, or systematic mimicry, either in one child alone, or in any small group of children, who, playing together, do not merely repeat some of the old traditional games of childhood, but invent their own drama. In case of each child concerned I shall be glad of as full an account as possible of the whole story of its imitative game, and of all the details of its life and character that seem to be relevant to the matter in hand. For a detailed comparison of such instances must throw light on the psychological mechanism of the processes involved. Cases of fixed family games of mimicry, confined to one family group of children, and apparently invented by them, will also be very welcome if accompanied by pretty full accounts of the children concerned.

In some cases those adults who are good at recalling their own childhood will have personal remembrance of experiences of this sort, and will be able to tell of such mimic and unreal child-lives lived for months or years alongside of their real lives—fancied lives that have left traces behind in memory such as often prove

¹ Answers to any of these inquiries may be sent either to the editor of THE CENTURY MAGAZINE, or to Josiah Royce, 103 Irving Street, Cambridge, Massachusetts.

² The highly important paper on imitation in "Mind" for January, 1893, contains the following sentence on "Mental

Evolution in the Child and the Race," both by Professor Baldwin, have appeared since the text of the present paper was written. They should be consulted by all students of this topic.

of no small import for the feelings and character of the mature person. Any one who can tell pretty fully of experiences of this sort may be sure that the story will have a very real psychological interest.

3. *Imitative naughtiness.* It is often said by observers of children that if you tell a child one story of a good boy, and of his ways and rewards, and another story, no more vivid in detail, of a bad boy, and of his deeds and downfall, you will pretty certainly find the effect, other things being equal, to be that the child will manifest far more interest in imitating the naughty boy of the latter story, and in taking his risks, than in imitating the good boy, and in winning the praises showered upon him. The case is here the well-known one of the "lilies and languors of virtue." Unquestionably, childhood contains great numbers of cases where what may be called unintended counter-suggestion, the process of setting a child to imitate an undesirable fashion of life by means of your very efforts to keep him from such imitation, takes effect, and does mischief. Now of course I do not hope, by any collection of incidents, to solve so complex a psychological question as that of this frequent and primary attractiveness of evil in the heart of the natural man, when first such a heart contrasts ill with good. Into that frequent result far too many mental factors enter for us to hope to deal with it in any simple way. But still I have a reason for wishing to collect instances of such "counter-suggestions"; *i. e.*, cases where a child has been apparently tempted to do the wrong merely by hearing that it is the wrong, as well as instances where children have seemed from the start disposed to imitate evil examples rather than good, to admire bad big boys rather than good ones, to be forced to build fires in dangerous places just because they have learned of the danger, in a word, to be fascinated by mischief merely because it is mischief. That this may, and often does, happen we all know. Why it happens, no particular instances can in general make clear. But what I now want is no theory on this topic, but as concrete and precise a story as possible of individual instances, reported from the life, which may seem to fall under this general head, and to illustrate this well-known and frequent tendency. It is needless to explain why such stories may serve the purpose of throwing light on the imitative functions. It is enough that, if told freshly and circumstantially, and, as I say, from the life, they will help me, although those who tell them cannot well foresee how they can do so, and will therefore be all the more able to tell them without any presuppositions or prejudices.

4. *Imitative emotions* aroused in the minds of inexperienced persons. Observers of chil-

dren and of youth, as well as self-observing persons of all ages, may have cases coming under their notice, either in their own inner lives, or in the lives of people under their charge, where the sympathetic or imitative contagion of emotion appears to give to a sensitive person emotional states that far transcend anything in his own previous experience. Of such cases I have spoken earlier in this essay. The emotions of the theater, the precocious emotions of young children on noteworthy occasions, — *e. g.*, at funerals, — the reactions of sensitive people at the sight of disease and of accidents, are all cases in point. For the sake of guiding possible future inquiries into matters of this kind, I want, as a general basis, a collection of individual instances, reported just as they appear to the observers to have taken place, the person who had the experience, and the circumstances, being described as precisely as possible. The study of a branch of natural history has to begin with just such collections of individual experiences, which may be valuable even when the circumstances seem to the persons concerned relatively insignificant or even trivial.

5. The study of the imitative functions is useless without a consideration of their opposites, the functions which appear to be the reverse of imitative. There are some eccentric or wilful children whose life seems to their parents or teachers a life of almost persistent refusal to imitate models. They will not play with the other children, they live much alone, they do not love what the family is most accustomed to show interest in, they seem to be determined from the outset to choose their own way, and to walk in it. In later youth such characters become especially noteworthy and perplexing. I want a collection of descriptions of such persons — children or youth, portrayed just as they seem to their often very much-concerned parents, teachers, or other friends. These eccentric types are of the utmost interest for the study of the imitative functions. How they will prove so, I can best show when the accounts are before me.

SUCH are some of the matters of natural history concerning which I just now ask for assistance from kindly disposed persons. Of the precise value of a collection of such reports it is impossible to give any fuller account without going into technical details beyond my present limits. Suffice it to say that all serious efforts to answer any of the foregoing questions will be valuable. Where, in writing to me personally, correspondents have occasion to mention persons or incidents that they wish to keep private, they may be sure of my discretion. In using my returns I shall never make in any way pub-

lic any names or personal details without express permission, and shall keep confidential statements in a safe place, where they will surely be destroyed without further examination in case of my death.

As for the further importance of a study of the psychology of imitation, I hope before long, as I have said, to have an opportunity to present considerations bearing on the numerous points which have been touched, but not developed, in the present paper. Especially do the close relations between imitation and originality need clarifying before teachers and critics of art, and of other imitative human activities, can learn to avoid certain extremely prevalent errors, which, as I believe, only psychological analysis can duly expose. As a fact, originality and imitation are not in the least opposed, but are, in healthy cases, absolutely correlative and inseparable processes, so that you cannot be truly original in any direction unless you imitate, and cannot imitate effectively, worthily, admirably unless you imitate in original fashions. The greatest thinker, artist, or prophet is merely a man who imitates inimitably something in the highest degree worthy of his imitation. The current confusion of imitativeness with slavishness, the frequent assertion that children and idiots imitate more frequently than do sound and intelligent and reflective adults, the frequent exhortations to teachers that they shall make their young charges *not* imitative *but* spontaneous in thought (as if one could become rationally spontaneous except through imitation), all such errors rest on a false separation of imitativeness and spontaneity, a separation which can be avoided only through a careful psychological study of these fascinating processes.

Josiah Royce.

FLASH-LIGHTS.

MRS. DEEPWATER.

I.

*To Joshua R. Deepwater, Esq.,
The Bangor House, Portland, Maine.*

Sunday, January 8th, 1893.

DEAREST JOSHUA: How tiresome to have you write that you are doubtful about getting back Saturday next, when I have been count-

ing upon seeing you then. I am actually beginning to hate that odious lumber business which takes you away from me so often. Surely we must be rich enough, when even I, with the best will in the world, cannot manage to spend your entire income. Do you know there are moments when I can scarcely resist urging you to retire altogether from affairs next year, so that I can have you more to myself? And then I hesitate, fearing that the forced inaction and lack of interest might bore you, and you would end by blaming me for having advised such a radical step; so I shrink from the responsibility.

The instant you get this, dear, telegraph me the earliest possible date you can come home; for if not by Saturday, I will arrange to run down to Lakewood with the children over Sunday, returning in time to meet you in town. Gladys has been looking rather pale and languid for the past week, and the poor little thing seems to have lost her lovely color and usual good spirits; the doctor says it is nothing serious, but advises a couple of days in the country and a complete change of air. By the by, since we shall all be out of town the end of the week, if at the last moment you manage to get away sooner than you expect, instead of coming back here to a deserted house, do spend Sunday at Salem, and see old Aunt Angelica. She wrote me such a sad little letter the other day, bewailing

her loneliness and depression now that she no longer feels able to travel about the world, and amuse herself according to her time-honored

JOSHUA R. DEEPWATER, ESQ.

custom. I reproach myself exceedingly for not having made a more determined effort to see her during the past three years; but you know I could not bear to leave the children for that length of time, or yet expose them to the danger and fatigue of such a long tedious journey. Auntie will be far more cheered by seeing you, and pouring her woes into your sympathetic ears, and you might perhaps make my peace with her by expatiating upon my devotion to the children, and how badly I feel at being unable to come to her, as I long to do.

The usual stream of dinner invitations pours in, but I am declining everything until I know more definitely about your plans, as I hate the idea of dining out without you.

Nevertheless, I was obliged to fill a place last night at the eleventh hour, and after dinner the Patroon-Knickerbockers suggested that we should let them take half our box in the New Opera House. Ours being the second best box in the house, I was not unduly elated by their marked preference for our society, since it would cost them no more than a poorer and much less desirable box. I was inclined to say yes on the spot, as they belong to the "smart set," and she is closely connected with the leaders of it; besides, when people loathe music as you and I do, her being pretty and popular and having the box

full of men all the time would be really no objection, would it? I said it would be charming to have them, but, as I never did anything without consulting you, would write to you at once about it, and now am only waiting for your answer to send them a line in the affirmative. There is no objection to keeping them in uncertainty for a short time, however; sometimes diplomatic delays work wonders, and *il faut se faire valoir*.

Wrexham has just turned up here; I suppose we must do something for him, but it will be quite time enough when you get home, and, being too short of funds to move on, he is sure to idle along indefinitely in town. When you straightened out the affairs of his father, the duke, by all those lucky mining ventures, you did not expect to be called upon to look after a second edition in his son, did you?

Don't forget, dear, to telegraph fully and immediately your exact plans, as otherwise I shall not venture out of town for fear of missing you, and shall be, besides, in a constant fidget of expectation and uncertainty. Ever your loving wife,

FAITH DEEPWATER.

II.

To the Right Honorable Lord Viscount Wrexham,

The Brevoort House, Fifth Avenue.

January 8th.

DEAR LORD WREXHAM: So glad to get your note yesterday saying you had returned from your shooting-expedition. In the mean time, I have actually succeeded in finding your heiress — the genuine article, too, money safe as the Bank of England, and all of it carefully invested in the best real estate in this city, the Chemical Bank, and Pennsylvania coal-lands. Considering that she is a great heiress, Miss Temple's beauty and cleverness are quite remarkable; but what will appeal to you more, perhaps, is the fact of her being a thorough sportswoman, and such good form that she would make an ideal future Duchess of Lacklands. Above all, the money has been left to her absolutely in her own right by her father, a most worthy old gentleman, who, after making a fortune in some patent medicine, followed up his rapid success in this world by an equally speedy exit into the next through taking an overdose of his own invention, while fondly sharing the belief of the general public that it cured every known ill. There are no relatives but a mother, who seems presentable and inoffensive, like so many of the mothers here, and, having herself an independent fortune, would be no encumbrance. She adores titles, and worships those of the English aristocracy in particular with the same touching faith that the African savage does his fetish, and would, therefore, make no trouble about settlements.

The duchess has lately written me two long, pathetic letters imploring me to keep you from wasting your time, and to warn you against all attractive but impecunious girls labeled dangerous. Evidently your mother is becoming restive at your long and unprofitable stay in this country, and we shall both of us fall from her good graces if you don't bestir yourself a little more. Your heiress has promised to dine here quietly on Friday next, at eight o'clock, and I strongly urge the importance of your dropping in and joining us then, even if you have to throw over some other dinner. You *must* manage it, as Miss T. starts for St. Augustine on Saturday, and this will be your one opportunity of seeing whether she will do well enough for you to make the effort of going down to Florida to destroy alligators — to catch tarpon and her affections. I can then write diplomatically, and pacify the duchess with full particulars about the fortune, taking care to touch skilfully upon your keen interest in this affair, thereby preventing her from recalling you suddenly, or allowing the duke to carry out his recent threat of cutting off your allowance unless you marry, settled down, and cease being such a *mauvais sujet*. Your friend and mentor, FAITH DEEPWATER.

P. S. I have asked Meadowbrooke, M. F. H. of the Syosset, because you may want him to give you an occasional mount later in the season, and he is one of the few men in this country whose hunters are up to your weight. He may put you down at his clubs, but in any case old Dudley Hunter will be only too delighted to do that. Try, therefore, to be civil to him; I assure you it is for your good.

III.

To Miss Daisy Lawless,
The Brunswick, Fifth Avenue.

Monday, January 9th.

DEAR DAISY: I count upon you for Friday next at eight, to help me make success of a little dinner that I am at this moment getting up for Viscount Wrexham, the old Duke of Lacklands's only son, whom I am supposed to "bear-lead" in a way, and who has just dropped in from the Rockies in his usual inconsequent English fashion. Don't fail me, even if you get into hot water by sliding out of a previous engagement at the last moment, for you must raze-dazzle Wrexham, who is quite wide enough awake to take notice and meet you half-way, so that he is worth your while. I am sending off a line to Jack Meadowbrooke, asking him to dine here, also; do insist upon his coming, and then I can place you between your best young man and his lordship, giving you no cause to feel that you have wasted an evening or sac-

rificed yourself in vain to help a friend. It is all right about your spree to the Country Club next week; you can count upon my chaperoning it if Mr. Deepwater does not return home, and I think his business is almost certain to detain him in New England for some time yet.

Did you ever see a more stupid theater-party than that at Mrs. Leader's last night — such a mixed crowd? After being a social power all these years, surely at her age the old autocrat

VISCOUNT WREXHAM.

might have learned the first principles of getting together the right people and of making her things have more "go." Yours ever,

FAITH.

IV.

To J. Meadowbrooke, Esq.,
The Knickerbocker Club.

Monday, January 9th.

DEAR MR. MEADOWBROOKE: Will you dine with me very quietly next Friday at eight o'clock? I have asked only one or two people, because I wanted to have an opportunity of arranging with you and Daisy about the final details for her party to the Country Club next week.

Trusting that I may have the pleasure of seeing you, believe me sincerely yours,

FAITH DEEPWATER.

v.

To Miss Temple,
No. 113 Gramercy Park.

Monday, January 9th.

DEAR MISS TEMPLE: I find that on Friday my old friend Giboyer of the Comédie-Française has an off night, when he promises to dine with me very quietly at eight, and recite some of his monologues afterward, if I will ask only a few people. Will you be of the party? I am so

DAISY LAWLESS.

anxious to have you, for, having spent much of your life in Paris, it will interest Giboyer greatly to meet you, and I know you will inspire him to do his best.

I am delighted to hear that dear Mrs. Temple is so much better that you have abandoned all idea of going South this season, and can spend the winter here. Pray give her my best love, and with hopes that I may have the good fortune to find you disengaged, I am most cordially yours,

FAITH DEEPWATER.

vi.

To Mrs. Manhattan Leader,
No. 302 Fifth Avenue.

January 10th.

DEAR MRS. LEADER: If, by any fortunate chance, you and Mr. Leader are disengaged next Friday, will you dine with us most informally at eight o'clock, to meet Viscount Wrex-

ham, who is spending only a few days in town, on his way South, and has expressed a great desire to meet you? He tells me that the Duchess of Lacklands has often spoken to him about you, and of how much she enjoyed your society a few years ago, when you all stopped together in Scotland at Ballymichen.

Of course you have heard of the terrible scandal that is coming out this week; if you should happen to learn any of the particulars on Friday night, as perhaps you may, I know I can count upon your discretion not to mention them. With kindest regards, believe me very sincerely yours, FAITH DEEPWATER.

vii.

To Mrs. Patroon-Knickerbocker,
No. 3 Washington Square.

January 10th.

MY DEAR MRS. PATROON-KNICKERBOCKER: My husband has just wired me that he will be glad to let Mr. Patroon-Knickerbocker have half his box in the New Opera House, and will call and arrange it all with him immediately on his return to town.

You happened to mention the other day that you were anxious to meet Giboyer, and as he has just promised to dine here with me very quietly on Friday next, at eight o'clock, I should be delighted if you and Mr. Patroon-Knickerbocker would join us then, and pardon the informality of this hasty

invitation. Sincerely yours,

FAITH DEEPWATER.

viii.

January 11th.

M. MAXIME BLANC, HOTEL LOGEROT.

DEAR MONSIEUR BLANC: I was extremely pleased to renew our old acquaintance at Mrs. Masham's tea the other day, and to discover that as Monsieur Giboyer's private secretary, you had at last found a congenial occupation for a man of your *savoir faire* and literary tastes.

Immediately on my return home, I acted upon your clever suggestion of asking Monsieur Giboyer to dine with me next Friday, his off night, and he has accepted my invitation, as you predicted he would. This accomplished, I shall consider it a genuine act of friendship on your part never again to mention repaying the trifling sum you owe me. I assure you that in those old London days, I was most happy

to have an opportunity of being useful to a man of your brilliant attainments, too much occupied to attend to the sordid practical de-

JACK MEADOWBROOKE.

tails of daily life; and you have just placed me so deeply in your debt, that I shall be exceedingly gratified if you will dismiss it forever from your mind as completely as I shall.

Do you suppose Monsieur Giboyer would feel surprised or annoyed if, after dinner, I should ask him to recite one of his inimitable monologues? With a view to such a possible piece of good fortune, I have made a point of inviting a few of our best-known *dilettanti* and society people, to secure that atmosphere of sympathy and appreciation so grateful to true artists. Now you, who understand him so thoroughly, can, I know, merely by the exercise of your faultless tact, so influence him beforehand, that he will come to my house quite unconsciously inclined to grant my request. Rest assured, I shall ask him in such a natural and unpremeditated manner that he will attribute it entirely to an unguarded impulse of the moment; and thanking you in advance for these friendly efforts in my behalf, which *must* be crowned with success, I am yours truly,

F. DEEPWATER.

IX.

To Dudley Hunter, Esq.,
Union Club.

January 11th.

DEAR MR. DUDLEY HUNTER: Will a man of your innumerable social engagements pardon the informality of an invitation at the eleventh hour? Young Wrexham, Lacklands's only son, who has arrived in town unexpectedly, and

dines with me next Friday at eight, has expressed himself so anxious to meet you, that I trust his wish may be gratified; for he has read your book, is delighted with it, and insists that it is positively unique. He proposes spending enough time here to get a thorough glimpse of New York society, and I assured him you could put him in the way of seeing and knowing everybody and everything better than any one else. Do, therefore, take him in hand, keep him out of mischief, and present him only to the most eligible girls. His parents will be more than grateful, for I fancy he has been a little wild, as they appear to be very anxious that he should *ranger* himself.

Those canvasbacks at your house the other night were so delicious that I have been dreaming of them ever since. Why cannot my chef acquire the art of cooking them as yours does? He is a perfect marvel in every way. For this important occasion, I wonder if you would consider it an indiscretion on my part to ask you the exact number of minutes and seconds ducks should be kept in the oven. Sincerely yours,

FAITH DEEPWATER.

X.

Extract from a letter of Mrs. Manhattan Leader to her daughter the Princess Roccabruna, Palazzo Roccabruna, Rome.

Saturday, January 14th.

"I think I have now told you about everybody with the exception of a certain Mrs. Joshua R. Deepwater, quite a new woman, who has practi-

DOROTHY TEMPLE.

MRS. MANHATTAN LEADER.

cally succeeded in working her way up into society during the past year. None of us have been able to hunt up other particulars about her past than that she came originally from some little provincial town in the interior of the State, and married an utterly unknown, but rather worthy, elderly Western man, who laid the beginnings of his fortunes by successfully floating the schemes of some English capitalists in this country. They lived some years in England, where they appear to have met a number of nice people, from whom they probably acquired the manners of society and a certain knowledge of how to live. All of us here have felt in a measure obliged to take this person up, much against our will, of course, because the best men would flock to her house, saying they were never bored there. Somehow she contrives to give such clever impromptu dinners, composed of the smartest and most amusing people, that in this way she has made it rather the thing to go there. How she does it, none of us have been able to find out, for she seems a quiet little woman, apparently without powers of conversation, good looks, or intelligence. That she is rich, dresses well, has a good chef, and excellent wines, would hardly account for it all, when quantities of women in our set fail utterly, though possessed of all those social qualifications in a far greater degree, besides being backed up by powerful family connections. Handicapped tremendously by a dull husband,

many years older than herself, it puzzles me how she always gets him off the scenes whenever she entertains, without his apparently minding in the least, for he proves his absolute devotion by giving her *carte blanche* in everything, and her maid told my maid, who of course told me, that there was really nothing in the world that he would not do for her. It is all very mysterious, and I wish I knew the secret of her success, for she is certainly not the least clever, and she produces the impression of being so commonplace that one might almost term her stupid. By the by, you will be amazed to hear that *we* actually dined at her house last night, quite on the spur of the moment, of course. The husband was absent, and it proved really such an amusing and brilliant affair that I was immensely entertained, though occasionally I experienced a sensation of surprise at finding myself dining with such an utter parvenu. Lord Wrexham was there, for whom the dinner was given, and who dines with me to-night. He was sent out to marry Dorothy Temple, but has apparently fallen

deeply in love with Daisy Lawless instead. From the moment he was presented to her he was so cleverly played by that astute young person that he at once embarked upon a marked flirtation with her, and before dinner was half over it really looked like a serious case. Of course Meadowbrooke was so simply furious that he started in to make violent running with Dorothy, who has been madly in love with him for the past three years, as everybody knows. Poor girl! lately she has gone off so much in her looks that I am afraid she is not long for this world. I suppose she liked him because he was the one man in town not after her fortune; but if he had not been having such a desperate affair with Daisy all that time he might have proved like the rest. As usual Daisy has been playing the same old game, and only amusing herself with him; she has far too level a head to think seriously of such a detrimental, and will throw him away like an old glove, once she sees the slightest chance of landing Wrexham. If she does, what a life he will lead her, for I hear he is a very bad lot. You might find out and write me what they said about him in Rome, when he was attaché of the Embassy there, just after he left the Guards so suddenly; he cannot go back to England now until some one pays his debts. Besides all these, there was Giboyer, this season's greatest lion, who was most entertaining, and amused us so much by his monologues that none of us left until after

one o'clock. It appears he is an old friend of Mrs. Deepwater's, so I think I must cultivate her a little, and see if she cannot induce him to come to my house in that capacity, to amuse us. If she is intimate with all the leading professional celebrities, she might prove rather useful at times, and being such a humdrum little woman, she would expect nothing more in return than an occasional invitation to one of my big entertainments. The Patroon-Knickerbockers and old Dudley Hunter made up the rest of the party. On the whole, I am rather

pleased that we went, though, to do so, I had at the last moment to throw over a state dinner given by your aunt Spuyten Duyvel to the Bishop, which I had accepted more than five weeks ago, and indeed I rather fancy that some of my *convives* did the same, for I know that the Patroon-Knickerbockers and Dudley Hunter were expected at your aunt's as well, while Meadowbrooke was due at a big *débutante* dinner. What do you think is the secret of this woman's success? Do explain it to me if you can."

Lester Raynor.

DUDLEY HUNTER.

TOPICS OF THE TIME.

What is Political Economy?

WE doubt if the great mass of the American people realize to what extent their experience with financial problems during the last year or more has been a forced education in political economy. Most persons, when they hear the term political economy, think of an abstract and intricate science, abounding in laws and technical phrases about money, finance, trade, exchange, etc., all more or less beyond the comprehension of every one save those who because of their profession, or business, or lines of study, or mental inclination, have acquired a special knowledge on the subject. Now, while it is true that there are in every country comparatively few minds that are capable of so grasping the science of political economy as to become expert financiers, competent to direct the financial policy of a nation, or even to administer wisely the affairs of a bank or of a great corporation with large financial transactions, it nevertheless remains equally true that so far as political economy in its broadest sense is concerned,

a comprehension of it lies easily within the grasp of every intelligent person.

Defined in the simplest and most accurate way, political economy is merely the result of the experience of the human race since the dawn of civilization in seeking to improve its material condition. The laws of political economy, like all natural laws, have been discovered by observation and experience. There was no invention of political economy as a science. The first men to make a written science of it did not invent it; they merely set down in scientific form the results of human experience down to their day. Newton discovered the law of gravitation, but he did not invent it. Quesnay, Turgot, and Adam Smith discovered the great laws of political economy, but they did not invent them. All that Adam Smith did was to create out of the results of human experience down to his time the written science which is known as political economy. He studied philosophically the various attempts which had been made by different nations in different times to better the material condition of their people, and observ-

ing, running through all these experiences, evidence that certain causes always produced certain results, he deduced and formulated the principles which lie at the foundation of the modern science of political economy. New principles have been added in precisely the same way since his time, and modern developments have supplanted some of his principles with other principles, made laws by the progress and growth of the human race; but the science to-day remains as he formulated it—the summary of the results of human experience.

What we have been doing in this country during the last year, or, more accurately, during the last fifteen years, has been to defy the results of this experience. We were not the first people to make this experiment. The readers of *THE CENTURY* who followed our series of articles on "Cheap-Money Experiments" are aware that long before the time of Adam Smith, and at repeated periods since his day, efforts were made by one nation after another to set aside and ignore those natural laws which he formulated, the result in every instance being the same—failure and disaster. He published his "Wealth of Nations" in 1776; the English Land Bank experiment was tried in 1696, and John Law's experiment in France in 1718. Behind these experiments were the same delusions about the nature and function of money that appeared later in support of the long series of similar experiments which various nations have made since Adam Smith wrote. Precisely the same delusions were behind the silver movement in this country. Every man who has read the history of political economy recognized in that movement the same fallacies, misconceptions, and ignorance of natural laws which have characterized all cheap-money experiments from the first to the last. There was nothing new in it; even the inevitable disaster which nearly wrecked the business and industry of the country, and brought the nation itself to the verge of bankruptcy, was as old as civilization.

There were in our silver experiment, as in all the other attempts to make money more plentiful by depreciating it and destroying its usefulness as a standard of value, many earnest and sincere men who believed that they had discovered something new in the domains of economic truth, that we as a nation were so situated and circumstanced that we could shut our eyes to the lessons of experience in other countries, and could go ahead safely on new principles of our own, evolved expressly for our special needs. The result showed that natural laws do not change with time, and that the nation which violates them must suffer the consequences just as surely in the nineteenth century as in the seventeenth.

It cannot be that this lesson in what political economy actually is can be lost upon the American people. We believe that it will be many years before so disastrous an attempt will be made to ignore the results of human experience in the one field in which the welfare of all the people has most at stake. The natural well-being of man must be maintained in order that his moral well-being may exist and develop. In this sense the wise management of a nation's finances is the most important part of its government. There can be no such management if the teaching of the human race is ignored, and the natural laws deduced from that teaching are set at defiance. Hereafter, when any apostle of new doctrines of political economy comes before the

people, let him be judged on this basis. If he shall deny the value of experience, the teaching of history, the "garnered wisdom of the ages," the people can surely set him down as a pestiferous quack, who is either too ignorant or too dishonest to be a safe guide.

Let us hope also that the lesson has been learned that, in the financial management of the Government, expert knowledge which is based upon long, intelligent, and thoughtful study of the science evolved from human experience is the only kind which the country can afford to employ. Other nations seek out this knowledge, and bring it into their service at any and all cost. Why should we be less wise than they?

The Foreign Element in Trade-Unions.

WE are in receipt of many letters commenting upon our recent series of articles upon American boys and American labor. Some of these—by far the larger number—confirm the general position taken in those articles, and a few dissent from it. The latter do not, however, adduce any official or other evidence to offset that presented by us, but uniformly stop with statements of the personal experience of the writers. A fair sample of this class of communications is one written by Mr. George L. McMurphy, Corresponding Secretary of the Tacoma Trades Council. Mr. McMurphy says, in the first part of his letter, which is too long for us to publish in full:

The apprentice laws, or rules of the unions, which you seem to claim are adopted in a spirit of hostility to American labor, are adopted mainly for two reasons. First: with the purpose of controlling the number of men at work in the trade (in other words, controlling the supply of labor), with a view of more easily controlling wages. While I will admit this motive may be morally wrong, it is no more so, and no more to be condemned, than the action of sugar trusts, cordage trusts, whisky trusts, coal-oil combines, and the numberless other combinations of capital to control production for the purpose of controlling prices. But I think the main reason for restriction of the number of apprentices is that it is found to be absolutely necessary to prevent employers filling their shops with boys, called "apprentices," but who are given no chance to master the trade they are supposed to be learning, but are taught how to do one thing only, and kept at it, to the displacement of competent mechanics, because they can be hired cheaper.

This is clearly an admission that the trade-union rules, no matter what the motives behind them, do operate to keep boys from learning the trades. Mr. McMurphy goes on to say:

In point of fact, there is no chance to-day for American youth to learn any trade, except when the trade is controlled by trade-unions. I am a carpenter by trade, and have worked at that trade, mostly as journeyman, for the past twenty-two years, and in Vermont, New Hampshire, Massachusetts, Iowa, California, and this State, and during all that time, and over all that territory, have not worked where the number of apprentices was in any way restricted or controlled by any union, and yet, through all that time, I have found only *one* apprentice regularly indentured, and learning the trade.

Mr. McMurphy's point seems to be that the boys are not kept out of the trades by the hostility of the foreign element in the unions, but by their own disinclination to become apprentices. If he has read our articles carefully, he is aware that we have not charged upon the trade-unions the full responsibility for the passing away of the apprentice system. On the contrary, we

said in our second article in the series: "These [the unions] have been charged with far greater responsibility in the premises than belongs to them; they have helped to abolish the apprentice system; but it would have disappeared without their opposition, though not so soon." Mr. McMurphy says that he is an American, born of American parentage, and strongly American in sentiment, and that in all his experience he has not found among trade-union membership that hostility to American labor and to American institutions which we have declared to exist. Our readers are familiar with the official evidence which we cited in support of our contentions on these points, and it is not necessary to reproduce it now. A later bit in the same direction comes to us from a correspondent in St. Paul, Minnesota, who wrote some months ago:

In regard to the antagonism of labor-unions to American institutions, witness the action of the brewers in session recently, in which they unanimously determined and promulgated an order that no member of the brewers' union should become a member of the militia of any State, and that those now enlisted in the military service should leave it forthwith. This decision was followed by the coopers' union shortly afterward.

If this policy is pursued by the other-labor unions, I presume it will be but a short time before a demand will be made for the abolition of all State military forces.

Of course this action amounts to rebellion, and if it were to be followed in practice the question of whether the State or the trade-union was the supreme power would have to be met and answered. In closing his letter, Mr. McMurphy makes a point which is worthy of thoughtful consideration:

The fact that so large a percentage of the trade-unions' membership is of foreign birth is to be attributed to the blind selfishness of the American employer, who prefers the partly skilled workman of foreign birth, at a cheap price, to the skilled American, at a fair price, and will rather get along with the poor foreign article than offer any inducement, or chance even, for the American youth to perfect himself in his trade.

Popular Education in Citizenship.

ONE of the most healthful effects of the first national conference of municipal reform organizations, at Philadelphia in January last, has been the increased attention which has been given since to various plans and suggestions for arousing a more active interest in municipal politics. It is clear that many more persons are considering such matters now than ever before, and this fact of itself is ample justification of the wisdom of holding such conferences. We shall be very much surprised if next year's conference is not in attendance, weight of suggestion, and practical directness of discussion, a distinct advance over the first gathering. The first has sowed the seed of discussion in various quarters of the land, and unless all signs are misleading, there will be an encouraging crop of political results to be garnered when the second shall have come together.

Several notable aids to this discussion have been brought to our attention during the past few months in the form of books and pamphlets. Most of these relate to the problem of municipal government in the larger cities, for it is in these, of course, that aid is most needed. They are aimed very wisely at the dissemination of knowledge as to the exact working of the pres-

ent political machinery, with a view to improvement after a thorough study shall have revealed the defects which are the main causes of existing evils. The first object is to awake interest, the second to encourage investigation, and the third to institute and carry out necessary reforms. In passing, we wish to commend the example of the "Wharton School of Finance and Economy," in setting its class of 1893 to the task of collecting material for, and inditing, essays on the various departments of the government of Philadelphia. The result of the work of these young men is given in a volume just issued, with a preface by Professor E. J. James, explaining the circumstances of its preparation. Similar work might be done by every college in the country, in relation to various phases of government.

Two very useful books are "Primary Elections," by Mr. Daniel S. Remsen of New York, published in Putnam's "Questions of the Day" series, and a "Handbook for Philadelphia Voters," compiled by Mr. Charles A. Brinley, and published by the Wharton School. The first of these gives clear and concise summaries of the rules and methods which are at present observed by political parties in their primaries, county organizations, State and National conventions, in all parts of the country. The working of these is explained clearly, and the evils attendant upon them are pointed out. Mr. Remsen follows this exposition with a discussion of various plans for improvement, including plural and quota elections, direct nominations, proportional representation, secret voting by blanket-ballot in the primaries, and the nomination of candidates by politicians in the primaries. His point of view is that the primary is the pivot of reform, that the control of the primary carries with it the control of the party, the convention, and the nominations, and hence the primary determines both the character of the party, and the quality of popular government.

Mr. Brinley's handbook gives the Philadelphia voter full information as to the laws of citizenship and naturalization, qualifications of electors, boundaries of election, congressional and legislative districts and wards, lists of elective and appointive officers, dates of party meetings and primaries, rules of both political parties, principles and by-laws of the Municipal League, the ballot law, the anti-bribery and fraud laws, digest of the city charter, and of laws passed by the last legislature—in short, information of every kind which a voter may need to enable him to cast his vote intelligently. The book is a model of its kind, and every city in the land should have one similar to it for wide distribution among its voters.

A pamphlet by the same author, entitled "Citizenship," is deserving of equally warm commendation. It consists mainly of the results of a novel expedition which Mr. Brinley put on foot. He sent out a young man, recently out of college, with directions to obtain exact information about the places in the public service concerning which as a voter he was entitled to express his will at the polls. He put the results of his inquiries in writing as quickly as possible after each day's search, and these Mr. Brinley has given in his pamphlet under the title, "Report of a Voter in Search of his Rights." It took this voter several hours a day for six weeks to gather this information. He was delegated next to look into the question of primary elections in

the same way, and the results of this inquiry are included in the pamphlet. The reading of the reports on these two expeditions is most instructive, showing as it does how dense is the ignorance of the average intelligent voter in a large city on all matters pertaining to an election in which he takes part—ignorance as to candidates, to offices, to methods, to district boundaries—in fact, everything.

Mr. Brinley says in his comments upon the contents of his pamphlet:

A great deal of thought has been expended upon methods of reform, and upon some way of getting from the people a better expression of their preferences in caucus or at primary elections. How would it do for reformers to turn their attention to putting voters in possession of exact knowledge as to their elementary privileges and duties; and to posting them as to the exact means by which they may use the former and fulfil the latter?

... The individual voter must be held up to his work, and a way found to get it into his head what his work really is, and how to do it like an honest man and a civilized being, who has some conception of his relations to society. ... Cannot the idea of good government—honest government—participated in by all, from the careful voter at the primaries to the chief of his representatives, be made a new watchword? Is not Citizenship to-day a greater word for us than Liberty? If it cannot

become so, the time is near when we will have to use liberty with new meanings to invoke salvation from new and strange tyrannies.

This, it seems to us, sounds the true watchword for the campaign of education which is before all municipal reformers—a campaign of education in citizenship. Until the respectable and intelligent portions of the population of our large cities can be brought to take an active interest in city politics and city government, it is of small use to talk about improved methods for conducting primaries. The first thing to do is to get the people who are in favor of reform into the primaries. They do not go there now, and they will not be attracted there by improvement in primary methods. Nothing will take them there but interest in public affairs, and that can be awakened only by educating them in civic pride, or to a proper sense of what their citizenship implies. There can be no surer way of doing this than by disseminating widely books and pamphlets of the kind we have mentioned. Every voter who has one of these in his possession is certain to be influenced by it to take a more active part in the city government under which he lives.

OPEN LETTERS.

The Common Sense of Civil Service Reform.

A LETTER FROM COMMISSIONER ROOSEVELT.

IT is always a surprise to me that the Congressmen from the outlying districts fail to understand the immense advantage their constituents receive from the civil-service law. Under the old spoils system the people who are nearest the centers of influence are sure to have the best chance to get appointments. The man who can get to Washington readily and badger his Congressman, or badger the head of a department, has opportunities which are not open to the man who lives in northern Michigan or in Louisiana or on the Pacific coast. Under the civil-service law, on the contrary, each State gets its proper quota of appointments. Thus, during the four years of President Harrison's administration, the Commission succeeded, for the first time, in getting the quotas of the Southern States level with the quotas of the Northern. Four or five hundred appointments in the departmental service at Washington during Harrison's administration were made from the Southern States, and at least two thirds of the men thus appointed were white Democrats. The majority of the remainder were colored Republicans. The law thus worked well in two ways. In the first place, the young white Democrats who thus got in were appointed purely because of their merit, without the exercise of any political influence. They were given the chance to earn their livelihood and serve the Government solely by the civil-service law; and not one of them would have been appointed save for this law; and but for its existence the appointments would not have been evenly distributed among the States. No section of the country has benefited more by this law than the South.

In the next place, the colored people appointed were

not men of the ordinary colored politician stamp, with which we are unhappily familiar. They were bright, educated young fellows, often graduates of the colored colleges, of the class whose members have very few avenues of employment open to them, and who most need to have these avenues made more numerous. The civil-service law has thrown open one more walk of honorable employment to colored people who are striving to win their way upward.

I wish that the plain, sensible people of the country, those who are interested in decent politics, and not in office-mongering and office-jobbing, would make some of the Congressmen who declaim against the civil-service law understand that it is not safe always to pander to stupid or dishonest voters. The civil-service reform law is, in its essentials, a law to provide for entrance to and retention in office upon grounds of merit alone, and to do away with bribery by means of offices. In the last analysis, it is as immoral to bribe with an office as it is to bribe with money; and those Congressmen and politicians who want to repeal the civil-service law occupy a position quite as indefensible as if they wished to repeal the laws forbidding bribery at elections. They stand as the apostles of the dishonest in our public life.

The enactment of the civil-service law has brought a better class of clerks into the public service, and has enabled these employees to live more as reputable American citizens should live. They are enabled to provide for their wives and families, and to look to the future in a way that they could not possibly do so long as they were dependent for their livelihood upon doing the bidding of some local boss. Often clerks come to Washington not with the intention of staying permanently in the government service, but with the intention of putting

in their evening hours in studying some profession, which they would be unable to study in their country homes. Thoroughly capable men, while in the lower grades, can often do this without in any way interfering with their government work. I recall, for instance, a young fellow from Maine, wholly without political influence, who got an appointment under us in Washington. He stayed three years, rendering entirely satisfactory service to the Government, but during that time he also pursued his studies as a medical student, so that he was able to leave the government service, and complete his medical course abroad, and is now a practising physician. Another young man, whose case was brought to my notice, was from a country district in Texas. He was poor, the only son of a widow; he had educated himself at the local district school, and by studying at home during the evenings; he was ambitious, and wished to study law, but had no chance to study law where he was, and no chance to go anywhere else, because he had no money. He had no political or social influence whereby to secure an appointment on the grounds of patronage; but he entered one of our civil-service examinations, and, merely on his merits, won a position of a thousand dollars. On the lonely farm where he had been he could never have earned a third of this amount; neither could he have studied his profession at the little cross-roads village which was his post-office. Coming to Washington, he took night-courses in law, being also a faithful and efficient government clerk. He succeeded in being admitted to the bar, and after a few years he left the service, was taken into partnership, and is now a prosperous young lawyer in a thriving county-seat town. I am taking these instances almost at random; they could be paralleled in hundreds of cases.

Contrast the above with the experience of the man who gets his appointment under the spoils or patronage system. In the first place, he must sacrifice his self-respect by asking as a favor what under the civil-service law he gets as a right. He has to go through that most disagreeable experience of kicking his heels in the antechambers of the temporarily great. He has to sue for his appointment, intrigue for it, and usually has to do some kind of political work for local ward politicians as a price of their backing. Once in, he may or may not do his duty to the Government, but he is obliged all the time to be uneasily aware that he owes his retention to political influence, and that he must at all hazards retain this influence or be turned out.

The civil-service law does good service in raising the character of our government work; but the best service it renders is to our public life, for it wars against the foul system which treats government offices as forming a vast bribery chest with which to corrupt voters. It wars against a system to which more than to any other one thing we owe what is evil and undesirable in American political life.

Theodore Roosevelt.

General Hill's Article on Stonewall Jackson.

IN the February number of *THE CENTURY* there is an article by General D. H. Hill, entitled "The Real Stonewall Jackson," and purporting to be confined mainly to the personal recollections of the writer,

and to the "relation of incidents and anecdotes which he knew of his own knowledge to be true." After referring to the way in which General Taylor came to be called "Old Rough and Ready," he proceeds to state:

In like manner a letter written from the field of the first Manassas gave Jackson the cognomen of "Stonewall," and told a very pretty story about General Bee pointing to him, and saying, "There stands Jackson like a stone wall." Not only was the tale a sheer fabrication, but the name was the least suited to Jackson, who was ever in motion, "swooping like an eagle on his prey."

This assertion of General Hill is as unfortunate as unfounded. There may be a "cloud of witnesses" yet alive who heard General Bernard E. Bee so speak of General Jackson and his Virginians. Of this number I am one, and perhaps was nearer to him than any other person at the time when, in the excitement of the moment, he pronounced a sentence which stamped upon a hero and his brigade a cognomen which is as enduring as the history of their deeds, and with which that of General Bee will always be associated. The "pretty story" was not told by "a letter written from the field," but was told at General Joseph E. Johnston's headquarters by myself, one of his staff-officers, the day after the battle, and no doubt was also told by the Carolinians whom Bee rallied, and in this way was caught up by the soldiers, and its truth established in the minds and hearts of the entire army.

At the request of General Johnston I wrote an account of this first battle of Manassas a few days after it occurred. I mentioned this incident, which he himself witnessed. In 1879 the same facts were stated in a sketch of General Jackson, written at the request of the trustees of the Stonewall Jackson Institute of Abingdon, Va. Lest any material error might be made, I sent a copy of that portion of the address which embraced an account of the battle to General Johnston for his criticism and correction. His reply is dated White Sulphur Springs (Va.), September 3, 1879, and contains these extracts:

Your letter of August 20 came in due time. . . . I will not undertake to criticize your account of the battle of Manassas, for your impressions are perhaps as correct as mine. Now, Cousin Tom [we were kinsmen, and friends from childhood], remember that you saw as much of this battle as any one, and therefore there is no earthly reason why you should not prefer and adhere to your own opinions in the two points in which we differ [viz., as to the position of some of the troops].

The incidents connected with and preceding this designation of General Jackson and his brigade, as told at the time, are simply these:

When General Johnston and General Beauregard with their staffs and escorts reached the vicinity and rear of the conflict, in an open field a dispirited-looking body of men were seen standing along an old fence. General Johnston, accompanied by one of his staff (the writer), turned his horse toward the center of the line, and, approaching the color-bearer, asked, "What regiment is this, and what are you doing here?" He was answered: "It is the 4th Alabama. Our officers have been disabled or killed, and there is no one to command us." General Johnston put his hand upon the flagstaff, and said: "Give me your flag, and I will lead you. Follow me." The standard-bearer retained his hold upon the staff,

and, looking up to the general, as he walked quickly by the side of his horse, said, "General, don't take my colors from me. Tell me where to carry them, and I will plant them there." The general saw that the regiment advanced with spirit, and, relinquishing his hold upon the flagstaff, soon put Colonel R. S. Gist, one of General Bee's staff, in command. In confirmation of this fact, see General Johnston's "Narrative," page 48. His modesty and self-abnegation did not permit any allusion to the conspicuous part he had just performed. The regiment had hardly passed beyond General Johnston and me when General Bee rode up, and, as he faced General Johnston, dropped the reins of his bridle, and in a voice tremulous with emotion, the tears rolling down his cheeks, said, "General, my command is defeated and scattered, and I am alone." General Johnston in the kindest and gentlest tones replied, "I know it is not your fault, General Bee; but don't despair, the day is not lost yet." A few moments of conversation followed, and then General Johnston, pointing to some men lying along a fence, asked, "What men are these?" General Bee turned to look, and replied, "They are South Carolinians." General Johnston said, "Rally them, and lead them back into the fight." I was assigned to the same duty, and was near General Bee when he appealed to them as South Carolinians to sustain the reputation of their State, and, pointing to General Jackson's brigade (a part of which could be distinctly seen) exclaimed, "Look, there is Jackson with his Virginians standing like a stone wall against the enemy." * The men were aroused by these appeals, and, falling into line, were led toward the front, where General Bee, gathering other portions of his command, led the charge in which he fell mortally wounded.

I must, in conclusion, be pardoned for saying that General D. H. Hill does not present the "Real Stonewall Jackson" in all the fullness of his striking characteristics as he is known to his friends, and appears to those who have studied his private life and military career. What I have written is only to vindicate and establish the truth of history. I leave it with you to decide whether or not the correction shall follow the same channel as the mistakes of a brave soldier, scholar, and gentleman, who was often a careless writer and collator of facts.

Thomas L. Preston.

UNIVERSITY OF VIRGINIA, February 24, 1894.

Stonewall Jackson at Port Republic.

In the February number of *THE CENTURY*, General D. H. Hill says that the incident of the Yankee gunner and Stonewall Jackson at Port Republic is romantic, but false.

I was a member of Company F, Ninth Louisiana Volunteers, and was at Port Republic on the day of the battle. I was ill, and with a small number of other sick soldiers was ordered to cross from the north side of the river to the side on which Port Republic is situated, and to go in the direction of the baggage trains. We crossed the river a little above the bridge in a skiff, after which most of the men went directly toward the

baggage train, while I and a comrade by the name of Jones, a member of the same company, went to the pike, and proceeded down toward the bridge. When about seventy-five or a hundred yards from the bridge we saw three or four Federal soldiers with a cannon at the south entrance of the bridge pointing through it, and on the same side of the bridge with us. We were starting to run when we saw General Jackson, alone, coming down the road at a gallop. He had on his old cap, but wore a United States Army overcoat, and rode by, passing within ten feet of us, in the direction of the gun. I heard him say: "Why did you put that gun there? Why don't you remove it down there? Don't you see the enemy over yonder?" pointing to our troops on the north side of the river, and also to a level place a little below the bridge, and a short distance from the mouth of it. The Yankees at once moved the gun to the place indicated by General Jackson, who immediately rode through the bridge as fast as he could go, and waved his cap to his men, who began firing, and soon drove the gun away. There were other Federal troops to be seen down the river at the time. I knew General Jackson by sight, perfectly, and cannot be mistaken. My comrade Jones, I think, is dead. I have often mentioned the scene to my fellow-soldiers during and since the war.

R. S. Fortson.

SAN MARCOS, TEXAS.

The Depletion of American Forests.

A WRITER in the January number of *THE CENTURY*, under the title of "The Vanishing Moose," makes a statement which I think may be very misleading, if not erroneous. On page 345 he says: "Of the great forests that absolutely covered the Eastern and Northwestern States, and served as the home of vast numbers of animals, *scarcely anything is left.*" The italics are mine.

As to the Eastern States, the above is undoubtedly correct; but as a sweeping characteristic of the Northwestern States, I am sure the author of "The Vanishing Moose" is much in error.

Take, for instance, the State of Washington, the most northwestern State in the Union. Within its limits only the fringe of the lumber forests has as yet been cut away. The most carefully prepared statistics, gathered down to as late a date as January 1, 1894, show the number of standing feet of timber in the State of Washington to be 410,000,000,000, of which not quite 1,000,000,000 feet are cut and marketed each year. From these data it is easy to see that the forests of the State will be exhausted only about four hundred years hence.

To be sure, some little destruction goes on in the way of clearing and burning away timber to fit the land for agricultural pursuits, but this is chiefly on tracts that have already been exhausted by the machinery of logging. Instead of attacking land that is wholly new, the farmer selects those districts from which all wood valuable for lumber has been removed. Thus the heaviest is out of the way.

Forest fires are unknown in the State of Washington, so that destruction of her forests in this manner is not yet a source of anxiety.

The data I have given above apply with almost equal force to Oregon, Minnesota, and Wisconsin. It may

* This incident was also witnessed by Mr. Barna McKinne, at that time a private in the Fourth Alabama, and subsequently chief quartermaster on General G. W. Smith's staff.—EDITOR.

therefore be safely inferred that much of the forests of the Northwestern States yet remains.

SNOMONISH, WASHINGTON.

W. T. Ellwell.

REJOINDER BY THE AUTHOR OF "THE VANISHING MOOSE."

THE term "Eastern and Northwestern States" in my article was meant to refer to the two original forest areas in this country, and the State of Washington is in some respects the least injured of the whole district; but even in Washington the area of virgin forest has been very seriously diminished.

The figures Mr. Ellwell quotes are of no value as showing decrease of forest area, because his ratio between the number of feet of standing timber and the number of feet annually marketed does not show the ratio between what is annually cut, cleared, or burned (or, in other words, destroyed) and what is left untouched. The timber marketed is only a fraction of what is cut, and in a new country rapidly being settled the amount cut by lumbermen is only a fraction of what is cleared. To this must be added the timber burned, which in the Northwest is very great. Within the last two years the Olympic peninsula has been badly burned, and in 1880 alone, the last year for which figures are attainable, 37,910 acres, valued at \$713,200, were destroyed by fire in the State of Washington. This effectually disposes of Mr. Ellwell's statement that "forest fires are unknown in the State of Washington."

The only way to judge of the destruction of forests in the United States is to consider the number of square miles of timber-lands annually cleared in any manner, whether by settlement, fire, or lumbering. Judged by this standard, not only Washington, but the other Northwestern States, would make a sorry showing.

The destruction of forests in this country is, indeed, so very far advanced that it is, or ought to be, a source of anxiety to patriotic men not wholly absorbed in realizing on the heritage of the centuries for their own financial advancement and the impoverishment of coming generations. In evidence of this, let me quote from a letter just received from Dr. John D. Jones, assistant chief in the Division of Forestry at Washington, D. C., who is widely known as an authority on the subject:

"At the present rate of destruction, together with the enormous increasing demands, the timber-lands of the United States, unless some radical action is taken at once, will, in a very short time, be a thing of the past."

Madison Grant.

The English Language in America.

THERE has been from time to time serious talk, even in England, of the reform of English orthography. The word is a misnomer in relation to the English language, for there is nothing orthographic in it. No language, except perhaps the Etruscan, was ever reduced to such phonetic decay. The simplest and most easily acquired, as speech, of all European languages, its spelling brings the foreigner to despair. It is impossible for any man who has learned the sounds given to the letters of it, and acquired them in the highest possible exactitude as elements, to go on from that and learn to talk it so as to be generally understood. This is a disgraceful fact, explain it how we may.

The business world is meanwhile persistently clamoring and searching for a universal language, and Volapük has even been acquired by thousands of malcontents, in the whimsical faith that a language without literature and without roots in the habits of mankind can be coaxed into vitality by the more or less philosophic considerations that it favors no existing language, impartially borrows from all, lends to none, and therefore can excite the jealousy of nobody. The only apology for this unfathomable absurdity is that the owners of the existing languages refuse to adapt them to the uses of humanity at large. To say that our language is the simplest of the European tongues in its grammar, in its construction of phrase, and especially in its inflections, is to claim what nobody contests; and that it is the easiest to learn is a common remark by those who have studied it, but coupled always with the qualifying criticism that the written word gives but a poor indication of the pronunciation. Make it phonetically correct, and it becomes the easiest language to acquire in the world, and supersedes Volapük and all its substitutes. This is for the foreigner; but for ourselves there is a kindlier service in the elementary education of our children. As this is now carried on, it requires in many cases two or three years for a child to learn to read, and, in not a few, many years to master the spelling of the language. By a phonetic system this time is reduced, for any language, to six weeks, on an average. This I observed during the troubles in the Herzegovina in 1876, when thousands of refugee children in Dalmatia, almost entirely the descendants of illiterate ancestors from time immemorial, were gathered into schools instituted for them in the cities which gave them refuge. These children, of ages from two or three up to ten and twelve, using the Cyrillic alphabet, which is strictly phonetic, required, on an average, as I found by many inquiries from the priests in charge of the schools, only six weeks to learn to read.

In the primary education of my own children I have to a satisfactory extent proved the same advantages in a phonetic system of teaching. A friend of our family who was an enthusiast in all reforms of education — Mrs. Margaret Merington, the daughter of the Mr. Hamilton who was known sixty years ago as the inventor of improved methods of instruction — had as long ago as 1828 elaborated an alphabet which proposed a distinct character for every sound in the language, preceding Pitman by some time in the publication of it. The scheme failed to receive support, being far too radical and too early for the English public. Some years after, Mrs. Merington, always turning the subject in her mind, and spending the most of the time she could spare from her family in teaching foreign languages to poor governesses or English to poor foreigners, contrived a modification of the actual alphabet for this purpose, and at her own expense had a font of type cast, and text-books printed, in which the English letters of common use were distinguished by accents and other modifications, so as to give a definite value to every letter. I had had so much experience of crowding the minds of little children, and its disastrous effects on the brain, that I had made a rule that none of my children should be set to learn their letters before the age of seven; and at this age Mrs. Merington took two of them in succession to teach them to read by the improved

alphabet. Though one of the children was slow to learn, and neither very precocious, both learned to read in the same time,—six weeks,—and one of them, on being transferred to books in the common character, found no difficulty in spelling or pronouncing, but read with fluency books in the usual type suited to her age, and followed the customary routine afterward. The other had for some time a tendency to “incor-rect” spelling, but not more than some people retain all their lives in spite of all education.

The system of Mrs. Merington not only provided the distinct character for every sound in the language, but that the sound should be taught in such a way that it combined naturally with the adjoining ones; *i. e.*, instead of giving the letters names as in the Alpha-Beta-Gamma system, each letter was given the articulation it had in all cases, B for instance being neither *bee* nor *eb*, but simply *b* isolated from any vowel or other consonant sound. This being thoroughly accepted, the coupling of the consonant with each vowel at need was the natural consequence of articulation, and the letters ran into words without giving rise to any perplexity. In default of such a system, children set to learn the English language have many months of painful perplexity over their spelling-books, and in general do not succeed in learning to read fluently till they have come to distinguish the words by their individual physiognomy, which is a late acquisition to all, and impossible to many, while it often happens that the conventional spelling of many words is never acquired even by people devoted to literature. The proof-readers of any of our principal periodicals can attest to this fact.

The suggestion of the Americanization of the English language carries with it as the logical consequence a radical reform which the insular mind is too conservative to accept, but which will, when accepted by the expanding branch of the race, so facilitate the acquisition of the language that no excuse will remain for the construction of a new universal speech; and it will at once establish the position of our tongue as not only the simplest in construction and the widest in extent and therefore the most useful, but as the most easily acquired of all human languages. But to this end the reform must be radical. It is trifling with the subject to throw out a useless *gh* here and a superfluous *m* or *l* there; not only must the useless be eliminated, but the incorrect and inexact must be made correct and exact; there must be no two characters for the same sound, or two sounds for the same character. But we are mostly too conservative to adopt the form of the Artemus Ward literature—mainly, I imagine, because we consider that we might be confounded with the illiterate, and because we do not like to forfeit the credit of having learned our language in the difficult way; and also, to a large extent, because we are attached to the old forms, and do not trouble ourselves for those who are to come after. Language is a tool, but from time unknown the human mind has resisted the change of forms of tools to which the human hand has become accustomed. The change must therefore be radical in

character, but conservative in form, and the means of combining these conditions is furnished by the Merington alphabet. For the silent letters it employs italics; for the sounded vowels, accents; and for sounded consonants, modifications of the forms so slight as not to offend the accustomed sense, while they convey to the beginner all that is requisite in the indication of modification of sound. The printed page, therefore, corresponds so nearly to the present form that the eye is not offended, the history of the language is kept intact, and the books already printed will have only a slightly archaic character to those who follow us, while the words once learned in the new character will be perfectly well known in the old. That afterward the progressive reform shall proceed little by little to throw out the useless letters, and insist more forcibly on the differentiation of the modified, we cannot foresee or provide for or against. What is certain is, that a reform will come when the desire for it has reached the requisite strength; and the longer that reform is delayed, the more reckless of conservative conditions it will be, and the more our immediate successors will have lost. And, after all, the changes will be only the putting of what we now get in our dictionaries into our text-books. But with this change an intelligent foreigner can learn English in six months, not only, as now, to read it, but to be able to speak it intelligibly and correctly—an accomplishment which is usually the result of years of study.

W. J. Stillman.

“The Century’s” American Artist Series.

FREDERICK W. FREER. (See page 57.)

FREDERICK W. FREER became first known to American art-lovers early in the eighties by his water-colors, which, although narrow in their range of subjects, were attractive and taking, delightful in their color-sense, and always pictorial. It was some years later that he gained the place he now occupies as an expert and facile worker in oil.

In the eighties Freer’s pictures, as was natural, showed much of the influence of Munich, for he had been a student at the Royal Academy in that city since 1867. Later he threw off the Munich yoke, and seemed for a year or two to lean toward Paris. His mature work does not savor of any special school or method.

Freer was born in Chicago in 1849. He studied both in Munich and Paris for nearly fourteen years, and returned to America and settled in New York in 1880. During the last few years he has lived in his native city. He is a member of the Society of American Artists, and of the American Water Color Society, and an associate of the National Academy of Design. He gained a medal at the Columbian Exposition.

I doubt not that Mr. Freer has as much difficulty with his medium as most artists have, but his “facture” is so well hidden, his brush-work is so facile and pleasant, that his pictures are grateful alike to the professional and the unprofessional eye, because they possess the rare quality of *seeming* to have been easily done.

W. Lewis Fraser.

IN LIGHTER VEIN.

Sleepy Man.

WHEN the Sleepy Man comes with the dust on his eyes,
(Oh, weary, my Dearie, so weary!)
He shuts up the earth, and he opens the skies.
(So hush-a-by, weary my Dearie!)
He smiles through his fingers, and shuts up the sun;
(Oh, weary, my Dearie, so weary!)
The stars that he loves he lets out one by one.
(So hush-a-by, weary my Dearie!)
He comes from the castles of Drowsy-boy Town;
(Oh, weary, my Dearie, so weary!)
At the touch of his hand the tired eyelids fall down.
(So hush-a-by, weary my Dearie!)
He comes with a murmur of dream in his wings,
(Oh, weary, my Dearie, so weary!)
And whispers of mermaids and wonderful things.
(So hush-a-by, weary my Dearie!)
Then the top is a burden, the bugle a bane,
(Oh, weary, my Dearie, so weary!)
When one would be faring down Dream-a-way Lane,
(So hush-a-by, weary my Dearie!)
When one would be wending in Lullaby Wherry
(Oh, weary, my Dearie, so weary!)
To Sleepy Man's Castle by Comforting Ferry.
(So hush-a-by, weary my Dearie!)

Charles G. D. Roberts.

Outlines.

A MAN owned a slave. But coming to believe it to be wrong to hold men in slavery, he said, "I will set this one free." At this his neighbors protested, saying it would be bad policy, since it would cause other slaves to desire their freedom, and so make trouble. But the man holding firm, they threatened him with ostracism. Now, for himself the man cared for this not one whit; but because of his wife and children, who would suffer, he yielded.

But he said, "I am myself a slave."

A BOY went to school. He was very little. All that he knew he had drawn in with his mother's milk. His teacher (who was God) placed him in the lowest class, and gave him these lessons to learn: Thou shalt not kill. Thou shalt do no hurt to any living thing. Thou shalt not steal. So the man did not kill; but he was cruel, and he stole. At the end of the day (when his beard was gray, when the night was come), his teacher (who was God) said: "Thou hast learned not to kill; but the other lessons thou hast not learned. Come back to-morrow."

On the morrow he came back, a little boy. And his teacher (who was God) put him in a class a little higher, and gave him these lessons to learn: Thou shalt do no hurt to any living thing. Thou shalt not steal. Thou shalt not cheat. So the man did no hurt to any living

thing; but he stole, and he cheated. And at the end of the day (when his beard was gray, when the night was come), his teacher (who was God) said: "Thou hast learned to be merciful; but the other lessons thou hast not learned. Come back to-morrow."

Again, on the morrow, he came back, a little boy. And his teacher (who was God) put him in a class yet a little higher, and gave him these lessons to learn: Thou shalt not steal. Thou shalt not cheat. Thou shalt not covet. So the man did not steal; but he cheated, and he coveted. And at the end of the day (when his beard was gray, when the night was come), his teacher (who was God) said: "Thou hast learned not to steal; but the other lessons thou hast not learned. Come back my child, to-morrow."

This is what I have read in the faces of men and women, in the book of the world, and in the scroll of the heavens, which is writ with stars.

A CHILD said to me, "A wonderful thing will happen to-morrow."

I said, "What?"

He said, "To-morrow."

A CHILD brought me a pebble, white and smooth and round. "What a wonderful thing!" he said.

"Wonderful?" said I. "There are millions and millions of things like that."

"Then," said he, "there are millions and millions of wonderful things."

A MAN went to the court. When he came back, his neighbors asked: "Did you see the king? Did you see the queen? Did you see the prince and the princess? Did you see the duke and the duchess?"

But he said, "I saw only men and women."

IN a certain country there was a law which forbade a man to kiss his wife on the Sabbath. For violation of this law (and others of equal wisdom) a potter had suffered both fine and imprisonment. It happened after that, when the potter was at work at his wheel, that there came to him one of the law-makers, who complained that some of the potter's ware which he had bought had too easily broken. "If I were a potter," said the law-maker, "I would make ware which could not be so easily broken." "And if I were a law-maker," said the potter, "I would make laws which could not be so easily broken."

A MAN loved a woman, but she laughed at him. Then, through grief, he became ill, and was like to die, in very despair of her love. Whereat pity touched her heart, and pity grew to love. When he came to know this, having now the love he had so yearned to possess, he rejoiced greatly, and arose from his bed.

And straightway he began to love another woman.

Berry Benson.

Men and Women.

MOST women are inclined to be very lenient to any offense on the part of a man which he can make them believe springs from their attractiveness.

Every woman has an ideal husband before marriage, and a very real one after it.

Many a woman who has made a man unhappy for a time by declining his offer of marriage has, afterward, earned his eternal gratitude for her discernment.

To know some women is to know the whole sex. They seem to combine in dazzling bewilderment the virtues and vices, the charms and counter-charms, of all womankind.

A married woman is always wiser than an unmarried woman; but it is often the wisdom that comes from disappointment, sorrow, and discontent.

Men, as a rule, long to be loved only during youth. In mature age they long for power, and their longing is increased in proportion to its acquirement. Their love of women is readily appeased; their love of power is insatiable.

No woman is capable of inspiring so intense and lasting a love as one who feels that she is unlovable.

The man who weds a woman solely because he believes she loves him commits the greatest wrong toward her. She will certainly discover the fact, and will hate him and herself for all future time: him for having deceived her; herself for incapacity to keep her own secret.

The more love we give, the more we have, may be true of women; but man seems to be possessed only of a fixed amount. He can hardly form a new attachment without drawing heavily on his limited capital of affection invested in an earlier sweetheart.

Some shallow, sentimental women occupy most of their time in doing what they should not do, in repenting of it with superabundant tears, and in continuing their offenses.

When a man feels irritated toward a woman from insufficient cause, her patience and amiableness increase his irritability, and aggravate injustice into cruelty.

Many a woman is as remarkable for greatness of heart as for littleness of mind. She can feel deeply when she cannot see clearly, which may be the main reason for her tenderness.

Certain passionate, high-tempered women can never love without a mixture of shrewishness. This is naturally more endurable to lovers than to husbands, who would prefer, for peace's sake, a little less love and a little more amiability.

Junius Henri Browne.

The Evolution of a "Name."

WHEN Hill, the poet, first essayed
To push the goose's quill,
Scarce any name at all he made.
('T was simply "A. H. Hill.")

But as success his efforts crowned,
Rewarding greater skill,
His name expanded at a bound.
(It was "A. Hiller Hill.")

Now that his work, be what it may,
Is sure "to fill the bill,"
He has a name as wide as day.
("Aquilla Hiller Hill.")

Charles Battell Loomis.

The Tests.

Of a fine man: not the harm that he does not do, but the good that he does do.

Of happiness: the art of forgetting actual unhappiness.

Of unhappiness: the habit of forgetting actual happiness.

Of a millionaire: not what he spends, but what he earns.

Of a student: not how much he knows, but how much he wants to know.

Of a clerk: not what he earns, but what he spends.

Of unselfishness: never to remember yourself.

Of dignity: never to forget yourself.

Of a woman's power: not how exclusively you think of her when she is there, but how often you think of her when she is not there.

Of beauty: not that it is perfect, but that it always attracts.

Of purity: not what it has not seen, but what it has not touched.

Of tact: not how often you please, but how seldom you offend.

Of friendship: 1. How much you can say to each other. 2. How little you need say to each other. 3. How much you enjoy differing with each other.

Of charm: not how deeply you feel it, but how keenly you remember it.

Of fascination: not how keenly you remember it, but how much else you forget.

Of a good comrade: how much you enjoy talking to him.

Of sympathy: how much he enjoys talking with you.

Of the worst pessimism: leading a poor life, and then preaching what you practise.

Of a realist: not that he never depicts ideally, but that he never depicts falsely.

Of virtue: not what it does not do, but what it does not want to do.

Alice Wellington Rollins.

Mellin's Food

received the highest awards, Medal and Diploma, that were given to Infants' Foods by the World's Fair, *but* the voluntary selection and *successful* use of MELLIN'S FOOD at the Crèche, in the Children's building at the World's Fair (10,000 Babies were fed with it there), by the Matron, Miss Marjory Hall, "after a fair trial of the other Foods," was, *really*, the highest award, as no other Infants' Food in the world was thus honored and endorsed.

THE CENTURY CO., 33 East 17th Street, New York, N. Y.

chair, and went on whittling. The boy turned eagerly to a crevice in the logs, and, trembling with excitement, searched the other shore for Jasper's gray horse, going home.

"He called me a idgit," he said to himself, with a threatening shake of his head. "Jes would n't I like to hev a chance at him! Rome ull git him! Rome ull git him!"

There was no moving point of white on the broad face of the mountains or along the river road. Jasper was yet to come, and, with ears alert to every word behind him, the lad fixed his eyes where he should see him first.

"Oh, he did n't mean to hit me. Not thet he ain't mean enough to shoot from the bresh," Rome broke out savagely. "Thet 's jes whut I 'm afeard he will do. Thar was too much daylight fer him. Ef he jes don't come a-sneakin' over hyar, 'n' waitin' in the lorrel atter dark fer me, it 's all I ax."

"Waitin' in the lorrel!" Old Gabe could hold back no longer. "Hit 's a shame, a burnin' shame! I don' know whut things air comin' to! 'Pears like all you young folks think about is killin' somebody. Folks usen to talk about how fer they could kill a deer; now it 's how fer they kin kill a man. I hev knowed the time when a man would 'a' been druv out o' the county fer drawin' a knife ur a pistol; 'n' ef a feller was ever killed, it was kinder accidental by a Barlow. I reckon folks got usen to weepens 'n' killin' 'n' bushwhackin' in the war. Looks like it 's been gittin' wuss ever sence, 'n' now it 's dirk, 'n' Winchester, 'n' shootin' from the bushes all the time. Hit 's wuss 'n' stealin' money to take a feller-creetur's life thet way!"

The old miller's indignation sprang from memories of a better youth. For the courtesies of the code went on to the Blue Grass, and before the war the mountaineer fought with English fairness and his fists. It was a disgrace to use a deadly weapon in those days; it was a disgrace now not to use it.

"Oh, I know all the excuses folks make," he went on: "hit 's fa'r fer one as 't is fer t' other; ye can't fight a man fa'r 'n' squar' who 'll shoot ye in the back; a poh man can't fight money in the counts; 'n' thar hain't no witnesses in the lorrel but leaves; 'n' dead men don't hev much to say. I know it all. Hit 's cur'us, but it act'ally looks like lots o' decent young folks hev got usen to the idee—thar 's so much of it goin' on, 'n' thar 's so much talk 'bout killin' 'n' layin' out in the lorrel. Reckon folks ull git to pesterin' women 'n' strangers bimeby, 'n' robbin' 'n' thievin'. Hit 's bad enough thar 's so leetle law thet folks hev to take it in their own hands oncet in a while, but this shootin' from the bresh hit 's p'int'ly a sin 'n' shame! Why," he concluded, pointing his remonstrance as he always did, "I seed your grandad and young

Jas's fight up thar in Hazlan full two hours 'fore the war,—fist and skull,—'n' your grandad was whooped. They got up and shuk hands. I don't see why folks can't fight thet way now. I wish Rufe 'n' old Jas 'n' you 'n' young Jas could have it out fist and skull, 'n' stop this killin' o' people like hogs. Thar 's nobody left but you four. But thar 's no chance o' that, I reckon."

"I 'll fight him anyway, 'n' I reckon ef he don't die till I lay out in the lorrel fer him, he 'll live a long time. Ef a Stetson ever done sech meanness as that I never heerd it."

"Nuther hev I," said the old man, with quick justice. "Ye air a overbearin' race, all o' ye, but I never knowed ye to be that mean. Hit 's all ther wuss fer ye thet ye air in sech doin's. I tell ye, Rome—"

A faint cry rose above the drone of the mill-stones, and old Gabe stopped with open lips to listen. The boy's face was pressed close to the logs. A wet paddle had flashed into the sunlight from out the bushes across the river. He could just see a canoe in the shadows under them, and with quick suspicion his brain pictured Jasper's horse hitched in the bushes, and Jasper stealing across the river to waylay Rome. But the canoe moved slowly out of sight down-stream and toward the deep water, the paddler unseen, and the boy looked around with a weak smile. Neither seemed to have heard him. Rome was brooding, with his sullen face in his hands; the old miller was busy with his own thoughts; and the boy turned again to his watch.

But Jasper did not come. Isom's eyes began to ache from the steady gaze, and now and then he would drop them to the water swirling beneath. A slow wind swayed the overhanging branches at the mouth of the stream, and under them was an eddy. Escaping this, the froth and bubbles raced out to the gleams beating the air from the sunlit river. He saw one tiny fleet caught; a mass of yellow scum bore down, and, sweeping through bubbles and eddy, was itself struck into fragments by something afloat. A tremulous shadow shot through a space of sunlight into the gloom cast by a thicket of rhododendrons, and the boy caught his breath sharply. A moment more, and the shape of a boat and a human figure quivered on the water running under him. The stern of a Lewallen canoe swung into the basin, and he sprang to his feet.

"Rome!" The cry cut sharply through the drowsy air. "Thar he is! Hit 's Jas!"

The old miller rose to his feet. The boy threw himself behind the sacks of grain. Rome wheeled for his rifle, and stood rigid before the door. There was a light step without, and the click of a gun-lock within; a shadow fell across the doorway, and a girl stood at the threshold with an empty bag in her hand.

A CUMBERLAND VENDETTA.

A TALE OF THE KENTUCKY MOUNTAINS.

By the author of "A Mountain Europa," etc.

WITH PICTURES BY LOUIS LOEB.

I.

THE cave had been their hiding-place as children; it was a secret refuge now against hunger or darkness when they were hunting in the woods. The primitive meal was finished; ashes were raked over the red coals; the slice of bacon and the little bag of meal were hung high against the rock: and the two stepped from the cavern into a thicket of rhododendrons.

Parting the bushes toward the dim light, they stood on a massive shoulder of the mountain, the river girding it far below, and the afternoon shadows at their feet. Both carried guns: the tall mountaineer, a Winchester; the boy, a squirrel rifle longer than himself. Climbing about the rocky spur, they kept the same level over log and boulder and through bushy ravine to the north. In half an hour they ran into a path that led up home from the river, and they stopped to rest on a cliff that sank in a solid black wall straight under them. The sharp edge of a steep corn-field ran near, and, stripped of blade and tassel, the stalks and hooded ears looked in the coming dusk a little like monks at prayer. In the sunlight across the river the corn stood thin and frail. Over there a drouth was on it; and whap drifting little-plumes marked the moon-

tide of the year, each yellow stalk had withered blades and an empty sheath. Everywhere a look of vague trouble lay upon the face of the mountains. The autumn was at hand; and when the wind blew, the silver of the leaves showed ashen.

There was no physical sign of kinship between the two, half-brothers though they were. The tall one was dark; the boy, a foundling, had flaxen hair, and was stunted and slender. He was a dreamy-looking little fellow, and one may easily find his like throughout the Cumberland — paler than his fellows, from staying much indoors, with half-haunted face, and eyes that are deeply pathetic when not cunning; ignorantly credited with idiocy and uncanny powers: treated with much forbearance, some awe, and a little contempt; and suffered to do his pleasure — nothing, or much that is strange — without comment.

"I tell ye, Rome," he said, taking up the thread of talk that was broken at the cave, "when Uncle Gabe says *he's* afeard thar 's goin' to be trouble, hit 's a-comin'; 'n' I want you to git me a Winchester. I 'm a-gittin' big enough now. I kin shoot mighty nigh as good as you, 'n' whut am I fit fer with this hyar ole papaw pop-gun?"

"I don't want ye fightin', boy, I've told ye.

"SHE WAS WAVING HER BONNET AT HIM."

ENGRAVED BY A. E. ANDERSON

Ye air too little 'n' puny, 'n' I want ye to stay home 'n' take keer o' mam 'n' the cattle—ef fightin' does come. I reckon thar won't be much."

"Don't ye?" cried the boy, with sharp contempt—"with ole Jas Lewallen a-devilin' Uncle Rufe, 'n' that black-headed young Jas a-climbin' on stumps over thar across the river, 'n' crowin' 'n' sayin' out open in Hazlan thet ye air afeard o' him? Yes; 'n' he called me a idgit." The boy's voice broke into a whimper of rage.

"Shet up, Isom! Don't you go gittin' mad now. You 'll be sick ag'in. I 'll tend to him when the time comes." Rome spoke with rough kindness, but ugly lines had gathered at his mouth and forehead. The boy's tears came and went easily. He drew his sleeve across his eyes, and looked up the river. Beyond the bend three huge birds rose into the sunlight, and floated toward them. Close at hand, they swerved sidewise.

"They hain't buzzards," he said, standing up, his anger gone; "look at them straight wings!"

Again the eagles swerved, and two shot across the river. The third dropped with shut wings to the bare crest of a gaunt old poplar under them.

"Hit 's a young un, Rome!" said the boy, excitedly. "He 's goin' to wait thar tell the old uns come back. Gimme thet gun!"

Catching up the Winchester, he slipped over the ledge; and Rome leaned suddenly forward, looking down at the river.

A group of horsemen had ridden around the bend, and were coming at a walk down the other shore. Every man carried something across his saddle-bow. There was a gray horse among them,—young Jasper's,—and an evil shadow came into Rome's face, and quickly passed. Near a strip of woods the gray turned up the mountain from the party, and on its back he saw the red glint of a woman's dress. With a half smile he watched the scarlet figure ride from the woods, and climb slowly up through the sunny corn. On the spur above, and full in the rich yellow light she halted, half turning in her saddle. He rose to his feet, to his full height, his head bare, and thrown far back between his big shoulders, and, still as statues, the man and the woman looked at each other across the gulf of darkening air. A full minute the woman sat motionless, then rode on. At the edge of the woods she stopped and turned again.

The eagle under Rome leaped one stroke in the air, and dropped like a clod into the sea of leaves. The report of the gun and a faint cry of triumph rose from below. It was good marks-
~~man's, but on the cliff Rome did not heed it.~~
~~Something had fluttered in the air above the~~

girl's head, and he laughed aloud. She was waving her bonnet at him.

II.

JUST where young Stetson stood, the mountains racing along each shore of the Cumberland had sent out against each other, by mutual impulse, two great spurs. At the river's brink they stopped sheer, with crests uplifted, as though some hand at the last moment had hurled them apart, and had led the water through the breach to keep them at peace. To-day the crags look seamed by thwarted passion; and, sullen with firs, they made symbols of the human hate about the base of each.

When the feud began no one knew. Even the original cause was forgotten. Both families had come as friends from Virginia long ago, and had lived as enemies nearly half a century. There was hostility before the war, but until then little bloodshed. Through the hatred of change characteristic of the mountaineer the world over, the Lewallens were for the Union. The Stetsons owned a few slaves, and they fought for them. Peace found both still neighbors and worse foes. The war armed them, and brought back an ancestral contempt for human life; it left them a heritage of lawlessness that for mutual protection made necessary the very means used by their feudal forefathers; personal hatred supplanted its dead issues, and with them the war went on. The Stetsons had a good strain of Anglo-Saxon blood, and owned valley-lands; the Lewallens kept store, and made "moonshine": so kindred and debtors and kindred and tenants were arrayed with one or the other leader, and gradually the retainers of both settled on one or the other side of the river. In time of hostility the Cumberland came to be the boundary between life and death for the dwellers on each shore. It was feudalism born again.

Above one of the spurs each family had its home, the Stetsons, under the seared face of Thunderstruck Knob, the Lewallens just beneath the wooded rim of Wolf's Head. The eaves and chimney of each cabin were faintly visible from the porch of the other. The first light touched the house of the Stetsons; the last, the Lewallen cabin. So there were times when the one could not turn to the sunrise nor the other to the sunset but with a curse in his heart; for his eye must fall on the home of his enemy.

For years there had been peace. The death of Rome Stetson's father from ambush, and the fight in the court-house square, had forced it. After that fight only four were left—old Jasper Lewallen, and young Jasper, the boy Rome, and his uncle Rufe Stetson. Then Rufe fled to the West, and the Stetsons were helpless. For three years no word was heard of him, but the

"MARTHY."

hatred burned in the heart of Rome's mother, and was traced deep in her grim old face while she patiently waited the day of retribution. It smoldered, too, in the hearts of the women of both clans who had lost husbands, or sons, or lovers; and the friends and kin of each had little to do with one another, and met and passed with watchful eyes. Indeed, it would take so little to turn peace to war that the wonder was that peace had lived so long. Now trouble was at hand. Rufe Stetson had come back at last, a few months since, and had quietly opened store at the county-seat, Hazlan,—a little town five miles up the river, where Troubled Fork runs seething into the Cumberland,—a point of neutrality for the factions, and consequently a battle-ground. Old Jasper's store was at the other end of the town, and the old man had never been known to brook competition. He had driven three men from Hazlan during the last term of peace for this offense, and everybody knew that the fourth must leave or fight. Already Rufe Stetson had been warned not to appear outside his door after dusk. Once or twice his wife had seen skulking shadows under the trees across the road, and a tremor of anticipation ran along both shores of the Cumberland.

III.

A FORTNIGHT later court came. Rome was going to Hazlan, and the feeble old Stetson mother limped across the porch from the kitchen, trailing a Winchester behind her. Usually he went unarmed, but he took the gun now, as she gave it, in silence.

The boy Isom was not well, and Rome had told him to ride the horse. But the lad had gone on afoot to his duties at old Gabe Bunch's mill, and Rome himself rode down Thunder-struck Knob through the mist and dew of the early morning. The sun was coming up over Virginia, and through a dip in Black Mountain the foot-hills beyond washed in blue waves against its white disk. A little way down the mountain the rays shot through the gap upon him, and, lancing the mist into tatters, and lighting the dewdrops, set the birds singing. Rome rode, heedless of it all, under primeval oak and poplar, and along rain-clear brooks and happy waterfalls, shut in by laurel and rhododendron, and singing past mossy stones and lacelike ferns that brushed his stirrup. On the brow of every cliff he would stop to look over the trees and the river to the other shore, where the gray line of a path ran aslant Wolf's Head, and was lost in woods above and below.

At the river he rode up-stream, looking still across it. Old Gabe Bunch hallooed to him from the doorway of the mill, as he splashed through the creek, and Isom's thin face peered

through a breach in the logs. At the ford beyond he checked his horse with a short oath of pleased surprise. Across the water a scarlet dress was moving slowly past a brown field of corn. The figure was bonneted, but he knew the girl's walk and the poise of her head that far away. Just who she was, however, he did not know, and he sat irresolute. He had seen her first a month since, paddling along the other shore, erect, and with bonnet off and hair down; she had taken the Lewallen path up the mountain. Afterward he saw her going at a gallop on young Jasper's gray horse, bare-headed again, and with her hair loose to the wind, and he knew she was one of his enemies. He thought her the girl people said young Jasper was going to marry, and he had watched her the more closely. From the canoe she seemed never to notice him; but he guessed, from the quickened sweep of her paddle, that she knew he was looking at her, and once, when he halted on his way home up the mountain, she half turned in her saddle and looked across at him. This happened again, and then she waved her bonnet at him. It was bad enough, any Stetson seeking any Lewallen for a wife, and for him to court young Jasper's sweetheart—it was a thought to laugh at. But the mischief was done. The gesture thrilled him, whether it meant good-will or defiance, and the mere deviltry of such a courtship made him long for it at every sight of her with the river between them. He then began to plan how he could get near her, but through some freak she had paid no further heed to him. He saw her less often,—for a week indeed he had not seen her at all till this day,—and the forces that hindrance generates in an imperious nature had been at work within him. The chance now was one of gold, and with his life in his hand he turned into the stream. Across, he could see something white on her shoulder—an empty bag. It was grinding-day, and she was going to mill—the Lewallen mill. She stopped as he galloped up, and turned, pushing back her bonnet with one hand, and he drew rein. But the friendly, expectant light in her face kindled to such a blaze of anger in her eyes that he struck his horse violently, as though the beast had stopped of its own accord, and, cursing himself, kept on. A little farther, he halted again. Three horsemen, armed with Winchesters, were jogging along toward town ahead of him, and he wheeled about sharply. The girl, climbing rapidly toward Steve Brayton's cabin, was out of the way, but he was too late to reach the ford again. Down the road two more Lewallens with guns were in sight, and he lashed his horse into the stream where the water was deep. Old Gabe, looking from the door of his mill, quit laughing to himself; and under cover of

ENGRAVED BY PETER AITKEN.

"WHY DON'T YE SHOOT?"

the woods the girl watched man and horse fighting the tide. Twice young Stetson turned his head. But his enemies apparently had not seen him, and horse and rider scrambled up the steep bank and under shelter of the trees. The girl had evidently learned who he was. Her sudden anger was significant, as was the sight of Lewallens going armed to court, and Rome rode on, uneasy.

When he reached Troubled Fork, in sight of Hazlan, he threw a cartridge into place, and shifted the slide to see that it was ready for use. Passing old Jasper's store on the edge of town, he saw the old man's bushy head through the open door, and Lewallens and Braytons crowded out on the steps and looked after him. All were armed. Twenty paces farther he met young Jasper on his gray, and the look on his enemy's face made him grip his rifle. With a flashing cross-fire from eye to eye, the two passed, each with his thumb on the hammer of his Winchester. The groups on the court-house steps stopped talking as he rode by, and turned to look at him. He saw none of his own friends, and he went on at a gallop to Rufe Stetson's store. His uncle was not in sight. Steve Marcum and old Sam Day stood in the porch, and inside a woman was crying. Several Stetsons were near, and all with grave faces gathered about him.

He knew what the matter was before Steve spoke. His uncle had been driven from town. A last warning had come to him on the day before. The hand of a friend was in the caution, and Rufe rode away at dusk; and that night his house was searched by men masked and armed. The Lewallens were in town, and were ready to fight. The crisis had come.

IV.

BACK at the mill old Gabe was troubled. Usually he sat in a cane-bottomed chair near the hopper, whittling, while the lad tended the mill, and took pay in an oaken toll-dish smooth with the use of half a century. But the incident across the river that morning had made the old man uneasy, and he moved restlessly from his chair to the door, and back again, while the boy watched him, wondering what the matter was, but asking no questions. At noon an old mountaineer rode by, and the miller hailed him.

"Any news in town?" he asked.

"Hain't been to town. Reckon fightin' 's goin' on thar from whut I heerd." The careless, high-pitched answer brought the boy with wide eyes to the door.

"Whut d' ye hear?" asked Gabe.

"Jes heerd fightin' 's goin' on!"

Then every man who came for his meal brought a wild rumor from town, and the old miller moved his chair to the door, and sat there

whittling fast, and looking anxiously toward Hazlan. The boy was in a fever of unrest, and old Gabe could hardly keep him in the mill. In the middle of the afternoon the report of a rifle came down the river, breaking into echoes against the cliffs below, and Isom ran out the door, and stood listening for another, with an odd contradiction of fear and delight on his eager face. In a few moments Rome Stetson galloped into sight, and, with a shrill cry of relief, the boy ran down the road to meet him, and ran back, holding by a stirrup. Young Stetson's face was black with passion, and his eyes were heavy with drink. At the door of the mill he swung from his horse, and for a moment was hardly able to speak from rage. There had been no fight. The Stetsons were few and unprepared. They had neither the guns nor, without Rufe, the means to open the war, and they believed Rufe had gone for arms. So they had chafed in the store all day, and all day Lewallens on horseback and on foot were in sight; and each was a taunt to every Stetson, and, few as they were, the young and hot-headed wanted to go out and fight. In the afternoon a talebearer had brought some of Jasper's boasts to Rome, and, made reckless by moonshine and much brooding, he sprang up to lead them. Steve too caught up his gun, but old Sam's counsel checked him, and the two by force held Rome back. A little later the Lewallens left town. The Stetsons too disbanded, and on their way home a last drop of gall ran Rome's cup of bitterness over. Opposite Steve Brayton's cabin a jet of smoke puffed from the bushes across the river, and a bullet furrowed the road in front of him. That was the shot they had heard at the mill. Somebody was drawing a "dead line," and, by instinct, Rome wheeled his horse at the brink of it. A mocking yell came over the river, and a gray horse flashed past an open space in the bushes. Rome knew the horse and knew the yell; young Jasper was "bantering" him. Nothing maddens the mountaineer like this childish method of insult; and telling of it, Rome sat in a corner, and loosed a torrent of curses against young Lewallen and his clan.

Old Gabe had listened without a word, and the strain in his face was eased. Always the old man had stood for peace. He believed it had come after the court-house fight, and he had hoped against hope, even when Rufe came back to trade against old Jasper; for Rufe was big and good-natured, and unsuspected of resolute purpose, and the Lewallens's power had weakened. So, now that Rufe was gone again, the old miller half believed he was gone for good. Nobody was hurt; there was a chance yet for peace, and with a rebuke on his tongue, and relief in his face, the old man sat back in his

chair, and went on whittling. The boy turned eagerly to a crevice in the logs, and, trembling with excitement, searched the other shore for Jasper's gray horse, going home.

"He called me a idgit," he said to himself, with a threatening shake of his head. "Jes would n't I like to hev a chance at him! Rome ull git him! Rome ull git him!"

There was no moving point of white on the broad face of the mountains or along the river road. Jasper was yet to come, and, with ears alert to every word behind him, the lad fixed his eyes where he should see him first.

"Oh, he did n't mean to hit me. Not thet he ain't mean enough to shoot from the bresh," Rome broke out savagely. "Thet 's jes whut I 'm afeard he will do. Thar was too much daylight fer him. Ef he jes don't come a-sneakin' over hyar, 'n' waitin' in the lorrel atter dark fer me, it 's all I ax."

"Waitin' in the lorrel!" Old Gabe could hold back no longer. "Hit 's a shame, a burnin' shame! I don't know whut things air comin' to! 'Pears like all you young folks think about is killin' somebody. Folks usen to talk about how fer they could kill a deer; now it 's how fer they kin kill a man. I hev knowed the time when a man would 'a' been druv out o' the county fer drawin' a knife ur a pistol; 'n' ef a feller was ever killed, it was kinder accidental by a Barlow. I reckon folks got usen to weepens 'n' killin' 'n' bushwhackin' in the war. Looks like it 's been gittin' wuss ever sence, 'n' now it 's dirk, 'n' Winchester, 'n' shootin' from the bushes all the time. Hit 's wuss 'n' stealin' money to take a feller-creetur's life thet way!"

The old miller's indignation sprang from memories of a better youth. For the courtesies of the code went on to the Blue Grass, and before the war the mountaineer fought with English fairness and his fists. It was a disgrace to use a deadly weapon in those days; it was a disgrace now not to use it.

"Oh, I know all the excuses folks make," he went on: "hit 's fa'r fer one as 't is fer t' other; ye can't fight a man fa'r 'n' squar' who 'll shoot ye in the back; a poh man can't fight money in the couhts; 'n' thar hain't no witnesses in the lorrel but leaves; 'n' dead men don't hev much to say. I know it all. Hit 's cur'us, but it act'ally looks like lots o' decent young folks hev got usen to the idee — thar 's so much of it goin' on, 'n' thar 's so much talk 'bout killin' 'n' layin' out in the lorrel. Reckon folks ull git to pesterin' women 'n' strangers bimeby, 'n' robbin' 'n' thievin'. Hit 's bad enough thar 's so leetle law thet folks hev to take it in their own hands oncet in a while, but this shootin' from the bresh hit 's p'int'ly a sin 'n' shame! Why," he concluded, pointing his remonstrance as he always did, "I seed your grandad and young

Jas's fight up thar in Hazlan full two hours fore the war,—fist and skull,—'n' your grandad was whooped. They got up and shuk hands. I don't see why folks can't fight thet way now. I wish Rufe 'n' old Jas 'n' you 'n' young Jas could have it out fist and skull, 'n' stop this killin' o' people like hogs. Thar 's nobody left but you four. But thar 's no chance o' that, I reckon."

"I 'll fight him anyway, 'n' I reckon ef he don't die till I lay out in the lorrel fer him, he 'll live a long time. Ef a Stetson ever done sech meanness as that I never heard it."

"Nuther hev I," said the old man, with quick justice. "Ye air a overbearin' race, all o' ye, but I never knowed ye to be that mean. Hit 's all ther wuss fer ye thet ye air in sech doin's. I tell ye, Rome—"

A faint cry rose above the drone of the millstones, and old Gabe stopped with open lips to listen. The boy's face was pressed close to the logs. A wet paddle had flashed into the sunlight from out the bushes across the river. He could just see a canoe in the shadows under them, and with quick suspicion his brain pictured Jasper's horse hitched in the bushes, and Jasper stealing across the river to waylay Rome. But the canoe moved slowly out of sight down-stream and toward the deep water, the paddler unseen, and the boy looked around with a weak smile. Neither seemed to have heard him. Rome was brooding, with his sullen face in his hands; the old miller was busy with his own thoughts; and the boy turned again to his watch.

But Jasper did not come. Isom's eyes began to ache from the steady gaze, and now and then he would drop them to the water swirling beneath. A slow wind swayed the overhanging branches at the mouth of the stream, and under them was an eddy. Escaping this, the froth and bubbles raced out to the gleams beating the air from the sunlit river. He saw one tiny fleet caught; a mass of yellow scum bore down, and, sweeping through bubbles and eddy, was itself struck into fragments by something afloat. A tremulous shadow shot through a space of sunlight into the gloom cast by a thicket of rhododendrons, and the boy caught his breath sharply. A moment more, and the shape of a boat and a human figure quivered on the water running under him. The stern of a Lewallen canoe swung into the basin, and he sprang to his feet.

"Rome!" The cry cut sharply through the drowsy air. "Thar he is! Hit 's Jas!"

The old miller rose to his feet. The boy threw himself behind the sacks of grain. Rome wheeled for his rifle, and stood rigid before the door. There was a light step without, and the click of a gun-lock within; a shadow fell across the doorway, and a girl stood at the threshold with an empty bag in her hand.

v.

WITH a little cry she shrank back a step. Her face paled, and her lips trembled, and for a moment she could not speak. But her eyes swept the group, and were fixed in two points of fire on Rome.

"Why don't ye shoot?" she asked scornfully. "I hev heerd thet the Stetsons hev got to makin' war on women-folks, but I never believed it afore." Then she turned to the miller.

"Kin I git some more meal hyar?" she asked. "Or hev ye stopped sellin' to folks on t' other side?" she added in a tone that sought no favor.

"You kin hev all ye want," said old Gabe, quietly.

"The mill on Dead Crick is broke ag'in," she continued, "'n' co'n is skase on our side. We'll hev to begin buyin' purty soon, so I thought I'd save totin' the co'n down hyar." She handed old Gabe the empty bag.

"Well," said he, "as it air gittin' late, 'n' ye hev to climb the mountain ag'in, I'll let ye hev that comin' out o' the hopper now. Take a cheer."

The girl sat down in the low chair, and, loosening the strings of her bonnet, pushed it back from her head. An old-fashioned horn comb dropped to the floor, and when she stooped to pick it up, she let her hair fall in a heap about her shoulders. Thrusting one hand under it, she calmly tossed the whole mass of chestnut and gold over the back of the chair, where it fell rippling like water through a bar of sunlight. With head thrown back and throat bared, she shook it from side to side, and, slowly coiling it, pierced it with the coarse comb. Then passing her hands across her forehead and temples, as women do, she folded them in her lap, and sat motionless. The boy, crouched near, held upon her the mesmeric look of a serpent. Old Gabe was peering covertly from under the brim of his hat, with a chuckle at his lips. Rome had fallen back to a corner of the mill, sobered, speechless, his rifle in a nerveless hand. The passion that fired him at the boy's warning had as swiftly gone down at sight of the girl, and her cutting rebuke made him hot again with shame. He was angry, too,—more than angry,—because he felt so helpless, a sensation that was new and stifling. The scorn of her face, as he remembered it that morning, hurt him again while he looked at her. A spirit of contempt was still in her eyes, and quivered about her thin lips and nostrils. She had put him beneath further notice, and yet every toss of her head, every movement of her hands, seemed meant for him, to irritate him. And once, while she combed her hair, his brain whirled with an impulse to catch the shining stuff in one hand and to pinion both her wrists with the other, just

to show her that he was master, and still would harm her not at all. But he shut his teeth, and watched her. Among mountain women the girl was more than pretty; elsewhere only her hair, perhaps, would have caught the casual eye. She wore red homespun and coarse shoes; her hands were brown and hardened. Her arms and shoulders looked muscular, her waist was rather large,—being as nature meant it,—and her face in repose had a heavy look. But the poise of her head suggested native pride and dignity; her eyes were deep, and full of changing lights; the scarlet dress, loose as it was, showed rich curves in her figure, and her movements had a certain childlike grace. Her brow was low, and her mouth had character; the chin was firm, the upper lip short, and the teeth were even and white.

"I reckon thar 's enough to fill the sack, Isom," said the old miller, breaking the strained silence of the group. The girl rose, and handed him a few small pieces of silver.

"I reckon I'd better pay fer it all," she said. "I s'pose I won't be over hyar again."

Old Gabe gave some of the coins back.

"Ye know whut my price allers is," he said.

"I'm obleeged," answered the girl, flushing. "Co'n hev riz on our side. I thought mebbe you charged folks over thar more, anyways."

"I sells fer the same, ef co'n is high ur low," was the answer. "This side or t' other makes no diff'unce to me. I hev frien's on both sides, 'n' I take no part in sech doin's as air a shame to the mountains."

There was a quick light of protest in the girl's dark eyes; but the old miller was honored by both factions, and without a word she turned to the boy, who was tying the sack.

"The boat 's loose!" he called out, with the string' between his teeth; and she turned again and ran out. Rome stood still.

"Kerry the sack out, boy, 'n' he'p the gal." Old Gabe's voice was stern, and the young mountaineer doggedly swung the bag to his shoulders. The girl had caught the rope, and drawn the rude dugout along the shore.

"Who axed ye to do thet?" she asked angrily.

Rome dropped the bag into the boat, and merely looked her in the face.

"Look hyar, Rome Stetson,"—the sound of his name from her lips almost startled him,— "I'll hev ye understan' thet I don't want to be bounden to you, nor none o' yer kin."

Turning, she gave an impatient sweep with her paddle. The prow of the canoe dipped and was motionless. Rome had caught the stern, and the girl wheeled in hot anger. Her impulse to strike may have been for the moment, and no longer, or she may have read swiftly no unkindness in the mountaineer's steady look; for the

uplifted oar was stayed in the air, as though at least she would hear him.

"I've got nothin' ag'in' *you*," he said slowly. "Jas Lewallen hev been threatenin' me, 'n' I thought it was him, 'n' I was ready fer *him*, when you come into the mill. I would n't hurt you nur no other woman. Ye ought to know it, 'n' ye do know it."

The words were masterful, but said in a way that vaguely soothed the girl's pride, and the oar was let slowly into the water.

"I reckon ye air a friend o' his," he added, still quietly. "I've seed ye goin' up thar, but I've got nothin' ag'in' ye, whoever ye be."

She turned on him a sharp look of suspicion. "I reckon I do be a friend o' his," she said deliberately; and then she saw that he was in earnest. A queer little smile went like a ray of light from her eyes to her lips, and she gave a quick stroke with her paddle. The boat shot into the current, and was carried swiftly toward the Cumberland. The girl stood erect, swaying through light and shadow like a great scarlet flower blowing in the wind; and Rome watched hertill she touched the other bank. Swinging the sack out, she stepped lightly after it, and without looking behind her, disappeared in the bushes.

The boy Isom was riding away when Rome turned, and old Gabe was watching from the door of the mill.

"Who is that gal?" he asked slowly. It seemed somehow that he had known her a long while ago. A puzzled frown overlay his face, and the old miller laughed.

"You a-axin' who she be, 'n' she a-axin' who you be, 'n' both o' ye a-knowin' one 'nother sence ye was knee-high. Why, boy, hit 's old Jasper's gal — Marthy!"

VI.

In a flash of memory Rome saw the girl as vividly as when he last saw her years ago. They had met at the mill, he with his father, she with hers. There was a quarrel, and the two men were held apart. But the old sore as usual was opened, and a week later Rome's father was killed from the brush. He remembered his mother's rage and grief, her calls for vengeance, the uprisings, the fights, the plots, and the ambushes. He remembered the look the girl had given him that long ago, and her look that day was little changed.

When fighting began she had been sent for safety to the sister of her dead mother, in another county. When peace came old Jasper married again, and the girl refused to come home. Lately the stepmother too had passed away, and then she came back to live. All this the old miller told in answer to Rome's questions as the two walked away in the twilight. This

was why he had not recognized her, and why her face yet seemed familiar even when he crossed the river that morning.

"Uncle Gabe, how do you reckon the gal knowed who I was?"

"She axed me."

"She axed *you*! Whar?"

"Over thar in the mill." The old miller was watching the young mountaineer closely. The manner of the girl was significant when she asked who Rome was, and the miller knew but one reason possible for his foolhardiness that morning.

"Do you mean to say she hev been over hyar afore?"

"Why, yes, come to think about it, **three** or four times while Isom was sick; and **whut** she come fer I can't make out. The mill **over thar** was n't broke long, 'n' why she did n't go thar or bring more co'n at a time, to save **her** the trouble o'so many trips, I can't see to **save** me."

Young Stetson was listening eagerly. Again the miller cast his bait.

"Mebbe she 's spyin'."

Rome faced him, alert with suspicion; but old Gabe was laughing silently.

"Don't you be a fool, Rome. The gal comes and goes in thet boat, 'n' she could n't see a **soul** without my knowin' it. She seed ye ridin' by one day, 'n' she looked mighty cur'us when I tol' her who ye was."

Old Gabe stopped his teasing, Rome's face was so troubled, and himself grew serious.

"Rome," he said earnestly, "I wish to the good Lord ye was n't in sech doin's. Ef thet hed been young Jas 'stid o' Marthy, I reckon ye would 'a' killed him right thar."

"Well, I was n't going to let him kill me," was the sullen answer.

The two had stopped at a rickety gate swinging open on the road. The young mountaineer was pushing a stone about with the toe of his boot. He had never before listened to remonstrance with such patience, and old Gabe grew bold.

"You 've been drinkin' ag'in, Rome," he said suddenly, "n' I know it. Hit 's been moonshine that 's whooped you Stetsons, not the Lew-allens, long as I kin rickollect, 'n' it ull be moonshine ag'in ef ye don't let it alone."

Rome made no denial, no defense. "Uncle Gabe," he said slowly, still busied with the stone, "hev thet gal been over hyar sence ye tol' her who I was?"

The old man was waiting for the pledge that seemed on his lips, but he did not lose his temper.

"Not till to-day," he said quietly.

Rome turned abruptly, and the two separated with no word of parting. For a moment the miller watched the young fellow striding away under his rifle.

"I hev been atter peace a good while," he said to himself, "but I reckon thar's a bigger hand a-workin' now than mine." Then he lifted his voice. "Ef Isom's too sick to come down to the mill to-morrer, I wish you'd come 'n' he'p me."

Rome nodded back over his shoulder, and went on, with head bent, along the river road. Passing a clump of pines at the next curve, he pulled a bottle from his pocket.

"Uncle Gabe's about right, I reckon," he said half aloud; and he raised it above his head to hurl it away, but checked it in mid-air. For a moment he looked at the colorless liquid, then, with quick nervousness, pulled the cork of sassafras leaves, gulped down the pale moonshine, and dashed the bottle against the trunk of a beech. The fiery stuff does its work in a hurry. He was thirsty when he reached the mouth of a brook that tumbled down the mountain along the pathway that would lead him home, and he stooped to drink where the water sparkled in a rift of dim light from overhead. Then he sat upright on a stone, with his wide hat-brim curved in a crescent over his forehead, his hands caught about his knees, and his eyes on the empty air.

He was scarcely over his surprise that the girl was young Lewallen's sister, and the discovery had wrought a curious change. The piquant impulse of rivalry was gone, and something deeper was taking its place. He was confused and a good deal troubled, thinking it all over. He tried to make out what the girl meant by looking at him from the mountain-side, by waving her bonnet at him, and by coming to old Gabe's mill when she could have gone to her own. To be sure, she did not know then who he was, and she had stopped coming when she learned; but why had she crossed again that day? Perhaps she too was bantering him, and he was at once angry and drawn to her; for her mettlesome spirit touched his own love of daring, even when his humiliation was most bitter—when she told him he warred upon women, when he held out to her the branch of peace and she swept it aside with a stroke of her oar. But Rome was little conscious of the weight of subtle facts like these. His unseeing eyes went back to her as she combed her hair. He saw the color in her cheeks, the quick light in her eyes, the bare, full throat, once more, and the wavering forces of his unsteady brain centered in a stubborn resolution—to see it all again. He would make Isom stay at home, if need be, and he would take the boy's place at the mill. If she came there no more, he would cross the river again. Come peace or war, be she friend or enemy, he would see her. His thirst was fierce again, and, with this half-drunken determination in his heart, he stooped once more to drink from the cheerful little

stream. As he rose, a loud curse smote the air. The river, pressed between two projecting cliffs, was narrow at that point, and the oath came across the water. An instant later a man led a lamed horse from behind a boulder, and stooped to examine its leg. The dusk was thickening, but Rome knew the huge frame and gray beard of old Jasper Lewallen. The blood beat in a sudden tide at his temples, and, half by instinct, he knelt behind a rock, and, thrusting his rifle through a crevice, cocked it softly.

Again the curse of impatience came over the still water, and old Jasper rose and turned toward him. The glistening sight caught in the center of his beard. That would take him in the throat; it might miss, and he let the sight fall till the bullet would cut the fringe of gray hair into the heart. Old Jasper, so people said, had killed his father in just this way; he had driven his uncle from the mountains; he was trying now to revive the feud. He was the father of young Jasper, who had threatened his life, and the father of the girl whose contempt had cut him to the quick twice that day. Again her taunt leaped through his heated brain, and his boast to the old miller followed it. His finger trembled at the trigger.

"No; by—, no!" he breathed between his teeth; and old Jasper passed on unharmed.

VII.

NEXT day the news of Rufe Stetson's flight went down the river on the wind, and before nightfall the spirit of murder was loosed on both shores of the Cumberland. The more cautious warned old Jasper. The Stetsons were gaining strength again, they said; so were their feudsmen, the Marcums, enemies of the Braytons, old Jasper's kinspeople. Keeping store, Rufe had made money in the West, and money and friends right and left through the mountains. With all his good nature, he was a persistent hater, and he was shrewd. He had waited the chance to put himself on the side of the law, and now the law was with him. But old Jasper laughed contemptuously. Rufe Stetson was gone again, he said, as he had gone before, and this time for good. Rufe had tried to do what nobody had done, or could do, while he was alive. Anyway, he was reckless of consequences, and he cared little if war did come again. Still, the old man prepared for a fight, and Steve Marcum on the other shore made ready for Rufe's return.

It was like the breaking of peace in feudal days. The close kin of each leader were already about him, and now the close friends of each took sides. Each leader trading in Hazan had debtors scattered through the mountains, and these rallied to aid the man who had be-

friended them. There was no grudge but served a pretext for partizanship in the coming war. Political rivalry had wedged apart two strong families, the Marcums and Braytons; a boundary line in dispute was a chain of bitterness; a suit in a county court had sown seeds of hatred. Sometimes it was a horse-trade, a fence left down, or a gate left open, and the trespassing of cattle; in one instance, through spite, a neighbor had docked the tail of a neighbor's horse—had "muled his critter," as the owner phrased the outrage. There was no old sore that was not opened by the crafty leaders, no slumbering bitterness that they did not wake to life. "Help us to revenge, and we will help you," was the whispered promise. So, had one man a grudge against another, he could set his foot on one or the other shore, sure that his enemy would be fighting for the other.

Others there were, friends of neither leader, who, under stress of poverty or hatred of work, would fight with either for food and clothes; and others still, the ne'er-do-wells and outlaws, who fought by the day or month for hire. Even these were secured by one or the other faction, for Steve and old Jasper left no resource untried, knowing well that the fight, if there was one, would be fought to a quick and decisive end. The day for the leisurely feud, for patient planning, and the slow picking off of men from one side or the other, was gone. The people in the Blue Grass, who had no feuds in their own country, were trying to stop them in the mountains. Over in Breathitt, as everybody knew, soldiers had come from the "settlements," had arrested the leaders, and had taken them to the Blue Grass for the feared and hated ordeal of trial by a jury of "bigoted furriners." On the heels of the soldiers came a young preacher up from the Jellico hills, half "citizen," half "furriner," with long black hair and a scar across his forehead, who was stirring up the people, it was said, "as though Satan was atter them." Over there the spirit of the feud was broken, and a good effect was already perceptible around Hazlan. In past days every pair of lips was sealed with fear, and the non-combatants left crops and homes, and moved down the river, when trouble began. Now only the timid considered this way of escape. Steve and old Jasper found a few men who refused to enter the fight. Several, indeed, talked openly against the renewal of the feud, and somebody, it was said, had dared to hint that he would send to the governor for aid, if it should break out again. But these were rumors touching few people.

For once again, as time and time again before, one bank of the Cumberland was arrayed with mortal enmity against the other, and old Gabe sat, with shaken faith, in the door of his mill. For years he had worked and prayed

for peace, and for a little while the Almighty seemed lending aid. Now the friendly grasp was loosening, and yet the miller did all he could. He begged Steve Marcum to urge Rufe to seek aid from the law when the latter came back; and Steve laughed, and asked what justice was possible for a Stetson, with a Lewallen for a judge and Braytons for a jury. Then the miller pleaded with old Jasper, and old Jasper pointed to the successes of his own life.

"I hev triumphed ag'in' my enemies time 'n' ag'in," he said. "The Lord air on my side, 'n' I gits a better Christian ever' year." The old man spoke with the sincerity of a barbarism that has survived the dark ages, and, holding the same faith, the miller had no answer. It was old Gabe indeed who had threatened to send to the governor for soldiers, and this he would have done, perhaps, had there not been one hope left, and only one. A week had gone, and there was no word from Rufe Stetson. Up on Thunderstruck Knob the old Stetson mother was growing pitifully eager and restless. Every day she slipped like a ghost through the leafless woods, and in and out the cabin, kindling hatred; and at every dawn or dusk she was on her porch peering through the dim light for Rufe Stetson. Steve Marcum was ill at ease. Rome Stetson alone seemed unconcerned, and his name was on every gossiping tongue.

He took little interest and no hand in getting ready for the war. He forbade the firing of a gun till Rufe came back, else Steve should fight his fight alone. He grew sullen and morose. His old mother's look was a thorn in his soul, and he stayed little at home. He hung about the mill, and when Isom became bedfast, the big mountaineer, who had never handled anything but a horse, a plow, or a rifle, to the bewilderment of the Stetsons, settled himself into the boy's duties, and nobody dared question him. Even old Gabe jested no longer. The matter was too serious.

Meanwhile the winter threw off the last slumbrous mood of autumn, as a sleeper starts from a dream. A fortnight was gone, and still no message came from the absent leader. Oneshore was restive, uneasy; the other confident, mocking. Between the two, Rome Stetson waited his chance at the mill.

VIII.

DAY was whitening on the Stetson shore. Across the river the air was still sharp with the chill of dawn, and the mists lay like flocks of sheep under shelter of rock and crag. A peculiar cry radiated from the Lewallen cabin with singular resonance on the crisp air—the mountain cry for straying cattle. A soft low came from a distant patch of laurel, and old

Jasper's girl, Martha, folded her hands like a conch at her mouth, and the shrill cry again startled the air.

"Ye better come, ye pried muley critter." Picking up a cedar piggin, she stepped from the porch toward the meek voice that had answered her. Temper and exertion had brought the quick blood to her face. Her head was bare, her thick hair was loosely coiled, and her brown arms were naked almost to the shoulder. At the stable a young mountaineer was overhauling his riding-gear.

"Air you goin' to ride the hoss to-day, Jas?" she asked querulously.

"Thet 's jes whut I was aimin' to do. I 'm a-goin' to town."

"Well, I 'lowed I was goin' to mill to-day. The co'n is 'mos' gone."

"Well, ye 'lowed wrong," he answered imperturbably.

"Yu're mean, Jas Lewallen," she cried hotly; "thet 's whut ye air, mean—dog-mean!"

The young mountaineer looked up, whistled softly, and laughed. But when he brought his horse to the door an hour later there was a bag of corn across the saddle.

"As ye air so powerful sot on goin' to mill, whether or no, I 'll leave this hyar sack at the bend o' the road, 'n' ye kin git it thar. I 'll bring the meal back ef ye puts it in the same place. I hates to see women-folks ridin' this hoss. Hit spiles him."

The horse was a dapple-gray of unusual beauty, and as the girl reached out her hand to stroke his throat, he turned to nibble at her arm.

"I reckon he 'd jes as lieve hev me ride him as you, Jas," she said. "Me 'n' him hev got to be great friends. Ye orter n't to be so stingy."

"Well, he ain't no hoss to be left out 'n the bresh now, 'n' I hain't goin' to 'low it."

Old Jasper had lounged out of the kitchen door, and stood with his huge bulk against a shrinking pillar of the porch. The two men were much alike. Both had the same black, threatening brows meeting over the bridge of the nose. A kind of grim humor lurked about the old man's mouth, which time might trace about young Jasper's. The girl's face had no humor; the same square brows, apart and clearly marked, gave it a strong, serious cast, and while she had the Lewallen fire, she favored her mother enough, so the neighbors said, "to hev a mighty mild, takin' way about her ef she wanted."

"You 're right, Jas," the old mountaineer said; "the hoss air a sin 'n' temptation. Hit do me good ever' time I look at him. Thar air no sech hoss, I tell ye, this side o' the settlements."

The boy started away, and the old man followed, and halted him out of the girl's hearing.

"Tell Eli Crump 'n' Jim Stover to watch the Breathitt road closet now," he said in a low

voice. "See all them citizens I tol' ye, 'n' tell them to be ready when I says the word. Thar's no tellin' whut 's goin' to happen."

Young Jasper nodded his head, and struck his horse into a gallop. The old man lighted his pipe, and turned back to the house. The girl, bonnet in hand, was starting for the valley.

"Thar ain't no use goin' to Gabe Bunch's fer yer grist," he said. "The mill on Dead Crick is a-runnin' ag'in, 'n' I don't want ye over thar axin' favors, specially jes now."

"I lef' somethin' fer ye to eat, dad," she replied, "ef ye gits hongry before I git back."

"You heard me?" he called after her, knitting his brows.

"Yes, dad; I heerd ye." Then she added to herself, "But I don't heed ye." In truth, the girl heeded nobody. She was not accustomed to ask consent, even her own, nor to follow advice. At the bend of the road she found the bag, and for an instant she stood wavering. An impulse turned her to the river, and she loosed the boat, and headed it across the swift, shallow water from the ford and straight toward the mill. At every stroke of her paddle the water rose above the prow of the boat, and, blown into spray, flew back and drenched her; the wind loosed her hair, and, tugging at her skirts, draped her like a statue: and she fought them, wind and water, with mouth set and a smile in her eyes. One sharp struggle still, where the creek leaped into freedom; the mouth grew a little firmer, the eyes laughed more, the keel grated on pebbles, and the boat ran its nose into the withered sedge on the Stetson shore.

A tall gray figure was pouring grain into the hopper when she reached the door of the mill. She stopped abruptly, Rome Stetson turned, and again the two were face to face. No greeting passed. The girl lifted her head with a little toss that deepened the set look about the mountaineer's mouth; her lax figure grew tense as though strung suddenly against some coming harm, and her eyes searched the shadows without once resting on him.

"Whar 's Uncle Gabe?" She spoke shortly, and as to a stranger.

"Gone to town," said Rome, composedly. He had schooled himself for this meeting.

"When 's he comin' back?"

"Not 'fore night, I reckon."

"Whar 's Isom?"

"Isom 's sick."

"Who 's tendin' the mill?"

For answer he tossed the empty bag into the corner, and, without looking at her, picked up another bag.

"I reckon ye see me, don't ye?" he asked coolly. "Hev a cheer, and rest a spell. Hit 's a purty long climb whar you come from."

The girl was confused. She stayed in the

ENGRAVED BY PETER AITKEN.

"WHY DON'T YE SHOOT?"

the woods the girl watched man and horse fighting the tide. Twice young Stetson turned his head. But his enemies apparently had not seen him, and horse and rider scrambled up the steep bank and under shelter of the trees. The girl had evidently learned who he was. Her sudden anger was significant, as was the sight of Lewallens going armed to court, and Rome rode on, uneasy.

When he reached Troubled Fork, in sight of Hazlan, he threw a cartridge into place, and shifted the slide to see that it was ready for use. Passing old Jasper's store on the edge of town, he saw the old man's bushy head through the open door, and Lewallens and Braytons crowded out on the steps and looked after him. All were armed. Twenty paces farther he met young Jasper on his gray, and the look on his enemy's face made him grip his rifle. With a flashing cross-fire from eye to eye, the two passed, each with his thumb on the hammer of his Winchester. The groups on the court-house steps stopped talking as he rode by, and turned to look at him. He saw none of his own friends, and he went on at a gallop to Rufe Stetson's store. His uncle was not in sight. Steve Marcum and old Sam Day stood in the porch, and inside a woman was crying. Several Stetsons were near, and all with grave faces gathered about him.

He knew what the matter was before Steve spoke. His uncle had been driven from town. A last warning had come to him on the day before. The hand of a friend was in the caution, and Rufe rode away at dusk; and that night his house was searched by men masked and armed. The Lewallens were in town, and were ready to fight. The crisis had come.

IV.

BACK at the mill old Gabe was troubled. Usually he sat in a cane-bottomed chair near the hopper, whittling, while the lad tended the mill, and took pay in an oaken toll-dish smooth with the use of half a century. But the incident across the river that morning had made the old man uneasy, and he moved restlessly from his chair to the door, and back again, while the boy watched him, wondering what the matter was, but asking no questions. At noon an old mountaineer rode by, and the miller hailed him.

"Any news in town?" he asked.

"Hain't been to town. Reckon fightin' 's goin' on thar from whut I heerd." The careless, high-pitched answer brought the boy with wide eyes to the door.

"Whut d' ye hear?" asked Gabe.

"Jes heerd fightin' 's goin' on!"

Then every man who came for his meal brought a wild rumor from town, and the old miller moved his chair to the door, and sat there

whittling fast, and looking anxiously toward Hazlan. The boy was in a fever of unrest, and old Gabe could hardly keep him in the mill. In the middle of the afternoon the report of a rifle came down the river, breaking into echoes against the cliffs below, and Isom ran out the door, and stood listening for another, with an odd contradiction of fear and delight on his eager face. In a few moments Rome Stetson galloped into sight, and, with a shrill cry of relief, the boy ran down the road to meet him, and ran back, holding by a stirrup. Young Stetson's face was black with passion, and his eyes were heavy with drink. At the door of the mill he swung from his horse, and for a moment was hardly able to speak from rage. There had been no fight. The Stetsons were few and unprepared. They had neither the guns nor, without Rufe, the means to open the war, and they believed Rufe had gone for arms. So they had chafed in the store all day, and all day Lewallens on horseback and on foot were in sight; and each was a taunt to every Stetson, and, few as they were, the young and hot-headed wanted to go out and fight. In the afternoon a talebearer had brought some of Jasper's boasts to Rome, and, made reckless by moonshine and much brooding, he sprang up to lead them. Steve too caught up his gun, but old Sam's counsel checked him, and the two by force held Rome back. A little later the Lewallens left town. The Stetsons too disbanded, and on their way home a last drop of gall ran Rome's cup of bitterness over. Opposite Steve Brayton's cabin a jet of smoke puffed from the bushes across the river, and a bullet furrowed the road in front of him. That was the shot they had heard at the mill. Somebody was drawing a "dead line," and, by instinct, Rome wheeled his horse at the brink of it. A mocking yell came over the river, and a gray horse flashed past an open space in the bushes. Rome knew the horse and knew the yell; young Jasper was "bantering" him. Nothing maddens the mountaineer like this childish method of insult; and telling of it, Rome sat in a corner, and loosed a torrent of curses against young Lewallen and his clan.

Old Gabe had listened without a word, and the strain in his face was eased. Always the old man had stood for peace. He believed it had come after the court-house fight, and he had hoped against hope, even when Rufe came back to trade against old Jasper; for Rufe was big and good-natured, and unsuspected of resolute purpose, and the Lewallens's power had weakened. So, now that Rufe was gone again, the old miller half believed he was gone for good. Nobody was hurt; there was a chance yet for peace, and with a rebuke on his tongue, and relief in his face, the old man sat back in his

this. It took away her shame at once, and the passion of it thrilled her, and left her trembling. While he spoke her lashes drooped quickly, and her face softened, and the color came back to it. She began intertwining her fingers, and would not look up at him.

"Ef ye hates me like the rest uv ye, why don't ye say it right out? 'N' ef ye do hate me, whut hev *you* been lookin' 'cross the river fer, 'n' shakin' yer bonnet at me, 'n' paddlin' to Gabe's fer yer grist, when the mill on Dead Crick 's been a-runnin', 'n' I know it? Ye 've been banterin' me, hev ye!"—the blood rose to his eyes again—"Ye must n't fool with me, gal, —ye must n't. Whut *hev* you been goin' over thar fer?" He even took a threatening step toward her, and, with a helpless gesture, stopped. The girl was little frightened. Indeed, she smiled, seeing her power over him; she seemed even about to laugh outright: but the smile turned to a quick look of alarm, and she bent her head suddenly to listen to something below. At last she did speak. "Somebody 's comin'!" she said. "You 'd better git out o' the way," she went on hurriedly. "Somebody 's comin', I tell ye! Don't ye hear?"

It was no ruse to get rid of him. The girl's eyes were dilating. Something was coming far below. Rome could catch the faint beats of a horse's hoofs. He was unarmed, and he knew it was death for him to be seen on that forbidden mountain; but he was beyond caution, and ready to welcome any vent to his passion, and he merely shook his head.

"Ef it 's Satan hissself, I won't run." The hoof-beats came nearer. The rider must soon see them from the coil below.

"Rome, hit 's Jas! He 's got his rifle, and he 'll kill ye, 'n' me too!" The girl was white with distress. She had called him by his name, and the tone was of appeal, not anger. The black look passed from his face, and he caught her by the shoulders with rough tenderness; but she pushed him away, and without a word he sprang from the road, and let himself noiselessly down the cliff. The hoof-beats thundered above his head, and young Jasper's voice hailed Martha.

"This hyar 's the bigges' meal I ever straddled. Why d' n't ye git ther grist ground?"

For a moment the girl did not answer, and Rome waited breathless. "Was n't the mill runnin'? Why n't ye go on 'cross ther river?"

"Thet 's whut I did," said the girl quietly. "Uncle Gabe was n't thar, 'n' Rome Stetson was. I would n't 'low him to grin' ther co'n, 'n' I toted hit back."

"Rome Stetson!" The voice was lost in a volley of oaths.

The two passed out of hearing, and Rome

went plunging down the mountain, swinging recklessly from one little tree to another, and wrenching limbs from their sockets out of pure physical ecstasy. When he reached his horse he sat down, breathing heavily, on a bed of moss, with a strange new yearning in his heart. If peace should come! Why not peace, if Rufe should not come back? He would be the leader then, and without him there could be no war. Old Jasper had killed his father. He was too young at the time to feel the poignant sorrow now, and somehow he could look even at that death in a fairer way. His father had killed old Jasper's brother. So it went back; a Lewallen killed a Stetson; that Stetson had killed a Lewallen, until one end of the chain of deaths was lost, and the first fault could not be placed, though each clan put it on the other. In every generation there had been compromises—periods of peace; why not now? Old Gabe would gladly help him. He might make friends with young Jasper; he might even end the feud. And then—he and Martha—why not? He closed his eyes, and for one radiant moment it all seemed possible. And then a gaunt image rose in the dream, and only the image was left. It was the figure of his mother, stern and silent through the years, opening her grim lips rarely without some curse against the Lewallen race. He remembered she had smiled for the first time when she heard of the new trouble—the flight of his uncle and the hope of conflict. She had turned to him with her eyes on fire and her old hands clenched. She had said nothing, but he understood her look. And now—now what would she think and say if she knew what he had done? His whole frame twitched at the thought, and, with a nervous spring to escape it, he was on his feet, and starting down the mountain.

Close to the river he heard voices below him, and again he turned his horse quickly aside into the bushes. Two women who had been washing clothes passed, carrying white bundles home. They were talking of the coming feud.

"That ar young Stetson ain't much like his dad," said one. "Young Jas has been a-darin' 'n' a-banterin' him, 'n' he *won't* take it up. They say he air turnin' out a plumb coward."

When he reached the Stetson cabin three horses with drooping heads were hitched to the fence. All had traveled a long way. One wore a man's saddle; on the others were thick blankets tied together with leathern thongs.

In the dark porch sat several men. Through the kitchen door he could see his mother getting supper. Inside a dozen rifles leaned against the wall in the firelight, and about their butts was a pile of ammunition. In the doorway stood Rufe Stetson.

John Fox, Jr.

(To be continued.)

ONE SUMMER EVENING. PAINTED BY CHARLES H. DAVIS.

REPRODUCED BY THE ARTIST

A ROSE RHYME TO JULIET.

[CUM REGNAT ROSA.]

HEEDLESS how it may fare with Time,
I send you here a rose of rhyme:
Its fragrance, love; its color, one
Caught from Hope's ever-constant sun;
Upon each leaf a lyric writ —
Your eyes alone may witness it;
And in its heart for you to see
Another heart — the heart of me.

All roses are as fitly worn
By you as by your sister Morn,
Since you, like Morn, fail not to give
New beauty to them while they live.
If this against your bosom rest
One brief, sweet hour, its life were blest;
Then, should you chance to cast it by,
It would not find it hard to die.

So take this bloom of love and song,
And, be its life or brief or long,
Know that for you the petals part,
Disclosing all its lyric heart;
For you its fragrant breaths are drawn;
For you its color — love's glad dawn;
And for you, too, the heart that goes
Song-prisoned in this rhyme of rose!

Frank Dempster Sherman.

v.

WITH a little cry she shrank back a step. Her face paled, and her lips trembled, and for a moment she could not speak. But her eyes swept the group, and were fixed in two points of fire on Rome.

"Why don't ye shoot?" she asked scornfully. "I hev heerd thet the Stetsons hev got to makin' war on women-folks, but I never believed it afore." Then she turned to the miller.

"Kin I git some more meal hyar?" she asked. "Or hev ye stopped sellin' to folks on t' other side?" she added in a tone that sought no favor.

"You kin hev all ye want," said old Gabe, quietly.

"The mill on Dead Crick is broke ag'in," she continued, "n' co'n is skase on our side. We'll hev to begin buyin' perty soon, so I thought I'd save totin' the co'n down hyar." She handed old Gabe the empty bag.

"Well," said he, "as it air gittin' late, 'n' ye hev to climb the mountain ag'in, I'll let ye hev that comin' out o' the hopper now. Take a cheer."

The girl sat down in the low chair, and, loosening the strings of her bonnet, pushed it back from her head. An old-fashioned horn comb dropped to the floor, and when she stooped to pick it up, she let her hair fall in a heap about her shoulders. Thrusting one hand under it, she calmly tossed the whole mass of chestnut and gold over the back of the chair, where it fell rippling like water through a bar of sunlight. With head thrown back and throat bared, she shook it from side to side, and, slowly coiling it, pierced it with the coarse comb. Then passing her hands across her forehead and temples, as women do, she folded them in her lap, and sat motionless. The boy, crouched near, held upon her the mesmeric look of a serpent. Old Gabe was peering covertly from under the brim of his hat, with a chuckle at his lips. Rome had fallen back to a corner of the mill, sobered, speechless, his rifle in a nerveless hand. The passion that fired him at the boy's warning had as swiftly gone down at sight of the girl, and her cutting rebuke made him hot again with shame. He was angry, too,—more than angry,—because he felt so helpless, a sensation that was new and stifling. The scorn of her face, as he remembered it that morning, hurt him again while he looked at her. A spirit of contempt was still in her eyes, and quivered about her thin lips and nostrils. She had put him beneath further notice, and yet every toss of her head, every movement of her hands, seemed meant for him, to irritate him. And once, while she combed her hair, his brain whirled with an impulse to catch the shining stuff in one hand and to pinion both her wrists with the other, just

to show her that he was master, and still would harm her not at all. But he shut his teeth, and watched her. Among mountain women the girl was more than pretty; elsewhere only her hair, perhaps, would have caught the casual eye. She wore red homespun and coarse shoes; her hands were brown and hardened. Her arms and shoulders looked muscular, her waist was rather large,—being as nature meant it,—and her face in repose had a heavy look. But the poise of her head suggested native pride and dignity; her eyes were deep, and full of changing lights; the scarlet dress, loose as it was, showed rich curves in her figure, and her movements had a certain childlike grace. Her brow was low, and her mouth had character; the chin was firm, the upper lip short, and the teeth were even and white.

"I reckon thar's enough to fill the sack, Isom," said the old miller, breaking the strained silence of the group. The girl rose, and handed him a few small pieces of silver.

"I reckon I'd better pay fer it all," she said. "I s'pose I won't be over hyar again."

Old Gabe gave some of the coins back.

"Ye know whut my price allers is," he said.

"I'm obleeged," answered the girl, flushing.

"Co'n hev riz on our side. I thought mebbe you charged folks over thar more, anyways."

"I sells fer the same, ef co'n is high ur low," was the answer. "This side or t' other makes no diff'unce to me. I hev frien's on both sides, 'n' I take no part in sech doin's as air a shame to the mountains."

There was a quick light of protest in the girl's dark eyes; but the old miller was honored by both factions, and without a word she turned to the boy, who was tying the sack.

"The boat's loose!" he called out, with the string' between his teeth; and she turned again and ran out. Rome stood still.

"Kerry the sack out, boy, 'n' he'p the gal." Old Gabe's voice was stern, and the young mountaineer doggedly swung the bag to his shoulders. The girl had caught the rope, and drawn the rude dugout along the shore.

"Who axed ye to do thet?" she asked angrily.

Rome dropped the bag into the boat, and merely looked her in the face.

"Look hyar, Rome Stetson,"—the sound of his name from her lips almost startled him,— "I'll hev ye understan' thet I don't want to be bounden to you, nor none o' yer kin."

Turning, she gave an impatient sweep with her paddle. The prow of the canoe dipped and was motionless. Rome had caught the stern, and the girl wheeled in hot anger. Her impulse to strike may have been for the moment, and no longer, or she may have read swiftly no unkindness in the mountaineer's steady look; for the

Ararat (12,840 feet above sea-level), and the other still smaller heights that dot the plain, only serve as a standard by which to measure Ararat's immensity and grandeur.

Little Ararat is the meeting-point, or corner-stone, of three great empires. On its conical peak converge the dominions of the Czar, the Sultan, and the Shah. The Russian border-line runs from Little Ararat along the high ridge which separates it from Great Ararat, through the peak of the latter, and onward a short distance to the northwest, then turns sharply to the west. On the Sardarbulakh pass, between Great and Little Ararat, is stationed a handful of Russian Cossacks to remind lawless tribes of the guardianship of the "White Sultan."

The two Ararats together form an elliptical mass, about twenty-five miles in length, running northwest and southeast, and about half that in width. Out of this massive base rise the two Ararat peaks, their bases being contiguous up to 8800 feet and their tops about seven miles apart. Little Ararat is an almost perfect truncated cone, while Great Ararat is more of a broad-shouldered dome supported by strong, rough-ribbed buttresses. The isolated position of Ararat, its structure of igneous rocks, the presence of small craters and immense volcanic fissures on its slopes, and the scorïæ and ashes on the surrounding plain, establish beyond a doubt its volcanic origin. But according to

the upheaval theory of the eminent geologist, Hermann Abich, who was among the few to make the ascent of the mountain, there never was a great central crater in either Great or Little Ararat. Certain it is that no craters or signs of craters now exist on the summit of either mountain. But Mr. James Bryce, who made the last ascent, in 1876, seems to think that there is no sufficient reason why craters could not have previously existed, and been filled up by their own eruptions. There is no record of any irruption in historical times. The only thing approaching it was the earthquake which shook the mountain in 1840, accompanied by subterranean rumblings, and destructive blasts of wind. The Tatar village of Arghuri and a Kurdish encampment on the northeast slope were entirely destroyed by the precipitated rocks. Not a man was left to tell the story. Mr. Bryce and others have spoken of the astonishing height of the snow-line on Mount Ararat, which is placed at 14,000 feet; while in the Alps it is only about 9000 feet, and in the Caucasus on an average 11,000 feet, although they lie in a very little higher latitude. They assign, as a reason for this, the exceptionally dry region in which Ararat is situated. Mr. Bryce ascended the mountain on September 12, when the snow-line was at its very highest, the first large snow-bed he encountered being at 12,000 feet. Our own ascent being made as early as July 4,—in

DESIGNED BY IRVING R. WILES, FROM AUTHORS' PHOTOGRAPH.

PARLEYING WITH THE KURDISH PARTY AT THE SPRING.

fact, the earliest ever recorded,—we found some snow as low as 8000 feet, and large beds at 10,500 feet. The top of Little Ararat was still at that time streaked with snow, but not covered. With so many extensive snow-beds, one would naturally expect to find copious brooks and streams flowing down the mountain into the plain; but owing to the porous and dry nature of the soil, the water is entirely lost before reaching the base of the mountain. Even as early as July we saw no stream below 6000 feet, and even above this height the mountain freshets frequently flowed far beneath the surface under the loosely packed rocks, bidding defiance to our efforts to reach them. Notwithstanding the scarcity of snow-freshets, there is a middle zone on Mount Ararat, extending from about 5000 feet to 9000 feet elevation, which is covered with good pasture, kept green by heavy dews and frequent showers. The hot air begins to rise from the desert plain as the morning sun peeps over the horizon, and continues through the day; this warm current, striking against the snow-covered summit, is condensed into clouds and moisture. In consequence, the top of Ararat is usually—during the summer months, at least—obscured by clouds from some time after dawn un-

til sunset. On the last day of our ascent, however, we were particularly fortunate in having a clear summit until 1:15 in the afternoon.

Among the crags of the upper slope are found only a few specimens of the wild goat and sheep, and, lower down, the fox, wolf, and lynx. The bird and insect life is very scanty, but lizards and scorpions, especially on the lowest slopes, are abundant. The rich pasture of Ararat's middle zone attracts pastoral Kurdish tribes. These nomadic shepherds, a few Tatars at New Arghuri, and a camp of Russian Cossacks at the well of Sardarbulakh, are the only human beings to disturb the quiet solitude of this grandest of nature's sanctuaries.

The first recorded ascent of Mount Ararat was in 1829, by Dr. Frederick Parrot, a Russo-German professor in the University of Dorpat. He reached the summit with a party of three Armenians and two Russian soldiers, after two unsuccessful attempts. His ascent, however, was doubted, not only by the people in the neighborhood, but by many men of science and position in the Russian empire, notwithstanding his clear account, which has been confirmed by subsequent observers, and in spite of the testimony of the two Russian soldiers who had

gone with him.¹ Two of the Armenians who reached the summit with him declared that they had gone to a great height, but at the point where they had left off had seen much higher tops rising around them. This, thereupon, became the opinion of the whole country. After Antonomoff, in 1834, Herr Abich, the

the Englishman who had just ascended to the top of "Masis." "No," said the ecclesiastical dignitary; "that cannot be. No one has ever been there. It is impossible." Mr. Bryce himself says: "I am persuaded that there is not a person living within sight of Ararat, unless it be some exceptionally educated Russian of-

THE KURDISH ENCAMPMENT.

geologist, made his valuable ascent in 1845. He reached the eastern summit, which is only a few feet lower than the western, and only a few minutes' walk from it, but was obliged to return at once on account of the threatening weather. When he produced his companions as witnesses before the authorities at Erivan, they turned against him, and solemnly swore that at the point which they had reached a higher peak stood between them and the western horizon. This strengthened the Armenian belief in the inaccessibility of Ararat, which was not dissipated when the Russian military engineer, General Chodzko, and an English party made the ascent in 1856. Nor were their prejudiced minds convinced by the ascent of Mr. Bryce twenty years later, in 1876. Two days after his ascent, that gentleman paid a visit to the Armenian monastery at Echmiadzin, and was presented to the archimandrite as

ficial at Erivan, who believes that any human foot, since Father Noah's, has trodden that sacred summit. So much stronger is faith than sight; or rather so much stronger is prejudice than evidence."

We had expected, on our arrival in Bayazid, to find in waiting for us a Mr. Richardson, an American missionary from Erzerum. Two years later, on our arrival home, we received a letter explaining that on his way from Van he had been captured by Kurdish brigands, and held a prisoner until released through the intervention of the British consul at Erzerum. It was some such fate as this that was predicted for us, should we ever attempt the ascent of Mount Ararat through the lawless Kurdish tribes upon its slopes. Our first duty, therefore, was to see the mutessarif of Bayazid, to whom we bore a letter from the Grand Vizir of Turkey, in order to ascertain what protection and as-

¹ Eight years before the first recorded ascent of Ararat by Dr. Parrot (1829), there appeared the following from "Travels in Georgia, Persia, Armenia, and Ancient Babylonia," by Sir Robert Ker Porter, who, in his time, was an authority on southwestern Asia: "These inaccessible heights [of Mount Ararat] have never been trod by the foot of man since the days of Noah, if even then; for my idea is that the Ark rested in the space

between the two heads (Great and Little Ararat), and not on the top of either. Various attempts have been made in different ages to ascend these tremendous mountain pyramids, but in vain. Their forms, snows, and glaciers are insurmountable obstacles: the distance being so great from the commencement of the icy region to the highest points, cold alone would be the destruction of any one who had the hardihood to persevere."

"OUR GUARDS, AS USUAL, SIT DOWN TO DISCUSS THE SITUATION."

sistance he would be willing to give us. We found with him a Circassian who belonged to the Russian camp at Sardarbulakh, on the Ararat pass, and who had accompanied General Chodzko on his ascent of the mountain in 1856. Both he and the mutessarif thought an ascent so early in the year was impossible; that we ought not to think of such a thing until two months later. It was now six weeks earlier than the time of General Chodzko's ascent (August 11th to 18th), then the earliest on record. They both strongly recommended the northwestern slope as being more gradual. This is the one that Parrot ascended in 1829, and where Abich was repulsed on his third attempt. Though entirely inexperienced in mountain-climbing, we ourselves thought that the southeast slope, the one taken by General Chodzko, the English party, and Mr. Bryce, was far more feasible for a small party. One thing, however, the mutessarif was determined upon; we must not approach the mountain without an escort of Turkish *zaptiehs*, as an emblem of government protection. Besides, he would send for the chief of the Ararat Kurds, and endeavor to arrange with him for our safety and guidance up the mountain. As we emerged into the streets an

Armenian professor gravely shook his head. "Ah," said he, "you will never do it." Then dropping his voice, he told us that those other ascents were all fictitious; that the summit of "Masis" had never yet been reached except by Noah; and that we were about to attempt what was an utter impossibility.

In Bayazid we could not procure even proper wood for alpenstocks. Willow branches, two inches thick, very dry and brittle, were the best we could obtain. Light as this wood is, the alpenstocks weighed at least seven pounds apiece when the iron hooks and points were riveted on at the ends by the native blacksmith, for whom we cut paper patterns, of the exact size, for everything we wanted. We next had large nails driven into the soles of our shoes by a local shoemaker, who made them for us by hand out of an old English file, and who wanted to pull them all out again because we would not pay him the exorbitant price he demanded. In buying provisions for the expedition, we spent three hours among the half dilapidated bazaars of the town, which have never been repaired since the disastrous Russian bombardment. The most difficult task, perhaps, in our work of preparation was to strike a bargain with an Ar-

HELPING THE DONKEYS OVER A SNOW-FIELD.

menian muleteer to carry our food and baggage up the mountain on his two little donkeys.

Evening came, and no word from either the mutessarif or the Kurdish chief. Although we were extremely anxious to set off on the expedition before bad weather set in, we must not be in a hurry, for the military governor of Karakillissa was now the guest of the mutessarif, and it would be an interference with his social duties to try to see him until after his guest had departed. On the morrow we were sitting in our small dingy room after dinner, when a cavalcade hastened up to our inn, and a few minutes later we were surprised to hear ourselves addressed in our native tongue. Before us stood a dark-complexioned young man, and at his side a small wiry old gentleman, who proved to be a native Austrian Tyrolean, who followed the profession of an artist in Paris. He was now making his way to Erivan, in Russia, on a sight-seeing tour from Trebizond. His companion was a Greek from Salonica, who had lived for several years in London, whence he had departed not many weeks before, for Teheran, Persia. These two travelers had met in Constantinople, and the young Greek, who could speak English, Greek, and Turkish, had been acting as interpreter for the artist. They had heard of the "devil's carts" when in Van, and had made straight for our quarters on their arrival in Bayazid. At this point they were to separate. When we learned that the old gentleman (Ignaz Raffl by name) was a member

of an Alpine club and an experienced mountain-climber, we urged him to join in the ascent. Though his shoulders were bent by the cares and troubles of sixty-three years, we finally induced him to accompany our party. Kantsa, the Greek, reluctantly agreed to do likewise, and proved to be an excellent interpreter, but a poor climber.

The following morning we paid the mutessarif a second visit, with Kantsa as interpreter. In as much as the Kurdish chief had not arrived, the mutessarif said he would make us bearers of a letter to him. Two zaptiehs were to accompany us in the morning, while others were to go ahead and announce our approach.

At ten minutes of eleven, on the morning of the second of July, our small cavalcade, with the two exasperating donkeys at the head laden with mats, bags of provisions, extra clothing, alpenstocks, spiked shoes, and coils of stout rope, filed down the streets of Bayazid, followed by a curious rabble. As Bayazid lies hidden behind a projecting spur of the mountains we could obtain no view of the peak itself until we had tramped some distance out on the plain. Its huge giant mass broke upon us all at once. We stopped and looked—and looked again. No mountain-peak we have seen, though several have been higher, has ever inspired the feeling which filled us when we looked for the first time upon towering Ararat. We had not proceeded far before we descried a party of Kurdish horsemen approaching from

the mountain. Our zaptiehs advanced rather cautiously to meet them, with rifles thrown across the pommels of their saddles. After a rather mysterious parley, our zaptiehs signaled that all was well. On coming up, they reported that these horsemen belonged to the party that was friendly to the Turkish government. The Kurds, they said, were at this time divided among themselves, a portion of them having adopted conciliatory measures with the government, and the rest holding aloof. But we rather considered their little performance as a scheme to extort a little more bakshish for their necessary presence.

The plain we were now on was drained by a tributary of the Aras River, a small stream reached after two hours' steady tramping. From the bordering hillocks we emerged in a short time upon another vast plateau, which stretched far away in a gentle rise to the base of the mountain itself. Near by we discovered a lone willow-tree, the only one in the whole sweep of our vision, under the gracious foliage of which sat a band of Kurds, retired from the heat of the afternoon sun, their horses feeding on some swamp grass near at hand. Attracted by this sign of water, we drew near, and found a copious spring. A few words from the zaptiehs, who had advanced among them, seemed to put the Kurds at their ease, though they did not by any means appease their curiosity. They invited us to partake of their frugal lunch of *ekmek* and goat's-milk cheese. Our clothes and baggage were discussed piece by piece, with loud expressions of merriment, until one of us arose, and, stealing behind the group, snapped the camera. "What was that?" said a burly member of the group, as he looked round with scowling face at his companions. "Yes; what was that?" they echoed, and then made a rush for the manipulator of the black box, which they evidently took for some instrument of the black art. The photographer stood serenely innocent, and winked at the zaptieh to give the proper explanation. He was equal to the occasion. "That," said he, "is an instrument for taking time by the sun." At this the box went the round, each one gazing intently into the lens, then scratching his head, and casting a bewildered look at his nearest neighbor. We noticed that every one about us was armed with knife, revolver, and Martini rifle, a belt of cartridges surrounding his waist. It occurred to us that Turkey was adopting a rather poor method of clipping the wings of these mountain birds, by selling them the very best equipments for war. Legally, none but government guards are permitted to carry arms, and yet both guns and ammunition are sold in the bazaars of almost every city of the Turkish dominions. The existence of these people, in their

wild, semi-independent state, shows not so much the power of the Kurds as the weakness of the Turkish government, which desires to use a people of so fierce a reputation for the suppression of its other subjects. After half an hour's rest, we prepared to decamp, and so did our Kurdish companions. They were soon in their saddles, and galloping away in front of us, with their arms clanking, and glittering in the afternoon sunlight.

At the spring we had turned off the trail that led over the Sardarbulakh pass into Russia, and were now following a horse-path which winds up to the Kurdish encampments on the southern slope of the mountain. The plain was strewn with sand and rocks, with here and there a bunch

LITTLE ARARAT COMES INTO VIEW.

of tough, wiry grass about a foot and a half high, which, though early in the year, was partly dry. It would have been hot work except for the rain of the day before and a strong south-east wind. As it was, our feet were blistered and bruised, the thin leather sandals worn at the outset offering very poor protection. The atmosphere being dry, though not excessively hot, we soon began to suffer from thirst. Although we searched diligently for water, we did not find it till after two hours more of constant marching, when at a height of about 6000 feet, fifty yards from the path, we discerned a picturesque cascade of sparkling, cold mountain water. Even the old gentleman, Raffi, joined heartily in the gaiety induced by this clear, cold water from Ararat's melting snows.

Our ascent for two and a half hours longer was through a luxuriant vegetation of flowers, grasses, and weeds, which grew more and more scanty as we advanced. Prominent among the specimens were the wild pink, poppy, and rose. One small fragrant herb, that was the most

THE WALL INCLOSURE FOR OUR BIVOUAC AT ELEVEN THOUSAND FEET.

abundant of all, we were told was used by the Kurds for making tea. All these filled the evening air with perfume as we trudged along, passing now and then a Kurdish lad, with his flock of sheep and goats feeding on the mountain-grass, which was here much more luxuriant than below. Looking backward, we saw that we were higher than the precipitous cliffs which overtower the town of Bayazid, and which are perhaps from 1500 to 2000 feet above the lowest part of the plain. The view over the plateau was now grand. Though we were all fatigued by the day's work, the cool, moisture-laden air of evening revived our flagging spirits. We forged ahead with nimble step, joking, and singing a variety of national airs. The French "Marseillaise," in which the old gentleman heartily joined, echoed and re-echoed among the rocks, and caused the shepherd lads and their flocks to crane their heads in wonderment. Even the Ar-

menian muleteer so far overcame his fear of the Kurdish robbers as to indulge in one of his accustomed funeral dirges; but it stopped short, never to go again, when we came in sight of the Kurdish encampment. The poor fellow instinctively grabbed his donkeys about their necks, as though they were about to plunge over a precipice. The zaptiehs dashed ahead with the mutessarif's letter to the Kurdish chief. We followed slowly on foot, while the Armenian and his two pets kept at a respectful distance in the rear.

The disk of the sun had already touched the western horizon when we came to the black tents of the Kurdish encampment, which at this time of the day presented a rather busy scene. The women seemed to be doing all the work, while their lords sat round on their haunches. Some of the women were engaged in milking the sheep and goats in an inclosure. Others were busy making butter in a churn which was

nothing more than a skin vessel three feet long, of the shape of a Brazil-nut, suspended from a rude tripod; this they swung to and fro to the tune of a weird Kurdish song. Behind one of the tents, on a primitive weaving-machine, some of them were making tent-roofing and matting. Others still were walking about with a ball of wool in one hand and a distaff in the other, spinning yarn. The flocks stood round about, bleating and lowing, or chewing their cud in quiet contentment. All seemed very domestic and peaceful except the Kurdish dogs, which set upon us with loud, fierce growls and gnashing teeth.

Not so was it with the Kurdish chief, who by this time had finished reading the mutessarif's message, and who now advanced from his tent with salaams of welcome. As he stood before us in the glowing sunset, he was a rather tall, but well-proportioned man, with black eyes and dark mustache, contrasting well with his brown-tanned complexion. Upon his face was the stamp of a rather wild and retiring character, although treachery and deceit were by no means wanting. He wore a head-gear that was something between a hat and a turban, and over his baggy Turkish trousers hung a long Persian coat of bright-colored, large-figured cloth, bound at the waist by a belt of cartridges. Across the shoulders was slung a breech-loading Martini rifle, and from his neck dangled a heavy gold chain, which was probably the spoil of some predatory expedition. A quiet dignity sat on Ismail Deverish's stalwart form.

It was with no little pleasure that we accepted his invitation to a cup of tea. After our walk of nineteen miles, in which we had ascended from 3000 to 7000 feet, we were in fit condition to appreciate a rest. That Kurdish tent, as far as we were concerned, was a veritable palace, although we were almost blinded by the smoke from the green pine-branches on the smoldering fire. We said that the chief invited us to a cup of tea: so he did—but we provided the tea; and that, too, not only for our own party, but for half a dozen of the chief's personal friends. There being only two glasses in the camp, we of course had to wait until our Kurdish acquaintances had quenched their burning thirst. In thoughtful mood we gazed around through the evening twilight. Far away on the western slope we could see some Kurdish women plodding along under heavy burdens of pine-branches like those that were now fumigating our eyes and nostrils. Across the hills the Kurdish shepherds were driving home their herds and flocks to the tinkling of bells. All this, to us, was deeply impressive. Such peaceful scenes, we thought, could never be the haunt of warlike robbers. The flocks at last came home; the shouts of the shepherds ceased; darkness fell; and all was quiet.

DRAWN BY I. R. WILES, FROM AUTHORS' PHOTOGRAPH. ENGRAVED BY HOMAGE BAKER.
NEARING THE HEAD OF THE GREAT CHASM.

One by one the lights in the tents broke out, like the stars above. As the darkness deepened, they shone more and more brightly across the amphitheater of the encampment. The tent in which we were now sitting was oblong in shape, covered with a mixture of goats' and sheep's wool, carded, spun, and woven by the Kurdish women. This tenting was all of a dark brown or black color. The various strips were badly joined together, allowing the snow and rain, during the stormy night that followed, to penetrate plentifully. A wickerwork fencing, about three feet high, made from the reeds gathered in the swamps of the Aras River, was stretched around the bottom of the tent to keep out the cattle as well as to afford some little protection from the elements. This same material, of the same width or height, was used to partition off the apartments of the women. Far from being veiled and shut up in harems, like their Turkish and Persian sisters, the Kurdish women come and go among the men, and talk and laugh as they please. The thinness and lowness of the partition walls did not disturb their astonishing equanimity. In their relations with the men the women are extremely free. During the evening we frequently found ourselves surrounded by a concourse of these mountain beauties, who would sit and stare at us with their black eyes, call attention to our personal

oddities, and laugh among themselves. Now and then their jokes at our expense would produce hilarious laughter among the men. The dress of these women consisted of baggy trousers, better described in this country as "divided skirts," a bright-colored overskirt and tunic, and a little round cloth cap encircled

DRAWN BY F. C. MARTIN, FROM AUTHORS' PHOTOGRAPH.

ON THE SUMMIT OF MOUNT ARARAT—FIRING THE FOURTH OF JULY SALUTE.

with a band of red and black. Through the right lobe of the nose was hung a peculiar button-shaped ornament studded with precious stones. This picturesque costume well set off their rich olive complexions, and black eyes beneath dark-brown lashes.

There were no signs of an approaching evening meal until we opened our provision-bag, and handed over certain articles of raw food to be cooked for us. No sooner were the viands intrusted to the care of our hosts, than two sets of pots and kettles made their appearance in the other compartments. In half an hour our host and friends proceeded to indulge their voracious appetites. When our own meal was brought to us some time after, we noticed that the fourteen eggs we had doled out had been reduced to six; and the other materials suffered a similar reduction, the whole thing being so patent as to make their attempt at innocence absurdly ludicrous. We thought, however, if Kurdish highway robbery took no worse form than this, we could well afford to be content. Supper over, we squatted round a slow-burning fire, on the thick

felt mats which served as carpets, drank tea, and smoked the usual cigarettes. By the light of the glowing embers we could watch the faces about us, and catch their horrified glances when reference was made to our intended ascent of Ak-Dagh, the mysterious abode of the jinn. Before turning in for the night, we reconnoitered our situation. The lights in all the tents, save our own, were now extinguished. Not a sound was heard, except the heavy breathing of some of the slumbering animals about us, or the bark of a dog at some distant encampment. The huge dome of Ararat, though six to eight miles farther up the slope, seemed to be towering over us like some giant monster of another world. We could not see the summit, so far was it above the enveloping clouds. We returned to the tent to find that the zaptiehs had been given the best places and best covers to sleep in, and that we were expected to accommodate ourselves near the door, wrapped up in an old Kurdish carpet. Policy was evidently a better developed trait of Kurdish character than hospitality.

Although we arose at four, seven o'clock saw us still at the encampment. Two hours vanished before our gentlemen zaptiehs condescended to rise from their peaceful slumbers; then a great deal of time was unnecessarily consumed in eating their special breakfast. We ourselves had to be content with *ekmek* and *yaourt* (blotting-paper bread and curdled milk). This over, they concluded not to go on without sandals to take the place of their heavy military boots, as at this point their horses would have to be discarded. After we had employed a Kurd to make these for them, they declared they were afraid to proceed without the company of ten Kurds armed to the teeth. We knew that this was only a scheme on the part of the Kurds, with whom the zaptiehs were in league, to extort money from us. We still kept cool, and only casually insinuated that we did not have enough money to pay for so large a party. This announcement worked like a charm. The interest the Kurds had up to this time taken in our venture died away at once. Even the three Kurds who, as requested in the message of the mutessarif, were to accompany us up the mountain to the snow-line, refused absolutely to go. The mention of the mutessarif's name awakened only a sneer. We had also relied upon the Kurds for blankets, as we had been advised to do by our friends in Bayazid. Those we had already hired they now snatched from the donkeys standing before the tent. All this time our tall, gaunt, meek-looking muleteer had stood silent. Now his turn had come. How far was he to go with his donkeys?—he did n't think it possible for him to go much beyond this point. Patience now ceased to be a

virtue. We cut off discussion at once; told the muleteer he would either go on, or lose what he had already earned; and informed the *zaptiehs* that whatever they did would be reported to the *mutessarif* on our return. Under this rather forcible persuasion, they stood not on the order of their going, but sullenly followed our little procession out of camp before the crestfallen Kurds.

In the absence of guides we were thrown upon our own resources. Far from being an assistance, our *zaptiehs* proved a nuisance. They would carry nothing, not even the food they were to eat, and were absolutely ignorant of the country we were to traverse. From our observations on the previous days, we had decided to strike out on a northeast course, over the gentle slope, until we struck the rocky ridges on the southeast buttress of the dome. On its projecting rocks, which extended nearer to the summit than those of any other part of the mountain, we could avoid the slippery, precipitous snowbeds that stretched far down the mountain at this time of the year.

Immediately after leaving the encampment, the ascent became steeper and more difficult; the small volcanic stones of yesterday now increased to huge obstructing boulders, among which the donkeys with difficulty made their way. They frequently tipped their loads, or got wedged in between two unyielding walls. In the midst of our efforts to extricate them, we often wondered how Noah ever managed with the animals from the ark. Had these donkeys not been of a philosophical turn of mind, they might have offered forcible objections to the way we extricated them from their straightened circumstances. A remonstrance on our part for carelessness in driving brought from the muleteer a burst of Turkish profanity that made the rocks of Ararat resound with indignant echoes. The spirit of insubordination seemed to be increasing in direct ratio with the height of our ascent.

We came now to a comparatively smooth, green slope, which led up to the highest Kurdish encampment met on the line of our ascent, about 7500 feet. When in sight of the black tents, the subject of Kurdish guides was again broached by the *zaptiehs*, and immediately they sat down to discuss the question. We ourselves were through with discussion, and fully determined to have nothing to do with a people who could do absolutely nothing for us. We stopped at the tents, and asked for milk. "Yes," they said; "we have some": but after waiting for ten minutes, we learned that the milk was still in the goats' possession, several hundred yards away among the rocks. It dawned upon us that this was only another trick of the *zaptiehs* to get a rest.

We pushed on the next 500 feet of the ascent without much trouble or controversy, the silence broken only by the muleteer, who took the *raki* bottle off the donkey's pack, and asked if he could take a drink. As we had only a limited supply, to be used to dilute the snow-water, we were obliged to refuse him.

At 8000 feet we struck our first snowdrift, into which the donkeys sank up to their bodies. It required our united efforts to lift them out, and half carry them across. Then on we climbed till ten o'clock, to a point about 9000 feet, where we stopped for lunch in a quiet mountain glen, by the side of a rippling mountain rill. This snow-water we drank with *raki*. The view in the mean time had been growing more and more extensive. The plain before us had lost nearly all its detail and color, and was merged into one vast whole. Though less picturesque, it was incomparably grander. Now we could see how, in ages past, the lava had burst out of the lateral fissures in the mountain, and flowed in huge streams for miles down the slope, and out on the plain below. These beds of lava were gradually broken up by the action of the elements, and now presented the appearance of ridges of broken volcanic rocks of the most varied and fantastic shapes.

It was here that the muleteer showed evident signs of weakening, which later on developed into a total collapse. We had come to a broad snow-field where the donkeys stuck fast and rolled over helpless in the snow. Even after we had unstrapped their baggage and carried it over on our shoulders, they could make no headway. The muleteer gave up in despair, and refused even to help us carry our loads to the top of an adjoining hill, whither the *zaptiehs* had proceeded to wait for us. In consequence, Raffl and we were compelled to carry two donkey-loads of baggage for half a mile over the snow-beds and boulders, followed by the sulking muleteer, who had deserted his donkeys, rather than be left alone himself. On reaching the *zaptiehs*, we sat down to hold a council on the situation; but the clouds, which, during the day, had occasionally obscured the top of the mountain, now began to thicken, and it was not long before a shower compelled us to beat a hasty retreat to a neighboring ledge of rocks. The clouds that were rolling between us and the mountain summit seemed but a token of the storm of circumstances. One thing was certain, the muleteer could go no farther up the mountain, and yet he was mortally afraid to return alone to the Kurdish robbers. He sat down, and began to cry like a child. This predicament of their accomplice furnished the *zaptiehs* with a plausible excuse. They now absolutely refused to go any farther without him. Our interpreter, the Greek, again joined

the majority; he was not going to risk the ascent without the Turkish guards, and besides, he had now come to the conclusion that we had not sufficient blankets to spend a night at so high an altitude. Disappointed, but not discouraged, we gazed at the silent old gentleman at our side. In his determined countenance we read his answer. Long shall we remember Ignaz Raffl as one of the pluckiest, most persevering of old men.

There was now only one plan that could be pursued. Selecting from our supplies one small blanket, a felt mat, two long, stout ropes, enough food to last us two days, a bottle of cold tea, and a can of Turkish raki, we packed them into two bundles to strap on our backs. We then instructed the rest of the party to return to the Kurdish encampment and await our return. The sky was again clear at 2:30 P. M., when we bade good-by to our worthless comrades and resumed the ascent. We were now at a height of nine thousand feet, and it was our plan to camp at a point far enough up the mountain to enable us to complete the ascent on the following day, and to return to the Kurdish encampment by nightfall. Beyond us was a region of snow and barren rocks, among which we still saw a small purple flower and bunches of lichens, which grew more rare as we advanced. Our course continued in a northeast direction, toward the main southeast ridge of the moun-

tain. Sometimes we were floundering with our heavy loads in the deep snow-beds, or scrambling on hands and knees over the huge boulders of the rocky seams. Two hours and a half of climbing brought us to the crest of the main southeast ridge, about one thousand feet below the base of the precipitous dome. At this point our course changed from northeast to northwest, and continued so during the rest of the ascent. Little Ararat was now in full view. We could even distinguish upon its northwest side a deep-cut gorge, which was not visible before. Upon its smooth and perfect slopes remained only the tatters of its last winter's garments. We could also look far out over the Sardarbulakh ridge, which connects the two Ararats, and on which the Cossacks are encamped. It was to them that the mutessarif had desired us to go, but we had subsequently determined to make the ascent directly from the Turkish side.

Following up this southeast ridge we came at 5:45 P. M. to a point about eleven thousand feet. Here the thermometer registered 39° Fahrenheit, and was constantly falling. If we should continue on, the cold during the night, especially with our scanty clothing, would become intolerable; and then, too, we could scarcely find a spot level enough to sleep on. We therefore determined to stop here for the night, and to continue the ascent at dawn. Some

A HARVEST SCENE IN ASIATIC TURKEY. FROM A PHOTOGRAPH.

high, rugged crags on the ridge above us attracted our attention as affording a comparatively protected lodging. Among these we spread our carpet, and piled stones in the intervening spaces to form a complete inclosure. Thus busily engaged, we failed for a time to realize the grandeur of the situation. Over the vast and misty panorama that spread out before us, the lingering rays of the setting sunshed a tinge of gold, which was communicated to the snowy beds around us. Behind the peak of Little Ararat a brilliant rainbow stretched in one grand archway above the weeping clouds. But this was only one turn of nature's kaleidoscope. The arch soon faded away, and the shadows lengthened and deepened across the plain, and mingled, till all was lost to view behind the falling curtains of the night. The Kurdish tents far down the slope, and the white curling smoke from their evening camp-fires, we could see no more; only the occasional bark of a dog was borne upward through the impenetrable darkness.

Colder and colder grew the atmosphere. From 39° the thermometer gradually fell to 36° , to 33° , and during the night dropped below freezing-point. The snow, which fell from the clouds just over our heads, covered our frugal supper-table, on which was placed a few hard-boiled eggs, some tough Turkish bread, cheese, and a bottle of tea mixed with raki. Ice-tea was no doubt a luxury at this time of the year, but not on Mount Ararat, at the height of eleven thousand feet, with the temperature at freezing-point. M. Raffl was as cheerful as could be expected under the circumstances. He expressed his delight at our progress thus far; and now that we were free from our "gentlemen" attendants, he considered our chances for success much brighter. We turned in together under our single blanket, with the old gentleman between us. He had put on every article of clothing, including gloves, hat, hood, cloak, and heavy shoes. For pillows we used the provision-bags and camera. The bottle of cold tea we buttoned up in our coats to prevent it from freezing. On both sides, and above us, lay the pure white snow; below us a huge abyss, into which the rocky ridge descended like a darkened stairway to the lower regions. The awful stillness was unbroken, save by the whistling of the wind among the rocks. Dark masses of clouds seemed to bear down upon us every now and then, opening up their trap-doors, and letting down a heavy fall of snow. The heat of our bodies melted the ice beneath us, and our clothes became saturated with ice-water. Although we were surrounded by snow and ice, we were suffering with a burning thirst. Since separating from our companions we had found no

water whatever, while the single bottle of cold tea we had must be preserved for the morrow. Sleep, under such circumstances, and in our cramped position, was utterly impossible. At one o'clock the morning star peeped above the eastern horizon. This we watched hour after hour, as it rose in unrivaled beauty toward the zenith, until at last it began to fade away in the first gray streaks of the morning.

By the light of a flickering candle we ate a hurried breakfast, fastened on our spiked shoes, and strapped to our backs a few indispensable articles, leaving the rest of our baggage at the camp until our return. Just at daybreak, 3:55 A. M., on the 4th of July, we started off on what proved to be the hardest day's work we had ever accomplished. We struck out at once across the broad snow-field to the second rock rib on the right, which seemed to lead up to the only line of rocks above. The surface of these large snow-beds had frozen during the night, so that we had to cut steps with our ice-picks to keep from slipping down their glassy surface. Up this ridge we slowly climbed for three weary hours, leaping from boulder to boulder, or dragging ourselves up their precipitous sides. The old gentleman halted frequently to rest, and showed evident signs of weariness. "It is hard; we must take it slowly," he would say (in German) whenever our impatience would get the better of our prudence. At seven o'clock we reached a point about 13,500 feet, beyond which there seemed to be nothing but the snow-covered slope, with only a few projecting rocks along the edge of a tremendous gorge which now broke upon our astonished gaze. Toward this we directed our course, and, an hour later, stood upon its very verge. Our venerable companion now looked up at the precipitous slope above us, where only some stray, projecting rocks were left to guide us through the wilderness of snow. "Boys," said he, despondently, "I cannot reach the top; I have not rested during the night, and I am now falling asleep on my feet; besides, I am very much fatigued." This came almost like a sob from a breaking heart. Although the old gentleman was opposed to the ascent in the first instance, his old Alpine spirit arose within him with all its former vigor when once he had started up the mountain slope; and now, when almost in sight of the very goal, his strength began to fail him. After much persuasion and encouragement, he finally said that if he could get half an hour's rest and sleep, he thought he would be able to continue. We then wrapped him up in his greatcoat, and dug out a comfortable bed in the snow, while one of us sat down, with back against him, to keep him from rolling down the mountain-side.

We were now on the chasm's brink, looking

down into its unfathomable depths. This gigantic rent, hundreds of feet in width and thousands in depth, indicates that northwest-southeast line along which the volcanic forces of Ararat have acted most powerfully. This fissure is perhaps the greatest with which the mountain is seamed, and out of which has undoubtedly been discharged a great portion of its lava. Starting from the base of the dome, it seemed to pierce the shifting clouds to a point about 500 feet from the summit. This line is continued out into the plain in a series of small volcanoes the craters of which appear to be as perfect as though they had been in activity only yesterday. The solid red and yellow rocks which lined the sides of the great chasm projected above the opposite brink in jagged and appalling cliffs. The whole was incased in a mass of huge fantastic icicles, which, glittering in the sunlight, gave it the appearance of a natural crystal palace. No more fitting place than this could the fancy of the Kurds depict for the home of the terrible jinn; no better symbol of nature for the awful jaws of death.

Our companion now awoke considerably refreshed, and the ascent was continued close to the chasm's brink. Here were the only rocks to be seen in the vast snow-bed around us. Cautiously we proceed, with cat-like tread, following directly in one another's footsteps, and holding on to our alpenstocks like grim death. A loosened rock would start at first slowly, gain momentum, and fairly fly. Striking against some projecting ledge, it would bound a hundred feet or more into the air, and then drop out of sight among the clouds below. Every few moments we would stop to rest; our knees were like lead, and the high altitude made breathing difficult. Now the trail of rocks led us within two feet of the chasm's edge; we approached it cautiously, probing well for a rock foundation, and gazing with dizzy heads into the abyss.

The slope became steeper and steeper, until it abutted in an almost precipitous cliff coated with snow and glistering ice. There was no escape from it, for all around the snow-beds were too steep and slippery to venture an ascent upon them. Cutting steps with our ice-picks, and half-crawling, half-dragging ourselves, with the alpenstocks hooked into the rocks above, we scaled its height, and advanced to the next abutment. Now a cloud, as warm as exhausted steam, enveloped us in the midst of this ice and snow. When it cleared away, the sun was reflected with intenser brightness. Our faces were already smarting with blisters, and our dark glasses afforded but little protection to our aching eyes.

At 11 A. M. we sat down on the snow to eat our last morsel of food. The cold chicken and bread tasted like sawdust, for we had no saliva

with which to masticate them. Our single bottle of tea had given out, and we suffered with thirst for several hours. Again the word to start was given. We rose at once, but our stiffened legs quivered beneath us, and we leaned on our alpenstocks for support. Still we plodded on for two more weary hours, cutting our steps in the icy cliffs, or sinking to our thighs in the treacherous snow-beds. We could see that we were nearing the top of the great chasm, for the clouds, now entirely cleared away, left our view unobstructed. We could even descry the black Kurdish tents upon the northeast slope, and, far below, the Aras River, like a streak of silver, threading its way into the purple distance. The atmosphere about us grew colder, and we buttoned up our now too scanty garments. We must be nearing the top, we thought, and yet we were not certain, for a huge, precipitous cliff, just in front of us, cut off the view.

"Slowly, slowly," feebly shouted the old gentleman, as we began the attack on its precipitous sides, now stopping to brush away the treacherous snow, or to cut some steps in the solid ice. We pushed and pulled one another almost to the top, and then, with one more desperate effort, we stood upon a vast and gradually sloping snow-bed. Down we plunged above our knees through the yielding surface, and staggered and fell with failing strength; then rose once more and plodded on, until at last we sank exhausted upon the top of Ararat.

For a moment only we lay gasping for breath; then a full realization of our situation dawned upon us, and fanned the few faint sparks of enthusiasm that remained in our exhausted bodies. We unfurled upon an alpenstock the small silk American flag that we had brought from home, and for the first time the "stars and stripes" was given to the breeze on the Mountain of the Ark. Four shots fired from our revolvers in commemoration of Independence Day broke the stillness of the gorges. Far above the clouds, which were rolling below us over three of the most absolute monarchies in the world, was celebrated in our simple way a great event of republicanism.

Mount Ararat, it will be observed from the accompanying sketch, has two tops, a few hundred yards apart, sloping, on the eastern and western extremities, into rather prominent abutments, and separated by a snow valley, or depression, from 50 to 100 feet in depth. The eastern top, on which we were standing, was quite extensive, and 30 to 40 feet lower than its western neighbor. Both tops are hummocks on the huge dome of Ararat, like the humps on the back of a camel, on neither one of which is there a vestige of anything but snow.

There remained just a little trace of the

crosses left by Parrot and Chodzko, as of the ark itself. We remembered the pictures we had seen in our nursery-books, which represented this mountain-top covered with green grass, and Noah stepping out of the ark, in the bright, warm sunshine, before the receding waves; and now we looked around and saw this very spot covered with perpetual snow. Nor did we see any evidence whatever of a former existing crater, except perhaps the snow-filled depression we have just mentioned. There was nothing about this perpetual snow-field, and the freezing atmosphere that was chilling us to the bone, to remind us that we were on the top of an extinct volcano that once trembled with the convulsions of subterranean heat.

The view from this towering height was immeasurably extensive, and almost too grand. All detail was lost—all color, all outline; even the surrounding mountains seemed to be but excrecent ridges of the plain. Then, too, we could catch only occasional glimpses, as the clouds shifted to and fro. At one time they opened up beneath us, and revealed the Aras valley with its glittering ribbon of silver at an abyssal depth below. Now and then we could descry the black volcanic peaks of Ali Ghez forty miles away to the northwest, and on the southwest the low mountains that obscured the town of Bayazid. Of the Caucasus, the mountains about Erzerum on the west, and Lake Van on the south, and even of the Caspian Sea, all of which are said to be in Ararat's horizon, we could see absolutely nothing.

Had it been a clear day we could have seen not only the rival peaks of the Caucasus, which for so many years formed the northern wall of the civilized world, but, far to the south, we might have descried the mountains of Quardu land, where Chaldean legend has placed the landing of the ark. We might have gazed, in philosophic mood, over the whole of the Aras valley, which for 3000 years or more has been the scene of so much misery and conflict. As monuments of two extreme events in this historic period, two spots might have attracted our attention—one right below us, the ruins of Artaxata, which, according to tradition, was built, as the story goes, after the plans of the roving conqueror Hannibal, and stormed by the Roman legions, A. D. 58; and farther away to the north, the modern fortress of Kars, which so recently reverberated with the thunders of the Turkish war.

We were suddenly aroused by the rumbling of thunder below us. A storm was rolling rapidly up the southeast slope of the mountain. The atmosphere seemed to be boiling over the heated plain below. Higher and higher came the clouds, rolling and seething among the grim crags along the chasm; and soon we were caught

in its embrace. The thermometer dropped at once below freezing-point, and the dense mists, driven against us by the hurricane, formed icicles on our blistered faces, and froze the ink in our fountain-pens. Our summer clothing was wholly inadequate for such an unexpected experience; we were chilled to the bone. To have remained where we were would have been jeopardizing our health, if not our lives. Although we could scarcely see far enough ahead to follow back on the track by which we had ascended, yet we were obliged to attempt it at once, for the storm around us was increasing every moment; we could even feel the charges of electricity whenever we touched the iron points of our alpenstocks.

Carefully peering through the clouds, we managed to follow the trail we had made along the gradually sloping summit, to the head of the great chasm, which now appeared more terrible than ever. We here saw that it would be extremely perilous, if not actually impossible, to attempt a descent on the rocks along its treacherous edge in such a hurricane. The only alternative was to take the precipitous snow-covered slope. Planting our ice-hooks deep in the snow behind us, we started. At first the strong head wind, which on the top almost took us off our feet, somewhat checked our downward career, but it was not long before we attained a velocity that made our hair stand on end. It was a thrilling experience; we seemed to be sailing through the air itself, for the clouds obscured the slope even twenty feet below. Finally we emerged beneath them into the glare of the afternoon sunlight; but on we dashed for 6000 feet, leaning heavily on the trailing-stocks, which threw up an icy spray in our wake. We never once stopped until we reached the bottom of the dome, at our last night's camp among the rocks.

In less than an hour we had dashed down through a distance which it had taken us nine and a half hours to ascend. The camp was reached at 4 P. M., just twelve hours from the time we left it. Gathering up the remaining baggage, we hurried away to continue the descent. We must make desperate efforts to reach the Kurdish encampment by nightfall; for during the last twenty-seven hours we had had nothing to drink but half a pint of tea, and our thirst by this time became almost intolerable.

The large snow-bed down which we had been sliding now began to show signs of treachery. The snow, at this low altitude, had melted out from below, to supply the subterranean streams, leaving only a thin crust at the surface. It was not long before one of our party fell into one of these pitfalls up to his shoulders, and floundered about for some time before he could extricate himself from his unexpected snow-bath.

Over the rocks and boulders the descent was much slower and more tedious. For two hours we were thus busily engaged, when all at once a shout rang out in the clear evening air. Looking up we saw, sure enough, our two zaptiehs and muleteer on the very spot where we had left them the evening before. Even the two donkeys were on hand to give us a welcoming bray. They had come up from the encampment early in the morning, and had been scanning the mountain all day long to get some clue to our whereabouts. They reported that they had seen us at one time during the morning, and had then lost sight of us among the clouds. This solicitude on their part was no doubt prompted by the fact that they were to be held by the mutessarif of Bayazid as personally responsible for our safe return, and perhaps, too, by the hope that they might thus retrieve the good graces they had lost the day before, and

thereby increase the amount of the forthcoming bakshish. Nothing, now, was too heavy for the donkeys, and even the zaptiehs themselves condescended to relieve us of our alpenstocks.

That night we sat again around the Kurdish camp-fire, surrounded by the same group of curious faces. It was interesting and even amusing to watch the bewildered astonishment that overspread their countenances as we related our experiences along the slope, and then upon the very top, of Ak-Dagh. They listened throughout with profound attention, then looked at one another in silence, and gravely shook their heads. They could not believe it. It was impossible. Old Ararat stood above us grim and terrible beneath the twinkling stars. To them it was, as it always will be, the same mysterious, untrodden height—the palace of the jinn.

APOLLO AND DAPHNE.

UNDER the morning skies,
Across the meadow see the maiden pass.
She flies, she flies;
O Daphne, be thou fleet!
The little rosy feet
Wet with the cold dews glistening on the grass.
Apollo, gleaming, follows on her track
With head thrown forward, and bright curls blown back.
His singing voice rings forth, "Alas! alas!
Stay, sweet! stay, sweet!
I am no hawk, fair dove;
I love, I love!"
The amorous words go whistling on the wind.
She hears, and with a frightened glance behind,
Forcing her strength, starts onward with a bound;
Her pressed foot spurns a violet from the ground:
He does not touch the earth; the grass is stirred
As by the near approach of some swift bird.
Now but a step his outstretched hand debars.
She seeks the river sparkling in the sun,
Drives up the splashing spray, a shower of stars.
The god springs forward. Ah, she 's won!
His kisses fall upon her tangled hair;
For down she bends her head upon his breast,
And cries, "Oh, help me, Father!" in despair.
He feels her stiffen in his hold;
The silky locks on which his cheek doth rest,
To light leaves turning, flutter thin and cold;
The quivering limbs are pliant stems of bay;
His soft lips press rough bark, which shrinks away.
"Still shalt thou be my love," Apollo cries,
"My favored wreath!" and plucks the slender leaves.
A soft wind stirs the branches, and low sighs
The tree, as though the loveless Daphne grieves.

FIELD-NOTES.

I. A WEASEL AND HIS DEN.

Y most interesting note of last season relates to a weasel. One day in early November my boy and I were sitting on a rock at the edge of a tamarack swamp in the woods hoping to get a glimpse of some grouse which we knew were in the habit of feeding in the swamp. We had not sat there very long before we heard a slight rustling in the leaves below us which we at once fancied was made by the cautious tread of a grouse. (We had no gun.) Presently through the thick brushy growth we caught sight of a small animal running along that we at first took for a red squirrel. A moment more, and it came into full view only a few yards from us, and we saw that it was a weasel. A second glance showed that it carried something in its mouth, which, as it drew near, we saw was a mouse, or a mole of some sort. The weasel ran nimbly along, now the length of a decayed log, then over stones and branches, pausing a moment every three or four yards, and passed within twenty feet of us, and disappeared behind some rocks on the bank at the edge of the swamp. "He is carrying food into his den," I said; "let us watch him." In four or five minutes he reappeared, coming back over the course along which he had just passed, running over and under the same stones and down the same decayed log, and was soon out of sight in the swamp. We had not moved, and evidently he had not noticed us. After about six minutes we heard the same rustle as at first, and in a moment saw the weasel coming back with another mouse in his mouth. He kept to his former route as if chained to it, making the same pauses and gestures, and repeating exactly his former movements. He disappeared on our left as before, and, after a few moments' delay, reemerged, and took his course down into the swamp again. We waited about the same length of time as before, when back he came with another mouse. He evidently had a big crop of mice down there amid the bogs and bushes, and he was gathering his harvest very industriously. We became curious to see exactly where his den was, and so walked around where he had seemed to disappear each time, and waited. He was as punctual as usual, and was back with his game exactly on time. It happened that we

had stopped within two paces of his hole, so that, as he approached it, he evidently discovered us. He paused, looked steadily at us, and then without any sign of fear entered his den. The entrance was not under the rocks, as we had expected, but was in the bank a few feet beyond them. We remained motionless for some time, but he did not reappear. Our presence had made him suspicious, and he was going to wait awhile. Then I removed some dry leaves, and exposed his doorway, a small, round hole hardly as large as the chipmunk makes, going straight down into the ground. We had a lively curiosity to get a peep into his larder. If he had been carrying in mice at this rate very long, his cellars must be packed with them. With a sharp stick I began digging into the red clayey soil, but soon encountered so many roots from near trees that I gave it up, deciding to return next day with a mattock. So I repaired the damages I had done as well as I could, replaced the leaves, and we moved off.

The next day, which was mild and still as usual, I came back armed as I thought to unearth the weasel and his treasures. I sat down where we had sat the day before, and awaited developments. I was curious to know if the weasel was still carrying in his harvest. I had sat but a few minutes when I heard again the rustle in the dry leaves, and saw the weasel coming home with another mouse. I observed him till he had made three trips; about every six or seven minutes I calculated he brought in a mouse. Then I went and stood near his hole. This time he had a fat meadow-mouse. He laid it down near the entrance, went in and turned around, and reached out and drew the mouse in after him. "That store of mice I am bound to see," I thought, and then fell to with the heavy mattock. I followed the hole down about two feet, when it turned to the north. I kept the clue by thrusting into the passage slender twigs; these it was easy to follow. Two or three feet more and the hole branched, one part going west, the other northeast. I followed the west one a few feet till it branched. Then I turned to the easterly tunnel, and pursued it till it branched. I followed one of these ways till it divided. I began to be embarrassed and hindered by the accumulations of loose soil. Evidently this weasel had foreseen just such an assault upon his castle as I was making, and had planned it accordingly. He was not to be caught napping. I found several enlargements

in the various tunnels,—breathing-spaces, or spaces to turn around in, or to meet and chat with a companion,—but nothing that looked like a terminus, a permanent living-room. I tried removing the soil a couple of paces away with the mattock, but found it slow work. I was getting warm and tired, and my task was apparently only just begun. The farther I dug the more numerous and intricate became the passages. I concluded to stop, and come again the next day, armed with a shovel in addition to the mattock.

Accordingly, I came back on the morrow, and fell to work vigorously. I soon had quite a large excavation; I found the bank a labyrinth of passages, with here and there a large chamber. One of the latter I struck only six inches under the surface, by making a fresh breach a few feet away.

While I was leaning upon my shovel-handle and recovering my breath, I heard some light-footed creature tripping over the leaves above me just out of view, which I fancied might be a squirrel. Presently I heard the bay of a hound and the yelp of a cur, and then knew that a rabbit had passed near me. The dogs came slowly after, with a great rumpus, and then presently the hunters followed. The dogs remained barking not many rods south of me on the edge of the swamp, and I knew the rabbit had run to hole. For half an hour or more I heard the hunters at work there, digging their game out; then they came along and discovered me at my work. (An old trapper and woodsman and his son.) I told them what I was in quest of.

"A mountain weasel," said the old man. "Seven or eight years ago I used to set dead-falls for rabbits just over there, and the game was always partly eaten up. It must have been this weasel that visited my traps." So my game was evidently an old resident of the place. This swamp, maybe, had been his hunting-ground for many years, and he had added another hall to his dwelling each year. After further digging, I struck at least one of his banqueting-halls, a cavity about the size of one's hat, arched over by a network of fine tree-roots. The occupant evidently lodged or rested here also. There was a warm, dry nest made of leaves and the fur of mice and moles. I took out two or three handfuls. In finding this chamber, I had followed one of the tunnels around till it brought me within a foot of the original entrance. A few inches to one side of this cavity there was what I took to be a back alley where the weasel threw his waste; there were large masses of wet decaying fur here, and fur pellets such as are regurgitated by hawks and owls. In the nest there was the tail of a flying-squirrel, showing that the weasel sometimes had a flying-squirrel for supper or dinner.

I continued my digging with renewed energy; I should yet find the grand depot where all these passages centered: but the farther I excavated, the more complex and baffling the problem became; the ground was honey-combed with passages. "What enemy has this weasel," I said to myself, "that he should provide so many ways of escape, that he should have a back door at every turn?" To corner him would be impossible; to be lost in his fortress were like being lost in Mammoth Cave. How he could bewilder his pursuer by appearing now at this door, now at that; now mocking him from the attic, now defying him from the cellar! So far, I had discovered only one entrance; but some of the chambers were so near the surface that it looked as if the planner had calculated upon an emergency when he might want to reach daylight quickly in a new place.

Finally I paused, rested upon my shovel awhile, eased my aching back upon the ground, and then gave it up, feeling as I never had before the force of the old saying, that you cannot catch a weasel asleep. I had made an ugly hole in the bank, had handled over two or three times a ton or more of earth, and was apparently no nearer the weasel and his store of mice than when I began.

Then I regretted that I had broken into his castle at all; that I had not contented myself with coming day after day, and counted his mice as he carried them in, and continued my observation upon him each succeeding year. Now the rent in his fortress could not be repaired, and he would doubtless move away, as he most certainly did, for his doors, which I had closed with soil, remained unopened after winter had set in.

But little seems known about the intimate private lives of any of our lesser wild creatures. It was news to me that any of the weasels lived in dens in this way, and that they stored up provision against a day of need. This species was probably the little ermine, eight or nine inches long, with tail about five inches. It was still in its summer dress of dark chestnut-brown above and whitish below.

It was a mystery where the creature had put the earth, which it must have removed in digging its den; not a grain was to be seen anywhere, and yet a bushel or more must have been taken out. Externally, there was not the slightest sign of that curious habitation under the ground. The entrance was hidden beneath dry leaves, and was surrounded by little passages and flourishes between the leaves and the ground. If any of my readers find a weasel's den, I hope they will be wiser than I was, and observe his goings and comings without disturbing his habitation.

II. KEEN PERCEPTIONS.

SUCCESS in observing nature, as in so many other things, depends upon alertness of mind and quickness to take a hint. One's perceptive faculties must be like a trap lightly and delicately set; a touch must suffice to spring it. But how many people have I walked with whose perceptions were rusty and unpractised — nothing less than a bear would spring their trap. All the finer play of nature, all the small deer, they miss. The little dramas and tragedies that are being enacted by the wild creatures in the fields and woods are more or less veiled and withdrawn; and the actors all stop when a spectator appears upon the scene. One must be able to interpret the signs, to penetrate the scenes, to put this and that together.

Then, nature speaks a different language from our own; the successful observer translates this language into human speech. He knows the meaning of every sound, movement, gesture, and gives the human equivalent. Careless or hasty observers, on the other hand, make the mistake of reading their own thoughts or mental and emotional processes into nature; plans and purposes are attributed to the wild creatures which are quite beyond them. Some people in town saw an English sparrow tangled up in a horsehair, and suspended from a tree, with other sparrows fluttering and chattering about it. They concluded at once that the sparrows had executed one of their number, doubtless for some crime. I have several times seen sparrows suspended in this way about their nesting and roosting places. Accidents happen to birds as well as to other folks; but they do not yet imitate us in the matter of capital punishment.

One day I saw a little bush sparrow fluttering along in the grass, disabled in some way, and a large number of its mates flitting and calling about it. I captured the bird, and in doing so, its struggles in my hand broke the bond that held it — some kind of web or silken insect thread that tied together the quills of one wing. When I let it fly away all its mates followed it as if wondering at the miracle that had been wrought. They no doubt experienced some sort of emotion. Birds sympathize with one another in their distress, and will make common cause against an enemy. Crows will pursue and fight a tame crow. They seem to look upon him as an alien and an enemy. He is never so shapely and bright and polished as his wild brother. He is more or less demoralized, and has lost caste. Probably a pack of wolves would in the same way destroy a tame wolf should such a one appear among them.

The wild creatures are human — with a difference, a wide difference. They have the keenest powers of perception; what observers they are!

how quickly they take a hint! But they have little or no powers of reflection. The crows do not meet in parliaments and caucuses as has been fancied, and try offenders, and discuss the tariff, or consider ways and means. They are gregarious and social, and probably in the fall have something like a reunion of the tribe. At least their vast assemblages upon the hills at this season have a decidedly festive appearance.

The crow has fine manners. He always has the walk and air of a lord of the soil. One morning I put out some fresh meat upon the snow near my study window. Presently a crow came and carried it off, and alighted with it upon the ground in the vineyard. While he was eating of it, another crow came, and, alighting a few yards away, slowly walked up to within a few feet of his fellow, and stopped. I expected to see a struggle over the food, as would have been the case with domestic fowls or animals. Nothing of the kind. The feeding crow stopped eating, regarded the other for a moment, made a gesture or two, and flew away. Then the second crow went up to the food, and proceeded to take his share. Presently the first crow came back, when each seized a portion of the food, and flew away with it. Their mutual respect and good-will seemed perfect. Whether it really was so in our human sense, or whether it was simply an illustration of the instinct of mutual support which seems to prevail among gregarious birds, I know not. Birds that are solitary in their habits, like hawks or woodpeckers, behave quite differently toward one another in the presence of their food.

The lives of wild creatures revolve about two facts or emotions, appetite and fear. Their keenness in discovering food and in discovering danger are alike remarkable. But man can nearly always outwit them, because while his perceptions are not so sharp, his power of reflection is much greater. His cunning carries a great deal further. The crow will quickly discover anything that looks like a trap or snare set to catch him, but it takes him a long time to see through the simplest contrivance. As I have above stated, I sometimes place meat on the snow in front of my study window to attract him. On one occasion, after a couple of crows had come to expect something there daily, I suspended a piece of meat by a string from a branch of the tree just over the spot where I usually placed the food. A crow soon discovered it, and came into the tree to see what it meant. His suspicions were aroused. There was some design in that suspended meat, evidently. It was a trap to catch him. He surveyed it from every near branch. He peeked and pried, and was bent on penetrating the mystery. He flew to the ground, and walked about and surveyed it from all sides. Then he took a long walk

down about the vineyard as if in hope of hitting upon some clue. Then he came to the tree again, and tried first one eye, then the other, upon it; then to the ground beneath; then he went away and came back; then his fellow came, and they both squinted and investigated and then disappeared. Chickadees and woodpeckers would alight upon the meat and peck it swinging in the wind, but the crows were fearful. Does this show reflection? Perhaps it does, but I look upon it rather as that instinct of fear and cunning so characteristic of the crow. Two days passed thus; every morning the crows came and surveyed the suspended meat from all points in the tree, and then went away. The third day I placed a large bone on the snow beneath the suspended morsel. Presently one of the crows appeared in the tree, and bent his eye upon the tempting bone. "The mystery deepens," he seemed to say to himself. But after half an hour's investigation, and after approaching several times within a few feet of the food upon the ground, he seemed to conclude there was no connection between it and the piece hanging by the string. So he finally walked up to it and fell to pecking it, flipping his wings all the time, as a sign of his watchfulness. He also turned up his eye, momentarily, to the piece in the air above, as if it might be a sword of Damocles, ready to fall upon him. Soon his mate came and alighted on a low branch of the tree. The feeding crow regarded him a moment, and then flew up to his side, as if to give him a turn at the meat. But he refused to run the risk. He evidently looked upon the whole thing as a delusion and a snare, and presently went away, and his mate followed him. Then I placed the bone in one of the main forks of the tree, but the crows kept at a safe distance from it. Then I put it back to the ground, but they grew more and more suspicious; some evil intent in it all, they thought. Finally, a dog carried off the bone, and the crows ceased to visit the tree.

III. A SPARROW'S MISTAKE.

If one has always built one's nest upon the ground, and if one comes of a race of ground-builders, it is a risky experiment to build in a tree. The conditions are vastly different. One of my near neighbors, a little song-sparrow, learned this lesson the past season. She grew ambitious; she departed from the traditions of her race, and placed her nest in a tree. Such a pretty spot she chose, too — the pendent cradle formed by the interlaced sprays of two parallel branches of a Norway spruce. These branches shoot out almost horizontally; indeed, the lower ones become quite so in spring, and the side shoots with which they are clothed droop down, forming the slopes of miniature

ridges; where the slopes of two branches join, a little valley is formed, which often looks more stable than it really is. My sparrow selected one of these little valleys about six feet from the ground and quite near the walls of the house. "Here," she thought, "I will build my nest, and pass the heat of June in a miniature Norway. This tree is the fir-clad mountain, and this little vale on its side I select for my own." She carried up a great quantity of coarse grass and straws for the foundation, just as she would have done upon the ground. On the top of this mass there gradually came into shape the delicate structure of her nest, compacting and refining till its delicate carpet of hairs and threads was reached. So sly as the little bird was about it, too — every moment on her guard lest you discover her secret! Five eggs were laid, and incubation was far advanced, when the storms and winds came. The cradle indeed did rock. The boughs did not break, but they swayed and separated as you would part your two interlocked hands. The ground of the little valley fairly gave way, the nest tilted over till its contents fell into the chasm. It was like an earthquake that destroys a hamlet.

No born builder in trees would have placed its nest in such a situation. Birds that build at the end of the branch, like the oriole, tie the nest fast; others, like the robin, build against the main trunk; still others build securely in the fork. The sparrow, in her ignorance, rested her house upon the spray of two branches, and when the tempest came the branches parted company, and the nest was engulfed.

Another sparrow friend of mine met with a curious mishap the past season. It was the little social sparrow, or chippy. She built her nest on the arm of a grape-vine in the vineyard, a favorite place with chippy. It had a fine canopy of leaves, and was firmly and securely placed. Just above it hung a bunch of young grapes, which in the warm July days grew very rapidly. The little bird had not foreseen the calamity that threatened her. The grapes grew down into her nest, and completely filled it, so that when I put my hand in, there were the eggs sat upon by the grapes. The bird was crowded out, and had perforce abandoned her nest, ejected by a bunch of grapes. How long she held her ground I do not know; probably till the fruit began to press heavily upon her.

IV. A POOR FOUNDATION.

It is a curious habit the wood-thrush has of starting its nest with a fragment of newspaper or other paper. Except in remote woods I think it nearly always puts a piece of paper in the foundation of its nest. Last spring I chanced to be sitting near a tree in which a

wood-thrush had concluded to build. She came with a piece of paper nearly as large as my hand, placed it upon the branch, stood upon it a moment, and then flew down to the ground. A little puff of wind caused the paper to leave the branch a moment afterward. The thrush watched it eddy slowly down to the ground, when she seized it, and carried it back. She placed it in position as before, stood upon it again for a moment, and then flew away. Again the paper left the branch, and sailed away slowly to the ground. The bird seized it again, jerking it about rather spitefully, I thought; she turned it around two or three times, then labored back to the branch with it, upon which she shifted it about as if to hit upon some position in which it would lie more securely. This time she sat down upon it for a moment, and then went away, doubtless with the thought in her head that she would bring something to hold it down. The perverse paper followed her in a few seconds. She seized it again, and hustled it about more than before. As she rose with it toward the nest, it in some way impeded her flight, and she was compelled to return to the ground with it. But she kept her temper remarkably well. She turned the paper over, and took it up in her beak several times before she was satisfied with her hold, and then carried it back to the branch, where, however, it would not stay. I saw her make six trials of it when I was called away. I think she finally abandoned the restless fragment,—probably a scrap that held some “breezy” piece of writing,—for later in the season I examined the nest, and found no paper in it.

V. A FRIGHTENED MINK.

In walking through the woods one day in early winter, we read upon the newly fallen snow the record of a mink's fright the night before. The mink had been traveling through the woods post-haste, not by the watercourses, where one sees them by day, but over ridges and across valleys. We followed his track some distance to see with what adventures he had met. We tracked him through a bushy swamp, saw where he had left it to explore a pile of rocks, then where he had taken to the swamp again, then to the more open woods. Presently the track turned sharply about, and doubled upon itself in long hurried strides. What had caused the mink to change its mind so suddenly? We explored a few paces ahead, and came upon a fox-track. The mink had seen the fox stalking stealthily through the woods, and the sight had probably brought his heart into his mouth. I think he climbed a tree, and waited till the fox passed. His track disappeared amid a clump of hemlocks, and then reappeared again a little beyond

them. It described a big loop around, and then crossed the fox-track only a few yards from the point where its course was interrupted. Then it followed a little watercourse, went under a rude bridge in a wood-road, then mingled with squirrel-tracks in a denser part of the thicket. If the mink met a muskrat or a rabbit in his travels, or came upon a grouse, or quail, or a farmer's hen-roost, he had the supper he was in quest of.

VI. A LEGLESS CLIMBER.

THE eye always sees what it wants to see, and the ear hears what it wants to hear. If I am intent upon birds' nests in my walk, I find birds' nests everywhere. Some people see four-leaved clovers wherever they look in the grass. A friend of mine picks up Indian relics all about the fields; he has Indian relics in his eye. I have seen him turn out of the path at right angles, as a dog will when he scents something, and walk straight away several rods, and pick up an Indian pound-ing-stone. He saw it out of the corner of his eye. I find that without conscious effort I see and hear birds with like ease. Eye and ear are always on the alert.

One day in early June I was walking with some friends along a secluded wood-road. Above the hum of the conversation I caught the distressed cry of a pair of blue-jays. My companions heard it also, but did not heed it.

But to my ear the cry was peculiar. It was uttered in a tone of anguish and alarm. I said, “Let us see what is the trouble with these jays.” I presently saw a nest twenty-five or thirty feet from the ground in a small hemlock, which I at once concluded belonged to the jays. The birds were only a few yards away, hopping about amid the neighboring branches, uttering now and then their despairing note. Looking more intently at the nest, I became aware in the dim light of the tree of something looped about it, or else there was a dark, very crooked limb that partly held it. Suspecting the true nature of the case, I threw a stone up through the branches, and then another and another, when the dark loops and folds upon one side of the nest began to disappear, and the head and neck of a black-snake to slide slowly out on a horizontal branch on the other; in a moment the snake had cleared the nest, and stretched himself along the branch.

Another rock-fragment jarred his perch, when he slid cautiously along toward the branch of a large pine-tree which came out and mingled its spray with that of the hemlock. It was soon apparent that the snake was going to take refuge in the pine. As he made the passage from one tree to the other we sought to dislodge him by a shower of sticks and stones, but without success; he was soon upon a large branch of

the pine, and, stretched out on top of the limb, thought himself quite hidden. And so he was; but we knew his hiding-place, and the stones and clubs we hurled soon made him uneasy. Presently a club struck the branch with such force that he was fairly dislodged, but saved himself by quickly wrapping his tail about the limb. In this position he hung for some moments, but the intervening branches shielded him pretty well from our missiles, and he soon recovered himself, and gained a still higher branch that reached out over the road, and nearly made a bridge to the trees on the other side.

Seeing the monster was likely to escape us unless we assailed him at closer quarters, I determined to climb the tree. A smaller tree growing near helped me up to the first branches, where the ascent was not very difficult. I finally reached the branch upon which the snake was carefully poised, and began shaking it. But he did not come down; he wrapped his tail about it, and defied me. My own position was precarious, and I was obliged to move with great circumspection.

After much manœuvring I succeeded in arming myself with a dry branch eight or ten feet long, where I had the serpent at a disadvantage. He kept his hold well. I clubbed him about from branch to branch while my friends, with cautions and directions looked on from beneath. Neither man nor snake will trust himself to very lively antics in a tree-top thirty or forty feet from the ground. But at last I dislodged him, and, swinging and looping like a piece of rubber hose, he went to the ground, where my friends pounced upon him savagely, and quickly made an end of him.

I worked my way carefully down the tree, and was about to drop upon the ground from the lower branches, when I saw another black-snake coiled up at the foot of the tree, as if lying in wait for me. Had he started to his mate's rescue, and, seeing the battle over, was he now waiting to avenge himself upon the victor? But the odds were against him; my friends soon had him stretched beside his comrade.

The first snake killed had swallowed two young jays just beginning to feather out.

How the serpent discovered the nest would be very interesting to know. What led him to

search in this particular tree amid all these hundreds of trees that surrounded it? It is probable that the snake watches like a cat, or, having seen the parent birds about this tree, explored it. Nests upon the ground and on low boughs are frequently rifled by black-snakes, but I have never before known one to climb to such a height in a forest-tree.

It would also be interesting to know if the other snake was in the secret of this nest, and was waiting near to share in its contents. One rarely has the patience to let these little dramas or tragedies be played to the end; one cannot look quietly on, and see a snake devour anything. Not even when it is snake eating snake. Only a few days later my little boy called me to the garden to see a black-snake in the act of swallowing a garter-snake. The little snake was holding back with all his might and main, hooking his tail about the blackberry-bushes, and pulling desperately; still his black enemy was slowly engulfing him, and had accomplished about eight or ten inches of him, when he suddenly grew alarmed at some motion of ours, and ejected the little snake from him with unexpected ease and quickness, and tried to escape. The little snake's head was bleeding, but he did not seem otherwise to have suffered from the adventure.

Still, a few days later, the man who was mowing the lawn called to me to come and witness a similar tragedy, but on a smaller scale — a garter-snake swallowing a little green snake. Half the length of the green snake had disappeared from sight, and it was quite dead. The process had been a slow one, as the garter-snake was only two or three inches longer than his victim. There seems to be a sort of poetic justice in snake swallowing snake, shark eating shark; and one can look on with more composure than when a bird or frog is the victim. It is said that in the deep sea there is a fish that will swallow another fish eight or ten times its own size. It seizes its victim by the tail, and slowly sucks it in, stretching and expanding itself at the same time, and probably digesting the big fish by inches, till after many days it is completely engulfed. Would it be hard to find something analogous to this in life, especially in American politics?

John Burroughs.

THE LOOSENED CORD.

A MIDNIGHT STORY.

THE host was noted for his charming dinners. He had never been known to give them twice alike, and whoever was fortunate enough to be invited to one of his entertainments always had a delightful memory of it—something unusual, some wonder of the table, some setting original and peculiar. His combinations were carefully considered, and many were the stories told of them.

Once it was a delightful dinner in midsummer, where small vessels floated about among miniature icebergs over a sea of cobalt blue, a cool, refreshing, and unique centerpiece.

At another time the centerpiece was a large, circular, shallow vessel of brightly burnished copper, filled with water, and surrounded with small pots of growing verbenas—pink, crimson, purple, white, and variegated, fringing the miniature lake like a beautiful meadow of flowers. On the surface of the water floated delicate, blown-glass balls of various sizes, like bubbles, kept in motion by gold and silver fish swimming about among them; they caught reflections of color from the flowers, and high lights gleamed here and there, thrown from the softly glowing candles above. Now and then a gold or a silver fish would be magnified through a glass ball until it became a golden or silver bubble drifting slowly over the water. Old Russian hammered copper receptacles at the four corners of the table held towering rose-bushes in full bloom, so that the lovely guest of the evening sat in a bower of green and roses.

I.

TO-NIGHT every one was wondering what new device, what new treatment of the table,

the host had evolved. The dinner was held in a lofty studio at the top of the house, in early spring. Rare low-toned tapestries adorned the side walls. Here and there gleamed brass and copper plaques of the fifteenth century. Venetian glass glittered in antique carved cabinets. There were old musical instruments, crucifixes, paintings, arms, and bric-à-brac from every quarter of the globe. The night being warm, the great skylight had been thrown open, and above the beautiful studio there could be seen a velvety patch of sky, through which the stars twinkled softly, making a marked contrast to the rich surroundings of the interior.

The host had provided a table marked by the simplicity of its decoration—a few flowers here and there, bits of old repoussé silver of the times of the Georges, dainty glass and china, and that was all. When the company entered the room there was an exclamation, and all eyes were turned toward the chair assigned to the honored guest, for, attached to it by a most delicate silken cord, floated a miniature balloon, swayed by every current of air which passed through the great studio. It was a balloon perfect in all its details, a complete miniature of a real and possible one, not the red ball of the toy-shops. All its ropes and stays were of threads of silk, golden and delicate apple-green, crossing and recrossing one another. Beneath it, instead of the usual car or basket, hung a circular cage of gossamer-like workmanship. In it was a swinging perch on which sat a little bird that sang with the greatest delight as the balloon rocked to and fro, held in place by its single cord of silk.

It was a charming company. There was a wit, a naval officer, a contralto singer, a storyteller—but why enumerate all of that delight-

ful group? The studio and table looked lovely in the soft glow of candle-light, for neither gas nor electric light had any part in the host's entertainment. Later on, when the merriment was at its height, the voices were almost drowned by the notes of the little songster in his gilded cage. Just as the contralto had arisen to sing, the silken cord which held the balloon became loosened in some accidental manner. Hands were eagerly but vainly extended to catch it, and all eyes were turned upward as the balloon rose rapidly higher and higher out of reach. The joyous notes of the bird grew fainter and fainter until balloon and songster disappeared through the open skylight, into the patch of velvety sky studded with stars. The merriment was hushed, and it was minutes before any one spoke, and then the bronzed naval officer suggested that they should go to the roof, and see which way the wind was blowing. They ascended the winding stairs, and the officer held up his handkerchief to catch the breeze.

"The wind is due north," he said, "and by morning the little bird will be well on its way toward the Gulf."

They returned to the studio, but do what they would, the conversation flagged, and it was impossible to revive the merriment. Even the contralto's beautiful song failed to interest them, and nothing seemed to restore the spirits of the guests. Each one was thinking of the little bird; each one seemed to hear its ecstatic notes as it sailed away out of sight under the stars, and a feeling of sympathy and pity for the little prisoner came over them all.

Coffee and cigars were brought, and the ladies disappeared. The party broke up at midnight. Carriages were called, and the host bade his guests good night. He whose dinners had always been a success was forced to acknowledge that to-night's was a dismal failure, and he sat gloomy and silent, thinking of the little balloon sailing away through the blackness of the night, carrying the imprisoned songster he knew not whither.

II.

THE sun is just setting behind a beautiful old French town on the west bank of the southern Mississippi. The streets are filled—flooded with sunlight. The gardens are blooming with oleander-trees. There is the humming of bees, singing of birds, and a fragrance indescribable. The Mississippi stretches away like a great silver serpent between golden meadows and headlands on either side, until it becomes a mere glint of light in the distance. Children are playing in the streets, and dark-eyed French girls in their pure white dresses are sitting in the balconies among the flowers. Many of the

villagers are wending their way to the post-office for the evening mail, and here and there in a doorway is a gossiping group. Suddenly there is an exclamation. The children stop their play, and point to the sky. At the extreme end of the village street is a mere speck floating and swaying in the air as it comes nearer and nearer. Heads are peering out of windows. The villagers have forgotten their mail and their gossip. All is hushed. There in the yellow light something floats in the sky, coming steadily nearer. Music is heard—bird-music. Among those watching are a few brothers of the church, who cross themselves and look wonderingly at the rapidly growing speck. On it comes, larger and larger it grows, and now a miniature balloon is seen sailing slowly, swaying gracefully to and fro, but keeping almost a steady course down the quiet street. The villagers are filled with awe, as floating overhead almost within reach the little balloon passes on and on in the golden light of the dying day, with its feathered passenger sending forth its liquid, almost heavenly song.

At the other end of the village street is a group of people standing about a noble-looking house with a double piazza where flowers are blooming—cactus, crimson roses, and yellow jasmine. The group includes old and young, men, women, and little children, a cripple on crutches, and colored servants; for they are standing about the house of Rose Danian—she who has done sweet deeds of charity throughout the short life which is now slowly ebbing away. All wait in reverent mood; even the children forget their play: for all love her, and remember some kindness,—some unexpected, generous deed,—and the whole town is in mourning. In the room above, which is flooded with soft warm sunlight, stand parents and friends, and the village priest administering the last sacrament to the dying girl. Her luxuriant auburn hair surrounds her head like the aureole of a saint. Her eyes gaze into the distance with a look of rapture.

And now down the village street, through a cloud of golden dust raised by a passing vehicle, there floats gently, gently, before the house of Rose Danian, the little balloon with its half-famished singing prisoner that has made so long and perilous a journey. Caught by a sudden current of air, it drifts lower and lower until it pauses underneath the upper balcony, trembling with a slight quivering motion before the open window, in the tender, soft light of departing day. The last look of the dying girl rests on the little songster as it pours forth again and again its ecstatic song with delight indescribable, then drops from its perch. What curious coincidence causes the balloon suddenly to collapse, and to sink slowly and softly until

it lies on the balcony among the flowers, it, too, like the little bird, with life extinct?

The priest crosses himself. The weeping friends drop on their knees as the last ray of sunlight disappears, gilding here and there a roof, here and there a bit of projecting ornament. The golden light changes to a delicate apple-green; the great river gleams and glows, assuming prismatic hues reflected from the sky above. All is hushed and solemn in the twilight, as the priest says reverently, "A miracle, my children! a miracle!"

In the chapel of the church of Saint Mary, just in front of the altar, to the left of the picture of Mary and the Child, hangs suspended from a curiously wrought brass scroll, or arm, the little balloon. It was the clock-maker of the village, who, with loving care, arranged the ribs of wire which hold it out until it assumes its natural, inflated form. Underneath is the delicate cage, and, done with the tenderest love of the village taxidermist, there sits the little feathered songster on its swinging perch, its head turned upward, its throat expanded, its mouth open, apparently singing its last rapturous song. It is placed there as a token of love to mark the miracle of the dying day of sweet Rose Danian.

Children peer between the wrought-iron bars of the great gates, with their noble family escutcheon, which protect the chapel. Mothers pause, looking lovingly at the balloon with its lifeless songster. The cripple, leaning on his crutch, gazes long and wonderingly, with almost superstitious awe, at this singular token of lov-

ing remembrance. Many are the stories told of beautiful Rose Danian on this, the anniversary day of the miracle, and in the church mass has been celebrated for the repose of her soul. But now vespers are being held; great shafts of colored light are thrown through the stained-glass windows, penetrating the gloom of the darkest recesses, flooding the picture of Mary and the Child, lighting and gilding the little balloon until it looks like a floating glory, or halo. There is an odor of burning incense, the grand chant of the brothers, and the solemn swell of the organ.

Penitents young and old are kneeling in the church, but who, think you, is standing before the altar in the chapel, examining with intense interest the little balloon, while the distant voices of the brothers and the last strains from the organ die away? On whom, think you, does the sweet, pensive smile of Mary rest, and to whom does the Infant Saviour hold out his little hands?

It is the host, whose imagination has been kindled, whose heart has been touched, by the curious story of the miracle which he has heard to-day for the first time. He has found his long-lost device.

As he passes out of the church and down the village street, again the great river gleams and glows, the sunset sky flames and burns with crimson light. And as he leaves the little town behind him, now almost lost in the purple mist of twilight, he murmurs to himself, "How strange a transformation—a thought of beauty has become a miracle of God!"

Alexander W. Drake.

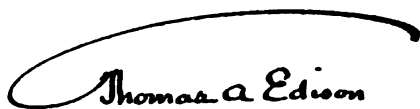

EDISON'S INVENTION OF THE KINETO-PHONOGRAPH.

In the year 1867, the idea occurred to me that it was possible to devise an instrument which should do for the eye what the phonograph does for the ear, and that by a combination of the two, all motion and sound could be recorded and reproduced simultaneously. This idea, the germ of which came from the little toy called the Zoetrope, and the work of Muybridge, Maricé, and others has now been accomplished, so that every change of facial expression can be recorded and reproduced life size. The Kinetoscope is only a small model illustrating the present stage of progress but with each succeeding month new possibilities are brought into view. I believe that in coming years by my

own work and that of Dickson, Muybridge Maricé and others who will doubtless enter the field, that grand opera can be given at the Metropolitan Opera House at New York without any material change from the original, and with artists and musicians long since dead.

The following article which gives an able and reliable account of the invention has my entire endorsement.

The authors are peculiarly well qualified for their task from a literary standpoint and the exceptional opportunities which Mr Dickson has had in the fruition of the work.

Thomas A Edison

ACCOUNT OF THE INVENTION.¹

THE synchronous attachment of photography with the phonograph was early contemplated by Mr. Edison, in order to record and give back the impressions to the eye as well as to the ear.

The comprehensive term for this invention is the kineto-phonograph. The dual "taking-

age impressed on the sensitive surface of the shell. The photographic portion of the undertaking was seriously hampered by the defects of the materials at hand, which, however excellent in themselves, offered no substance sufficiently sensitive. How to secure clear-cut outlines, or indeed any outlines at all, to-

machine" is the phono-kinetograph, and the reproducing-machine the phono-kinetoscope, in contradistinction to the kinetograph and the kinetoscope, which relate respectively to the taking and reproduction of movable but *soundless* objects.

The initial experiments took the form of microscopic pin-point photographs, placed on a cylindrical shell, corresponding in size to the ordinary phonograph cylinder. These two cylinders were then placed side by side on a shaft, and the sound record was taken as near as possible synchronously with the photographic im-

gether with phenomenal speed, was the problem which puzzled the experimenters. The Daguerre, albumen, and kindred processes met the first requirements, but failed when subjected to the test of speed. These methods were therefore regretfully abandoned, a certain precipitate of knowledge being retained, and a bold leap was made to the Maddox gelatine bromide of silver emulsion, with which the cylinders were coated. This process gave rise to a new and serious difficulty. The bromide of silver haloids, held in suspension with the emulsion, showed themselves in an exaggerated coarse-

¹ The text and pictures of this article copyright, 1894, by ANTONIA & W. K. L. DICKSON.
The photographs are by Mr. Dickson.

ness when it became a question of enlarging the pin-point photographs to the dignity of one eighth of an inch, projecting them upon a screen, or viewing them through a binocular microscope. Each accession of size augmented the difficulty, and it was resolved to abandon that line of experiment, and to revolutionize the whole nature of the proceedings by discarding these small photographs, and substituting a series of very much larger impressions affixed to the outer edge of a swiftly rotating wheel, or disk, and supplied with a number of pins, so arranged as to project under the center of each picture. On the rear of the disk, upon a stand, was placed a Geissler tube, connected with an induction coil, the primary wire of which, operated by the pins, produced a rupture of the primary current, which, in its turn, through the medium of the secondary current, lighted up the Geissler tube at the precise moment when a picture crossed its range of view. This electrical discharge was performed in such an inappreciable fraction of time, the succession of pictures was so rapid, and the whole mechanism so nearly perfect, that the goal of the inventor seemed almost reached.

Then followed some experiments with drums, over which sheets of sensitized celluloid film were drawn, the edges being pressed into a narrow slot in the surface, similar in construction to the old tin-foil phonograph. A starting- and stopping-device very similar to the one now in use was also applied. The pictures were then taken spirally to the number of two hundred or so, but were limited in size, owing to the roundness of surface, which brought only the center of the picture into focus. The sheet of celluloid was then developed, fixed, etc., and placed upon a transparent drum, bristling at its outer edge with brass pins. When the drum was rapidly turned, these came in contact with the primary current of an induction coil, and each image was lighted up in the same manner as described in the previous disk experiment, with this difference only, that the inside of the drum was illuminated.

The next step was the adoption of a highly sensitized strip of celluloid half an inch wide; but this proving unsatisfactory, owing to inadequate size, one-inch pictures were substituted on a band one and a half inches wide, the additional width being required for the perforations on the outer edge. These perforations occur at close and regular intervals, in order to enable the teeth of a locking-device to hold the film steady for nine tenths of the one forty-sixth part of a second, when a shutter opens rapidly and admits a beam of light, causing an image or phase in the movement of the subject. The film is then jerked forward in the remaining one tenth of the one forty-sixth part of a

second, and held at rest while the shutter has again made its round, admitting another circle of light, and so on until forty-six impressions are taken a second, or 2760 a minute. This speed yields 165,600 pictures in an hour, an amount amply sufficient for an evening's entertainment, when unreel'd before the eye. By connecting the two ends of the strip, and thus forming a continuous band, the pictures can be indefinitely multiplied. In this connection it is interesting to note that were the spasmodic motions added up by themselves, exclusive of arrests, on the same principle that a train record is computed independent of stoppages, the incredible speed of twenty-six miles an hour would be shown.

The advantage of this system over a continuous band, and of a slotted shutter forging widely ahead of the film, would be this, that in that case only the fractional degree of light comprised in the $\frac{1}{2760}$ part of a second is allowed to penetrate to the film at a complete sacrifice of all detail, whereas, in the present system of stopping and starting, each picture gets one hundredth part of a second's exposure, with a lens but slightly stopped down—time amply sufficient, as any photographer knows, for the attainment of excellent detail even in an ordinarily good light. It must be understood that only one camera is used for taking these strips, and not a battery of cameras, as in Mr. Muybridge's photographs of "The Horse in Motion."¹

The next step, after making the negative band, is to form a positive or finished series of reproductions from the negative, which is passed through a machine for the purpose, in conjunction with a blank strip of film, which, after development and general treatment, is replaced in the kinetoscope or phono-kinetoscope, as the case may be. When a phonograph record has been taken simultaneously with such a strip, the two are started together by the use of a simple but effective device, and kept so all through. the phonographic record being in perfect accord with the strip. In this conjunction, the tiny holes with which the edge of the celluloid film is perforated, correspond exactly with the phonographic records, and the several devices of the camera, such as the shifting of the film and the operations of the shutter, are so regulated as to keep pace with the indentation made by the stylus upon the phonographic wax cylinder, one motor serving as a source of common energy to camera and phonograph, when they are electrically and mechanically linked together.

The establishment of harmonious relations between kinetoscope and phonograph was a harrowing task, and would have broken the spirit of inventors less inured to hardship and discour-

THOMAS A. EDISON, 1893.

THE FENCERS. TWO SECTIONS OF THE KINETOSCOPIC BAND, SHOWING MINUTE GRADATIONS IN POSE.

most scrupulous nicety of adjustment has been achieved, with the resultant effects of realistic life, audibly and visually expressed.

The process of "taking" is variously performed: by artificial light in the photographic department, or by daylight under the improved conditions of the new theater, of which we shall speak. The actors, when more than one in number, are kept as close together as possible, and exposed either to the glare of the sun, to the blinding light of four parabolic magnesium lamps, or to the light of twenty arc-lamps, provided with highly actinic carbons, supplied with powerful reflectors equal to about 50,000 candle-power. This radiance is concentrated upon the performers while the kinetograph and phonograph are hard at work storing up records and impressions for future reproduction.

A popular and inexpensive adaptation of kinetoscopic methods is in the form of the well-known nickel-in-the-slot, a machine consisting of a cabinet containing an electrical motor and batteries for operating the mechanism which acts as the impelling power to the film. The film is in the shape of an endless band fifty feet in length, which is passed through the field of a magnifying-glass perpendicularly placed. The photographic impressions pass before the eye at the rate of forty-six per second, through the medium of a rotating, slotted disk, the slot exposing a picture at each revolution, and separating the fractional gradations of pose. Projected against a screen, or viewed through a magnifying-glass, the pictures are eminently lifelike, for the reason that the enlargement need not be more than ten times the original size. On exhibition evenings the projecting-room, which is situated in the upper story of the photographic department, is hung with black, in order to prevent any reflection from the circle of light emanating from the screen at the other end, the projector being placed behind a curtain, also of black, and provided with a single peep-hole for the accommodation of the lens. The effect of these somber draperies, and the weird accompanying monotone of the electric motor attached to the projector, are horribly impressive, and one's sense of the supernatural is heightened when a figure suddenly springs into his path, acting and talking with a vigor which leaves him totally unprepared for its mysterious vanishing. Projected stereoscopically, the results are even more realistic, as those acquainted with that class of phenomena may imagine, and a pleasing roundness is apparent, which, in ordinary photographic displays, is conspicuous by its absence.

Nothing more vivid or more natural could be imagined than these breathing, audible forms, with their tricks of familiar gesture and speech. The inconceivable swiftness of the photographic

agement than Edison's veterans. The experiments have borne their legitimate fruit, and the

"HEAR ME, NORMA." KINETOSCOPIC VIEWS, SHOWING FIVE SECTIONS OF THE STRIP.

successions, and the exquisite synchronism of the phonographic attachment, have removed the last trace of automatic action, and the illusion is complete. The organ-grinder's monkey jumps upon his shoulder to the accompaniment of a strain from "Norma." The rich strains of a tenor or soprano are heard, set in their appropriate dramatic action; the blacksmith is seen swinging his ponderous hammer, exactly as in life, and the clang of the anvil keeps pace with his symmetrical movements; along with the rhythmical measures of the dancer go her soft-sounding footfalls; the wrestlers and fencers ply their intricate game, guarding, parrying, attacking, thrusting, and throwing, while the quick flash of the eye, the tension of the mouth, the dilated nostrils, and the strong, deep breathing give evidence of the potentialities within.

The photographic rooms, with their singular completeness of appointment, have been the birthplace and nursery of this invention; and the more important processes connected with the preparation and development of the film, together with other mechanical and scientific devices, are still carried on in this department. The exigencies of natural lighting incident to the better "taking" of the subjects, and the lack of a suitable theatrical stage, however, necessitated the construction of a special building, which stands in the center of that cluster of auxiliary houses which forms the suburbs of the laboratory, and which is of so peculiar an appearance as to challenge the attention of the most superficial observer. It obeys no architectural rules, embraces no conventional materials, and follows no accepted scheme of color. Its shape is an irregular oblong, rising abruptly in the center, at which point a movable roof is attached, which is easily raised or lowered at the will of a single manipulator. Its color is a grim and forbidding black, enlivened by the dull luster of many hundred metallic points; its material is paper, covered with pitch and profusely studded with tin nails. With its flapping sail-like roof and ebon hue, it has a weird and semi-nautical appearance, and the uncanny effect is not lessened when, at an imperceptible signal, the great building swings slowly around upon a graphited center, presenting any given angle to the rays of the sun, and rendering the operators independent of diurnal variations. The movable principle of this building is identical with that of our river swinging-bridges, the ends being suspended by iron rods from raised center-posts. This building is known as the Kinetographic Theater, otherwise the "Black Maria." Entering, we are confronted by a system of lights and shades so sharply differentiated as to pain the eye, accustomed to the uniform radiance of the outer air. Later we find that the contrasts are effected by the total

exclusion of light from the lower end of the hall, heightened by draperies of impenetrable black, against which stands out in sharp relief the central stage, on which are placed the kinetographic subjects, bathed in the full power of the solar rays pouring down from the movable roof. This distribution of light and shade is productive of the happiest effects in the films, as the different figures are thrown into the broadest relief against the black background, and a distinctness of outline is achieved that would be impossible under ordinary conditions.

At the other end of the hall is a cell, indicated by an ordinary door and an extraordinary window, glazed in panes of a lurid hue, which gives the finishing touch to the Rembrandtesque character of the picture. The compartment is devoted to the purpose of changing the film from the dark box to the kinetographic camera, being provided with a special track, running from the mysterious recesses at the back of the stage to its own special precincts, where fresh films are substituted for the ones already employed. The processes of development, etc., are performed in the main photographic building.

The *dramatis personæ* of this stage are recruited from every characteristic section of social, artistic, and industrial life, and from many a phase of animal existence. One day chronicled the engagement of a troupe of trained bears and their Hungarian leaders. The bears were divided between surly discontent and a comfortable desire to follow the bent of their own inclinations. It was only after much persuasion that they could be induced to subserve the interests of science. One furry monster waddled up a telegraph-pole, to the soliloquy of his own indignant growls; another settled himself comfortably in a deep arm-chair, with the air of a postgraduate in social science; a third rose solemnly on his hind legs and described the measures of some dance, to the weird strains of his keeper's music. Another licked his master's swarthy face, another accepted his keeper's challenge, and engaged with him in a wrestling-match, struggling, hugging, and rolling on the ground.

Of human subjects we have a superfluity, although the utmost discrimination is essential in the selection of themes. The records embrace pugilistic encounters, trapeze and cane exercises, dancing, wrestling, fencing, singing, the playing of instruments, speech-making, the motions involved in the different crafts, horse-shoeing, equestrianism, gardening, and many others.

We have yet to speak of the microscopic subjects, a class of especial interest, as lying outside of the unaided vision of man. In the treatment of these infinitesimal types, much

"THE RABBIT SHOP."

difficulty was experienced in obtaining a perfect adjustment so as to reproduce the breathing of insects, the circulation of blood in a frog's leg, and other similar processes of nature. The enlargement of animalculæ in a drop of stagnant water proved a most exacting task, but by the aid of a powerful lime-light, concentrated on the water, by the interposition of alum cells for the interception of most of the heat rays, and by the use of a quick shutter and kindred contrivances, the obstacles were overcome, and the final results were such as fully to compensate for the expenditure of time and trouble. We will suppose that the operator has at last been successful in imprisoning the tricky water-goblins on the sensitive film, in developing the positive strip, and placing it in the projector. A series of inch-large shapes then springs into view, magnified stereoptically to nearly three feet each, gruesome beyond power of expression, and exhibiting an indescribable celerity and rage. Monsters close upon one another in a blind and indiscriminate attack, limbs are dismembered, gory globules are tapped, whole battalions disappear from view. Before the ruthless completeness of these martial tactics the Kilkenny cats fade into insignificance. A curious feature of the performance is the passing of these creatures in and out of focus, appearing sometimes as huge and distorted shadows, then springing into the reality of their own size and proportions.

Hitherto we have limited ourselves to the

delineation of detached subjects, but we shall now touch very briefly upon one of our most ambitious schemes, of which these scattered impersonations are but the heralds. Preparations have long been on foot to extend the number of the actors and to increase the stage facilities, with a view to the presentation of an entire play, set in its appropriate frame.

This line of thought may be indefinitely pursued, with application to any given phase of outdoor or indoor life which it is desired to reproduce. Our methods point to ultimate success, and every day adds to the security and the celerity of the undertaking. No scene, however animated and extensive, but will eventually be within reproductive power. Martial evolutions, naval exercises, processions, and countless kindred exhibitions will be recorded for the leisurely gratification of those who are debarred from attendance, or who desire to recall them. The invalid, the isolated country recluse, and the harassed business man can indulge in needed recreation, without undue expenditure, without fear of weather, and without the sacrifice of health or important engagements. Not only our own resources but those of the entire world will be at our command. The advantages to students and historians will be immeasurable. Instead of dry and misleading accounts, tinged with the exaggerations of the chroniclers' minds, our archives will be enriched by the vitalized pictures of great national scenes, instinct with all the glowing personalities which characterized them.

OLD DUTCH MASTERS.

ADRIAAN VAN OSTADE (1610-1685).

It is said that Millet's admiration of the Dutch masters amounted to veneration. A friend who knew intimately the great peasant painter showed me an etching by Van Ostade from which it is plain to see that Millet borrowed somewhat for his famous picture of "The Angelus"; for Van Ostade, like Millet, painted scenes taken from the ordinary peasant life of his neighborhood. The etching represents a poor peasant family gathered about a frugal meal, and in the act of giving thanks; from the simple treatment, the touching sentiment, and the genuine and unaffected feeling, truly nothing could be more calculated to move one with inward meltings of humanity and compassion. Millet held this work in particular esteem, and those who know his "Angelus" will recognize in this etching the original of the young man standing in a devout attitude, holding his hat in both his hands, as well as the charming attitude of the woman, with bent head and clasped hands.

Adriaan Jansz Van Ostade was born at Haarlem in 1610, and continued to live there until his death in 1685. He was formerly supposed to be a native of Lübeck, to have painted much at Amsterdam, and to have died there; but this is now found to be erroneous. His father, who is said to have been a weaver, was of no inconsiderable standing in his community, and had a family of eight children, whom he brought up in good circumstances. Adriaan was the third, and his brother Isack—who also became a painter of repute—was the youngest. The name Ostade was derived from a small hamlet of that name (now called Ostedt), near Eindhoven.

Adriaan entered the school of Frans Hals when that master was in the full vigor and practice of his art. Adriaan Brouwer was then also studying under the same master. On the completion of his apprenticeship he established himself in a shop of his own in his native town, where he labored with industry and lived in good circumstances. He had several pupils, prominent among whom were his brother Isack, and, as is supposed, the more famous Jan Steen. In more than one picture Van Ostade has given us a view of an artist's workshop of the time. In the Amsterdam museum there is one before which I have often stood; the painter

is seated at his easel, while his man is grinding colors in the background. One can feel the atmosphere of meditation and perfect composure that reigns there. The broad, high window, latticed with small panes ornamentally disposed, admits a soft and quiet light, giving a sense of seclusion, and the feeling of a calm and cool retreat from the bustle and glare of the outside world. Above the painter is a sheet distended against the ceiling, to prevent any particles of dust falling therefrom and settling upon his work, for the Dutch painters generally were very particular in this respect. About him are a few objects of use, such as a lay figure, a cast from an antique head, etc. His was essentially a *workshop*, and had not yet assumed the more dignified appellation of studio, nor, like the majority of such, was it arranged for display. This picture shows Van Ostade at work in his own shop.

In the Louvre may be seen the portrait of the painter himself, with his wife and family of six children, and his brother Isack and his wife—ten very remarkable likenesses, all full-length figures, and charmingly composed, forming a beautiful picture upon a panel 32 inches wide by 28 inches high. It is one of his largest works. I have heard artists of distinction speak of this painting as one of the rarest pieces of the Louvre. The black draperies in it are admired as being among the best instances of the rendering of this most difficult of colors. M. Charles Blanc, in his "Lives of the Dutch Painters," observes that although Van Ostade—owing probably to the taste of his patrons more than to his own inclination—painted many scenes of tavern life, his own way of life was essentially a gentle and a decent one; in which conclusion one must certainly agree on beholding this charming portrait-piece of himself and family, and especially the kind and honest face of the master, tender and refined, reverent, and more grave than gay.

"The Village Schoolmaster" of the Salon Carré is one of his most remarkable interiors. It is a little picture 13 by nearly 16 inches, and is valued at \$33,000. The affinity between some of Van Ostade's interiors and those of Rembrandt have not unnaturally led some writers on Dutch art to suppose that Adriaan worked among the great master's pupils; but this was not the case. He often produces in his pictures those deep golden tones which

THE FISH MARKET. BY ADRIAAN VAN OSTADE.

characterize the works of Rembrandt, while in many of his interiors the lights and shadows are as subtly managed. He is an independent figure, however, and one of the exemplifiers of the most flourishing period of Dutch art.

"The Fish Market," which I have engraved, is also an admirable example, and hangs, as does the portrait group, in the long gallery of the Louvre. It measures $16\frac{1}{4}$ inches high by $13\frac{3}{4}$ inches wide. It would be impossible to describe its wondrous color—the warm, humid atmosphere and mellow golden light in which it is steeped. It is an admirable instance, also, of how well the master could bind together a mass of shadow and a mass of light, and must have been the fruit of much observation and reflection. In respect to its light and shade, everything is subservient to the man and fish, which receive the strongest lights and shadows, though they are not, like the background, in the sunlight. This is contrary to natural laws, especially out of doors; but this was the law of that lighting which was peculiar to the school, and which may be traced from the early Italians down; that is, a central point of light and of dominant interest around which are disposed minor points and planes of light, all in perfect relation of color and value to the plane or focus occupied by the object of main interest. The Dutchmen were not so very realistic in adhering to the facts of nature as many are in the habit of supposing; they studied nature, but chose to light her out of their own heads. The law of values and of chiaroscuro they made use of as an artifice; understanding its principle, they made their own application of it, and valued it as a means by which to give a touch of mystery and romance to their forms.

I once heard an art-critic object to "The Fish Market" on the score of the subject. He doubted whether any lady would care to have it in her parlor, fish being at best an unpleasant

thing to have about. But to object to such a picture on the ground of its subject is by no means to show overflowing good sense, but rather a false and vitiated taste; certainly an affectation of refinement, and a want of sympathy, which is the most unpardonable of sins in the critic. The sentiment in Dutch painting is always charming and never repulsive, because it deals with light and shade and color. This is in truth its never-varying theme. In Dutch art the subject is generally its least important consideration. There is no well-determined subject, because anything would serve to illustrate what the Dutchman sought to tell. What he should paint did not concern him so much as how he should paint. He is enamored of the world in its exterior aspect, and chooses things at random, as it were, as instances in proof that we are immersed in beauty could our eyes behold it. To judge the faces of Van Ostade's men and women ugly, however, is to regard their features merely, and to fail to perceive their air, which is their essence. Often the good nature of a countenance gives it a certain air which is more amiable than beauty. The beauty of a Van Ostade face is that it is warm with expression. It is a beauty that speaks to the imagination, and conducts us from the surface to regard the soul within. Van Ostade's power of seizing character is certainly equal to Rembrandt's in its subtlety and depth of insight.

None of the Dutchmen was more skilful in composition than Van Ostade, and none of better taste in arrangement; and the action of his figures is appropriate and never overstrained. He has great deftness of touch and breadth of handling, together with a large and serious manner, qualities which, combined with his refined sense of color and his feeling for values, place him in the foremost rank of the Dutchmen.

T. Cole.

VISIBLE SOUND.

IF human voice may on the plastic disk
Breathe into being forms of beauty rare,
And we may see the voices that we love
Take shape and color, infinitely fair,

May not the lofty mountains and the hills
Be voice of God; his song, the gentle flowers;
His chant, the stars' procession, and alas!
His only sigh, these human hearts of ours?

Ellen Knight Bradford.

A LOAN OF HALF-ORPHANS.

A NARRATIVE IN TWO PARTS. PART II.

By Thomas A. Janvier, author of "Color Studies," "An Embassy to Provence," etc., etc.

I.

TREATING OF MRS. LATIMER'S GLOOMY FOREBODINGS, AND OF MR. LATIMER'S HIGH RESOLVE.

PHILOSOPHERS and others have observed with interest that even the gentlest of women will rise to valorous heights of combative endeavor rather than submit tamely to being placed in the wrong. Mrs. Latimer was no exception to this rule; indeed, it is not going too far to say that her disposition to maintain the doctrine of feminine infallibility, with especial reference to the incarnation of that dogma in herself, was rather unusually strong.

Naturally, therefore, when Mr. Latimer had the temerity to assert that the nocturnal noises which occasioned her so much uneasiness had no existence outside of her own fancy, all her latent fighting spirit was aroused. In order to prove that she was in the right, she would have braved a whole arena-full of assorted wild beasts with Early Christian equanimity, and her strongest wish was that something convincingly desperate—even, if necessary, the sacrifice of her own life—would happen in a hurry: to the end that Mr. Latimer, simultaneously losing her and getting the worst of the argument, might be confounded and utterly cast down.

Her desire for haste in the production of this decisive catastrophe was due to the fact that Mrs. Haverwood's home-coming—the time for which had almost arrived—would be the signal for them to vacate that lady's home; with which departure, of course, every possibility of proving that the noises were not the creation of her own fancy would be gone. And she knew (although so young a bride, she already had learned a few of the eternal truths of matrimony) that Mr. Latimer then would be in a position to say things at her to the end of their married days.

Therefore did it seem to Mrs. Latimer as though the stars in their courses were fighting against her when what she believed would be her last night in Mrs. Haverwood's mansion came to a tranquil ending, and the mystery still remained unsolved. This was the night of Saturday, October 2; and Mrs. Haverwood, if her

steamer came in on time, was due to arrive on Sunday, October 3. Postal cards already had come from the remaining parents of several of the half-orphans, announcing their intention to keep the appointment which Mrs. Haverwood had made with them, by letter, for Monday, October 4; and one parent actually had arrived in person. This was Mrs. Poundweight, who proved to be a most spirited young widow, of not a day over five-and-thirty, clad with a vehement gaiety which threw the historically brilliant costume of the Queen of Sheba—especially in view of the facts that that royal personage was not a widow and the mother of a nearly grown up daughter—completely into the shade. Oddly enough, Mrs. Poundweight had come in ahead of schedule time, not because she was at all in a hurry to clasp again her daughter to her heart, but because she wanted to make arrangements for transferring Susan directly to another half-orphan home. This was a matter, of course, in which Mrs. Latimer could not take any action; she could only advise the Widow Poundweight to call, in company with the other parents, on Monday morning at eleven o'clock; the day and hour which Mrs. Haverwood had named. Finally, Mr. Latimer had reëngaged their old apartment in Irving Place, and had sent thither all their luggage save a hand-bag in which were necessities for the night. If for any reason Mrs. Haverwood failed to arrive on time, they would continue in charge of her eccentric household for the brief period that her coming might be delayed. If she did arrive on time, they had only to pick up the hand-bag, and—leaving their palace and also their load of half-orphans and cats forever behind them—come down-town to their own modest quarters on a Madison Avenue car.

In point of fact, Mrs. Haverwood did not arrive on time. On Saturday morning an easterly gale of unusual severity set in, and through Saturday night and Sunday and Sunday night this gale continued with a constantly increasing violence. Mr. Latimer—who had designed a silver-plated table-service for one of the big transatlantic liners—knew a good deal about ships and storms and that sort of thing, and he said on Saturday evening that if the gale held, the *Cantabria*, the steamer on which Mrs. Haverwood was returning, would

have to stand out to sea, and certainly could not come into port before Monday. As the gale did hold, this presumably was what the *Cantabria* did; at any rate, she did not come across the bar on Sunday, nor could any news of her having been signaled be obtained at her dock.

In the sober facts of this situation there was no cause for serious alarm. But Mrs. Latimer, by touching up the facts with her imagination, succeeded by noon on Sunday in wrecking the *Cantabria* on the Jersey coast; and by dinner-time she had Mrs. Haverwood washed ashore with seaweed in her hair, and with exanimate accessories of the most heartrending character. Having thus created a situation that entirely justified worrying, Mrs. Latimer proceeded to worry over it in a gyratory fashion—that is to say, working around in a circle and so coming again and again to the same dismal possibilities—that nearly drove Mr. Latimer wild. The most dismal of these possibilities—and the one, of course, to which she came back most frequently—was that as the result of Mrs. Haverwood's untoward decease they would be saddled with the care of the sixteen cats and the eight half-orphans for the remainder of their lives.

In combating this absurd position Mr. Latimer's rational statement and logical deduction alike were wasted. At the best of times cold facts and colder logic were little to Mrs. Latimer's liking; but when she fairly was under the domination of an imaginary woe her attitude toward these bases of reason in the human understanding was that of absolute disdain. It was a waste of words, therefore, for Mr. Latimer to assure her—on the impossible supposition that they would succeed to the administration of a private charity in which they had absolutely no inheritable right—that all the cats, even though they had nine lives apiece to start with, certainly would be dead in a few years' time; and that in a similarly short period all the half-orphans would be women grown. Mrs. Latimer did not attempt to deny these assertions, but when they were made she shifted her ground to lamentations over Mrs. Haverwood's damply tragic fate; and then—just as Mr. Latimer, shifting his sphere of cheery encouragement, had landed Mrs. Haverwood safely from a life-boat, or had brought her triumphantly through the breakers by means of a breeches-buoy—back she would come again to the incubus of cats and half-orphans which was destined to weigh upon them until it brought down their prematurely gray hairs in sorrow to the grave.

What with the somber weather without, and Mrs. Latimer's blood-curdling forebodings within, Mr. Latimer was driven almost to de-

spair. He was naturally a cheerful young man, and to have horrors fired at him this way at point-blank range was calculated, he felt, if persisted in, to make him old before his time. Moreover, the intense unreasonableness of it all vexed him beyond words—at least, beyond words that he could use without being very impolite indeed. Therefore,—much as he usually enjoyed Mrs. Latimer's society, and fond as he usually was of the sound of her voice,—he was most sincerely thankful when at last the coming of bedtime brought a promise of temporary relief.

That the relief would be only temporary Mr. Latimer very well knew. Experience had taught him that when Mrs. Latimer got into one of these wrought-up moods he could count as certainly upon her smelling smoke, or hearing a burglar, or both, at various periods in the night as he could count upon the sunrise of the following day. However, he was a little wrought-up himself—and his very last conscious act of volition before he dropped off to sleep was most highly to resolve that Mrs. Latimer might smell smoke in every room in the house; and might hear burglars from the cellar to the roof, inclusive, without his budging one inch from his bed to investigate her alleged igneous and latrocinate phenomena. This smoke-smelling and burglar-hearing nonsense, he decided in his sleepy wrath, had gone far enough. The time had come for calling a halt.

II.

HOW MRS. LATIMER, EXPOSING HERSELF TO ASSASSINATION, CAUGHT A PAIR OF LOVERS KISSING THROUGH THE BARS.

HER head being full of grizzly phantasms, and her heart of dark forebodings of a dismal future crowded to repletion with recalcitrant half-orphans and unnecessary cats, Mrs. Latimer did not easily get to sleep; and when she did get to sleep it was only to continue in a still more startling fashion the same gloom-stricken train of thought in her dreams.

Out of this troubled and fitful slumber she awakened suddenly, and with the feeling of having heard a strange and affrighting sound; but whether the sound had been a reality or a part of a dream she could not tell. Outside, the easterly storm still continued with great violence, the rain falling heavily, and the wind surging in angry gusts which came with a roar and passed away with a moaning wail like the cry of a lost sinful soul. Instantly the thought occurred to her of the *Cantabria* crashing to fragments upon the Jersey sands; with the sequent thought of poor Mrs. Haverwood tossing about in the breakers with unbecoming seaweed tangled in her hair. She would have

got along to all the rest of the horrors in her cycle of dreary thoughts but that there came just then one of those curious lulls of a few seconds of absolute silence in the storm; and while this lull lasted she was convinced that she heard, through the partly opened front window, the sound of a man's voice speaking in a guardedly low tone. In an instant her memory flashed back to the precisely similar occurrence on the first night that they had dwelt in Mrs. Haverwood's marble halls; and in another instant she was shaking Mr. Latimer vigorously in order to get him awake.

Mr. Latimer did not waken easily, and his first sleepy words showed that the high resolve which he had taken as a sort of moral night-cap still held firm.

"No," he said, "I *don't* smell smoke, and I don't believe you do either. Let me alone!"

"Ridley! Ridley dear!" Mrs. Latimer cried in her low but intense tones. "It is n't smoke. Wake up!"

"I won't," replied Mr. Latimer, resolutely, and turned over on his other side.

"But you must; I tell you you *must* wake up, Ridley! There 's the same burglar down-stairs that we heard the very first night we came here — away back in last June."

"Nonsense!" said Mr. Latimer, drowsily; and then slowly, and more and more drowsily, added: "He simply can't have been there all this time, you know. We could n't have boarded and lodged him all summer, without knowing that he was there."

The last word or two of this utterance scarcely was articulate, and as Mr. Latimer ceased speaking, his deep and regular breathing gave proof that he had surrendered himself again to sleep.

Times and seasons there were in Mrs. Latimer's life when dove-like gentleness and sweetness were her dominant characteristics; but the moment when Mr. Latimer, for the first time wholly revolting against her authority, rolled over and went to sleep that way — leaving behind him so bitter a legacy of derisive words — was not a time and season of this sort. So lively was her resentment that, had she not been in a recumbent position, she certainly would have danced with rage. What she actually did do, after a moment or so of reflection, — turning rather white, and her hands and feet going rather cold as she did it, — was to get right up out of bed, slip on a wrapper and her slippers, take the dark lantern from its accustomed place on the table by the bedside, and, thus accoutered, resolutely set off down-stairs to investigate the dangerous situation to its most perilous depths. At that moment there was not in her mind a trace of the Susan Poundweight hypothesis; what she confidently expected to

encounter was a murderous burglar, or gang of burglars, who would assist her to round on the rebellious Mr. Latimer by slaying her on sight. Thrills of deliciously sorrowful joy shot through her as she thought how, in the morning, Jane Spicer — it would certainly be Jane, and she knew precisely how Jane would make the announcement — would knock at the door of his chamber, and would say respectfully: "If you please, sir, Mrs. Latimer is in the front kitchen, a-welterin' in her gore!"

Although in so fine a glow of righteous resentment, Mrs. Latimer did not dash recklessly upon the violent death which she fully believed was lurking in wait for her in the lower regions of the house. With the lantern tight-closed, that not a ray of light from the bull's-eye might betray her presence, she tiptoed down-stairs with as cautious a silence as though she herself was the burglar of whom she was in search. Even without regard to the deadly peril upon which she thus cautiously was precipitating herself, there was a strong element of the horrible to one of her highly imaginative temperament, in thus stealing down the dark stairways, and along the dark passages, in the depths of that wildly tempestuous night. All the more did the moanings and wailings of the wind sound to her like the cries of lost souls in agony; and she also found a painfully close resemblance to the hissings of serpents (which reptilian sibilation, by the way, she never actually had heard) in the seething downpour of the rain. On the last stairway, leading to the basement, she shifted the ground of her imaginative horrors to the region of Wagnerian grand opera, and so came to the kitchen-door in the key of the Walpurgis Night.

Even as she advanced along the passage, she was confident that she heard the sound of voices, and as she opened the kitchen-door this sound became unmistakably the murmur of a conversation carried on in low and very earnest tones. The kitchen was inky dark; but the sound obviously came from the farther side of the room — the side toward the street — and the sharp puff of cold air which blew in her face as she unlatched the door was evidence that one of the windows was open. The faint light from a distant street lamp made the windows slightly luminous, so that the tracery of the sashes and of the heavy outer grating of iron bars was distinguishable; and against one of them there was vaguely outlined a mass of blackness that was strongly suggestive of two human forms.

In the instant of these several discoveries, Mrs. Latimer felt that at last she had got hold of the mystery which had vexed and perplexed her all summer long; and, such is the contradictoriness of human nature, and so promptly does satisfaction merge itself in satiety, that her

strongest desire in that same instant was to let go of it with all possible speed. Somehow—now that she actually possessed the desired opportunity for self-immolation—there was a decided weakening of her resolve to cast herself, as it were, to the lions in order to confound Mr. Latimer's incredulity, and to establish her own creed. On the other hand, failing this simple and heroic method of dealing with the situation, the only other reasonable course open to her was the equally simple but not at all heroic one of running away.

It is unnecessary to speculate as to which of these courses Mrs. Latimer would have adopted, inasmuch as modifying conditions arose which resulted in her rejecting them both. In the critical moment that she stood hesitating, with her hand upon the door-knob, the murmur of conversation ceased, and she fancied that the heads of the figures, looming against the dim light, came closely together; and then, most unmistakably, above the sound of moaning wind and hissing rain, came in quick succession the sound of a series of those honest kisses, as hearty as they are innocent, which are described most accurately by the honest old word "buss."

Even had Mrs. Latimer been in the habit of arriving at conclusions by the slow process of ratiocination, she would not have lost much time in deciding that in the presence of so much frank love-making she was in no peril of her life. Being accustomed, however, to get at results by the far quicker process of intuition, she discharged all fear from her soul at the sound of the second kiss; and by the seventh—the volley was fired with great rapidity—she had brought her lantern to bear, and had shot back the slide. And then, revealed in the circle of light, she saw Susan Poundweight and the young plumber kissing each other as hard as ever they could kiss through the iron bars.

Of the three persons who simultaneously shared this curiously complete surprise, the person who showed to the least advantage was the plumber. Mrs. Latimer, who, being hidden behind the glare of the lantern, really did not show at all, stood her ground with a dignified firmness; and Susan Poundweight, though turning a flaming crimson, manifested a dogged disposition to fight for her love-making rights with a stolid energy that was in keeping with her stolid but by no means weak nature, and with her slow habit of mind. But the plumber very obviously was scared almost out of his seven senses, and but for Susan's firm restraining grip upon him through the bars most certainly would have run away.

"Don't you budge, John," said Susan, stoutly. "You ain't doin' any harm, an' he ain't goin' t' hurt you."

"You wicked girl!" cried Mrs. Latimer,

hotly. "Now I know why you broke the plumbing all over the house."

"Oh, I did n't know it was you, ma'am!" Susan answered with a little gasp, and her vivid crimson changed to a pasty paleness. In her sudden rush of emotion her clutch upon the plumber relaxed, and that young man—to his shame be it spoken—twitched his arm away from her nerveless grasp, and disappeared instantly into the stormy darkness of the night.

To be deserted by a plumber under circumstances so delicately critical would have caused a young woman of less stable temperament to collapse immediately; but Susan Poundweight,—having a backbone that in the matter of toughness would compare favorably with the yew long-bow of her Saxon ancestors,—so far from collapsing because of the plumber's ignoble defection, rallied gallantly her forces for the fray.

"I ain't a wicked girl!" she said resolutely. "I did break them things, and I did it a-purpose—'cause it was 'most the only way me an' John could get a chance to lay eyes on each other. But John he made th' bills jus' as little as he dared, for fear o' your ketchin' on t' what we was up to; an' he 's kep' a stric' account of every cent every one o' them breaks cost, an' as soon 's we 're married we 're goin' to pay it all back, fair an' square." Susan paused for a moment, and then, with much less confidence and in decidedly apologetic tones, she added: "John he ought n't to a-run off that way. He was n't doin' anythin' he had n't a perfec' right to,—we bein' promised,—but someways, I s'pose, he can't help it, for he ain't got th' spunk of a cat. Now that 's the whole story. And I ain't a wicked girl, and I ain't done nothin' I 'm ashamed of—or nothin', I guess, you would n't 'a' done too if you 'd been in my shoes. So, there!"

Had Susan presented this combined Declaration of Independence and Bill of Rights on the night when Mrs. Latimer first caught her vigilant (yet knew not that her vigil was for the sweet sake of Love) the chances are that the outcome of the situation would have been all that any brace of lovers reasonably could have asked. And even had the discovery come only one night earlier,—that is to say, ere Mr. Latimer had flung to the breeze his rebel flag,—Mrs. Latimer's disposition toward the young people, when she had recovered a little from the first shock of her surprise, probably would have been that of rather effusive friendliness. But if ever Love shamefully neglected his duty, it was in permitting the twist of ill-fortune by which Susan's passion for the plumber was discovered on this most ill-starred night of all the nights in the year: when Mrs. Latimer's honeymoon, which, for some little time past, had

been dropping rather rapidly toward the horizon, at last had set luridly in storm-clouds of wrath. Because of this conjunction of malignant astral principles, and with all the bitterness of her bitter mood upon her, Mrs. Latimer spoke; and her words, temporarily, at least, were the words of doom.

"Susan Poundweight," she said in tones of great severity, "it is useless for you to try to brazen this matter out by denying your wickedness. You have been wicked in every possible way. The injury that you have done to Mrs. Haverwood's property is almost the same thing as stealing. For months you have lived a life of deception that has been one long acted lie. Nothing could be worse than your conduct has been. And you have done all this wickedness"—Mrs. Latimer's tone here became very bitter—"for the sake of a man who deserts you at the very first sign of danger and trouble, and who certainly,"—here Mrs. Latimer's tone not only was bitter, but her utterance was broken by half-hysterical sobs,—"*who certainly will not be half a year married to you—if ever you are so unfortunate as to marry him at all—before his love for you will have disappeared utterly, and only his cruel selfishness will remain.* O Susan, Susan! believe me, no man is worthy of a woman's love! Take warning by—I mean, be warned in time by me!"

At the beginning of this address, during that portion of it which was charged with condemnation of herself, Susan listened in stolid silence; but as it shifted into vilification, and that vilification of her lover, she bristled, and was about to speak with a good deal of energy, when its sudden ending in what evidently was most earnest exhortation and warning so changed its whole complexion that she was brought completely to a stand. In the moment or two of silence which therefore ensued, Mrs. Latimer a little recovered her composure; and so was able to add to her judicial review of the crime a tentative sentence of the criminal at the bar.

"It is useless, Susan," she said coldly, "to discuss this matter now. If Mrs. Haverwood, whose kindness you have repaid with such horrid ingratitude, has not perished at sea in this dreadful storm, she probably will return to-morrow; in any event, your mother will certainly be here. To them I shall leave the painful duty of inflicting upon you a punishment severe enough to be in keeping with your crime. But it is my intention, Susan,"—here Mrs. Latimer paused as though putting on the black cap,—"*that when Mrs. Haverwood comes she shall be made aware of my horror of your outrageous conduct by finding you—bagged.*

"Now, close the window, and go immediately to your room, and to bed. I will not mock you by wishing you a good-night."

Consistency not being, perhaps, the most conspicuous jewel in Mrs. Latimer's crown of perfect womanhood, she did not adopt the Roman-matron policy of severity that might have been expected of her when she returned to her bed-chamber, and there found the rebellious Mr. Latimer—whom, but a moment before, she had been lashing so savagely over the back of the evanescent plumber—still flying, in a passive fashion, his flag of successful rebellion by continuing to sleep the sleep of the unjust.

Having gone down-stairs resolved to welter in her own gore in Mrs. Haverwood's kitchen for the express purpose of making her husband uncomfortable, and then having come up-stairs again in such an anticlimax sort of way,—neither with her shield, nor upon it; and absolutely hale and goreless,—Mrs. Latimer certainly would have preserved the unities of the situation had she stuck a knife into Mr. Latimer, or set fire to the house. Failing to engage in consistent action of so radical a sort, the very least that was to be expected of her was absolute silence toward Mr. Latimer that night, and in the morning—in the event of her speaking to him at all—a cold and bare statement of the events which had taken place during his guilty sleep.

But what Mrs. Latimer actually did—so far from slaying Mr. Latimer, or making him the central feature of a conflagration, or ignoring him by going to sleep in dignified silence—was to nudge him gently into wakefulness, and to say with persuasive eagerness: "*Ridley! Ridley dear! You really must rouse up and listen. I've got the most delightful thing to tell you that you ever heard!*" And then she went ahead under high pressure, and with energetic diffuseness told him the whole story from beginning to end.

By the time that Mrs. Latimer had finished her story-telling it was too late to go all the way back to Mr. Latimer's misconduct and make a regular quarrel out of it. Indeed, not being at all a malice-bearing sort of a person, by that time she had so far completed her moral change of front that she had forgiven him his crime, and even, in a feminine way, had forgotten it: that is to say, she had dropped it down into one of the remote chambers of her mind, where (stored like fixed ammunition) it would remain until his commission of some other crime should induce its sudden production and vigorous use as an instrument of castigation and reproof. To all intents and purposes, however, he was entirely restored to her good graces, and even to her affection: for what young woman of romantic and imaginative temperament could tell the story of such a tender, yet mettlesome, attachment as was this of Susan's and the plumber's,—of faucets broken and gas-brackets shattered to

gain a soulful glance; of wash-tubs wrecked to win a loving word; of trysts by night, and kisses 'twixt iron bars,—and not, in telling it, herself thrill all responsive to the soft phrase of love? Certainly not a young woman in the least like Mrs. Latimer; and by the time that she had talked the matter all out, and was ready to go to sleep (which was some little time after Mr. Latimer was quite ready to have her go), her disposition toward her husband was that of the most commendably tender affection; while her feeling toward Susan Poundweight had changed from bows and bowstrings to an earnest desire to help put up the banns.

III.

EXHIBITING MRS. LATIMER'S CHANGE TO A KINDLIER MOOD, AND EXPLAINING SUSAN POUNDWEIGHT'S WILLINGNESS TO BE BAGGED.

THE morning following this tempestuous and generally thrilling night was such an outburst of brilliant sunshine as comes only in New York in October, and even then only on the heels of an easterly storm. To be melancholy in such an atmosphere simply was impossible. With a long swing of her mental pendulum, Mrs. Latimer swung all the way across from almost despairing despondency to an entirely exultant joy—and so came down to breakfast in the spirit of a very pretty and ladylike giantess refreshed with a dry atmospheric champagne.

Under these spirited conditions all her dark phantoms of the night were banished, and only agreeable concepts found place in her mind. She no longer pictured Mrs. Haverwood as tossing about in the breakers on a sandy coast with an agonized face and her hair tangled with seaweed, but as driving up to the front-door of her own house in a two-horse carriage with her face all over smiles, and on her head the very latest thing in the way of a Paris bonnet. As to Susan Poundweight, Mrs. Latimer's intention was to seize upon the very first favorable moment after Mrs. Haverwood's arrival to plead that young person's and the plumber's cause. Even toward the plumber—who, assuredly, had been as conspicuously ungallant as a plumber possibly could be—her feeling was so amiable that she made a dozen excuses in her own mind for the white-feathery fashion in which he had stopped kissing Susan and had run away into hiding in the depths of the darkness and storm.

Being Monday, all the half-orphans had put on, as usual, their Arabian Nights garments—with the usual result of giving to the whole house a sort of exotic Bagdadish flavor that was very curious indeed. Had Mrs. Latimer been consulted in advance in regard to this particular Arabian Nights day, she probably would

have decided that it should pass unobserved. She had not received—indeed, she had not even asked—Mrs. Haverwood's permission thus to substitute during one day in each week, pseudo-Oriental garments for the regular half-orphan uniform; and to have her unauthorized innovation sprung upon the authoritative head of the institution by thus suddenly exhibiting to her all the half-orphans clad in the habiliments of the Far East would not be, she was disposed to believe, quite the best way of presenting this particular chapter in her account of her stewardship. On the other hand, Mrs. Latimer was a young woman with a good deal of character, and among the most commendable of her characteristics was that of having the courage of her convictions. Therefore she decided that since the children simply were acting in accordance with the rule which she herself had promulgated she would not weakly bend to mere expediency by traversing her own commands. Whatever might come of it, this Arabian Nights day should be dealt with in the customary fashion; and thereby would she, in her customary fashion, stand to her guns.

This same stern strain in Mrs. Latimer's nature disposed her to temper her really friendly disposition toward Susan Poundweight with what would have the appearance of being a just severity. In her wrathful haste she had decreed that Susan should pay for her stolen kisses—not stolen from the plumber, of course, for he gave them with the utmost freedom—by being bagged. Now, in her leisure, and without any wrath at all, she decided that this decree must be executed. But in adopting a course apparently so harsh, she was swayed by considerations slightly Machiavelian. The information that she had to impart to Susan's two guardians—the one natural, the other acquired—in regard to Susan's highly irregular conduct, was not of a sort to be instantly well received. To kiss a plumber under any circumstances would have been an act of questionable propriety; but to win opportunities for such kisses by deliberately wrecking Mrs. Haverwood's plumbing, and to create opportunities of a like nature by secretly meeting the plumber in the watches of the night, was to adopt a line of conduct to which the term propriety could not be applied in any way at all. Of course, from a mere worldly point of view, the redeeming feature of the case was the brilliant result which Susan seemed to be in a fair way to compass by these rather shady means. So far as material prosperity was concerned, it was evident that no more royal road to fortune than that of marrying a plumber could by any possibility be devised.

With a nice appreciation of the bearing upon each other of these several facts, Mrs. Latimer's

Machiavelian plan was to present Susan to Mrs. Haverwood and to the Widow Poundweight in the guise of a criminal who had committed a very serious crime; and then to outflank her own position by stating the details in apparent substantiation of this sweeping assertion in such a way as to show that Susan was guilty of only a few slight indiscretions — a little unconventionality in regard to receiving callers, a little carelessness in her handling of the gas- and water-fixtures — such as might have been committed by the most proper young woman in the world in love with a plumber and blinded by her love. Having got the matter on this favorable basis, Mrs. Latimer's intention was to dilate upon the position of easy affluence to which an alliance with a plumber necessarily would raise Susan in the course of but a very few years; and, finally, to clinch things by adding — this argument being intended to touch up Mrs. Haverwood on the side of her practical benevolence — that all the rest of the half-orphans might be provided for in the same magnificent manner as they arrived at maturity by marrying them off to Susan's husband's professional friends. To Mrs. Latimer's sanguine nature it seemed that such a presentation of the case as this would be could not fail to lead directly to the happiest results.

The very corner-stone of her plan, of course, was that Susan actually should be in the bag when Mrs. Haverwood and the Widow Poundweight arrived — and her plan almost went to pieces, therefore, because Susan vigorously protested against having anything to do with laying a corner-stone of this sort. As to making her understand the subtle spirit of the situation thus to be created, Mrs. Latimer knew that it was hopeless and did not attempt it. Instead, she made an appeal to her on personal grounds: representing that she, Mrs. Latimer, would be held to a strict account by Mrs. Haverwood for permitting one of the half-orphans to fall in love with a plumber, and for his and love's sake to smash the plumbing all over the house, and that only by exhibiting the culprit disgracefully bagged could her own skirts be cleared.

The concept thus presented for Susan's consideration was one which her rather dull mind could grasp easily, and it also was one which appealed forcibly to her natural sense of justice. Moreover, she too — like her mistress — had a strong character, and the courage of her convictions; of which convictions, just then, her devotion to her plumber was dominant over all. Therefore, without any farther argument, yielding to Mrs. Latimer's appeal, she poked one red-trousered leg after the other carefully into the bag which that lady held open for her; herself assisted in pulling it up snugly

around her plump person, and then meekly drew her arms inside while Mrs. Latimer hauled the drawing-strings taut around her neck and tied them beneath her chin. The bag was so loosely large that even Susan's abundant person did not nearly fill it; and, being made of a dark material, it greatly emphasized the effect of her rather absurdly big turban, and rather absurdly long white veil. Indeed, when the bagging was completed, the effect produced by her remarkably pretty face thus exhibited surmounting a curiously bunched and bundled figure, and overcast by a veil and turban of excessive size, was such as to suggest to the casual observer (had any such there been) some extravagant variety of mushroom gone wrong in its lower parts.

In order to demonstrate to Mrs. Haverwood that the extreme penalty for evil-doing had been imposed, Mrs. Latimer had decreed that Susan's bagging should take place in the drawing-room; and that there, in her bagged condition, she should await the return of her benefactress, whose plumbing she had outraged, and whose confidence she had betrayed. But Susan — fearing keenly the arrival of some chance caller — begged so hard for a change of venue, that Mrs. Latimer finally relented and agreed that the bagging should take place among the black-and-tan old masters in the picture-gallery. In this dismal, and also doubtful, society, therefore, at half after ten o'clock in the morning, Susan's investiture was completed, and she was left standing beneath a most melancholy Niobe, — herself as melancholy, but from a different cause, — officially and formally bagged.

IV.

SETTING FORTH THE WIDOW POUNDWEIGHT'S PRINCIPLES AND PRACTICE IN THE MATTER OF MATRIMONY.

ALMOST in the moment that it was urged, the reasonableness of Susan's protest against being bagged in the drawing-room was justified. Mrs. Latimer scarcely had left the picture-gallery when two rings came in quick succession at the front-door bell, and a minute later, — the door being opened by Martha Skeat, who had been detailed for the day to this service, with orders to wear her regular half-orphan uniform, — Susan's mother, the Widow Poundweight, and Susan's lover, the young plumber, came in together. As the event proved, their coming together was a pure accident, and neither of them had the least notion as to who the other was. On this occasion the widow looked even more like a tulip-bed gone adrift with a milliner's shop than on the occasion of her first visit; and her mood, evi-

dently, was as gay as her gown. The plumber, however, was somber in both his demeanor and his dress. He was clad in what evidently was his very best suit of black clothes,—the solemnity of which was a little relieved by a lilac-and-red necktie,—and he had the desperate, unflinching look of a plumber whose purpose it was either to do or to die.

Each of these persons asked Mrs. Latimer for a private interview; and as the simplest way of harmonizing their slightly conflicting requests she begged the plumber to wait in the drawing-room, while she gave the Widow Poundweight a hearing in the library up-stairs. The plumber politely acceded to this arrangement, but detained Mrs. Latimer alone for a moment while he whispered to her in hoarse, determined tones: "I want to speak to you about Miss Sue, ma'am. And — and" — here he had to give a gulp before he could continue — "and I ought n't to have run away last night. I want to say that, too." In delivering himself of this brave utterance he grew desperately red and perspired freely, but he obviously was very much more comfortable when he fairly had got it off his mind.

That a serious purpose underlay the Widow Poundweight's gay exterior was made manifest the moment that she was seated with Mrs. Latimer in the library — when she began to explain that she had presented herself in advance of the appointed time expressly that she might have a little talk about Susan before the other folks came; and by her then going on with an urgent request that Mrs. Latimer would use her good offices with Mrs. Haverwood to forward her, Mrs. Poundweight's, project for Susan's prompt translation to another half-orphan home.

"For as to Sue's livin' with me," said the Widow Poundweight in conclusion, and in most earnest tones, "that she sha'n't! I've had enough of her an' her stubborn ways. I'm more 'n willin' t' pay for her keep — it's not my fault I'm not payin' for 't now; I wanted to, but Mrs. Haverwood she had her own notions, an' would n't let me — and I'll give security that if she gets sick or anything, I'll see she's looked after and all th' bills paid. But have her around at home I won't. She's a dose. An' she'd be more of a dose, I guess, to" — At this point in her discourse the widow checked herself abruptly, manifested an air of curious embarrassment, and then added slowly, and in quite a different tone, "She'd bother some other folks more 'n she would me."

Until thus partly halted by what evidently was some sort of stumbling-block, the widow had gone along at such a hand-gallop of talk that Mrs. Latimer had not been able to slip in a word even edgewise. But she was quick

to take advantage of the opportunity thus given her to speak, and quite in the guise of an advocate pleading a cause before a stern court did she present to Susan's mother the facts of Susan's and the plumber's romantic love.

But the court thus appealed to was anything but stern. Even Mrs. Latimer — anxious though she was to gain a verdict in Susan's favor — was quite shocked by its over-lenience. Actually, the Widow Poundweight scarcely had heard more than the barest outline of the facts before she not only gave her cordial approval to the love-affair, but manifested a disposition to hurry the lovers along to a marriage at absolutely lightning speed.

"This is Monday," said Susan's too-acquiescent parent, "and I've got t' get back home by Friday night. Wednesday's as late as we can make it — for me to get off Thursday, you know — and Sue and I'll have t' everlastin'ly hustle t' get things fixed so 's she can be married then. There ain't a single minute t' be wasted, Mrs. Latimer; and I guess if you don't mind I'd better see her right off so 's we can begin t' settle what we've got t' do."

The exceeding abruptness of this program quite took Mrs. Latimer's breath away. "Oh!" she exclaimed anxiously, "you can't be in earnest, Mrs. Poundweight! Susan could n't possibly get married that way. It would n't — it would n't be respectable."

"Why not? I was married that way — and I'm respectable, I guess!" and the Widow Poundweight put her hands on her hips and turned out her elbows and looked at Mrs. Latimer hard.

"Oh, I beg your pardon," Mrs. Latimer answered in a good deal of confusion. "I did n't mean that, of course. But you must have been a good deal older than Susan, and —"

"I mus' n't 'a' been anything of th' kind!" cut in Mrs. Poundweight, peremptorily. "I was younger. I was n't seventeen, an' Sue's past. I guess I don't look so awful old, do I?"

"No, no, of course not. You look very young indeed — quite young enough to be Susan's sister. But what I meant was that of course your father and mother knew all about your being engaged —"

"Not much they did n't! Do you think I was goin' t' be fool enough t' give myself away like that? How was I t' know that anything was comin' of it?"

"Well, at least," continued Mrs. Latimer, clinging desperately to her position of conventional propriety, which each moment was weakened by the very unconventional facts educed against it by the Widow Poundweight from the storehouse of her own eccentric life, "at least you were engaged for a good while, and knew

each other very well, and you 'd talked over your plans, and —"

"Now, stop right there! We had n't done nothin' o'th'sort. What happened was just this: I met Poundweight at the Amalgamated Glass Blowers' picnic, an' we had seven dances together. He ast me in th' second dance if I 'd marry him. That was too sudden, and I told him he 'd got more brass than brains, and I would n't. He kep' on askin' me at each dance, and I kep' on sayin' no. When we was dancin' th' last dance, he wanted t' know if I was th' kind that was n't satisfied unless they kep' a man dancin' all his life at their heels before they 'd give him yes; an' he went right on an' said he wa' n't th' kind that 'u'd dangle that way. You see, he always was a tony, overbearin' sort of a man.

"Well, when he said so sharp that he was n't th' dancin' kind, I begun t' think he had his good points, and I weakened. Says I: 'Well, this time, just for a change, I won't say no. But not sayin' no ain't th' same as sayin' yes,' says I, 'an' don't you forget it!'; an' just about that time th' dance was over, an' we all started off for home. He kep' along with me. I was with my sister an' her husband; an' he never let up about gettin' married all th' way. Talk about Sue's bein' stubborn an' set in her ways, you ought to 'a' seen her father—an' that 's where she gets it from! When that man's mind was made up a thing had got t' be done—why, got to be done it had! Sayin' no t' him was no more use than sayin' boo t' the moon. An' so, he bein' set on my givin' him yes, he was boun' t' get it—an' he did get it when he was standin' at th' door sayin' good night."

"O-o-o-h!" exclaimed Mrs. Latimer. "You don't really mean to say that you were engaged to be married that way—all in an hour?"

Mrs. Poundweight bridled a little. "Of course we was n't engaged in an hour. What d' you take me for? It was n't four in the afternoon when we had our first dance together, and 't was goin' on ten at night when I give him his yes. Of course it was n't an hour—it was a'most six."

Mrs. Latimer did not venture any answer. She maintained a horrified silence, while the Widow Poundweight continued: "An' then, when I 'd give him his inch, of course he wanted his ell straight off. Nothin' was goin' t' satisfy him but gettin' married right away th' next evenin'. But I was n't th' sort t' rush things like that, an' so I give him t' understand plain. I told him if he wanted me he 'd got to wait."

"And how long did you make him wait?" Mrs. Latimer asked.

"Better 'n a week," the widow answered complacently.

Mrs. Latimer, who was genuinely shocked, could only gasp.

"Now, them 's just th' cold facts about Sue's father and me; an' why she need want any more time 'n we did I don't see. Anyhow, from what you say, it seems she 's been keepin' company with this young man ever sence last June. If that ain't long enough, I 'd like t' know what is? It's longer, I know, than I could stand with any one man, unless I was married fast t' him an' could n't get away."

By this time Mrs. Latimer had recovered from her shock sufficiently to speak. "Did—did your marriage turn out well? Were you—were you happy?" she asked.

"Oh, I guess ours was about th' average," Mrs. Poundweight answered, in an off-hand way. "You 're married yourself, so you must know how that sort o' thing goes. We had our troubles same as folks in general. But it turned out well enough," she continued, with a self-conscious air, and even blushing a little, "for me t' be willin' t' give a second man a show."

"You mean that you are going to be married again, Mrs. Poundweight?"

"That 's just th' size of it," the widow answered. "An' that 's why I wanted t' get Sue fixed in some other home or asylum or something'. *He* never would get along with her. She 's got her father's mastersome ways an' she 's just as stubborn as a mule. But if she 's goin' t' be married herself that lets me out, an' I 've nothin' more t' say. It 's heaps th' best thing she can do.

"An' now, Mrs. Latimer, Sue an' me must settle with a rush what we 've got t' do—for between now an' day after to-morrow ain't no time at all. I must get a-hold of her right off. Whereabouts, m'a'am, in this big house, is she likely to be?"

V.

NARRATING THE DEADLY PERIL OF POLLY CARROON AND TELLING OF MRS. HAVERWOOD'S STARTLING HOME-COMING.

WHILE this conversation went forward, Mrs. Latimer had been seated near one of the side windows, the outlook of which was upon the roof of the picture-gallery—and the sight which she beheld through that window at the precise moment when the Widow Poundweight made inquiry as to Susan's whereabouts was such that, instead of answering, she sprang from her seat with the horrified exclamation: "Oh! oh! oh! She certainly will fall and be killed!" And even the Widow Poundweight, who was not at all a nervous person, could not repress a small shriek on her own account when, having bounced out of her chair and across to the win-

dow, she perceived the cause of Mrs. Latimer's alarm.

The late Mr. Haverwood's equipment of eccentric opinions upon a working majority of conceivable subjects had been almost as complete as the similar equipment with which his widow continued to be endowed. One of his notions had been that the best light for a collection of very black and smoky old masters was that derived from a high skylight having a sharp pitch; and as his plans always were realized with a good deal of emphasis, the skylight at which Mrs. Latimer and the Widow Poundweight were looking at that potentially fatal moment was about as high and about as steep as a skylight well could be — indeed, had Mr. Haverwood's views been less extreme, or less emphatically realized, the horrifying situation then existing never could have come about.

Seated on the apex of this ill-conceived structure, at the end most remote from their point of view, was a gray cat in the act of bending down and comfortably washing her left shoulder-blade — in which placid spectacle there was no cause for emotion of a distressing kind. But a very keen note of tragedy was supplied by a small human figure — that is to say, by Polly Carroon, wearing her Arabian Nights costume — in a position of such extreme peril that a rescue seemed to be beyond the pale of hope.

Evidently having scrambled to the top of the skylight in pursuit of her beloved cat, and evidently having been overtaken by a sudden panic sense of the danger of her position, Polly was clinging to the ridge-pole in a huddled bunch of entirely abject fright. It was painfully clear that at any moment she might let go, and so slide down the steep slope of glass with such an impetus as to carry her across the roof of the picture-gallery and onward to the ground; and it also was an apparent possibility that in her unreasoning fear she might take to kicking, and so kick her way through the skylight and down into the picture-gallery below. In any event, her case appeared to be quite desperate — and all the more horrible, as it seemed to Mrs. Latimer, because of the comical figure that she cut, perched up there in her loose trousers of bright green and loose jacket of purple, and with her turban all cocked over on one side.

Fortunately, Mrs. Latimer had a good deal of presence of mind. Instead of opening the window and calling to Polly — with the probable result of startling the child into letting go her hold — she dashed to the door and thence, with the Widow Poundweight close at her heels, to the landing half-way down the stairs from which a window opened upon the picture-gallery roof. Yet quick though Mrs. Latimer was in executing this movement, another rescue-party got in ahead of her, and when she arrived

at the scene of action she found the situation materially improved. The rescuers were Polly's fellow half-orphans, all of whom, excepting Susan Poundweight, were congregated upon the roof under the intelligent leadership of Jane Spicer; and as they all, excepting Martha Skeat, were clad in their Arabian Nights costumes, the spectacle which they presented to the crowd rapidly forming in the street below was very brilliant indeed.

With her customary readiness in resource, Jane Spicer had brought with her a long-handled window-mop, and her first concern had been to put the brush end of this serviceable utensil under Polly's dangling feet, while she herself held the handle firmly braced against the roof. With this substantial support beneath her, Polly, temporarily, was entirely safe. As a further measure of precaution, however, Jane had despatched the twins and Biddy O'Dowd to bring pillows to place upon the roof in case by any accident Polly should fetch away. The actual work of rescue had been intrusted by this small commander-in-chief to the biggest girls of the party, Martha Skeat and Sally Tribbles, the first of whom had just succeeded in boosting the second up the wooden end-supports of the skylight to its peak at the moment that Mrs. Latimer and the Widow Poundweight arrived upon the scene. As Sally got safely into position — with one red-trousered leg hanging down on each side of the ridge-pole in vivid relief against the pale-green glass, and with her yellow-jacketed body and white-turbaned head standing out against the sky — there came up from the crowd in the street an encouraging cheer; and a breathless minute later, during which she worked her way slowly along the ridge-pole, the cheering became quite frantic as she caught Polly beneath the shoulders and lifted her into absolute safety, astride of the ridge-pole in front of herself.

And then, somehow, her natural tendency toward ill-luck getting the better of her, in the act of recovering her balance after this exertion, Sally Tribbles managed to kick both legs almost simultaneously through the skylight; and then her loose Turkish trousers somehow got caught on the jagged points of glass: and there she was — anchored hard and fast! She was perfectly safe, of course, and so was Polly Carroon; but the net result of the rescue, up to that point, was that two people were stuck fast on the peak of the skylight instead of one. The cat, the original cause of the trouble, early in the proceedings had jumped down from her perch and had returned by the open window into the house.

The element of danger having been eliminated from the situation, the crowd was disposed to regard the whole performance — the bril-

liantly Oriental half-orphans together with Mrs. Latimer and the Widow Poundweight grouped upon the roof, with the color-note repeated at a still higher level by Sally Tribbles and Polly Carroon astride of the skylight — as nothing less than a broad farce; because of which view of the matter came gushing cries of: "Put up a couple more of the monkeys on the trapeze," "Don't them she circus-riders know they ought n't to ride man-fashion?" "Let the red-legged bird in the tree-top give us a song!" — and so on, until Mrs. Latimer fairly grew dizzy and faint with vexation and shame. And then, above all this chatter and laughter, a strong voice called out: "I 'm comin' t' you, Sal. Don't you be afeard!" To which Sally replied stoutly: "I ain't afeard, father. Come right along!"

Two minutes later, the crowd broke into fresh cheering as Mr. Tribbles, who was a large man with an old-fashioned wooden leg, appeared upon the roof (Martha having run down to the front door and let him in), followed by Mrs. Spicer and Mrs. Wells and Bridget O'Dowd, who for some time had been ringing in vain, and by Mrs. Skeat and Mrs. Carroon, who at that very moment had arrived. Upon seeing her offspring in what seemed to her to be so dreadful a position, Mrs. Carroon shrieked aloud. Mr. Tribbles did not shriek. In a straightforward, sensible way, he stumped along the roof until he came directly beneath where his daughter was seated; then he leaned carefully against the skylight with his hands extended, and told Sally to begin the rescue by sliding Polly down into his arms.

But the cheer that was beginning to rise from the crowd in celebration of the success of this intelligent manœuvre never came to anything. It died away in a murmur of pained surprise — as the section of glass against which Mr. Tribbles was leaning gave way suddenly and a portion of his large person disappeared into the cleft. That he was caught in the iron framework of the skylight was obvious instantly; and when, in the violence of his struggles, he kicked off his wooden leg — which crashed through the next section, and so went down into the picture-gallery — it became evident that he was likely to stay caught, and there went up from the crowd a sympathetic groan.

Fortunately for Mr. Tribbles — and fortunately also for his daughter and for Polly Carroon — an excitable person in the crowd had dashed away some minutes earlier searching for a policeman and crying fire. What was still more fortunate, and even miraculous, this person actually had found what he was looking for; and the policeman so discovered — greatly disconcerted by the unnaturalness of the encounter — had turned in a fire-call without stopping to assure himself that there really was a fire.

Therefore it came to pass that not more than a minute after Mr. Tribbles had done for himself, by kicking off his wooden leg and sending it crashing through the skylight, there was a clanging of gongs up the street and down the street; the sound of galloping hoofs; the sight of dense masses of black smoke approaching rapidly — and almost before these several phenomena could be discriminately apprehended, three fire-engines were smoking and puffing in front of the house; three lines of hose had been made fast to the engines and three hose-carriages were dashing away to the nearest hydrants; and then a hook-and-ladder truck came around the corner with a jangling roar. Two minutes later, twenty policemen were on the ground; the crowd was driven back; fire-lines were stretched, and every suitable preparation was made for extinguishing a conflagration quite as unreal as any of the series which Mr. Latimer had been called upon to investigate under stress of Mrs. Latimer's imaginative fears.

However, a part of this anti-pyrotechnic outfit could be, and instantly was, most usefully employed. In a trice the firemen had their ladders all over the picture-gallery, and in another trice they had extracted Mr. Tribbles — making a dreadful wreck of the skylight with their axes while doing it; and then they made still more of a wreck in order to get Sally's legs loose; and then they gallantly rescued from her perch on the ridge-pole that stout young person and Polly Carroon with her — while the crowd cheered, and the other firemen cheered, and even the twenty policemen cheered too!

It was precisely at this thrilling instant that a carriage, with a steamer-trunk and many bags and wraps upon it, drove past the fire-lines, — after pausing for a moment of parley, — and stopped at the front door. Out of the carriage stepped Mr. Latimer, who, checking his very natural impulse to dash into the house to find out what in the world was the matter, turned and politely assisted Mrs. Haverwood to alight, and then gave her a steadying arm.

His tender of support was timely. The unfortunate lady looked at the fire-engines, and at the wrecked skylight, and at the array of fire-ladders, with very earnest and woeful gaze; but still more earnestly and woefully did she look at the thronged roof of the picture-gallery, which presented to her agonized observation at that moment a spectacle as harrowing as it was unaccountably strange. Standing well forward, upheld by a fireman on each side of him, was a one-legged man. Beyond this, in his then position, inexplicable uniped, was a considerable group of women huddled together by the window opening from the stairs. Clustered about the broken skylight, holding or leaning upon the axes with which they had broken it,

were a dozen or more firemen — and all over everything were her own half-orphans, clad (with but a single exception) in such strange and such violently colored Oriental garments that each individual half-orphan seemed to her startled soul to be the very quintessence of a horrifying dream. Under these keenly perturbing circumstances scant cause is there for surprise that Mrs. Haverwood, overcome by the sudden and violent onrush of painful emotions, clung to Mr. Latimer's arm almost convulsively, and gave utterance to a dismal groan.

VI.

SHOWING HOW THE COMMOTION UPON THE
HOUSETOP MADE PLAIN TO THE PLUMBER
THE PATH OF LOVE.

IT is one thing for a young plumber to put on his best black clothes with the intention of doing or dying in them, and so going instantly and elately (as circumstances may determine) to his do or his death. But it is quite another thing when deterrent conditions intervene to check his advance along either of these heroic lines and to enforce upon him a season of dull inactivity during which his lofty purpose may weaken and insidiously waste away.

The case of Susan's plumber during his temporary stagnation in Mrs. Haverwood's drawing-room afforded a pointed comment upon the foregoing somber text. Being left to his own devices while Mrs. Latimer was closeted with the Widow Poundweight in the library, he was pulled up short on the very brink of the matrimonial precipice over which he had determined to cast himself, and so was given a fatal moment of time in which his courage might ooze away. He had come to the house with the full intention of asking for Susan as a necessity, and of demanding her as a right; of making a clean breast about the wilfully broken plumbing, and of stating (as Susan already had stated, though he did not know it) his honorable intention to pay back every cent that had been paid him for repairs — of protesting, in short, that he was all for love and the world well lost.

But avowals of so resolute a sort, culminating in a protest like that, must spring from a strongly throbbing heart; and the longer that the plumber was left alone in the drawing-room the less strongly did his heart throb and the more wretchedly nervous did he become. But for the effrontery which was a part of his professional equipment — the quality that later was to aid him in building up a princely fortune by enabling him to insist calmly upon the justice of the most outrageous of bills — he certainly would have made a break for the door and so fairly have run away. As it was, he walked hurriedly about the large room like some im-

prisoned wild animal; the while pushing and pulling the furniture from place to place with such reckless violence and haste that even an adept in permutation — which is the arithmetical rule of ascertaining how many ways any given number of numbers of things may be varied in their relative positions — would have been puzzled in attempting to reduce him and the chairs and the tables to any intelligible result.

Being thus deeply engrossed in the conflict waging in his own breast between his courage and his love, the plumber did not for some little time pay any attention to a growing volume of unusual sounds — of hurrying footsteps on the floor above and on the stairs, of buzzing voices, of trampling on the picture-gallery roof — which would have informed him, had he been less preoccupied, that some unusual commotion had broken forth. Not, indeed, until Sally Tribbles kicked her legs through the skylight, did he become aroused to the disturbed domestic conditions; and even then it was not the sound of the breaking glass which seriously startled him, but the sound of his own Susan's voice raised into a shrill scream of alarm. It was the instinct of love which enabled the plumber to recognize Susan's voice at such high pressure; and the like instinct — combined with knowledge of the locality gained while mending one of the gas-brackets which she had broken — enabled him to tell whence it came. Instantly, at that sound, his waning courage again waxed full and strong; and again the determination to do or die for his Susan's sake thrilled through every fiber of his being from his once more heroic soul. Therefore, with a rapidity that no one who ever has watched a plumber at work would have believed possible, he sprang toward the heavy folding-doors and dashed them open (with such force that they rebounded and closed again behind him) just as Sally's second leg came through the skylight, and just as Susan uttered a second piercing scream.

But on the threshold of the picture-gallery, looking in wonder at the figure before him, the plumber stopped short, and seemed to be in a fair way to turn into stone — as though there suddenly had been sprung upon him a modified version of the Gorgon's head; the modification consisting in the substitution of a turban and veil for serpents, and in producing the effect of disassociation from a body by the simple expedient of inclosing the body in a large loose bag. In the self-same pregnant moment, Susan — as she saw her lover and perceived her petrefactive effect upon him — forgot all about the fright into which she had been thrown by the showering down upon her of broken glass, and by the terrifying (because essentially abnormal) spectacle of a pair of Turkish-trousered legs unrelated to any visible body waving wildly above

her in the air, and burst into an agony of blushes and of tears.

Of course no young man of spirit—in the whole range of young manhood, from plumbers up to princes—could behold a spectacle of that tenderly moving sort without instantly endeavoring, bag or no bag, to administer consolation of a suitable sort in a suitable way. The bag did, indeed, seriously complicate matters—for Susan's sense of duty was so strong that she absolutely refused to permit the plumber even to loosen the strings, let alone to unbag her; but a bag, after all, is a trifling barrier to set up against that master passion which laughs at locksmiths, and defies lightly the stoutest bolts and bars. And so, although neither of them could have defined accurately the meaning of the word romance, Susan and her plumber came nearer that day than in any other day in all their lives to realizing a romantic climax: as they sat on a sofa at the remote end of the picture-gallery (in order to be as far as possible out of range of the skylight battery), and drew closer and closer together as the need for the exertion of manly strength for the protection of womanly weakness momentarily was increased by the increasing turmoil on the roof above them and in the street, and by the increasingly hot fire to which they were exposed.

The fact may be added that the manly protection thus demanded was given with extreme willingness, and with the cumulative intensity of geometrical progression. At the moment when Mr. Tribbles partly came through the skylight, the plumber moved along the sofa close to Susan, and sought to reassure her by holding her hand in his. When Mr. Tribbles kicked off his leg, and it came crashing through the glass and down to the floor close beside them with a bang, he took possession of her other hand. When the fire-engines arrived, making a tremendous and quite inexplicable disturbance of a very terrifying sort, he snuggled Susan well against his shoulder. When the firemen released Mr. Tribbles from his awkward position by smashing in the skylight all around him with their axes, and sending a perfect storm of broken glass down into the picture-gallery, the plumber—making a very accurate guess as to whereabouts in the bag he would find it—slid a sustaining arm around Susan's substantial waist. When there came that final series of crashes above them, with its consequent vitreous tempest around them, incident to the loosening and extraction of Sally Tribbles's legs, he fairly got both arms around her and squeezed hard!

And even when the commotion gradually subsided, the plausible possibility that at any moment it might begin again gave the happy plumber a reasonable excuse for continuing to hold his happy Susan close clasped within the

gallant shelter of his arms. As for Susan, her love was too sincere to be veiled by idle coyness. Frankly—so far, at least, as she could manage it with her hands inside the bag—she clasped her arms about her plumber's neck, and in a sweet rapture of loving tenderness rested her turbaned head against his loyal heart.

VII.

PRESENTING A HAPPY CLIMAX IN WHICH THE PLUMBER COMES OUT STRONG.

It is not surprising that Mrs. Haverwood, getting her feet once more upon her native heath, and finding it in such a mess, should have been both shocked and pained. Any male house-owner would have been upset by finding on returning from Europe—or, for that matter, on returning from anywhere—the street in front of his house full of steam fire-engines, apparently hard at work, the house itself festooned with red ladders and decorated with blue-uniformed firemen, the fire-lines up and manned by policemen; by finding, in brief, every proof short of flame and smoke pouring out of the front windows, that his house was in course of burning down. And if, in addition to being a house-owner, the returning traveler had been the founder of a female half-orphanage, and had returned to find his female half-orphans not only arrayed in Far-Eastern garments of extraordinary shapes, and vivid hues, but actually congregated upon a portion of the roof which should have sheltered them, and there mingled with a mixed company of total strangers, of whom the most conspicuous figure was a one-legged man held steadily on his one leg by two obliging firemen—any male, and, therefore, still more any female, house-owner and philanthropist unquestionably would have been justified under conditions of such extreme irritation in deliberately and definitely going wild. Indeed, later, in thinking the whole matter over calmly, Mrs. Haverwood never was able to understand why she did not go wild on the spot; for her rapidly formulated theory in solution of the situation was that Mrs. Latimer and all the half-orphans had gone crazy together, and that among them they had set fire to the house.

In direct proportion, therefore, to the extreme depression of her spirits caused by her leap to the conception of this most untoward confirmation of mental and physical calamities, was the exaltation of her spirits caused by the entirely sane appearance of Mrs. Latimer, at the top of the front steps; and by that lady's reassuring announcement that there was n't any fire, and that, excepting the demolition of the skylight, no harm had been done at all.

In making this announcement, Mrs. Latimer

had displayed an admirable presence of mind. From her commanding position on the roof she had seen the carriage with the steamer-trunk on the box coming up the street; rightly had inferred that Mrs. Haverwood was inside the carriage, and would be greatly disturbed by finding a storm of such apparent severity central over her own home, and so had dashed down-stairs in order to impart on the very threshold her cheering news.

In Mrs. Latimer's wake, finding fresh cause for excitement in the return of their benefactress, the half-orphans came trooping down-stairs too: all of them, excepting Martha Skeat, very brilliant in their Arabian Nights costumes, and with their turbans every which way. Behind them, more sedately,—again with an exception, for the Widow Poundweight would not have been sedate even at her own funeral,—came Susan's blithe mother, in company with Mrs. Spicer and Mrs. Skeat and Mrs. Wells and Bridget O'Dowd and Mrs. Carroon. And finally, in the rear of the procession, came the two obliging firemen carrying Mr. Tribbles—who, of course, until his wooden leg should be in place again, could not walk.

Mrs. Haverwood, entering from the front door with Mr. and Mrs. Latimer, and encountering the leading files of half-orphans at the foot of the stairs, put herself at the head of the column; wheeled it into the drawing-room, and herself crossed that apartment—being desirous of finding out quickly what damage had been done to the old masters—directly to the picture-gallery door. Out in the street the fire-engines still were puffing and snorting loudly, and from the street came also the confused murmur of the voices of the crowd; which noises, penetrating freely through the broken skylight, were amply sufficient in the picture-gallery to drown all other sounds. There was a moment's delay before the doors could be opened—the lock having caught when they banged together—and this halt gave time for the rear-guard of parents to enter the drawing-room; and the firemen were glad enough to get a chance to rest themselves by standing Mr. Tribbles on his own one leg, and propping him against the wall. And then, Jane Spicer having overcome the difficulty about the lock, she and Martha Skeat, tugging together, shot the doors back suddenly, and the whole picture-gallery in an instant was disclosed to view: a foreground littered thickly with broken glass; in the middle distance Mr. Tribbles's wooden leg; and in the background, affectionately mingled upon the sofa, the plumber, in his seemly suit of black, and Susan Poundweight in her turban and her bag.

From the walls the black-and-tan old masters looked down in envious wonder upon this most tender and moving living picture—the

crisp realism of which threw their faded and muzzy ideality hopelessly into the shade. As for the living spectators, their interjectional comments ranged across the whole social gamut of expressions of wonder—from the seemly “Good gracious!” of Mrs. Haverwood down to the unseemly, and also ungrammatical, asseveration of the two fireman that they “be dam!”

But Susan faltered not, nor did the plumber quail. Bravely they stood up together; and the plumber, putting his arm around that portion of the bag in which he had ascertained by experiment Susan's waist was to be found, resolutely, and none the less resolutely because a little irrelevantly, informed the several members of the company that he was ready for 'em, and that he dared 'em to come on.

And then it was that the Widow Poundweight, recognizing the sterling qualities of her daughter's lover, cried out admiringly: “He 'll do Sue. That young man has sand!”

VIII.

STATING BRIEFLY THE HAPPINESS WHICH ACCRUED TO HUMANITY FROM MRS. HAVERWOOD'S PHILANTHROPIC SCHEME.

WHILE Susan and her mother were soothing the plumber, and while Mr. Tribbles, with the assistance of the firemen, was putting on his leg, Mrs. Haverwood rapidly carried into execution her prearranged plan for the disruption of the composite benevolent institution which her impulsive generosity had created, and which her bounty so munificently had sustained.

Formally she took over from Mrs. Latimer the eight half-orphans and the sixteen cats (these latter being produced in their cages), and, so to speak, receipted for their return to her in good condition. She even went a step farther, in that—passing over the little matter of the Arabian Nights costume, and the start that seeing the half-orphans thus clad and on the roof had given her—she complimented Mrs. Latimer handsomely upon her discharge of her trust. Then, with a characteristic expedition, she handed over the several half-orphans to their respective parents—save Susan Poundweight, whose mother preferred that she should be turned over directly to the plumber; and, indeed, the plumber was in such a state that nothing else would have satisfied him. Finally, she gave orders for despatching fourteen of the sixteen cats—Polly Carroon being permitted to take her two cats home with her—to a benevolent maiden lady, living near Patchogue, Long Island, with whom arrangement had been made by letter to this end.

So well was this campaign of disorganization planned, and with such dashing energy was it executed, that within one hour and twenty min-

utes from the moment of Mrs. Haverwood's arrival at her front door every half-orphan and cat had been swept away from her premises; Mr. and Mrs. Latimer — the latter feeling as though she had escaped from under a crushing burden of thousands of tons — were on their way down-town in a Madison Avenue car; and every vestige of the John L. Haverwood Female Half-Orphanage and Destitute Cat Home was effaced absolutely and forever from the earth.

As an experiment in applied philanthropy, Mrs. Haverwood unwillingly admitted, though

only to herself, that her scheme for the amelioration of the condition of half-orphaned children, and, at the same time, for making cats more comfortable, had been a failure. But even Mrs. Latimer — whose prejudices in the other direction, incident to her frequent strained personal relations with both classes of Mrs. Haverwood's beneficiaries, were very strong indeed — most willingly admitted, thinking of the joy that it had brought to Susan Poundweight and to the plumber, that as a contribution to the sum of human happiness Mrs. Haverwood's experiment had been a pronounced success.

THE END.

Thomas A. Janvier.

ICEBERGS.

THEY come again, those monsters of the sea,
 The north wind's brood, the children of the cold,
 Long lapped and cradled in white winter's fold,
 As worlds are cradled in eternity;
 Lulled by the storm, the Arctic's euphony,
 Launched in hoarse thunder from a mountain mold
 Upon the sea the viking sailed of old,
 They come, the fleet of death, in spring set free.
 Strange as the product of some other sphere,
 The huge imaginings the frost has wrought,
 Out of the land of the White Bear emerge;
 Seeking the sunlight, from creation's verge
 Southward they wander, silent as a thought,
 And in the Gulf-stream drown and disappear.

W. P. Foster.

[BEGUN IN DECEMBER, 1893.]

PUDD'NHEAD WILSON.

A TALE BY MARK TWAIN.

EVEN the clearest and most perfect circumstantial evidence is likely to be at fault, after all, and therefore ought to be received with great caution. Take the case of any pencil, sharpened by any woman: if you have witnesses, you will find she did it with a knife; but if you take simply the aspect of the pencil, you will say she did it with her teeth. — *Pudd'nhead Wilson's Calendar*.

CHAPTER XX.

HE weeks dragged along, no friend visiting the jailed twins but their counsel and Aunt Patsy Cooper, and the day of trial came at last — the heaviest day in Wilson's life; for with all his tireless diligence he had discovered no sign or trace of the missing confederate. "Confederate" was the term he had long ago privately accepted for that person — not as being unquestionably the right term, but as being at

least possibly the right one, though he was never able to understand why the twins did not vanish and escape, as the confederate had done, instead of remaining by the murdered man and getting caught there.

The court-house was crowded, of course, and would remain so to the finish, for not only in the town itself, but in the country for miles around, the trial was the one topic of conversation among the people. Mrs. Pratt, in deep mourning, and Tom with a weed on his hat, had seats near Pembroke Howard, the public prosecutor, and back of them sat a great array of

friends of the family. The twins had but one friend present to keep their counsel in countenance, their poor old sorrowing landlady. She sat near Wilson, and looked her friendliest. In the "nigger corner" sat Chambers; also Roxy, with good clothes on, and her bill of sale in her pocket. It was her most precious possession, and she never parted with it, day or night. Tom had allowed her thirty-five dollars a month ever since he came into his property, and had said that he and she ought to be grateful to the twins for making them rich; but had roused such a temper in her by this speech that he did not repeat the argument afterward. She said the old Judge had treated her child a thousand times better than he deserved, and had never done her an unkindness in his life; so she hated these outlandish devils for killing him, and should n't ever sleep satisfied till she saw them hanged for it. She was here to watch the trial, now, and was going to lift up just one "hooraw" over it if the County Judge put her in jail a year for it. She gave her turbaned head a toss and said, "When dat verdic' comes, I's gwine to lif' dat roof, now, I tell you."

Pembroke Howard briefly sketched the State's case. He said he would show by a chain of circumstantial evidence without break or fault in it anywhere, that the principal prisoner at the bar committed the murder; that the motive was partly revenge, and partly a desire to take his own life out of jeopardy, and that his brother, by his presence, was a consenting accessory to the crime; a crime which was the basest known to the calendar of human misdeeds — assassination; that it was conceived by the blackest of hearts and consummated by the cowardliest of hands; a crime which had broken a loving sister's heart, blighted the happiness of a young nephew who was as dear as a son, brought inconsolable grief to many friends, and sorrow and loss to the whole community. The utmost penalty of the outraged law would be exacted, and upon the accused, now present at the bar, that penalty would unquestionably be executed. He would reserve further remark until his closing speech.

He was strongly moved, and so also was the whole house; Mrs. Pratt and several other women were weeping when he sat down, and many an eye that was full of hate was riveted upon the unhappy prisoners.

Witness after witness was called by the State, and questioned at length; but the cross-questioning was brief. Wilson knew they could furnish nothing valuable for his side. People were sorry for Pudd'nhead; his budding career would get hurt by this trial.

Several witnesses swore they heard Judge Driscoll say in his public speech that the twins would be able to find their lost knife again

when they needed it to assassinate somebody with. This was not news, but now it was seen to have been sorrowfully prophetic, and a profound sensation quivered through the hushed court-room when those dismal words were repeated.

The public prosecutor rose and said that it was within his knowledge, through a conversation held with Judge Driscoll on the last day of his life, that counsel for the defense had brought him a challenge from the person charged at this bar with murder; that he had refused to fight with a confessed assassin — "that is, on the field of honor," but had added significantly, that he would be ready for him elsewhere. Presumably the person here charged with murder was warned that he must kill or be killed the first time he should meet Judge Driscoll. If counsel for the defense chose to let the statement stand so, he would not call him to the witness stand. Mr. Wilson said he would offer no denial. [Murmurs in the house — "It is getting worse and worse for Wilson's case."]

Mrs. Pratt testified that she heard no outcry, and did not know what woke her up, unless it was the sound of rapid footsteps approaching the front door. She jumped up and ran out in the hall just as she was, and heard the footsteps flying up the front steps and then following behind her as she ran to the sitting-room. There she found the accused standing over her murdered brother. [Here she broke down and sobbed. Sensation in the court.] Resuming, she said the persons entering behind her were Mr. Rogers and Mr. Buckstone.

Cross-examined by Wilson, she said the twins proclaimed their innocence; declared that they had been taking a walk, and had hurried to the house in response to a cry for help which was so loud and strong that they had heard it at a considerable distance; that they begged her and the gentlemen just mentioned to examine their hands and clothes — which was done, and no blood stains found.

Confirmatory evidence followed from Rogers and Buckstone.

The finding of the knife was verified, the advertisement minutely describing it and offering a reward for it was put in evidence, and its exact correspondence with that description proved. Then followed a few minor details, and the case for the State was closed.

Wilson said that he had three witnesses, the Misses Clarkson, who would testify that they met a veiled young woman leaving Judge Driscoll's premises by the back gate a few minutes after the cries for help were heard, and that their evidence, taken with certain circumstantial evidence which he would call the court's attention to, would in his opinion convince the

court that there was still one person concerned in this crime who had not yet been found, and also that a stay of proceedings ought to be granted, in justice to his clients, until that person should be discovered. As it was late, he would ask leave to defer the examination of his three witnesses until the next morning.

The crowd poured out of the place and went flocking away in excited groups and couples, talking the events of the session over with vivacity and consuming interest, and everybody seemed to have had a satisfactory and enjoyable day except the accused, their counsel, and their old-lady friend. There was no cheer among these, and no substantial hope.

In parting with the twins Aunt Patsy did attempt a good-night with a gay pretense of hope and cheer in it, but broke down without finishing.

Absolutely secure as Tom considered himself to be, the opening solemnities of the trial had nevertheless oppressed him with a vague uneasiness, his being a nature sensitive to even the smallest alarms; but from the moment that the poverty and weakness of Wilson's case lay exposed to the court, he was comfortable once more, even jubilant. He left the court-room sarcastically sorry for Wilson. "The Clarksons met an unknown woman in the back lane," he said to himself — "*that* is his case! I'll give him a century to find her in — a couple of them if he likes. A woman who does n't exist any longer, and the clothes that gave her her sex burnt up and the ashes thrown away — oh, certainly, he'll find *her* easy enough!" This reflection set him to admiring, for the hundredth time, the shrewd ingenuities by which he had insured himself against detection — more, against even suspicion.

"Nearly always in cases like this there is some little detail or other overlooked, some wee little track or trace left behind, and detection follows; but here there's not even the faintest suggestion of a trace left. No more than a bird leaves when it flies through the air — yes, through the night, you may say. The man that can track a bird through the air in the dark and find that bird is the man to track me out and find the Judge's assassin — no other need apply. And that is the job that has been laid out for poor Pudd'nhead Wilson, of all people in the world! Lord, it will be pathetically funny to see him grubbing and groping after that woman that don't exist, and the right person sitting under his very nose all the time!" The more he thought the situation over, the more the humor of it struck him. Finally he said, "I'll never let him hear the last of that woman. Every time I catch him in company, to his dying day, I'll ask him in the guileless affectionate way that used to gravel

him so when I inquired how his unborn law-business was coming along, 'Got on her track yet — hey, Pudd'nhead?'" He wanted to laugh, but that would not have answered; there were people about, and he was mourning for his uncle. He made up his mind that it would be good entertainment to look in on Wilson that night and watch him worry over his barren law-case and goad him with an exasperating word or two of sympathy and commiseration now and then.

Wilson wanted no supper, he had no appetite. He got out all the finger-prints of girls and women in his collection of records and pored gloomily over them an hour or more, trying to convince himself that that troublesome girl's marks were there somewhere and had been overlooked. But it was not so. He drew back his chair, clasped his hands over his head, and gave himself up to dull and arid musings.

Tom Driscoll dropped in, an hour after dark, and said with a pleasant laugh as he took a seat —

"Hello, we've gone back to the amusements of our days of neglect and obscurity for consolation, have we?" and he took up one of the glass strips and held it against the light to inspect it. "Come, cheer up, old man; there's no use in losing your grip and going back to this child's-play merely because this big sun-spot is drifting across your shiny new disk. It'll pass, and you'll be all right again" — and he laid the glass down. "Did you think you could win always?"

"Oh, no," said Wilson, with a sigh, "I did n't expect that, but I can't believe Luigi killed your uncle, and I feel very sorry for him. It makes me blue. And you would feel as I do, Tom, if you were not prejudiced against those young fellows."

"I don't know about that," and Tom's countenance darkened, for his memory reverted to his kicking; "I owe them no good will, considering the brunette one's treatment of me that night. Prejudice or no prejudice, Pudd'nhead, I don't like them, and when they get their deserts you're not going to find me sitting on the mourner's bench."

He took up another strip of glass, and exclaimed —

"Why, here's old Roxy's label! Are you going to ornament the royal palaces with nigger paw-marks, too? By the date here, I was seven months old when this was done, and she was nursing me and her little nigger cub. There's a line straight across her thumb-print. How comes that?" and Tom held out the piece of glass to Wilson.

"That is common," said the bored man, wearily. "Scar of a cut or a scratch, usu-

ally"—and he took the strip of glass indifferently, and raised it toward the lamp.

All the blood sunk suddenly out of his face; his hand quaked, and he gazed at the polished surface before him with the glassy stare of a corpse.

"Great Heavens, what 's the matter with you, Wilson? Are you going to faint?"

Tom sprang for a glass of water and offered it, but Wilson shrank shuddering from him and said—

"No, no!—take it away!" His breast was rising and falling, and he moved his head about in a dull and wandering way, like a person who has been stunned. Presently he said, "I shall feel better when I get to bed; I have been overwrought to-day; yes, and overworked for many days."

"Then I'll leave you and let you get to your rest. Good-night, old man." But as Tom went out he could not deny himself a small parting gibe: "Don't take it so hard; a body can't win every time; you'll hang somebody yet."

Wilson muttered to himself, "It is no lie to say I am sorry I have to begin with you, miserable dog though you are!"

He braced himself up with a glass of cold whisky, and went to work again. He did not compare the new finger-marks unintentionally left by Tom a few minutes before on Roxy's glass with the tracings of the marks left on the knife-handle, there being no need of that (for his trained eye), but busied himself with another matter, muttering from time to time, "Idiot that I was!—Nothing but a *girl* would do me—a man in girl's clothes never occurred to me." First, he hunted out the plate containing the finger-prints made by Tom when he was twelve years old, and laid it by itself; then he brought forth the marks made by Tom's baby fingers when he was a suckling of seven months, and placed these two plates with the one containing this subject's newly (and unconsciously) made record.

"Now the series is complete," he said with satisfaction, and sat down to inspect these things and enjoy them.

But his enjoyment was brief. He stared a considerable time at the three strips, and seemed stupefied with astonishment. At last he put them down and said, "I can't make it out at all—hang it, the baby's don't tally with the others!"

He walked the floor for half an hour puzzling over his enigma, then he hunted out two other glass plates.

He sat down and puzzled over these things a good while, but kept muttering, "It's no use; I can't understand it. They don't tally right, and yet I'll swear the names and dates are right, and so of course they *ought* to tally. I never

labeled one of these things carelessly in my life. There is a most extraordinary mystery here."

He was tired out, now, and his brains were beginning to clog. He said he would sleep himself fresh, and then see what he could do with this riddle. He slept through a troubled and unrestful hour, then unconsciousness began to shred away, and presently he rose drowsily to a sitting posture. "Now what was that dream?" he said, trying to recall it; "what was that dream?—it seemed to unravel that puzzle—"

He landed in the middle of the floor at a bound, without finishing the sentence, and ran and turned up his light and seized his "records." He took a single swift glance at them and cried out—

"It's so! Heavens, what a revelation! And for twenty-three years no man has ever suspected it!"

CHAPTER XXI.

He is useless on top of the ground; he ought to be under it, inspiring the cabbages.—*Pudd'nhead Wilson's Calendar.*

April 1. This is the day upon which we are reminded of what we are on the other three hundred and sixty-four.—*Pudd'nhead Wilson's Calendar.*

WILSON put on enough clothes for business purposes and went to work under a high pressure of steam. He was awake all over. All sense of weariness had been swept away by the invigorating refreshment of the great and hopeful discovery which he had made. He made fine and accurate reproductions of a number of his "records," and then enlarged them on a scale of ten to one with his pantograph. He did these pantograph enlargements on sheets of white cardboard, and made each individual line of the bewildering maze of whorls or curves or loops which constituted the "pattern" of a "record" stand out bold and black by reinforcing it with ink. To the untrained eye the collection of delicate originals made by the human finger on the glass plates looked about alike; but when enlarged ten times they resembled the markings of a block of wood that has been sawed across the grain, and the dullest eye could detect at a glance, and at a distance of many feet, that no two of the patterns were alike. When Wilson had at last finished his tedious and difficult work, he arranged its results according to a plan in which a progressive order and sequence was a principal feature; then he added to the batch several pantograph enlargements which he had made from time to time in bygone years.

The night was spent and the day well advanced, now. By the time he had snatched a trifle of breakfast it was nine o'clock, and the

court was ready to begin its sitting. He was in his place twelve minutes later with his "records."

Tom Driscoll caught a slight glimpse of the records, and nudged his nearest friend and said, with a wink, "Pudd'nhead's got a rare eye to business—thinks that as long as he can't win his case it's at least a noble good chance to advertise his palace-window decorations without any expense." Wilson was informed that his witnesses had been delayed, but would arrive presently; but he rose and said he should probably not have occasion to make use of their testimony. [An amused murmur ran through the room—"It's a clean back-down! he gives up without hitting a lick!"] Wilson continued—"I have other testimony—and better. [This compelled interest, and evoked murmurs of surprise that had a detectable ingredient of disappointment in them.] If I seem to be springing this evidence upon the court, I offer as my justification for this, that I did not discover its existence until late last night, and have been engaged in examining and classifying it ever since, until half an hour ago. I shall offer it presently; but first I wish to say a few preliminary words.

"May it please the Court, the claim given the front place, the claim most persistently urged, the claim most strenuously and I may even say aggressively and defiantly insisted upon by the prosecution, is this—that the person whose hand left the blood-stained fingerprints upon the handle of the Indian knife is the person who committed the murder." Wilson paused, during several moments, to give impressiveness to what he was about to say, and then added tranquilly, "*We grant that claim.*"

It was an electrical surprise. No one was prepared for such an admission. A buzz of astonishment rose on all sides, and people were heard to intimate that the overworked lawyer had lost his mind. Even the veteran judge, accustomed as he was to legal ambushes and masked batteries in criminal procedure, was not sure that his ears were not deceiving him, and asked counsel what it was he had said. Howard's impassive face betrayed no sign, but his attitude and bearing lost something of their careless confidence for a moment. Wilson resumed:

"We not only grant that claim, but we welcome it and strongly endorse it. Leaving that matter for the present, we will now proceed to consider other points in the case which we propose to establish by evidence, and shall include that one in the chain in its proper place."

He had made up his mind to try a few hardy guesses, in mapping out his theory of the origin and motive of the murder—guesses designed to fill up gaps in it—guesses which could help

if they hit, and would probably do no harm if they did n't.

"To my mind, certain circumstances of the case before the court seem to suggest a motive for the homicide quite different from the one insisted on by the State. It is my conviction that the motive was not revenge, but robbery. It has been urged that the presence of the accused brothers in that fatal room, just after notification that one of them must take the life of Judge Driscoll or lose his own the moment the parties should meet, clearly signifies that the natural instinct of self-preservation moved my clients to go there secretly and save Count Luigi by destroying his adversary.

"Then why did they stay there, after the deed was done? Mrs. Pratt had time, although she did not hear the cry for help, but woke up some moments later, to run to that room—and there she found these men standing, and making no effort to escape. If they were guilty, they ought to have been running out of the house at the same time that she was running to that room. If they had had such a strong instinct toward self-preservation as to move them to kill that unarmed man, what had become of it now, when it should have been more alert than ever? Would any of us have remained there? Let us not slander our intelligence to that degree.

"Much stress has been laid upon the fact that the accused offered a very large reward for the knife with which this murder was done; that no thief came forward to claim that extraordinary reward; that the latter fact was good circumstantial evidence that the claim that the knife had been stolen was a vanity and a fraud; that these details taken in connection with the memorable and apparently prophetic speech of the deceased concerning that knife, and the final discovery of that very knife in the fatal room where no living person was found present with the slaughtered man but the owner of the knife and his brother, form an indestructible chain of evidence which fixes the crime upon those unfortunate strangers.

"But I shall presently ask to be sworn, and shall testify that there was a large reward offered for the *thief*, also; that it was offered secretly and not advertised; that this fact was indiscreetly mentioned—or at least tacitly admitted—in what was supposed to be safe circumstances, but may *not* have been. The thief may have been present himself. [Tom Driscoll had been looking at the speaker, but dropped his eyes at this point.] In that case he would retain the knife in his possession, not daring to offer it for sale, or for pledge in a pawn-shop. [There was a nodding of heads among the audience by way of admission that this was not a bad stroke.] I shall prove to the

satisfaction of the jury that there *was* a person in Judge Driscoll's room several minutes before the accused entered it. [This produced a strong sensation; the last drowsy-head in the court-room roused up, now, and made preparation to listen.] If it shall seem necessary, I will prove by the Misses Clarkson that they met a veiled person — ostensibly a woman — coming out of the back gate a few minutes after the cry for help was heard. This person was not a woman, but a man dressed in woman's clothes." Another sensation. Wilson had his eye on Tom when he hazarded this guess, to see what effect it would produce. He was satisfied with the result, and said to himself, "It was a success — he's hit!"

"The object of that person in that house was robbery, not murder. It is true that the safe was not open, but there was an ordinary tin cash-box on the table, with three thousand dollars in it. It is easily supposable that the thief was concealed in the house; that he knew of this box, and of its owner's habit of counting its contents and arranging his accounts at night — if he had that habit, which I do not assert, of course; — that he tried to take the box while its owner slept, but made a noise and was seized, and had to use the knife to save himself from capture; and that he fled without his booty because he heard help coming.

"I have now done with my theory, and will proceed to the evidences by which I propose to try to prove its soundness." Wilson took up several of his strips of glass. When the audience recognized these familiar mementos of Pudd'nhead's old-time childish "puttering" and folly, the tense and funereal interest vanished out of their faces, and the house burst into volleys of relieving and refreshing laughter, and Tom chirked up and joined in the fun himself; but Wilson was apparently not disturbed. He arranged his records on the table before him, and said —

"I beg the indulgence of the court while I make a few remarks in explanation of some evidence which I am about to introduce, and which I shall presently ask to be allowed to verify under oath on the witness stand. Every human being carries with him from his cradle to his grave certain physical marks which do not change their character, and by which he can always be identified — and that without shade of doubt or question. These marks are his signature, his physiological autograph, so to speak, and this autograph cannot be counterfeited, nor can he disguise it or hide it away, nor can it become illegible by the wear and the mutations of time. This signature is not his face — age can change that beyond recognition; it is not his hair, for that can fall out; it is not his height, for duplicates of that exist;

it is not his form, for duplicates of that exist also, whereas this signature is each man's very own — there is no duplicate of it among the swarming populations of the globe! [The audience were interested once more.]

"This autograph consists of the delicate lines or corrugations with which Nature marks the insides of the hands and the soles of the feet. If you will look at the balls of your fingers, — you that have very sharp eyesight, — you will observe that these dainty curving lines lie close together, like those that indicate the borders of oceans in maps, and that they form various clearly defined patterns, such as arches, circles, long curves, whorls, etc., and that these patterns differ on the different fingers. [Every man in the room had his hand up to the light, now, and his head canted to one side, and was minutely scrutinizing the balls of his fingers; there were whispered ejaculations of "Why, it's so — I never noticed that before!"] The patterns on the right hand are not the same as those on the left. [Ejaculations of "Why, that's so, too!"] Taken finger for finger, your patterns differ from your neighbor's. [Comparisons were made all over the house — even the judge and jury were absorbed in this curious work.] The patterns of a twin's right hand are not the same as those on his left. One twin's patterns are never the same as his fellow-twin's patterns — the jury will find that the patterns upon the finger-balls of the accused follow this rule. [An examination of the twins' hands was begun at once.] You have often heard of twins who were so exactly alike that when dressed alike their own parents could not tell them apart. Yet there was never a twin born into this world that did not carry from birth to death a sure identifier in this mysterious and marvelous natal autograph. That once known to you, his fellow-twin could never personate him and deceive you."

Wilson stopped and stood silent. Inattention dies a quick and sure death when a speaker does that. The stillness gives warning that something is coming. All palms and finger-balls went down, now, all slouching forms straightened, all heads came up, all eyes were fastened upon Wilson's face. He waited yet one, two, three moments, to let his pause complete and perfect its spell upon the house; then, when through the profound hush he could hear the ticking of the clock on the wall, he put out his hand and took the Indian knife by the blade and held it aloft where all could see the sinister spots upon its ivory handle; then he said, in a level and passionless voice —

"Upon this haft stands the assassin's natal autograph, written in the blood of that help-

less and unoffending old man who loved you and whom you all loved. There is but one man in the whole earth whose hand can duplicate that crimson sign,"—he paused and raised his eyes to the pendulum swinging back and forth,—“and please God we will produce that man in this room before the clock strikes noon!”

Stunned, distraught, unconscious of its own movement, the house half rose, as if expecting to see the murderer appear at the door, and a breeze of muttered ejaculations swept the place. “Order in the court!—sit down!” This from the sheriff. He was obeyed, and quiet reigned again. Wilson stole a glance at Tom, and said to himself, “He is flying signals of distress, now; even people who despise him are pitying him; they think this is a hard ordeal for a young fellow who has lost his benefactor by so cruel a stroke—and they are right.” He resumed his speech:

“For more than twenty years I have amused my compulsory leisure with collecting these curious physical signatures in this town. At my house I have hundreds upon hundreds of them. Each and every one is labeled with name and date; not labeled the next day or even the next hour, but in the very minute that the impression was taken. When I go upon the witnessstand I will repeat under oath the things which I am now saying. I have the finger-prints of the court, the sheriff, and every member of the jury. There is hardly a person in this room, white or black, whose natal signature I cannot produce, and not one of them can so disguise himself that I cannot pick him out from a multitude of his fellow-creatures and unerringly identify him by his hands. And if he and I should live to be a hundred I could still do it! [The interest of the audience was steadily deepening, now.]

“I have studied some of these signatures so much that I know them as well as the bank cashier knows the autograph of his oldest customer. While I turn my back now, I beg that several persons will be so good as to pass their fingers through their hair, and then press them upon one of the panes of the window near the jury, and that among them the accused may set *their* finger-marks. Also, I beg that these experimenters, or others, will set their finger-marks upon another pane, and add again the marks of the accused, but not placing them in the same order or relation to the other signatures as before—for, by one chance in a million, a person might happen upon the right marks by pure guess-work *once*, therefore I wish to be tested twice.”

He turned his back, and the two panes were quickly covered with delicately-lined oval spots, but visible only to such persons as could

get a dark background for them—the foliage of a tree, outside, for instance. Then, upon call, Wilson went to the window, made his examination, and said—

“This is Count Luigi's right hand; this one, three signatures below, is his left. Here is Count Angelo's right; down here is his left. Now for the other pane: here and here are Count Luigi's, here and here are his brother's.” He faced about. “Am I right?”

A deafening explosion of applause was the answer. The Bench said—

“This certainly approaches the miraculous!”

Wilson turned to the window again and remarked, pointing with his finger—

“This is the signature of Mr. Justice Robinson. [Applause.] This, of Constable Blake. [Applause.] This, of John Mason, jurymen. [Applause.] This, of the sheriff. [Applause.] I cannot name the others, but I have them all at home, named and dated, and could identify them all by my finger-print records.”

He moved to his place through a storm of applause—which the sheriff stopped, and also made the people sit down, for they were all standing and struggling to see, of course. Court, jury, sheriff, and everybody had been too absorbed in observing Wilson's performance to attend to the audience earlier.

“Now, then,” said Wilson, “I have here the natal autographs of two children—thrown up to ten times the natural size by the pantograph, so that any one who can see at all can tell the markings apart at a glance. We will call the children *A* and *B*. Here are *A*'s finger-marks, taken at the age of five months. Here they are again, taken at seven months. [Tom started.] They are alike, you see. Here are *B*'s at five months, and also at seven months. They, too, exactly copy each other, but the patterns are quite different from *A*'s, you observe. I shall refer to these again presently, but we will turn them face down, now.

“Here, thrown up ten sizes, are the natal autographs of the two persons who are here before you accused of murdering Judge Driscoll. I made these pantograph copies last night, and will so swear when I go upon the witness stand. I ask the jury to compare them with the finger-marks of the accused upon the window-panes, and tell the court if they are the same.”

He passed a powerful magnifying-glass to the foreman.

One jurymen after another took the cardboard and the glass and made the comparison. Then the foreman said to the judge—

“Your honor, we are all agreed that they are identical.”

Wilson said to the foreman—

“Please turn that cardboard face down, and take this one, and compare it searchingly, by

the magnifier, with the fatal signature upon the knife-handle, and report your finding to the court."

Again the jury made minute examination, and again reported—

"We find them to be exactly identical, your honor."

Wilson turned toward the counsel for the prosecution, and there was a clearly recognizable note of warning in his voice when he said—

"May it please the court, the State has claimed, strenuously and persistently, that the blood-stained finger-prints upon that knife-handle were left there by the assassin of Judge Driscoll. You have heard us grant that claim, and welcome it." He turned to the jury: "Compare the finger-prints of the accused with the finger-prints left by the assassin—and report."

The comparison began. As it proceeded, all movement and all sound ceased, and the deep silence of an absorbed and waiting suspense settled upon the house; and when at last the words came—

"*They do not even resemble,*" a thunder-crash of applause followed and the house sprang to its feet, but was quickly repressed by official force and brought to order again. Tom was altering his position every few minutes, now, but none of his changes brought repose nor any small trifle of comfort. When the house's attention was become fixed once more, Wilson said gravely, indicating the twins with a gesture—

"These men are innocent—I have no further concern with them. [Another outbreak of applause began, but was promptly checked.] We will now proceed to find the guilty. [Tom's eyes were starting from their sockets—yes, it was a cruel day for the bereaved youth, everybody thought.] We will return to the infant autographs of *A* and *B*. I will ask the jury to take these large pantograph facsimiles of *A*'s, marked five months and seven months. Do they tally?"

The foreman responded—

"Perfectly."

"Now examine this pantograph, taken at eight months, and also marked *A*. Does it tally with the other two?"

The surprised response was—

"No—they differ widely!"

"You are quite right. Now take these two pantographs of *B*'s autograph, marked five months and seven months. Do they tally with each other?"

"Yes—perfectly."

"Take this third pantograph marked *B*, eight months. Does it tally with *B*'s other two?"

"By no means!"

"Do you know how to account for those strange discrepancies? I will tell you. For a purpose unknown to us, but probably a selfish one, somebody changed those children in the cradle."

This produced a vast sensation, naturally; Roxana was astonished at this admirable guess, but not disturbed by it. To guess the exchange was one thing, to guess who did it quite another. Pudd'nhead Wilson could do wonderful things, no doubt, but he could not do impossible ones. Safe? She was perfectly safe. She smiled privately.

"Between the ages of seven months and eight months those children were changed in the cradle"—he made one of his effect-collecting pauses, and added—"and the person who did it is in this house!"

Roxy's pulses stood still! The house was thrilled as with an electric shock, and the people half rose as if to seek a glimpse of the person who had made that exchange. Tom was growing limp; the life seemed oozing out of him. Wilson resumed:

"*A* was put into *B*'s cradle in the nursery; *B* was transferred to the kitchen and became a negro and a slave [Sensation—confusion of angry ejaculations]—but within a quarter of an hour he will stand before you white and free! [Burst of applause, checked by the officers.] From seven months onward until now, *A* has still been a usurper, and in my finger-records he bears *B*'s name. Here is his pantograph at the age of twelve. Compare it with the assassin's signature upon the knife-handle. Do they tally?"

The foreman answered—

"To the minutest detail!"

Wilson said, solemnly—

"The murderer of your friend and mine—York Driscoll of the generous hand and the kindly spirit—sits in among you. Valet de Chambre, negro and slave,—falsely called Thomas à Becket Driscoll,—make upon the window the finger-prints that will hang you!"

Tom turned his ashen face imploringly toward the speaker, made some impotent movements with his white lips, then slid limp and lifeless to the floor.

Wilson broke the awed silence with the words—

"There is no need. He has confessed."

Roxy flung herself upon her knees, covered her face with her hands, and out through her sobs the words struggled—

"De Lord have mercy on me, po' miserable sinner dat I is!"

The clock struck twelve.

The court rose; the new prisoner, handcuffed, was removed.

CONCLUSION.

IT is often the case that the man who can't tell a lie thinks he is the best judge of one.—*Pudd'nhead Wilson's Calendar.*

October 12, the Discovery. It was wonderful to find America, but it would have been more wonderful to miss it.—*Pudd'nhead Wilson's Calendar.*

THE town sat up all night to discuss the amazing events of the day and swap guesses as to when Tom's trial would begin. Troop after troop of citizens came to serenade Wilson, and require a speech, and shout themselves hoarse over every sentence that fell from his lips—for all his sentences were golden, now, all were marvelous. His long fight against hard luck and prejudice was ended; he was a made man for good.

And as each of these roaring gangs of enthusiasts marched away, some remorseful member of it was quite sure to raise his voice and say—

"And this is the man the likes of us have called a pudd'nhead for more than twenty years. He has resigned from that position, friends."

"Yes, but it is n't vacant—we're elected."

THE twins were heroes of romance, now, and with rehabilitated reputations. But they were weary of Western adventure, and straightway retired to Europe.

Roxy's heart was broken. The young fellow upon whom she had inflicted twenty-three years of slavery continued the false heir's pension of thirty-five dollars a month to her, but her hurts were too deep for money to heal; the spirit in her eye was quenched, her martial bearing departed with it, and the voice of her laughter ceased in the land. In her church and its affairs she found her only solace.

The real heir suddenly found himself rich and free, but in a most embarrassing situation. He could neither read nor write, and his speech was the basest dialect of the negro quarter. His

gait, his attitudes, his gestures, his bearing, his laugh—all were vulgar and uncouth; his manners were the manners of a slave. Money and fine clothes could not mend these defects or cover them up; they only made them the more glaring and the more pathetic. The poor fellow could not endure the terrors of the white man's parlor, and felt at home and at peace nowhere but in the kitchen. The family pew was a misery to him, yet he could nevermore enter into the solacing refuge of the "nigger gallery"—that was closed to him for good and all. But we cannot follow his curious fate further—that would be a long story.

The false heir made a full confession and was sentenced to imprisonment for life. But now a complication came up. The Percy Driscoll estate was in such a crippled shape when its owner died that it could pay only sixty per cent. of its great indebtedness, and was settled at that rate. But the creditors came forward, now, and complained that inasmuch as through an error for which *they* were in no way to blame the false heir was not inventoried at that time with the rest of the property, great wrong and loss had thereby been inflicted upon them. They rightly claimed that "Tom" was lawfully their property and had been so for eight years; that they had already lost sufficiently in being deprived of his services during that long period, and ought not to be required to add anything to that loss; that if he had been delivered up to them in the first place, they would have sold him and he could not have murdered Judge Driscoll; therefore it was not he that had really committed the murder, the guilt lay with the erroneous inventory. Everybody saw that there was reason in this. Everybody granted that if "Tom" were white and free it would be unquestionably right to punish him—it would be no loss to anybody; but to shut up a valuable slave for life—that was quite another matter.

As soon as the Governor understood the case, he pardoned Tom at once, and the creditors sold him down the river.

THE END.

Mark Twain.

"AM I RIGHT?"

ENGRAVED BY PETER AITKEN.

HUNTINGTON HOUSE.

LADIES, Ladies Huntington, your father served, we know,
 As aide-de-camp to Washington—you often told us so ;
 And when you sat you side by side in that ancestral pew,
 We knew his ghost sat next the door, and very proud of you.

Ladies, Ladies Huntington, like you there are no more :
 Nancy, Sarah, Emily, Louise—proud maidens four ;
 Nancy tall and angular, Louise a rosy dear,
 And Emily as fine as lace but just a little sere.

What was it, pray, your life within the mansion grand and old,
 Four dormers in its gambrel-roof, their shingles grim with mold ?
 How dwelt you in your spinsterhood, ye ancient virgins lone,
 From infancy to bag-and-muff so resolutely grown ?

Each Sunday morning out you drove to Parson Arms's church,
 As straight as if Time had not left you somehow in the lurch ;
 And so lived where your grandfather and father lived and died,
 Until you sought them one by one—and last of all stayed pride.

You knew that with them you would lie in that old burial ground
 Wherethrough the name of Huntington on vault and stone is found,
 Where Norwichtown's first infant male, in sixteen-sixty born,
 Grave Christopher, still rests beneath his cherub carved forlorn.

There sleep your warlike ancestors, their feet toward the east,
 And thus shall face the Judgment Throne when Gabriel's blast hath ceased.
 The frost of years may heave the tomb whereto you were consigned,
 And school-boys peer atween the cracks, but you—will never mind.

Edmund Clarence Stedman.

"EACH SUNDAY MORNING."

TISSOT'S ILLUSTRATIONS OF THE GOSPELS.

WITH PICTURES BY JAMES TISSOT.

NE of the most interesting features of this year's Champ de Mars Salon is the special exhibition, which fills two tastefully decorated rooms on the ground floor, of M. James Tissot's pictures illustrating the life of Jesus. It consists of 280 water-colors, either entirely finished or in an advanced state, and 100 pen-and-ink drawings, which are to be used for a future illustrated edition of the four gospels; or rather, to be more exact, only those portions of the scriptures which explain the pictures, and, in fact, gave birth to them, will form the text of the volume, accompanied by notes by the artist.

Seven or eight years ago artistic Paris talked for a day of the departure of Tissot for the Holy Land, in order to seek new inspirations. Tissot was then fresh in the public mind as the author of a series of etchings depicting the passions, charms, and seductions of feminine life at the French capital, and many an artist smiled skeptically at this apparent contradiction. Yet Tissot had already shown more than once that his talent had a bent in the direction of religious subjects. For had not his *début* at the Salon, in 1859, been the portraits of four saints, destined for a provincial church where his father and mother lie buried, and was not his contribution to the great retrospective Salon of 1883 the "Prodigal Son,"—four pendants reëxhibited at Jackson Park last summer,—which, it must be admitted, however, are biblical in little else than name? Then, too, at the very moment when he was engaged in packing his trunk for Palestine he had in his studio a carefully hidden canvas, scarcely dry, which was so penetrated with a subtle spiritual and Christian spirit that its timid author dared not exhibit it in public. It now forms the center of the Tissot collection at the Champ de Mars, where it is exposed for the first time. I refer to a large oil-painting called "The Voices Within," wherein are represented a poor man and his wife, who, fallen into deep despair in the midst of poverty and ruin, finally take new heart and courage through the consolation of Jesus, who appears to them, comforts them, and shows them his pierced hands. "That was the starting-point of my new dispensation," said M. Tissot, pointing to this picture the first time I saw it; "but I had a long and hard struggle before I could bring myself to begin it. More than one night did I lie awake for hours, till my head was burning through the mental

strain, struggling against the admission into my heart of the new light that was dawning upon me. But when I finally felt myself conquered, and was penetrated through and through by the grand mystery of a God turned man in order to save humanity, I could no longer escape from it. So, of course, this large painting must go to the Champ de Mars, for it is really the father of all this big brood of little ones."

With such thoughts in his mind and such awakenings in his heart, in the autumn of 1886 Tissot started for the holy sepulcher with all the enthusiasm of the crusaders of old. He saw, questioned, and meditated. He made scores of vivid sketches, and wrote reams of thoughtful notes. The first visit was repeated. During this second sojourn he utilized instantaneous photography, which was then first becoming known in France, and was thus able to bring back with him quantities of characteristic types, scenes, and landscapes. Almost all of the striking pen-and-ink drawings made during the first visit can be seen at the Champ de Mars, while the details furnished by the photographs have been reproduced in many of the water-colors.

The farther he wandered in Palestine, the more he saw there, and the deeper he studied his object, the stronger grew Tissot's conviction that his precursors in the field of biblical illustration had not caught the true spirit of their theme, had not struck the right note. He returned to France determined to catch the true spirit and to strike the right note. Once within the walls of Paris again, he buried himself in his handsome, secluded home, situated at the head of a quiet lane within a stone's throw of the Bois de Boulogne, and gave himself up entirely to his thoughts, his books, his collections, and his art. He pored over musty old commentaries on the Bible, studied archæology, mastered the Talmud, devoured books of Eastern travel, read the history of the Jews and Arabs, and went over the scriptures again and again in the Vulgate and in the French and English translations. Nor did he neglect the Apocrypha. In a word, before taking up his brush, Tissot saturated his mind with his subject, and gave full rein to an imagination now thirsting for the occult and mysterious. Society lost its charms for him. He who had been a *mondain* now became almost a recluse. He even abandoned the picture exhibitions which follow one another in such rapid succession throughout the Parisian season. You look almost in vain

"MARY MAGDALEN (BEFORE HER CONVERSION)."

for Tissot's name in the catalogues of the last ten years. He has been wholly absorbed by his new work, to which he has devoted all his time and strength.

The thorough manner in which Tissot studied before beginning to paint is shown by his note-books, which I have run over, and from which I shall make a few typical extracts. On the fly-leaf of the first of these blank-books the artist has written the title of the proposed volume: "Life of our Lord Jesus Christ. By a Pilgrim of the Holy Land." This title, and especially the latter half, reveals the spirit in which this modern palmer entered upon his task; while this note at the bottom of the page, "Begun on October 15, 1886," tells exactly how many years he has so far devoted to it. But it does not tell when the task will be completed. M. Tissot informs me that he expects to finish

Here is Tissot's note on the "Stairway of Fifteen Steps" in the Temple: "These steps were very low. It took three of them to make the height of an ordinary step. The whole flight was a meter and twelve centimeters high. A tradition of the time says that when Mary, at the age of three, was first taken to the Temple, she ran up these fifteen steps at one bound. This is quite possible when we bear in mind these measures, but it would have been impossible if the steps had been of the usual height. The painters who have treated this tradition—among them Tintoretto—have all fallen into this error; they have made their steps too high."

In the note on "The Voice in the Desert" we find this souvenir of the artist's Palestine journeys: "In these rocky valleys the voice resounds in an astonishing manner, and to-day one still hears the melancholy shouts of the shepherds hailing one another. Their voices are echoed from hill to hill at a great distance."

Sometimes the artist indulges in a little philosophizing, as when he writes, in a note to "The Possessed in the Synagogue": "It is curious to compare the case of this possessed person with instances of that ecstasy which is seen in our day in Protestant mysticism, and which, taking possession of those present, forces them to preach and to prophesize in the churches and in the public squares. It is the same phenomenon which, since the scenes at Munster down to those of the present day, has become epidemic in northern Germany, Denmark, Sweden, the United States, and England."

This note on the prevalence of the number forty in Bible history is suggested by the picture—which is, by the way, powerfully rendered in a most original and independent manner—entitled "Jesus Tempted in the Desert": "Ostrich eggs are suspended in Eastern sanctuaries, and are often highly ornamented. They are a symbol, a synthesis, of many mysteries. They were chosen because it is said that the ostrich sits on her eggs for forty days, thereby recalling the forty days of the Saviour's fast, which was also the length of Moses's sojourn on Mount Sinai, and of Elijah's on Mount Horeb; the forty days of the flood, Goliath challenging the Israelites during forty days, the forty years' wandering of the Jews in the wilderness, the presentation of Jesus at the Temple forty days after his birth, his excommunication by the synagogue forty days before his passion, the ascension forty days after his death, etc."

"The Angels Ministering unto Jesus" is an excellent example of the new and realistic life which Tissot has introduced into religious painting. Christ is reposing at full length on his back, while in the misty air about him appear the faces of many angels, whose arms are stretched toward him, and whose finger-tips

TYPE OF A JEW OF YEMEN.

the last illustration by the end of 1896, though he may need a few additional months in order to rewrite, and give the final form to, his notes and the texts. Thus will M. Tissot have devoted more than a whole decade to the accomplishment of a lofty idea, which in itself is no mean merit in this day and generation, the motto of which seems to be, What is worth doing at all is worth doing quickly.

The artist's notes are in the form of personal observations made in Palestine, references to learned works, etc. Let me give a few specimens of these notes. They reveal the working of the artist's mind, show the growth of the work, and explain the meaning and reason of this or that conception.

touch his body. Here is the note: "The angels go to the Saviour, and mysteriously renew his strength, not in the form of eatables and drinkables, but by bestowing upon him that spiritual force which fortifies him for the mission he is about to undertake."

The collection of illustrations may be divided into four classes. Some of them are simply pictorial translations of the Bible texts. Others give form to old traditions, which, though closely allied to the text, are, nevertheless, pure traditions. A third category, the most original of the whole, is the product of the artist's imagination alone, stimulated by inspiration resulting from long study of, and meditation on, the career of Jesus. And lastly—and this class is found chiefly among the pen-and-ink drawings—we have reproductions of historic spots, landscapes, etc., of the Holy Land as it appears to-day. These were made on the spot, as has already been said, and so have a value aside from their artistic merits.

Tissot's work possesses another interest of a general nature. It is, in a measure, a return, in spirit at least, to the methods and aspirations of the early masters in their treatment of religious subjects, and is in direct discord with the present tendency of French art, which is either to ignore sacred history and sacred themes altogether, or to treat them in an irreverent and sensational manner. Tissot, as we have seen, is a pious believer, and a faithful son of the Roman Catholic church. It would be impossible for him to present the Saviour as he has been presented several times in the Salons of recent years, as, for instance, to cite but one example, by M. Jean Béraud on two or three occasions.

"If I had not been supported by faith," says Tissot, "how could I have withstood the fatigues of such a task, and, above all, have found such profound consolation in my labors?"

Emphasis must be laid on the fact that Tissot, in the enthusiasm of a neophyte, has not simply gone back to the antiquated treatments of religious subjects. Herein lies, perhaps, the chief merit of his collection. His originality may often border on profanity, but never crosses the line. His innovations in the handling of old familiar themes frequently take the breath away when the beholder is of the cloth. An ecclesiastic who has carefully studied the collection declares that in his rendering of the Passion Tissot has introduced numerous details that had never before occurred to the clerical

WOMAN OF THE ENVIRONS OF JERUSALEM.

mind, and yet that none of these new departures is contrary to orthodoxy, and in no respect mars the emotion produced by the scene.

Tissot's series of "portraits" of the apostles is a mixture of archæological, ethnological, phrenological, and historical data welded together by reverence, art, and talent. They are sure to startle—that of St. Peter, for instance—a priest at the first glance, but the work will win respect and admiration at the second. For Tissot has a reason for all, even for the color of a garment, the form of a hood, or the style of the fastening of a sandal. One of the visitors has remarked concerning this remarkable gallery of saints, that the artist has not flattered his subjects. There is nothing wonderful about these poor fishermen, he says, nothing in their plain attire or every-day physiognomy to awaken awe. "But you feel that these are indeed the men whom Jesus inspired." In a word, Tissot's creations are pure realism tempered by sincere faith.

Perhaps the boldest of the pictures of pure imagination is that which he has named "What Jesus Saw from the Top of the Cross." In the first place, you see no cross. The spectator

"THE VOICE IN THE DESERT."

stands where the Christ should be, and this, in the words of the note, is what meets his eyes: "At the foot, weeping and burning with divine love and repentance, is Mary Magdalen; his mother, with her look of ineffable tenderness; Saint John, buried in profound devotion; and many holy women bathed in tears. A little farther back are the blasphemers, the haters, and the timid. Staring him in the face is the sepul-

cher which is to receive his body that very night. Farther back are timorous disciples, who approach that they may have a final glance at the Master before night hides all from view. The fainting Lord can just hear the murmur of the distant city, and the low blare of the trumpets at the Temple regulating the crowd according to the order of the sacrifices."

Theodore Stanton.

THE MOTHER OF IVAN TOURGUËNEFF.

It was Mr. Howells who, in 1871, called my attention to the writings of Tourguëneff. In 1872 we read "Smoke" together, and agreed that it was a great book. I then procured the whole series of Tourguëneff's novels in French and German translations, and the mingled strangeness and familiarity of the life they depicted attracted me with a potent fascination. Something marvelously new dawned upon me in these strong and simple tales, and I did not quite know what it was until it had, by some curious alchemy, entered into the substance of my mind, and changed my vision of the world. I had until then contemplated life through the medium of literature; now I learned to view literature through the medium of life—judge it according to the degree of its veracity. I do not mean by veracity a mere external conformity to fact, but a fundamental truth of conception and adherence to the logic of life. What impressed me so tremendously in Tourguëneff's novels was their accent of truth, their convincing authenticity. The incidents, though they be ever so fictitious, have the ring of things seen, heard, and experienced. The very subtlest flavor of personality which hitherto had eluded expression he triumphantly captured, and that often in nobly simple phrases. What writer is there who has not been visited with despair at the inexpressibility of the finest things which his inner sense apprehended? But here was one who had actually enlarged the territory of expression; who, with the comparatively coarse instrument of a semi-barbarous language, had surpassed the achievements of the most finished workman using the most exquisite tools. The fancies which, for others, broke through language and escaped he arrested in their flight, and held imprisoned within the meshes of his beautiful phrases.

This only to account for the enthusiasm which possessed me during the winter of 1873-74, when I met Tourguëneff in Paris. I have told elsewhere¹ of our intercourse during those delightful months. Suffice it to say that I found him a large and genial man, of quiet manners, naturally dignified, and full of gentleness and urbanity. His eyes were wonderfully kind, and kindness, I should say, was the key-note of his nature. His conversation was like his books, calm and natural, without a hint of the overstrained smartness of the boulevards, but opening vistas of reflection by its inspiring suggestions. There lay behind his remarks, in spite of their simplicity, a world of thought and ob-

servation—and as I sometimes fancied, of passionate, nay, even tragic, experience. It happened twice during our familiar talks in his library that he afforded me, inadvertently as it were, a glimpse of some somber and soul-stirring episode in his life of which he seemed in his next moment anxious to obliterate the impression. It was as if by the momentary opening of a door a murmur of turbulent music had reached me, and then, before I could catch its strain, it was gone.

He was subject at times to the most terrible fits of depression, when he would bewail his cowardice and the uselessness of his existence. When these attacks came upon him, he would sit and gaze before him with curiously veiled, unobservant eyes; but if, fancying that my presence was not desired, I rose to take my leave, he would rouse himself, and earnestly request me to remain. It was not until he was dead that I was able to assign a cause for these morbid moods of an otherwise sane and robust temperament. They were obviously the first symptoms of the spinal disease which ended his life in 1882. His reason was clouded during the year preceding his death; and a most pathetic portrait of him, exhibiting the signs of mental decay, was published in *THE CENTURY MAGAZINE* for November, 1883.

As to the tragic experience to which I have referred, some information is supplied (and much also withheld) by a book recently published by Michel Delines under the title "Tourguëneff Inconnu." The contributions of M. Delines himself are not remarkable; for nearly every one of Tourguëneff's friends could match the anecdotes which he relates of the great author's generosity in money matters, and his readiness to be victimized by Russian impostors who posed as patriotic martyrs. But the sketch of his mother, written by his adopted sister, accounts for much in Tourguëneff's character, and is of surpassing interest. When I read it the words of my friend recurred to my memory: "My mother was the typical noble lady of Russia"; and this was the only thing he ever said about her except this: "The utter irresponsibility of the master in his intercourse with the serf has the most detrimental effect upon character—as I saw exemplified in the case of my own mother."

I concluded from this that his mother had been a hard and tyrannical woman, and that he was unable to cherish her memory. But never did I dream, until his sister's narration fell into my hands, that she was the female counterpart of Ivan the Terrible. She delighted in the most arbitrary exercise of power, and

¹ "The Galaxy," April, 1874.

from sheer ennui tormented every one who came within the reach of her authority. She had herself been cruelly maltreated in her childhood — nay, she had been direfully insulted by her stepfather, and compelled in consequence to flee from home and seek refuge with a relative. By the death of her uncle, Ivan Lou-tovinoïf, she inherited an immense fortune, on the receipt of which she characteristically remarked, "Now I can do anything I like" (*"Maintenant, je peux tout"*). Among the many suitors who competed for her favor, she chose for a husband Sergius Nicolaevitch Tourguéneff because of his extraordinary beauty. She established herself in princely opulence on her estate of Spasskoë, and as she was determined upon keeping the reins of authority in her own hands, her husband thought it wiser to indulge her caprices, and refrain, as far as possible, from interfering with her wishes. Probably he had by this time discovered with whom he had to deal. He was too prudent a man to provoke a quarrel with a woman of so formidable a temperament.

It was, in fact, not only he whom she governed, but she insisted upon regulating the affairs of every one who approached her, or entered into any sort of relation with her, however remote. Her autocratic will did not tolerate even a suspicion of criticism, far less opposition; and the devices she hit upon for humiliating those who manifested what she regarded as a spirit of insubordination were worthy of her imperial prototype Catherine, misnamed the Great. When her daughter was ill with typhoid fever, she gave the physician, who was a highly educated serf, the choice between a complete cure and Siberia. A favorite serf, whom it pleased her from sheer caprice to persecute, she degraded from the position of a waiter to that of a field-laborer, and made him exchange his fine livery for the coarse garb of a peasant. Her major-domo, Paliakoff, she assaulted, in a fit of uncontrollable fury, with a crutch, and would have killed him if her brother-in-law had not interfered. She separated him from his wife and children, to whom he was warmly devoted, and exercised a diabolical ingenuity in devising new tortures for the unhappy man. His offense was that he had, out of love for his young master, Nicholas Tourguéneff, deceived her regarding the latter's relation to a certain beautiful German governess with whom Nicholas was deeply in love, and whom he had secretly married.

Neither Church nor State was of the least consequence if it came into conflict with Madame Tourguéneff's domineering will. She took into her head once to go to confession, and ordered the priest to attend her at a certain hour in her private chapel. All her numerous household were called in to partake of the sacrament.

When their mistress knelt to begin her confession, the priest made a signal to all present to depart. But Madame Tourguéneff promptly countermanded the order.

"Stay!" she cried.

A great confusion arose, some staying and others struggling to get out.

"It is contrary to the rules of the Church to hear confession in the presence of any one but the priest," her confessor observed mildly.

"But I—I wish to confess before all the world," replied the lady.

"But that is forbidden."

"But I—I say—that it is permitted," followed in a voice like a thunderclap; whereupon, snatching the prayer-book out of the hands of the priest, she began in a loud voice to recite the prescribed prayers.

When she had finished, the priest not daring to interfere, she turned toward her servants and said, "Pardon me"; and then in a tone of command to the priest, "Now administer the holy sacrament."

On another occasion she feigned illness, and gathered her household (consisting of forty house-servants, not counting the boy pages and an army of field-laborers) about her alleged death-bed, in order to test their sentiments toward her. All except two, who were a trifle tipsy, manifested the most exaggerated grief. In a dying voice she took an affecting leave of her children, all the time surreptitiously watching the countenance of each, in order to detect any hidden satisfaction or possible symptom of simulation. When she had finished her observation, she turned to her daughter and said, "Stop crying! God is merciful. Perhaps he will let me live. I feel better. Agatha! A cup of tea."

Then recovering with miraculous swiftness her wonted tone and manner, she commanded the major-domo to write down, according to her dictation, the punishment to be inflicted upon those abandoned wretches whose grief had not come up to her requirements.

When presently the church bells began to chime (it being the beginning of Holy Week), she sent word to the priest, forbidding the ringing, and the whole Easter festival, with its appropriate dishes and ceremonies, was for that year abolished, as far as Spasskoë with its dependencies was concerned.

One may well imagine what kind of boyhood Ivan Tourguéneff must have spent with such a mother. Without ever inquiring into his alleged misdemeanors, she did not disdain to whip him almost daily with her own hands. If, as frequently happened, he did not know why he was being punished, and took the liberty to ask, she responded only with more blows. And after having performed this pious labor, she would, as likely as not, order her daughter to

read aloud to her a chapter of Thomas à Kempis's "Imitation of Christ."

When the boy, humiliated, tormented, and harassed beyond endurance, made preparations for flight, which were only by accident discovered, she was frightened, and treated him henceforth with a greater approach to forbearance. As regards the father, he was too prudent by any kind of interference to expose himself to the wrath of his tempestuous spouse. He held aloof from all domestic scenes with the air of a well-bred stranger, who feigns not to observe what might be embarrassing to the family, if reported. His sole attention to his sons was to reach them his hand to kiss when they came to bid him good-night; and on the above recorded occasion, when Ivan's flight had been prevented, he managed to shake off his indifference so far as to remark in French:

"You are pretty, my little one. So young, and yet you can do such villainous things."

Who can wonder that these years of sorrow produced a sorrowful harvest? Ivan Tourguéneff was not by nature inclined to melancholy, but the continual unmerited sufferings of his boyhood gave a warp to his character from which it never could recover. His father's early death made but a slight impression upon him, while his mother's unimpaired vigor of health and temper was and remained the most formidable fact of his existence. He made repeated efforts to soothe and soften her, but only with momentary effect. The savage strain in her blood reasserted itself promptly, impelling her to acts of violence and treachery. The reflection which urges itself upon the reader of this tragic narrative is the appalling power of one cruel nature to spread misery and ruin — to blot out the very sun in the heavens, and to steep in darkness every life which comes within the sphere of its influence.

Having failed to break up the marriage of her elder son, and having cursed his three children, and ground their pictures under her heels (whereupon, strange to say, they all died), Madame Tourguéneff was the more resolved that the younger should make a fitting alliance and be a credit to her family. Imagine, then, her horror when she found that he wrote books — that his highest ambition was to be an author, like Pushkin!

"Is that a business for a nobleman?" she cried contemptuously. . . . "I can understand that you might write verses. But to be an author — an author! Do you know what it means to be an author? I'll tell you. Author and quill-driver are one and the same thing. Both sling ink for money. A nobleman should serve the czar, make a career and a name for himself in the army, and not by slinging ink. And who reads a Russian book, anyway? In-

deed, Ivan, believe me, in the army you would soon be promoted . . . and then you can marry . . ."

"Marry, mother!" replied her son, "Never! Pray, don't think of it. Sooner will the church of Spasskoë dance a jig on its two crosses than I will marry."

At this sally his sister began to laugh.

"How dare you laugh at such stupidities?" ejaculated the irate lady. "And you, Ivan, what nonsense you talk in the presence of this child!"

"But, mother," he remonstrated calmly, "why do *you* speak so contemptuously of authors? You were perfectly wild about Pushkin. And then Joukovsky — you both loved and respected him."

"Joukovsky! Well, that is quite another matter. You forget that he was received at court."

Her only criticism on Gogol, the author of "Dead Souls," whom her son passionately admired, was that he was improper and "bad form."

But when she heard that Ivan's books, which she herself professed to despise, had been publicly criticized in the press (a fact which to their author was very gratifying), she flew into one of her tremendous rages, which ended, as usual, with a physician and anodynes.

"How," she thundered, "do they dare criticize *you* — a nobleman and a Tourguéneff?"

"But, mother," he explained, with imperishable good temper, "that only proves that I have attracted attention — that I am not a nonentity of whom nobody speaks."

"But how — how is it you attract attention? They find fault with you. They treat you as an imbecile, and you are satisfied. What is the good of my having kept teachers and professors for you? One of my sons leaves me for a woman, and the other, my Benjamin, in order to become an author."

Then tears, passionate reproaches, paroxysms of wrath, and hasty summons of the family doctor.

In spite of all threats and opposition, however, Tourguéneff continued to write, and rapidly gained a reputation, to the great chagrin of his mother. But in the mean while an incident occurred which reveals their relation in the most glaring light. Ivan had never neglected an opportunity to speak in behalf of his brother Nicholas, and to urge upon his mother her duty to make some provision for her eldest son, who was living in St. Petersburg in positive penury. He had himself shared his scanty earnings with Nicholas and his family; but being by his "disobedience" cut off from home supplies, he had but little to share. Madame Tourguéneff had conceived the plan of starving her sons into submission; and she seemed to herself a terribly abused

creature when this Spartan discipline proved unavailing. Though she was herself rolling in wealth, and maintaining a small court at Spasskoë, she permitted them to taste the bitterest dregs of poverty, because she could not endure their independence. She was so accustomed to having every one bend under her despotic sway that she could not help attributing a wanton desire to insult her to any one who had the courage to resist. This was the situation when Ivan, after many rebuffs, made a final effort in his brother's behalf to bring her to reason. This time she actually yielded to his importunities, and promised to make a proper provision for both. The next day she dictated to her secretary two curious documents, giving to her two sons her estates Titchévo and Kadnoë. But there was no approach to legal form, no signature of witnesses, or adherence to established usage. She summoned Nicholas and Ivan, and had these deeds of gift read to them.

"Are you not now satisfied with me?" she asked.

After an awkward silence Ivan replied: "Undoubtedly, mother, we should be very well satisfied, and very grateful, if you would have these papers legalized."

"Why legalize?"

"You ask me why. You know perfectly well, if you really desire to deed these estates to us, how it is to be done."

"I don't understand you, Ivan. What more is there to be done? I give to each of you an estate. . . . I do not understand you."

She always assumed this air of innocence when she was checkmated. But the brothers had just received a piece of information which proved that she not only understood, but with her usual imperious irresponsibility was playing a cruel game with them. They had learned from her secretary that she had that same morning written to the stewards of the two estates commanding them immediately to sell all the grain which they had on hand, no matter at what price, and also the unharvested crops, and to send her the money without delay. There would accordingly be no seed-corn for the following year, and no money wherewith to buy, or to support existence in the mean while. The sons, knowing remonstrance to be vain, took their leave ceremoniously, without uttering a word.

The next morning they were again sent for. Ignoring the scene of the previous day, Madame Tourguénéff, sitting in solemn state, presented the sealed packages containing the worthless deeds of gift to Nicholas and Ivan, whereupon she reached them her hands to kiss. Of course they made no attempt to take possession of Titchévo and Kadnoë; and their mother, who dimly perceived that they had lost the last

remnant of respect which they had entertained for her, was bitterly disappointed. For in this extraordinary way she had perhaps intended to improve their circumstances; but then the reflection had occurred to her that if they were rich they would soon emancipate themselves from her control; and this idea seemed insupportable. She had, therefore, devised a clumsy method of keeping them in perpetual subjection by reserving to herself the right of depriving them of their property if they still persevered in displeasing her.

Terrible scenes followed, and the most strained relations existed between mother and sons. Neither she nor they relented, though they outwardly maintained toward her the most deferential attitude, and never by her blasts of passion were betrayed into uttering a discourteous word; they only avoided her, and never voluntarily crossed her path.

Her constant occupation in her declining years was playing at solitaire. Though she was suffering from dropsy, and consulted the most famous physicians, she blandly disregarded their dietetic rules, and followed her own sovereign whim. For a long time she ate nothing but grapes, and finally her diet consisted solely of ice-cream. For entertainment her daughter read aloud to her the latest French novels. Before her death, on November 16, 1850, she sent for her sons, who both hastened to her bedside. But only Nicholas found his mother alive. When Ivan arrived she had already expired. Before drawing her last breath, she scrawled these lines on a piece of paper:

"My mother, my children, forgive me! And thou, Lord, forgive me, too; for pride—that mortal sin—was always my cardinal sin."

Ivan Tourguénéff was thirty-two years old when his mother's sinister presence was removed from his life. He was now rich, famous, and universally courted. But from the somber shadow which her formidable Muscovite form threw over his youth he never fully emerged. All his relations (except to his brother and a few friends) were more or less abnormal. His childhood's experience had implanted in him a dread of marriage as the greatest of calamities which could befall a man. But of the two liaisons which he contracted neither brought him happiness. All the satisfaction which life yielded him he found in the companionship of artists and in the practice of his art. I once heard him quote with deep conviction Goethe's saying, "Fortunate is the man who learns in his youth what art is, for he can never be completely unhappy."

But how differently the course of this great man's life would have run if he had had a good mother and a joyous youth!

MAURICE BOUTET DE MONVEL.

TO know thyself is held on the best of authority to be the summit of human attainment, but, difficult as is this self-knowledge in any walk in life, it is perhaps never more difficult than in the case of the artist.

Professing an art with ill-defined boundaries, eager, and questioning every murmur of the wind as though it were the voice of the god, now progressing boldly, cheered by the approval of the multitude, or again groping blindly amidst general denunciation, the still small voice of artistic conscience his only supporter, this protean creation of super-sensitive atoms that we name artist lives with the sphinx who smiles

encouragement but is dumb. Happy indeed are the exceptions to this rule; fortunate he who from the first sees spread before him the way in which he may walk. He, it is true, will still find the path beset with pitfalls; the thorns of technical endeavor will still tear at his garment: but these are little ills; the temple, sun-illuminated, is clear to his eyes, and, though far distant, every step seems to bring him nearer.

And, like the roads that lead to Rome, the ways are many; no two men need follow the same, and the by-path followed by Chardin leads one thither no less — nay more — surely than the Appian Way trod by David. The secret of this primrose path is kept, however, so securely that

none may tell his fellow, "Follow me, and all will be well"; nor by following the elect can one hope to be of the chosen. Each must work out his own salvation, and against the temporary wave, whatever it may be, must be on his guard, lest it carry him beyond his depth and drown him in the futile and the commonplace. Every great artist has left resolutely behind him the apparently defined path to success. Giotto deserted the splendors of Byzantine mosaic, and, taking up duller pigments, found freedom of expression; Michelangelo, leaving the individualism of his contemporaries, invented a typical art all his own; and Millet, virile nature ill at ease in the classic precincts of the Hemicycle, betook himself to the fields, and molded his man of clay.

These are great names to conjure with, and the distance that separates them from that of Maurice Boutet de Monvel is undoubtedly vast; but as all roads lead to Rome, the by-path chosen by M. de Monvel is of his own discovery, and may lead him far. The infinitely great has many points of contact even with the infinitely small, and in the middle ground between them resemblances multiply and blend, so that it is the purpose of this paper to explain in a degree the place of its titular subject in the great family of art.

Maurice Boutet de Monvel was born at Orléans, France, in 1850, and if the proverb of *no-blesse oblige* can be artistically adapted, it is difficult to see how he could have readily escaped following some one of the many branches of an artistic career. Heredity, which is held respon-

"JACQUELINE AND MIRAUT." FROM "NOS ENFANTS."

"THE MILLER, HIS SON, AND THE DONKEY." FROM "LA FONTAINE'S

sible for so many things, had prepared since 1745 for the present exponent of the artistic temperament in the Monvel family, for it was in that year that his great-great-grandfather saw the light. Jacques Marie Boutet de Monvel was the son of an actor, and, following the profession of his father, made his début at the Théâtre Français in 1770. He was the great tragedian of his time, and, preceding Talma, brought tragedy from the bonds of stilted conventionalism into the realm of reality. French writers on the stage assign to him a most important place in theatrical history, and his literary talent was so esteemed by his contemporaries that he remains the only instance of an actor elected as a member of the Institute. The tragedian's daughter, known to us by her stage name of Mademoiselle Mars, is more celebrated. This astonishing woman, making her first appearance at the Théâtre Français in 1803, continued a career of successive triumphs until her farewell representation in 1841, when, at the age of sixty-two, she played the part of *Célimène* in "Le Misanthrope" of Molière. Throughout this long period, and in a fickle capital, she kept her place as the first actress in the first theater in the world, and the long line of dramatic authors from the time of the first Empire down to Dumas and Hugo were all indebted to her creation of their principal rôles. Other artistic stars of lesser magnitude who figure in this artistic genealogy were the brothers, Baptiste of the Comédie Française, and Feriol of the Opéra Comique. The line was to be broken, however, for two generations. The grandfather of the subject of this sketch, chose to abandon the mimic wars of the stage

for an actual war, which enlisted him, as it did so many of his generous countrymen, and brought him to the whilom British colonies in North America. Arriving in this country during the War of Independence, and acquiring the rank of captain of engineers in its army, he remained until peace was restored, and then, returning to France, settled to a life of philosophic research at Orléans. Here his son, the father of Maurice, was born, and here the artistic line was resumed by this son's marriage with the daughter of Adolphe Nourrit, who was not only the creator of the chief tenor parts in "Guillaume Tell," "Robert le Diable," "Les Huguenots," and other operas of Rossini and Meyerbeer, but the intimate friend and counselor of the composers. During a too short career — he died in 1839 at the age of thirty-seven — Nourrit succeeded in impressing his personality on his environment to a remarkable degree. It is related of him that Meyerbeer accepted and interpolated into his score of "Robert le Diable" airs of Nourrit's composition, and his versatile talent found vent in other directions, drawing "with great taste," says his biographer, and writing a series of criticisms on the Salon in the "Journal de Paris."

From such ancestry Maurice Boutet de Monvel was born. The future career of a child in France, in the midst of a family which had already counted such illustrious names in the domain of art, could almost be predicted. In curious contrast to the Anglo-Saxon order of ideas, which looks askance at the artist with a mixture of commiseration and distrust, is the Gallic idea, which not only counts this voca-

FABLES." BY PERMISSION OF MESSRS. E. FLON, NOURRIT & CIE.

tion as preëminently respectable, but, perhaps even more than the pursuit of arms, glorious. Therefore, young Monvel found no opposition when at an early age his artistic instincts became manifest. Repeating an experience common in the history of painters, it was, above all, his mother's counsel and encouragement which profited him the most, and through his childhood and school-boy days it was her exhortation and her stories of her father's triumphs which fired the youth's ambition, until in the year 1870 (after a year in the private studio of an artist of talent, De Rudder by name) he entered the Atelier Cabanel, in the École des Beaux-Arts. It was on the eve of war, and after the defeat at Sedan our young artist doffed his blouse, dropped his brushes, donned a uniform, and with a chassepot on his shoulder joined the army of the Loire. The boy of twenty, in the few short months of war, became a man, although of the scenes which he witnessed, of the emotions which war brought to him, there is visible in his work only an occasional tragic note, such as we may see in the "Apotheosis." (See page 260.) The war over, Monvel resumed his studies, but this time—an early sign of revolt—in the more independent Atelier Julian. In 1874 came his first exhibition at the Salon. At this time Monvel's equipment, and apparently his aim, were those of hundreds of other young painters, who, benefiting by the wonderfully systematized methods of instruction prevalent in France, find themselves, at the outset of their professional career, with an ideal purely academic, and a docile intention to carry out this ideal in the official manner.

French art education has, for the moment, its most bitter opponents in its own birthplace. To our more distant view it would seem to be as good as any general system of education can be. It does not produce artists, say its enemies. True enough, but, given the necessary temperament, does it not put into the artist's hands the weapons which he must wield in battle? *Poeta nascitur non fit* is true though trite, but an unlettered Keats is tongue-tied from birth. The army of painters sallying forth from drill practice counts for the time few but privates in its ranks, but little by little the natural leader is promoted, and at last commands.

The ability to draw with correctness, to paint with due regard to "values," to compose a picture in an intelligent, though somewhat conventional, manner—all this the schools place at the disposition of the many. It may not make draftsmen with style; the values may not be sublimated to their last expression; the compositions may smack overmuch of traditions; and it never, we may say, makes a colorist: but abolish all this (and every year in Paris there is an effort on the part of certain men and certain journals to do so), and you get what the sad spectacle of English art gives us—irrelevant, desultory effort, evidences enough of talent, but one and all wallowing in the slough of insufficient technical knowledge.

It can be maintained that it is not possible to judge of the effects of the abolition of the parental academic direction of art study in France, for, despite the theories of those who are now willing to overthrow the system, they—the leaders of the revolt—have profited by it,

or if they have not, as in a few isolated instances, the academic influence has been so strong that they have absorbed its principles against their will. The standard of Paris to-day demands of the painter technical acquirements that, left to himself, no man could arrive at, and if the "dried fruit of official culture" is rife upon the market through this system, the blossoms and ripe fruits are also there, the result of its careful culture.

One of the many at the time of his début at the Salon, Monvel was nevertheless one of the few who think for themselves. The absence of color *per se*, as a defect in French training, has been noted. Feeling the lack of it, Monvel in 1875 went back to school, this time to the revolutionary Atelier Carolus Duran, while still working in his own studio and contributing to the Salon. Monvel's work at this time had a strong grasp of character, but in striving for strength of effect there was too great a tendency to over-blackness of shadow, against which Duran labored in vain, and from which Monvel was only to be emancipated years later through the forced use of light tones and simple, unaccented silhouettes in the color-reproductions in his books. In 1876, marriage and the attendant responsibilities of a household relegated Salon triumphs and ambitions to a second place. To meet these new demands there followed a weary search from illustrated journal to book-publisher and back again for illustrative work. For a long time it was without result, and, rebuffed on every hand, Monvel was losing heart when Delagrave, a publisher, offered him the illustration of a child's history of France. The work was poorly paid, but it was an entering wedge, and, so reasoning, Monvel did his best, and as a result was offered other work, notably on the French edition of "St. Nicholas." With illustration as a breadwinner, work of more serious intention was undertaken for the Salon. It was still academic in treatment, but with a vein of originality in subject which, though slightly trivial, served to show that back of the tradition there was a glimmering of individuality. In the Salon of 1878 a third-class medal, and in 1880 one of the second class, making its recipient *hors concours*, came to recompense these efforts. The medaled picture of 1880 represented a young sorceress receiving instruction in the occult arts from an old witch. The subject served as a pretext for painting the nude figure of the young sorceress, which was in parts beautifully painted; but the bituminous shadows still prevailed, and the picture enters into the category somewhat contemptuously judged by M. de Monvel as having no other value than as a lesson in what to avoid.

With the Salon successes and their official

reward there appeared a little book, "Vieilles Chansons et Rondes" ("Old Songs and Dances"), soon followed by another, "Chansons de France" ("Songs of France"), in which, breaking through the shell of scholastic trammels, the talent of Monvel takes its first flight. These little books, oblong quarto in form, are of fifty or sixty pages, and on each page, surrounding the words and music of the song, is a decoratively treated drawing. Some of them are reproduced in these pages, and though in the original we have the delicate tones of color excellently well printed, which are of necessity lacking here, enough remains to show their merit. In the charming books which the fortunate children of this generation have in such number, I know none superior to these or to their successors, "La Civilité Honnête et Puérile," republished in this country as "Good and Bad Children," and the "Fables of La Fontaine." I do not think that any critical description of them can be made better than a quotation from a letter of M. de Monvel in which, speaking of drawing with a pen, he says:

Having at my disposition a means so limited [as the pen], I have learned that there is one all-important element which we must seek in everything which we would reproduce, and which, for want of a more definite word, we may call the soul, the spirit of the object represented. A rude stick planted in the ground has a particular character and interest of its own, and if we make of it a drawing which is commonplace, it is because we have failed to grasp its spirit. No other stick would have the character which belongs to this particular one, and this, which is true of the rude stick, applies the more as we ascend the scale of creation. This is the lesson taught me by the necessity of expressing much with the thin, encircling line of the pen, and all is there. In comparison with this sense of individual character in anything which we try to represent, all else is unimportant.

This is a brave profession of faith, which an examination of the artist's work renders convincing. Through all these little figures we find everywhere a truth of gesture, a reality of type, that are surprising; the children resemble one another only as one child is like another. They are French children, but there the resemblance ceases. And their heads, their hands, their little feet, express so much! An oval contour, two dots for eyes, a couple of delicately indicated accents for mouth and nose, and we have Mademoiselle Fifi, who turns her cheek and submits to the chaste embrace of Monsieur Paul, in pinafore. Then, in quite another vein, we have the three robbers making off with the newly shorn wool, and below, when brought to task by the owner, who, good woman, begs its return on bended knees, how fine the assumption of innocence on the part of the

PORTRAIT OF A YOUNG GIRL.

"CHASSON DE LA MARIÉE." FROM "CHANSONS DE FRANCE."

thieves! Again, in the fable of La Fontaine of the man who sells the bearskin before catching Bruin, how the story tells itself without the author's aid! All these are in delicate outline, filled in with flat tones of color sometimes subdued and delicate, and at others gorgeous in wealth of strong primary tones, and with the precision and daring of a Japanese. And throughout the work, though the little figures may not be more than two inches in height, the manner in which they are drawn, the indication of the turn of a wrist, the way that they stand on their feet, denote the masterly draftsman quick to seize and strong to express with accuracy and ease the movement and character of his figures. A later book, "*Nos Enfants*," with text, by that charming writer, Anatole France, shows the same qualities on a larger page, and is replete with tenderness, half amused, and yet thoroughly in sympathy with child life. Here we have the grave little doctor visiting the indisposed doll, while the little mother, gravely resting her chin on the headboard of the bed, awaits the result of the diagnosis. Very charming, also from this book, are the glimpses of country life—the good old peasant grandmother, the children gathering fagots, or the little becappped girl who submits with a mingling of terror and joy to the amicable caress of a great Newfoundland dog. Of more

import to Monvel than Salon honors was the reception accorded these works. Their popular success was great, and grave critics, turning aside from the consideration of large official painting, treated these delicately traced pages with becoming seriousness.

It is curious to turn from these works to Monvel's offered contribution to the Salon of 1885—the "*Apotheosis*," reproduced herewith. One cannot help feeling that his theatrical ancestry must have strongly influenced our painter, an influence wholly for the good when it impels him to throw himself for the nonce into the soul of a child that he wishes to represent, but in the case of a picture like this, an influence more questionable. Moreover, a picture, even more than a story, designed to teach a lesson, to advocate a theory, is an anomaly. In this we have the demagogue, enthroned on a barricade, being crowned by Robert Macaire, while the comrade Bertrand beats the bass-drum, and the crowd acclaims him king. A satire on universal suffrage, a protest against socialism, this may be one or the other, and it matters little; the real merit of the work is a technical one—the admirable manner in which the uplifted hands of the rabble are treated. Admirable as they are,—and from some of them one could reconstruct the individual as a naturalist reconstructs a prehistoric animal from a single bone,—and though the difficulties vanquished are great, and the success of the achievement considerable, the picture as a picture is not equal to some of the slighter drawings, or, above all, to Monvel's painting of to-day.

Its history, however, is amusing, and, as a bit of the *chronique scandaleuse* of the Salon, worth relating. The picture was sent to the Salon of 1885, was placed on the line, and duly admired by the jury previous to the official visit of the Assistant Director of Fine Arts, a certain M. Turquet. The official visit of the Director comes before that of the President and the Ministry, which in turn precedes the day of opening to the general public. At the appointed time came M. Turquet, who, considering it seditious, and liable to create a disturbance little

BY PERMISSION OF MESSRS. E. BLON, NOURRIE & CO.

short of a revolution, ordered the picture to be detached from the wall, and sent home to the painter. The jury meekly acquiesced, for the Director of Fine Arts sits at the source of official patronage, and as he directs the current the streams of Pae-tolus flow. So M. de Monvel, properly punished for painting a political opinion, saw himself excluded from the Salon—a grave misfortune, for in the capital of art many are striving for recognition, and it behooves one at the outset of a reputation to maintain himself before his public. At this junction M. Georges Petit, who was organizing an exhibition in his charming and much frequented gallery of the Rue de Seze, invited our painter to show the "Apotheosis" there. It was accordingly sent, and placed on the wall, when, just before the exhibition opened, a prominent painter, a member of the Institute, but of different political faith from M. de Monvel, saw the picture, and promptly gave M. Petit the choice of sending away the "Apotheosis" or having the picture painted by himself removed. As M. Petit is but human, and the authority of the Institute is great, Monvel once more saw his picture returned, and in this way a change of ministry, and possibly civil war, may have been averted.

It is pleasant to turn from this tempest in a tea-pot to an act of pure *camaraderie* uninfluenced even by personal acquaintance. Édouard Detaille, presumably disgusted with the injustice from which Monvel was suffering, espoused his cause by proposing him as a member of the French Water-Color Society, a most exclusive body. Considering that at the time Monvel had never painted in water-color, the appropriateness of the election which followed might be considered doubtful, but coming as the voluntary proffer of sympathy on the part of one of the most prominent painters in France, it took on the form of a vindication, and, greatly comforted thereby, Monvel at once applied himself to the manipulation of this (to him) new means of expression. As he knew nothing of the medium, all was to learn, and the result has been that his water-color work is peculiarly his own, the effect arrived at being one of singular limpidness and delicacy without undue sacrifice of strength.

With this period, and undoubtedly under the influence of this medium, the blackness characteristic of his early work has completely disappeared, and in the next important work which Monvel undertook, the illustration of "Xavière," by Ferdinand Fabre, we have a series of thirty-six drawings which for originality both in method and conception place him not only in the front rank of art, but give him a place by himself. Here we feel that he literally knows himself, that with a congenial subject he is completely master of the situation. The original drawings were executed in water-color, and have been superbly reproduced by the photo-gravure process of Boussod, Valadon & Cie., who publish the book. The reproductions are in black and white, but so thorough is the work of the artist, so delicately adjusted is the scale of light and shade, that the loss of color is hardly felt. The characters of the story, a village priest, his old woman-servant, and two children, a boy and a girl, and the simple rustic surroundings both in and out of doors, make up the subjects of the pictures. The atmosphere of the story surrounding these characters is felt through all the work; the good priest in his close-fitting robe, like a legacy from medieval times, moves quietly through it all, with his homely, saintly face; the shrewd goodness of the old servant gives a touch of strong reality; and the young

THE "APOTHEOSIS."

girl Xavière, with her sweetheart Landry, adds an idyllic note. It is difficult for me to write of these drawings in aught but a superlative way, for with this strong accentuation the means employed are the simplest. The beauty of ordinary daylight and lamplight effects in an interior simple almost to the point of bar-

renness is so well expressed that one almost forgets that simplicity is of all qualities the most difficult to obtain. The sureness of hand which in slighter works we have remarked in Monvel's drawings seems greater here where the scheme of light and shade is carried so much further, and the luminosity and the color qual-

"THE SCHOOL." FROM "NOS ENFANTS."

ity of some of the drawings is surprising. How exact in the sense of truth and character, in the "soul of the object represented," are the scenes where the priest and his little household are seated before the fire, the effect of lamplight where the priest searches the pages of St. Jerome, or that of the dappled sunlight as the children dance around the tree to the sound of Landry's flute! The enumeration of these various subjects at the risk of being tiresome must include

at least that of the closing drawings where poor Xavière dies, all of which are treated with a sympathetic touch, especially that of the last communion, which it is difficult to conceive as the work of the painter of the "Apotheosis," so great is the range of sentiment between. In truth, the doctrine of heredity finds confirmation in work like this, and the actor-artist lineage stands our painter in good stead when it plays through a gamut of character such as his

FROM "XAVIÈRE," BY PERMISSION OF BOUSSOD, VALADON & CIE.

"THE PRAYER DURING THE STORM."

In the old vicarage of Camplong, the little household of the priest, consisting of Prudence his old servant, his young nephew, and Landry, the son of the village schoolmaster, is assembled. There is a fearful thunderstorm, and the good priest is exposed to its violence in returning from the monthly reunion of the priests of the canton. To guide his steps, and as an intercession to the divine power, it is decided to ring the bell in the old church tower. Landry bravely volunteers to perform this service, leaving Prudence and the nephew on their knees.

"The first sound which arrived with a gust of wind which had joined forces with the storm upset me completely, and though determined to repeat the Ave Maria with Prudence until it pleased the Holy Mother to intercede for us, and above all for my poor uncle, exposed on the route to a thousand dangers, I was compelled to stop after indistinctly repeating three or four words. I could only listen to our bell, as far above the rock of Bataillo, far higher than the high crest of the Jougla, far beyond the great hills of Fonjouve, it sent its desperate appeal up into the sky of ink."

— "Xavière," by Ferdinand Fabre.

FROM "XAVIÈRE," BY PERMISSION OF BOUSSOD, VALADON & CIE.

"THE ABBÉ AND XAVIÈRE."

"The other evening Xavière came to the vicarage for an engraving which I had promised her of Saint Francis Xavier, the patron saint of her dead father and her own. I sat enjoying the last light of the day, forgetting to light my lamp. Xavière entered; I turned, and the whiteness of her figure, which her dark hair made by contrast more light, seemed in the growing darkness of the room like a pale moon, *sicut luna perfecta in æther* as it is written in the eighty-eighth psalm."

—"Xavière," by Ferdinand Fabre.

FROM "XAVIÈRE," BY PERMISSION OF SOUBSOO, VALADON & CIE.

"THE ABBÉ CONSULTS ST. JÉRÔME."

"I have the text! the exact text!"

"You have?"

"He did not listen. He murmured Latin words, which he translated as he went, not without difficulty. O interlined translation of Jules Delalain, publisher in the rue Mathurin-Saint-Jacques! O translation interlined and convenient, where art thou? Curiosity held me by the throat, and I waited almost with anguish. He did not hasten, stopped every second by some difficult expression. The cat, Cascarot, with a bound like my rubber-ball, installed himself on the reading desk, his phosphorescent eyes widely opened on us. What did *he* want? Had he scented a mouse in the old worm-eaten copy of St. Jérôme?" — "Xavière," by Ferdinand Fabre.

FROM "XAVIÈRE," BY PERMISSION OF BOUGGOD, VALADON & CIE.

"XAVIÈRE AND LANDRY."

"Xavière turned toward Landry a look of such deep affection that in passing it fairly made me tremble—a look which I had never seen in her pale, cool eyes: then going to him deliberately, she threw around his neck her two arms, as flexible as the little branches of the white willow; and, before me, to my face, kissed him and kissed him again. . . .

"'He is not a boy like the shepherd! Is he a boy like him!'

"'Certainly,' I affirmed stoutly.

"'It is Landry, my Landry,' she cried, straightening herself, her arms uplifted, tall as though borne on wings, transfigured, radiant, angelic as I had never seen her, as no one in the parish of Camplong had ever seen her."

—"Xavière," by Ferdinand Fabre.

"THE BLESSING."

"'My children,' said the old man of the Passettes, lifting his head to the sky, — 'my children, you are in the flower of your years, and with the vigor of youth which God accords us for a time you can overcome all obstacles. . . . Go together hand in hand; fear nothing, if you love from a full heart.'"—"Xavière," by Ferdinand Fabre.

FROM "XAVIÈRE," BY PERMISSION OF BOUSSOD, VALADON & CIE.

"LANDRY AT THE BEDSIDE OF XAVIÈRE."

"Xavière, by a violent effort, raised her head the better to see her friend of the village, her friend of Fonjouve, her friend of everywhere and always. A smile, the smile of a saint, lighted her face, cleared away its shadows, and she seemed restored to her health and beauty, as the bud became suddenly the perfect blossom of the soul."

—"Xavière," by Ferdinand Fabre.

work shows. Withal, the merit which of all he would assuredly claim a desire to possess is his — naïveté. It may be somewhat the simplicity which ignores nothing,—for to what else can one pretend in this much-informed age? — but if it is, and is consequently the result of will, it is no less credit to the valiant artist who turns his back on cleverness and superficiality, and tries humbly to approach each new subject as though it were the first he treated, in closing his

to the later Mlle. Dudlay, also of the *Comédie Française*, of three years ago. Last year, in Paris, M. de Monvel had on his easel a life-size *Diana*, which was finished for the annual exhibition of the Champ de Mars; for, like most of the progressive men, he deserted the Salon of the Champs Élysées when the new camp was formed.

The future of M. de Monvel will be interesting to watch, but the present of his artistic career is no less interesting. He stands by him-

PORTRAITS OF CHILDREN.

eyes to what has gone before, and daring to be himself.

THIS review of the art of a man still young and still progressing must draw to a close. There can be little more than a passing mention of work which has gone on alongside of work of larger volume if not of greater importance. Monvel enjoys in France an enviable reputation as a painter of children's portraits. It is only a step from the children of his imagination, who people his books and his canvases, to the real children which art-loving parents have brought to him to be portrayed. These works are characterized, with a fine artistic sense, by a picture-like quality never carried to such an extent as to recall the "fancy portraits" of our shepherd and shepherdess grandfathers and grandmothers, but they are very real little children, often engaged in the every-day pursuits of every-day children. Of other portraits the number is great, since the early Mounet-Sully, painted in 1876,

self, and in the midst of the painters of his time and country, given up for the most part to the exemplification of a pictorial dexterity almost without parallel in the history of art, he is one of the very few who has found the emotional quality. Gifted with a capacity which has been carefully trained, so that technically he is armed with knowledge equal to that which the same severe training has given his *confrères*, he uses it instead of allowing it to use him. In the truest sense he is an impressionist, in as much as his view of nature is an outcome of his own temperament; for in the painting of the future, impressionism must mean more than a wilful subordination of aught else than the visual faculty applied to external objects, and he who sees with the eyes of the soul, and, without faltering technically, translates this inner vision, will be the true impressionist. There are men — their names come to me as I write — who are gifted with the rare qualities which make the complete artist, and who, from a sense of the

overwhelming difficulty of adequate technical achievement, from uncertainty of purpose, or from a mean desire to be "in the swim" of a realistic age (or moment, as ages are counted), content themselves with showing how a work of art should be made instead of making it. Therefore, we may be grateful to M. de Monvel that, having through devious ways found

what he has to say, and having acquired the means of saying it, he is not ashamed of his honest emotion, and from the gay note to the grave, from the miller and his sons to where the life of Xavière fairly fades from our sight — for what he has to say, and for his manner of saying it — he is a welcome arrival on the field of modern art.

ON A MISSION FOR KOSSUTH.

ONLY men past the meridian of life will recollect the passage of that brilliant political luminary, Louis Kossuth, flaming from the East, through our political sky, and the unparalleled enthusiasm he created for Hungary

and the cause he had so gallantly and gloriously, but haplessly, supported. He came with a legend already created, such as most heroes have to wait generations for; he appealed to America with an Oriental eloquence clothed in our own language, but spoken with a pathos few English speakers have ever attained, and which was vastly heightened by his evident unfamiliarity with the tongue. This made it seem as if he must have learned the language in order to bring us his supplications for aid in attaining that liberty the possession of which, according to his pleading, made us debtors to all enslaved nations. He went through the country preaching his crusade to audiences that listened with increasing enthusiasm, until he reached the slave States, where upon him fell the chill of a public opinion to which liberty was a suspicious word; then he felt that his mission had failed, for the slave States held the keys to all official action.

I saw him immediately after his arrival,¹ and being in the plastic state of mind of early manhood, eager for adventure and ignorant of danger, I offered myself for the cause of Hungary, having nothing else to give. I waited on Pulszky, the companion in exile of Kossuth and his acting English secretary, and proposed myself for any service Kossuth might require, perilous or other. I heard all the speeches he made in public in New York, and certainly I have never heard eloquence equal to his, fettered as it was, wing-tied by the strange speech in which it found expression. He spoke with a grave and solemn deliberation, as if he were searching always for the precise word

which would serve him best among the unfamiliar tools of thought, but with no uncertainty, no vagueness of conception, as to which one it should be. He had searched our history for every local fact which could sharpen the point of application, and quoted our best authors and our greatest statesmen, and with a knowledge which amazed all who heard him brought all our own historical precedents to bear on his case. Wherever he went he seemed familiar with the local traditions and heroes; he knew the disasters and the glories of every region he appealed to, and flattered the *amour-propre* of his audiences by seeming to have made the history of their town his special study, while the critical epochs of our revolutionary history were the texts of his most powerful appeals. Wherever he went the gravest and wisest of our thinkers and statesmen paid him the tribute of the most attentive, and in the main sympathetic, reception, and while the sound tradition of entire abstention from all European questions, handed down from our early history, put a veto which seemed regretful on any practical answer to his appeal, there was no one who did not wish him God-speed.

The tradition of his years in prison, spent in the study of the Bible and Shakspeare, his mastery of our most classical English, and his use of sacred diction, at once impressed the religious part of our population with a certain evangelical dignity, and gave the cause he pleaded the character of a holy war. Had Austria been Mexico, we should probably have declared war by popular vote. He made Hungarian freedom a religious obligation. I remember how at one of his meetings he used the text, "On earth peace, good-will toward men," as we have it, as an appeal for our good-will, showing from the original that the true translation was, "Peace on earth to good-willing men," and how there ran round the audience that sort of electric thrill of recognition, and a looking from man to man and man to woman among those who heard, that was like the warming toward one another of the hearts of the disciples by the way. Another time he

¹ Kossuth arrived in New York December 5, 1851.

showed by the Greek that, through the slow progression of human selfishness, a word which once meant personal, *ιδιωτης*, from its original meaning of personal, had come to mean the complete negation of human intelligence, idiotic. The passion of his appeal left no chord of human nature untouched. In my experience of audiences I have never seen anything approaching the effect he produced, wrought even by an orator speaking in his own language. He seemed an incarnate voice of human freedom, the mystical, bodily presence of the woes and heroism of Hungary.

Pulszky presented me (for my volunteering) one night just before Kossuth left New York on his Western tour, and I saw him no more till he came back from Washington, where he had been received by the Senate and House of Representatives as a high official, instead of the fugitive and exile he was. If my memory serves me, it was just at the beginning of the presidential campaign, and Kossuth was unwilling to leave before he knew who was to be the new President. He hoped that Webster would be nominated, though just what he expected from our far-away country, even with a friend in office, it would have been hard to say; but when the choice lay between Scott and Pierce he appealed to them both, receiving from Scott only a cold and unsympathetic rebuff, and from Pierce vague promises of aid the precise nature of which I never knew. I used to go to see him in his New York lodgings, which it seems to me were in the neighborhood of Fourteenth street, but only late in the evening, as he was continually surrounded by spies of the Austrian government, and he considered it important that I should not be recognized as having been in relations with him. I went to see him late one evening, on the eve of the election, and after he had been receiving a committee of the supporters of Pierce, who had come to offer him terms for his support in the coming elections. He said to me sadly, "Mr. Stillman, if you do not get rid of those politicians, your country will be ruined in less than fifty years." They had offered him two men-of-war, equipped for action, and a sum of money, the amount of which I cannot recall, if he would throw his influence on the foreign vote for the Democratic candidate, and the formal offer had just then been made.

What was his reply and what his action, I never knew, but the incident and his grave words are impressed on my memory as a thing of yesterday. However, he got no such help, and in all the contributions to the cause were only about \$100,000; and he went back to London to await events which his heart, full of hopes to the exclusion of despair, told him would free his country from the rule of Austria. I followed him after a few weeks, and estab-

lished myself in a dark quarter, where spies would be little likely to notice me, and reported to him through Pulszky, whose address I had. I did not know London then very well, and I have seen no one since who could tell me where his lodgings were; but it seems to me by the road I used to take in going to see him, late in the evening, and by circuitous ways, for fear of spies, that it must have been in the outskirts of Bayswater. There I waited for several weeks for his plans to mature, and to learn where I could be most useful. At first my mission was to go to a little island in the Mediterranean south of Sardinia, on which, as he had learned by one of his multitudinous researches, the American flag had been hoisted years before, and which, being entirely unoccupied, and thus of doubtful jurisdiction, he thought of making his depot of material of war and his basis of action. This was apparently only a vague scheme of which he seems to have thought no more; moreover, the time was approaching for the rising of Milan under the plans of Mazzini, with which it was at first intended that the Hungarian movement should coincide, and Kossuth proposed that I should go there and distribute to the Hungarian regiments in the garrison of Milan his proclamation calling on them not to fire on the people if the latter rose. But Hungary was not yet ready, and he had tried to induce Mazzini to postpone the rising till they could act together; for, as he said, "I cannot play with the blood of my people." An insurrection was hopeless, as he believed, even for Italy, and as he knew, for Hungary, and all that he could do was to charge the Hungarian soldiers not to fire on Italians. Mazzini was impatient, and decided to move alone. Kossuth, however, had found emissaries better fitted than I for the service, I suppose, as I was not sent, and when the movement came it was soon repressed: but I heard that the faithful Hungarians did their leader's bidding, were decimated, and sent to Croatia; but of this I have no historical proof.

It was finally determined that I should undertake an expedition to Hungary. The object, I was told, was the rescue of the Hungarian crown-jewels, hidden at some point down the Danube before the flight of the dictator and his ministry into Turkey. I was to visit Vienna on the way, and Kossuth gave me the names of three persons in that city with whom I might communicate, requesting that the one who seemed to me the most apt for the purpose should go to London, and put himself in communication with Kossuth. On the way, as soon as I entered Austria, I was to study the public feeling as I saw it manifested, and report to him, from city to city, how far I judged it to be ripe for a movement. I was ordered to go in a roundabout way, so as not to seem to have

LOUIS KOSSUTH, 1889.

By the by, love to Mr.! and, alas! love to you also
 Dear Willie! I am spoiled; go to! I really am mad to
 annoy you with such scrawlings. I despatch
 else I apprehend I may get into the style of Mrs. who
 do you call her? Sydney, at the meeting for
 women's rights. With your pardon my folly, darling
 and will you be good enough to care about your health till
 it be not too late. Do Dear Willie do & believe me

Yours ever affectionate
 Cara

FACSIMILE OF PART OF A LETTER IN CIPHER FROM KOSSUTH TO MR. STILLMAN.

come directly from London to Vienna, so I went from Paris to Brussels, then to Dusseldorf, Berlin, Dresden, and Prague, and thence to Vienna. Here began our cipher correspondence. I carried with me two sections of a long despatch, which disclosed the whereabouts of the treasure, one for myself, and one for a patriot whose name I do not remember, but to whom I was to go in Pest. A third was to go by another messenger via Constantinople, who also carried the key to the cipher, which was to be given to one Nagy Josef in Pest, and who should call us together, when the four were to decipher it in company. The communication was written in a manner which made it utterly impossible of decipherment to any one who had not the key, and at least two parts of the text. It was written in this manner. A song was selected which had in it all the letters of the alphabet, and each letter was indicated in the despatch by the number of the letter in the line, as the numerator, and the number of the line as the denominator, of a fraction. The first letter of the message was given in the first portion of the despatch, the second in another, and the third in the remaining one, so that the three must be united in the presence of the accomplice who had the key to enable anything to be learned from it.

My own communications were carried on with Kossuth in a simpler manner. Taking a sheet of letter-paper of a defined size, I cut out spaces on each line, at irregular intervals, and when I wrote I laid this on another sheet of paper of the same size, and wrote the message in the spaces, when, removing the shield, I filled in the spaces so as to make sense or intelligible nonsense. Kossuth, being provided with a duplicate, had only to lay his shield over the letter and read the message. For an alternative there was another similar, in which the first word of the message was the first word in the first line, the second the second in the second

line, and so on, the order being subject to variations as agreed on. For general advices on the state of public feeling, architecture was substituted for politics, Gothic being equivalent to revolutionary or democratic, classic to despotism. I give the conclusion of a letter in the second method, the letter being one received at Pest by the ordinary post. It is in Kossuth's own handwriting. It is hypothetically written by a lady-love, love-letters, as he said, pardoning any nonsense.

To steady my nerves in Vienna, Kossuth had told me of a conspirator who had been arrested on suspicion, his name having been found among many others in the memorandum-book of an emissary who had been arrested for tampering with the troops. All persons whose names were found in the book were arrested. This particular person, having really a most important position in the conspiracy, and not knowing why he was arrested, naturally believed that he had been betrayed, and to avoid being driven to disclosures under torture, adopted the only means offered him of committing suicide, by wrapping his bed-clothes around him, and setting fire to them; his bed and his light being his only furniture. When he had been burned so that he could not survive, he tore off the clothes, and, calling the guard, told him to summon the council, and when they had assembled in his cell, told them that he was a conspirator, but his secrets were beyond their power of extortion — and died. This gave me a keen sense of the necessity of caution, and as I was certain to be put under surveillance as soon as the police knew I was in Vienna, I took time by the forelock, and before the police paper had been sent in, took a cab, drove to within a block of the house of the person I was to see first, dismissed the cab, and made my visit, establishing communications and precautions against the police. But my consternation may be imagined when my fellow-

conspirator, after all our arrangements were complete, took me into the room where his family were assembled, and introduced me as a friend who came from Kossuth. With five women, from twelve to forty years old, in possession of my secret, the tranquillity of my stay in Vienna was far from complete; but it was a family of red republicans, and I was safe.

Pest being my destination, I went there after a stay in Vienna long enough to give me the air of a leisurely traveler. Here appeared the trifling item of neglect on the part of Kossuth that spoiled the undertaking. I had been ordered to go to a certain correspondent of his who lived in Karolyisches Haus, a large apartment-house in Pest; but it happened that this person was under proscription by the police, and his residence there of course not known, he being practically in hiding. Knowing nothing of this, I drove at once to the house, and in the presence of the cabman asked for him. Of course I was told that there was no such person there; but having found the house, I returned later, and inquired more privately, but was again repelled angrily by the porter, who was of course in the secret. Then I wrote to Kossuth, telling him that there was no such person there; to which he replied, reiterating the address. It did not occur to him to write to the person to say that I was looking for him. To him the finding a man in the same city was a trifle; to me, a stranger in the place, and with an exaggerated fear of the police, to go about inquiring for some one I did not know was a risk I felt no desire to undertake. I wrote again, and received the same reply. Of course it gave me no help in my search. Afterward I found out that the man I sought was also sought for by the police, and that checked my activity. I lingered in Pest long after all its attractions were exhausted, hoping that the man who was to come via Constantinople would arrive, and relieve me from my awkward position. But he was delayed for six weeks by another contretemps; the police got curious as to my business in Pest, and I had to undergo an examination, which I passed better than I hoped when I went up.

We were living in a state of siege, and after eight of the evening no one was allowed to appear in the streets without a permit from the commander of the place. This I did not know, and my ignorance nearly cost me my life. In London I had gone to a shoemaker in an obscure street, and had the heel of one of my boots excavated, so as to admit the cipher despatch, which, wrapped and sealed in a sheet of gutta-percha, was deposited in the cavity, and the heel covered with two thicknesses of leather. But as the boots were the most precious part of my outfit, and I had only one pair, I never left

them out of sight; so that with my peregrinations the leather wore down to a thinness which threatened to bring the wear on the packet inside, and it became necessary to remove it. This I did with my pocket-knife; but this presented another problem, two, in fact — where to hide the despatch, and how to get rid of the boots. I knew that every hotel-waiter was a spy, and to leave my excavated boot to be blacked, or to send it to be mended, was to call attention to the fact that it had been a means of concealment. So the boots must go into the Danube. Putting the packet of the despatch into a recess of my wardrobe for the moment, I took the boots, and, the night being of the deepest dark, threatening rain, I stole down to the riverside, and tossed them in without a splash, and saw them floating into the dark, without having been noticed by any one. I walked up the high dike which contains the Danube, and as my head rose above the top of it, I saw opposite me a guard-house, and heard the sentinel challenge the officer of the guard, just then going his rounds; whereupon I slipped back as quietly as I had come, and stole along the water's edge till I deemed myself at a safe distance from the sentry, when I took the back road to my hotel. However, I was still in range of the vision of the officer, who immediately hailed me. I pretended not to hear, and kept on toward the nearest lamp-post, with a double purpose: I expected the sentinel to fire at me, and I knew from experience how difficult it is to take sight on a rifle with a bright light in your eyes, and I wished to be in the light when the officer overhauled me, as I saw at once he would, having a sort of prevision that when he saw me in a good light he would see that I was a foreigner, and would give me no more trouble. I did not know that to be out at night was in itself an offense. Reaching the lamp, I allowed myself to be arrested and examined. I realized all the danger of my position perfectly, and as the officer, scrutinizing me severely from under the hood which overshadowed his face, said, "Was machen Sie hier?" I felt that I was in for something more than a frolic. Fortunately, I did not for an instant lose my self-possession, and though from nervousness my voice shook a little, I replied with promptness, "Nichts," and then went on, in bungling and ungrammatical German, to say that I had come out to see things, and added that I was a stranger, and did not know that I had no right to be out. I said "stranger" in the plural, which made the good fellow laugh, and he dismissed me with a kind direction to keep out of the track of the police patrols, who would not be so lenient as he was, and would probably not let me get back to my hotel. The next morning I disposed of my despatches by covering

the little flat package with pitch, and hiding it under my hair, which I wore rather long on purpose. I waited nearly a month, and, seeing that the police began to wonder what I had to occupy myself with, I took to my bed and sent for a doctor. This was Orzovensky, who had been chief of the medical staff of Kossuth's army, and with whom I made friends. But still I got no news from Kossuth or his correspondent in Pest, and as the position could not be prolonged indefinitely, one day I made a confidant of the doctor, told him my business, and asked him if I could leave the despatches with him while I went back to London to put matters on another footing. Not for the world, he replied, would he mix himself in the affair, and he added that if it were discovered that he had had knowledge of my business he would be arrested, and would be a ruined man for not having betrayed me to the police. Then, for the first time, I lost my nerve, and my mouth was in an instant as dry as a bone, my tongue resembling a dry stick. I was never so frightened before or since, but I kept self-possession enough to note the singularity of the phenomenon, and made up my mind on the spot to get out of the range of the doctor's revelations as soon as possible. As nearly as I can remember I did not stop to sleep in a bed till I reached Frankfurt; and I got back to London by the earliest conveyance, and went to report to Kossuth. He received my report with perfect equanimity, and asked me only what I had done with the despatches. In my panic I had thrown them into the drain, as the only place where they were in no danger of being sought for if I were arrested before getting out of the country, and this I told him. He showed no irritation, but with an expression of perplexity rather than of vexation, said, "Three months lost," and then resumed his usual manner, asked me about many things in Hungary, told me that when I was at a loss I should have gone to the Hotel Tigris, which was the rendezvous of the patriots, and that there I would have made acquaintance with some of his friends who would have helped me out. He went on talking of other things as calmly as if I had not disappointed him. I had not the courage to urge my services in any other matter, and he saw that I had not in me the stuff for a conspirator, gave me the money to pay my passage home, and we parted with the understanding that if it came to fighting I should join him again.

I have said that my business was to recover the crown-jewels of Hungary, and I remember that Kossuth attached special importance to the abstraction of the crown of St. Stephen, to prevent the possibility of the Emperor of Austria being crowned with it, for, until then,

he told me, the Hungarian people would never recognize the emperor as king of Hungary until he had been. I was to go with the other conspirators to the place of concealment, and when the jewels were exhumed, we were to conceal them in a box or jar of a kind of conserve that was made there, and carry them to America, and deposit them with Dr. Howe, the well-known philanthropist. At any rate, I knew no other purpose in the expedition. I took my orders, and followed my instructions to the best of my abilities. The adventure failed, and I went back to my painting. I heard afterward that Bartholomew Czemere, a member of Kossuth's cabinet, and who shared with him the secret of the hiding of the regalia, on getting information that Kossuth had sent out an expedition to recover them, gave them up to the government; but how much truth there may be in this I do not know. My memory of days in which all my mental powers were at their quickest is complete, and the least detail of that rather nervous expedition is indelibly engraved on my mind.

Forty years had passed when I again saw Kossuth. I called on him last summer at Turin, where he had lived in retirement for twenty years, not having made a friend in the city, he assured me. He had evidently forgotten all about me and my expedition, or he was unwilling to admit that it had ever taken place; for he said at once, on my telling him that I was the young man who went to Hungary for him on the expedition for the regalia, that he had never sent such an expedition, and knew nothing about it. It was Czemere, he said, who had charge of that matter. When I told him details of our intercourse and facts connected with the expedition, he seemed to be recalling them, and replied, "There are some things that accord with the facts, but my memory is getting defective; yet I never sent any expedition for the jewels." As I went on to tell him things that he had told me in America, he grew more interested, and when I told him that I had two letters that he had written to me at Pest, and that I would send them to him to prove that all I said was true, he said eagerly that he would like to see them. And then, passing to other subjects, he told me some incidents of his experience in America, and how the hostility of the slavery people had worked against him. He was one day, he said, to meet at the house of Governor Seward several of the Southern representatives; and when they came, finding Chase there by chance, they left the room, contemptuously making a remark to the effect that they did not care to be in the company of that abolitionist. He asked Chase for an explanation, and got as the reply that he should make the acquaintance of those gentlemen at Chase's

house. In fact, when he returned from his Southern trip he was invited to Chase's, and there did meet the entire set in friendly relation with the abolitionist. When I recalled the offer made him by the committee of Pierce's friends, he interrupted impetuously, saying that he never would have made any such agreement—he could not; and on my replying that I did not say that he had accepted the offer, but that it was made, he made no further protest, and did not deny the incident. I think he finally satisfied himself that I was the man I asserted myself to be, and that there was something in my story; but he repeated that his memory was failing, as well it might, at ninety-odd, and with a brain charged with all his cognitions. He was nearly blind, and I did not understand how he would recognize his own handwriting in the letter I afterward sent him from Rome, and which, though he promised to return it, I did not again receive. As I registered it (inclosing an envelop directed to myself in that to him), there can be no doubt that he got it, and the not returning it adds to the complexity of the problem which the whole affair presents. It is as mysterious as the iron mask. Despite his rather excited manner of instantly denying that he had ever sent an expedition for the regalia when I told him who I was, and his professed ignorance of the whole subject, the direct and minute instructions given me, based on the recovery and delivery to Dr. Howe of the regalia, the elaborate precautions for the preservation of the secret against any chance of disclosure, my stay of over a month in Pest,

and his letters to me there, were no phantasm of my brain. And if the object of my expedition was not the regalia, but something more secret hidden under that pretext, what was that object? How could it be that a memory which retained the details of the meeting of the slaveholders at Seward's house should lose those of an expensive expedition for some serious purpose running over a considerable time? Or was there a reason why I should be misled at this late date as to the object of my journey, founded on some interest of Hungarian politics?

To the end Kossuth remained irreconcilable with the Austrian emperor; never, he said, would he recognize a ruler of Hungary from Austria. He remained an exile of will, not of necessity, for he might have returned at any moment to his country, so that this adventure could in no way have affected his position there. And he declared that he did not even know where the regalia was hidden, that being Czemere's affair. What did I go to Hungary for, then, and for what great interest of liberty did I stand a month under the gallows? For that is what it meant. If, when I was arrested by the Austrian officer, he had been obdurate and held to his prisoner, the room I occupied at the hotel would have been searched, and the despatches in Kossuth's own hand could not have escaped detection. After that my shift, in those terrible days of martial law and repression, would have been short; it would have been only a question of the gallows within twenty-four hours or being shot the next morning.

W. J. Stillman.

THE NESTING-PLACE.

WHEN back upon the soft south wind they roam,
Mark how each bird, by instinct subtly willed,
Erelong begins to seek where it shall build:
High in the elm the oriole makes her home;
Beneath the eaves the swallow shapes the loam;
The house-wren's note all day is never stilled;
The little finch's heart with joy is filled,
To find a hollow with a grassy dome.
Dost think the birds alone have this fine art,
To know and choose what place for each is best,
And there return and find a sheltering nest
Howe'er abroad in roving sport they dart?
I, too, have a wise spirit in my breast,
I would not build at all except within thy heart!

Edith M. Thomas.

BOOKBINDINGS OF THE PRESENT.

NOTES OF A BOOK-LOVER.

I.

S there is unfortunately no word in the English language to describe those familiar, yet elevated, poems which in France are known as *vers de société*, and which are far above ordinary "society verse," and as there is no single term to denote the short story, the form of fiction in which we Americans have been most abundant and successful, so also is there need in English of a recognized phrase for defining each of the two halves of bibliopegic art. Bookbinding consists of two wholly distinct operations, known to the expert as "forwarding" and "finishing." Forwarding is the proper preparation of a book for its cover and the putting on of that cover; finishing is the decoration of the sides and back of the book after it has been covered. Forwarding, therefore, is the task of an artisan, while finishing must be the work of an artist.

Mr. William Matthews, than whom there is no one more competent to express an opinion, has declared that "a book, when neatly and cleanly covered, is in a very satisfactory condition without any finishing or decorating." Many book-lovers agree with the foremost of American bookbinders, and order their precious volumes to be soberly-clad in plain morocco. The Jansenist binding, as it is called after the leader of the recluses of Port Royal, calls for the maximum of care in the forwarding, and the minimum of gilding or other decoration of the finisher. Mr. Matthews went even further,—I quote from his lecture on "Bookbinding Practically Considered," delivered before the Grolier Club of New York in 1885, and by the club printed in 1889,—and having described the successive steps by which a book is prepared, forwarded, and covered with leather, said: "I now declare the book in this condition is bound, and he who has skilfully mastered these various processes through which a volume has passed deserves the name of binder; he who is called upon to decorate it, finisher. At present the custom is the reverse: the finisher or decorator is credited with being the binder, whereas he has done none of the binding."

Now, there is no doubt that the complaint

of this accomplished craftsman is well founded. But the error is so old that there is no hope of uprooting it at this late day. When we speak of a book as beautifully bound, we are praising the work of the man who designed and executed the decoration of the cover, not the labor of the man who clothes the book with leather, and who obviously enough is really its binder. Of course, in a great many instances forwarder and finisher are one and the same person. Perhaps this was the case with the books which are catalogued as "bound by Le Gascon," although it is as a finisher that Le Gascon is unrivaled, and certainly it is the case with the books bound by Mr. Cobden-Sanderson, who himself attends to every detail of preparing and forwarding, aided only by his wife. The French term for "finisher" is "gilder," and, in his account of French bookbinding, M. Marius Michel, a *doreur* himself, is very careful to give credit for a delicate decoration to the special artist who designed and gilded it. It is greatly to be regretted that there is in popular use only one word to designate the two distinct operations.

Although these notes on the art of bookbinding as it is practised to-day have to do with the work of the finisher—the artist who adorns the exterior of a volume, and not with the more humble, but not less important, labor of the forwarder—the artisan who prepares it for decoration, it may not be amiss to begin by setting forth the series of operations a book undergoes at the hands first of the forwarder, and then of the finisher; and in this explanation of technical processes I shall follow two masters of the bibliopegic art, Mr. William Matthews, from whose lecture before the Grolier Club I have already quoted, and Mr. Joseph W. Zaehnsdorf, whose handbook of "The Art of Bookbinding" came forth in a second edition in 1890. Every book-lover should understand the principles of the art of the bookbinder, and the practices of the craft; appreciation is best founded on knowledge.

Often a volume comes into the hands of the binder already bound. The books of American publishers are issued in substantial cloth covers intended to be permanent. The bindings of British publishers are frequently more temporary, and the book is merely cased in the cloth cover,

the owner being expected to rebind in leather any volume which he deems worthy of preservation. The books of French publishers are issued in paper covers, merely stitched, and so are most of those of the German publishers; as Lord Houghton recorded on one of his early visits, "In Germany all the books are in sheets and all the beds without." The first thing the binder has to do if the book is already bound is to remove this cover, and then carefully to collate the volume page by page, to see if title, preface, table of contents, list of illustrations, notes, index, maps, plates, are each and all perfect and in place. If need be, the sheets are refolded so as to make the pages true; then they are beaten by hand, or rolled in a press, which is a more hurried method, and by far less workmanlike; the beating being to compact the pages, and to give the book solidity and strength. After the beating, the loose maps and illustrations, mounted on linen guards, are inserted in their proper places. Then the sheets are sewn to the bands, and generally there should be no saw-cuts in the back of the book, and the sewing should not be "sunk-band," as it is called, but "raised-band," and as flexible as it is firm.

The volume is now prepared for the forwarder, who carries on the work to the point where it is ready for the finisher. The forwarder attaches the end-papers; he glues the back of the book, and rounds it; he squares the mill boards which are to serve as the sides of the book, and he laces them in by means of the bands to which the sheets have been sewn. The forwarder needs a steady hand, and, above all things, a true eye—"the important principle to be observed in forwarding is *truthness*. The form and shape of the book depends on the forwarder" (Matthews, p. 35). The volume thus far advanced is clamped in a press, and allowed to repose and gain strength. Then the edges are cut, or at least the top edge is cut, the other margins being better left intact, to delight the owner's eye; as it is only on top that a volume standing on a shelf can accumulate dust, it is only the top edge that needs to be smoothed so that the dust can be blown off or wiped away at will. The cut edges, be it the top only, or top, bottom, and fore edge, are then marbled or gilded; sometimes they are gilded over marbling, to the added richness of the work. The back is then lined, and, when the binder is conscientious, a narrow leather joint is affixed, to act as a hinge for the covers. The headband is woven in. After that the leather—morocco, calf, or what not—is stretched tightly and snugly over the book, and glued fast. When the end-papers are pasted to the covers, the task of the forwarder is done, and the book is ready for the finisher who is to decorate it.

What the finisher has to do is to *invent* a design for the sides and back of the volume which is appropriate to the book, to its subject, to its owner, to its size, and to the kind of leather with which it is covered. This design must be one which can be worked out with the implements at his command. Every artist must consider the physical limitations of the art he practises, and the chief limitation of the artist who decorates a book is that the design he invents for it must be capable of accomplishment by the fillets, which make a straight line, by the gouges, which make curved lines, and by the various other tools, as they are termed. In the proper cutting and selection of tools is the secret of book-decoration. Mr. Matthews notes the superiority of the French tool-cutters over the American and English, and Mr. Cobden-Sanderson once told me of the difficulty he has had in getting cut such tools as he needed.

Having determined on the scheme of his design, the finisher selects the tools with which to execute it. Mr. Cobden-Sanderson even makes a habit of using the actual tools in the sketching out of his pattern, blackening them in the flame of a candle so that they can be transferred to paper. Often professional binders will have tools especially prepared for a special work. The more accomplished the workman, the smaller and more elementary his tools will be; he will decline to use a spray of leaves or a festoon cut all in a single piece, preferring to impress every leaf separately. M. Marius Michel is loud in the praises of a finisher who worked for Henry II., and who accomplished intricate and lovely decorations with no other implement than a fillet for the straight lines, and a set of gouges for the curves and circles; and these were all that Gilson used in the finishing of the most elaborate Hispano-Moresque cover and lining of the copy of Owen Jones's "Alhambra," which Mr. Matthews bound for the New York exhibition of 1853, and which took six months to complete, and cost \$500.

The process of working a design in the best manner is very tedious, so Mr. Matthews testifies, "more so than even connoisseurs imagine. First the design is made on paper, then impressed with the tools through the paper on to the leather; then the paper is removed, and the design again gone over with the tools to make the impression sharp and clear"—the leather being slightly moistened and the tools being moderately heated. "Then, after washing, sizing, and laying on the gold leaf, the design is gone over for the fourth time before one side of the cover is completed. This, having to be repeated on the other side of the volume, and the back also tooled, will afford some idea of the labor in executing the finest hand-tooling." Often the inside of the covers is also lined with

leather, and as carefully ornamented. Often certain figures in the pattern are excised, and the spaces filled with leathers of a different color; and this polychromatic decoration is known as inlaying, or illuminating. The finisher needs to have delicacy of taste and nicety of touch; he must have a fancy to invent beautiful designs, and a firm hand to execute them; and he must not expect wide fame, much real appreciation, or high pay. It is no wonder, therefore, that accomplished finishers are very few. Mr. Quaritch, in his catalogue of bookbindings, speaks of the late Francis Bedford as the best binder who ever lived. The best forwarder, he may have been, but he was not a finisher himself, and he never had a first-class finisher in his employ. Mr. Matthews asserted that there were not more than six finishers in New York "who can even work any intricate pattern with fair ability. In London I question if the number is greater in proportion to the population; and in Paris, where the art flourishes most, where the patronage is encouraging, and the workmen have superior advantages, I doubt if the number of finishers qualified to work intricate designs in first-class manner exceeds twenty."

Any one who was fortunate enough to see the Exhibition of Recent Bookbindings, 1860-1880, at the Grolier Club in the last days of 1890, or who will take the trouble to turn the pages of M. Octave Uzanne's "*La Reliure Moderne*," must confess that there are very few finishers of our time who have originality of invention, freshness of composition, or individuality of taste. But a comparison of the best-bound books of this century with those of the seventeenth and sixteenth centuries — which are the golden ages of bibliopegy, for Le Gascon lived in one, and Grolier in the other — will show that the work of our time is technically far better than any which has come down to us from our ancestors. There is better forwarding and better finishing. In the gold-tooling especially the modern workman is incomparably neater, cleaner, more exact, more conscientious, than his predecessor: the tooling of the men who bound for Grolier is to our eye inexcusably careless; clumsy irregularities mar the symmetry of the most beautifully designed arabesques, ill-balanced lines overrun their limits, and ends are left hanging out with reckless slovenliness. The superiority of the elder binders in their incomparable fertility of conception must not blind us to the fact that in care, in thoroughness, and in other workmanlike qualities, they bear a most obvious inferiority to binders of later years who have not a tithe of their ability.

Probably the same state of affairs exists in other arts. I remember that in 1867, when I

was but a boy, I had a chat in Naples with Signor Castellani, the antiquary and goldsmith, about the fluctuations of the art of the silver-smith. He told me that he had more than one workman then in his shop of greater skill than Benvenuto Cellini, of a more certain handicraft. These workmen could reproduce any of Cellini's legacies to posterity, little masterpieces of goldsmithery and enameling, and they would make a better job of it than the great Italian; for the modern imitations would show a finer technical skill than Cellini's, and reveal fewer defects and blunders and accidents than the marvelous originals. But copy as accurately as they might, the modern workmen were wholly incapable of originating anything. In Cellini there was a union of the head and the hand, of the artist and of the artisan, while in Castellani's men the hand had gained skill, but the head had lost its force. The handicraft had improved, and the art had declined. There were now very expert artisans, but there was no indisputably gifted artist.

In solidity of workmanship and in dexterity of handicraft, the art of the binder has advanced in this century; but not in design. The finishers of our time can repeat all the great artists of the past, but they cannot rival them in invention, in fantasy, in freshness, and in charm. To say this is not to assert that the art is in its cadence, or even that it is in any way going backward; but that it is not going forward one might venture to hint. The nineteenth century is now in its last decade, and it has not yet developed a style of its own in bookbinding — if it has in any other of the decorative arts. The men who bound for Grolier and Henry II. lived in the sixteenth century; the Èves and Le Gascon lived in the seventeenth; and even in the eighteenth century there was Derome, with his lace-work borders borrowed from, or at least inspired by, the graceful wrought-iron work of the contemporary French smiths. But the most beautiful bindings of the nineteenth century are in the main imitations of those of the centuries preceding. Often the style is a doubtful and tasteless eclectic, perhaps not unfairly to be stigmatized as bastard and mongrel. There is hardly to be detected even a vague effort after a style. Sometimes imitation develops into adaptation, and a new style is evolved slowly out of combinations and modifications, but in the art of binding we have not seen many signs of any such process now going on. Almost the only external influence which has been allowed to affect the accepted formulas is the Japanese, and the example of these surpassingly adroit decorative artists has not been sufficient to destroy the sterility from which the art of bookbinding is suffering. Its effect, at most, has been to increase the freedom of drawing, and

to encourage a more realistic treatment of natural objects.

The art of bookbinding has always been claimed by the French as peculiarly theirs, and it is not easy to deny the justice of the demand. Perhaps the position in which the art has found itself during the most of this century is due to the French Revolution, in the course of which, and of the long wars that ensued, the demand for fine work ceased abruptly. The trained workmen died off, the shops were broken up, and the tools were scattered and lost. Even the traditions of the art disappeared — and in every art which is also a trade the traditions represent the acquired force, the impetus. When the Empire came after the Consulate, and Napoleon wished to pose as the patron of the arts, bookbinding was dead in France. "I doubt if you could find anything more ugly than the books bound for Napoleon I., for Louis XVIII., for Louis Philippe," declared M. Auguste Laugel, in a letter to the "*Nation*," a dozen years or so ago.

As it happened, the art which had been highest in France, and had now sunk lowest, had kept its humble level in England, and at the end of the last century had even had its only successful effort at originality there. The greatest name in the history of bookbinding in Great Britain is that of Roger Payne, an honest and thorough workman of some taste, and with a certain elementary appreciation of design. "His efforts were always original, never copied," and this is a very rare compliment to pay to a British bookbinder; and it is to this originality, as Mr. Matthews suggests, rather than to any great excellence in his designs, that he owes the exaggerated esteem in which he is held in England. When Matthew Arnold once said to Sainte-Beuve that he did not think Lamartine very important as a poet, the French critic replied, "He is important to us"; and so it is with Roger Payne — he is important to the British. If he is mentioned at all in French books, his name is usually given incorrectly.

Lewis was the leading English binder early in this century, in Dr. Dibdin's day. Perhaps it was owing to the influence of Dibdin, some of whose rhapsodical writing was translated into French, that the Parisian book-lovers began to send their precious volumes across the Channel to be bound in London. Thus the tradition of Roger Payne, the most original binder the British had ever had, helped to revive the traditions of the French binders, who soon surpassed again their British rivals, just as it was a follower of Bewick who revealed to the French the possibilities of the art of wood-engraving, in which the French have also become superior to the British.

II.

WHETHER the vivifying spark was borrowed from Great Britain, or whether it was brought from Germany by Trautz, the French binders soon recovered their former supremacy. Trautz is still the strongest individuality among the French bookbinders of this century, and his influence is still perceptible, though he died in 1879. He is the foremost binder of the nineteenth century, and in his influence we can perhaps detect the foundation of a school, or at least of something more than merely individual, solitary, unaided struggle toward the unknown. At once forwarder and finisher, overseeing every operation of his craft, Trautz led the reform of bookbinding in France. He frowned upon all haste and on all labor-saving devices. He never stinted time or care or hard work. He did his best always. He gave to the volumes which left his hands greater firmness, flexibility, and solidity than any other binder had ever before attempted. He caused a host of new tools to be cut, modeled on those of Le Gascon and Derome and Padeloup. He studied the works of these masters reverently and unceasingly, seeking to spy out the secrets of their art. He followed in their footsteps, but although he modeled himself upon them, he never copied, trying rather to imbue himself with their spirit, and to carry forward their methods to a finer perfection.

"I do not think that Trautz ever made the same binding twice; there is on every book coming out of his hands something personal, something original," M. Laugel wrote in 1879. "This man, who could make any amount of money by merely putting his name on books, is so conscientious that he only turns out every year about two hundred volumes; he has only three workmen or workwomen; he does the drawing of ornaments and gilding himself. For those who have not seen Trautz or Thibaron (the pupil of Trautz) at work, it is almost impossible to imagine how much pains must be taken for one volume." Nothing that Trautz undertook cost more pains than his mosaics; in the two-score years from 1838 to 1878 he attempted only twenty-two of them, and of these four are now owned by New York collectors. They show, perhaps, the most originality of any of his bindings, and they reveal his characteristics most abundantly. They have the pure beauty of design which we look for in every work of decorative art, wrought with the utmost deftness and delicacy of handicraft.

Of the supremacy of the French in the art of bookbinding since Trautz led them back into the true path, no better evidence can there be than the index of binders represented prefixed to the catalogue of the Grolier Club Exhi-

bition of Recent Bookbindings. New York is perhaps the most cosmopolitan of all the great cities of the nineteenth century, especially in all matters pertaining to art; and the taste of its collectors is eclectic in the best sense of that much-abused term. Of the fifty-one binders whose handiwork was exhibited at the Grolier, thirty-six lived in Paris, one at Lyons, one at Brussels, six in London, five in New York, one in Philadelphia, and one in Quebec. The artistic superiority of the French bindings shown at the Grolier was almost as marked as the numerical; of the score of bindings finest in conception and in execution, three fourths at least were the product of Parisian workshops. There were not a few also which had come from these same shops, which were as bad as the worst which had been turned out in New York or London — misbegotten horrors of leather, "whom Satan hath bound," if it is permissible to borrow a scriptural quotation from that learned book-lover, the late Henry Stevens of Vermont.

But the very best of MM. Capé, Cuzin, Chambolle-Duru, De Samblancx, Gruel and Engelman, Joly, Lortic, Marius Michel, Niedrée, Quinet, and Ruban, attains a very high standard of excellence. Now and again, no doubt, we find a French binder who has sacrificed forwarding to finishing, having made his book so solid and so stiff that it can scarcely be opened, and so compacted that if it is opened unwarily the back is broken beyond repair. Books I have seen fresh from the hands of a Parisian binder as brilliant as a jewel-casket, and as hard to open as a safe-deposit vault when you have forgotten the combination.

The relatively high position held by the binders of Great Britain was momentary only, and at best it was due to the temporary decadence of the craft in France. Of late years, at least, bookbinding has shared the misfortune of most of the other fine arts in England, and has lingered in a condition only less lamentable than that of sculpture and painting because it con-

tented itself chiefly with dull and honest imitation of the dead-and-gone masters. Every artist must needs serve his apprenticeship, and follow in the footsteps of a teacher, but where Trautz, for example, sought inspiration only, Bedford and the other British binders found models which they copied slavishly. The workmanship of the bindings that left their shops was honest and thorough, but the decoration was lifeless and colorless. The British artisan forwarded conscientiously, but the finishing of the British artist was sadly to seek.

How inert the art of bookbinding was in England during nearly four-score years can be seen by glancing over the "Catalogue of Fifteen Hundred Books remarkable for the Beauty or the Age of their Bindings" issued by Mr. Quaritch in 1888. Here the curious inquirer will find, under numbers 1325-1345, a score of books bound by Francis Bedford, whom Mr. Quaritch declares to be the best binder who ever lived — meaning thereby, no doubt, the best forwarder; and every one of these books is finished in imitation of some French binder. Nos. 1325 and 1326 are "bound in imitation of Derome le jeune," the catalogue declares frankly, in apparent

HISTORY, THEORY AND PRACTICE OF ILLUMINATING. WYATT DIGBY. LONDON, 1861.

Bound by Zaehnsdorf. Crimson morocco, wide borders, inlaid with variegated leathers in a scroll pattern, bold in design; lined with dark green morocco with red border, the whole ornamented with vines and flowers. Owned by Mr. Samuel P. Avery.

unconsciousness of the hopelessly inartistic position to which this confession assigns the British craftsman. No. 1327 is "in imitation of Padeloup." No. 1328 is "bound in imitation of the work of Hardy-Dumesnil," a French binder not of the highest esteem among book-lovers. Nos. 1329, 1331, 1336, and 1339 are copied from Trautz. Nos. 1334, 1335, and 1345 are "bound in imitation of Chambolle-Duru."

This artistic sterility was probably due to the lack of intelligent patronage, and the sluggishness of the British book-lover is responsible for this disheartening result. But the custom seems to obtain even in the present day, if one may accept as evidence the second edition of Mr. Zaehnsdorf's "The Art of Bookbinding." In this practical guide to his art, the author, a book-binder himself and the son of a bookbinder,

gives plates of typical covers of the chief styles; and these are not genuine specimens bound for Grolier or by Le Gascon. They are apparently Mr. Zaehnsdorf's own handiwork; certainly the plate called "Gascon" (*sic*) cannot be the work of the great Frenchman, because the book is one first published perhaps two hundred years after his death. Here we discover a conscientious

is another British binder whose labors are liked by book-lovers. The most original figure among the English binders of this century — in fact, the only original figure since Roger Payne — is Mr. Cobden-Sanderson.

Mr. Cobden-Sanderson is one of the most characteristic personalities in the strange struggle for artistic freedom now going on in Eng-

craftsman not only content to be a humble imitator, but so deficient in any appreciation of originality that he sees no difference between the model of his master and his own second-hand copy.

And yet Francis Bedford was capable of original work, simple always, but with a quiet dignity of its own. Mr. Zaehnsdorf is an accomplished workman, able to send from his shop books dressed with propriety, and, at times, not without individuality. Mr. Roger de Coverly

land. He is a friend and fellow-laborer of Mr. William Morris and of Mr. Walter Crane, with whose socialistic propaganda he is in sympathy, and with whom he manifests and parades. He takes much the same view of life that they have; he holds the same creed as to society, and as to each man's duty toward it; he has the same aim in art; and he is gifted with not a little of the same decorative instinct. Believing in handicraft as the salvation of humanity, and that a man should labor with his hands, he

abandoned the bar, and studied the trade of the binder. Perhaps it is hardly unfair to call him an amateur—so Mr. Hunt was an amateur when he designed those most beautiful wrought-iron gates at Newport. Mr. Cobden-Sanderson's forwarding has not yet attained to the highest professional standard. But there

warder and finisher, unaided even by an apprentice, although his wife (a daughter of Richard Cobden) has taken charge of the sewing. He designs his own tools, having them cut especially for him. Even the letters he uses were drawn for him by Miss May Morris; and he makes a most artful use of lettering, working

are not lacking book-lovers who believe him to be the most original and the most effective finisher who has yet appeared in England.

His tooling is admirably firm and dazzlingly vigorous. Whatever the inadequacy of his workmanship in the processes which precede the gilding,—and in these his hand is steadily gaining strength,—there is no disputing his decorative endowment. He brought to the study of book-binding an alert intelligence, a trained mind, and a determination to master the secrets of the art. He does all his own work, being both for-

initials, names, titles, and mottoes into his design, and making them an integral and essential part of the scheme of decoration. He has studied most lovingly the methods of Le Gascon, and he has assimilated some of the taste of that master of the art; it is from Le Gascon, no doubt, that Mr. Cobden-Sanderson caught the knack of powdering parts of his design with gold points, stars, single leaves, and the like—a device giving the utmost brilliancy to the design if used skilfully.

Mr. Cobden-Sanderson will not work to or-

der. He binds only those books that please him, and he binds them as he pleases. He is independent of the caprices of his customers. He does not undertake many volumes, and with each he does his best. When a novice, trying his 'prentice hand, he wasted himself more than once on volumes of no great value, and put a fifty dollar binding on a book not worth five —

tration; as he explained in an article on his art, "beauty is the aim of decoration, and not illustration, or the expression of ideas." So we do not find on his books any of the childish symbolism which has been abundantly advocated in England, and according to which a treatise on zoölogy or botany **must** be adorned with an animal or a flower — a bald

a pecuniary solecism, an artistic incongruity. Of late he has not fallen into this blunder, and he prefers to spend himself on books of permanent value in the original edition. Of course he never repeats himself; every one of his bindings is as unique as a picture; there are no replicas. Every cover is composed for the volume itself, and is often the outcome of a loving study of the author, a decorative scheme having been suggested by some representative passage.

But he never confounds decoration with illus-

and babyish labeling of a book wholly unrelated to propriety of ornamentation. Mr. Cobden-Sanderson's covers are generally rich with conventionalized flowers arrayed with geometrical precision. He falls into a naturalistic treatment only at rare and regrettable moments. In a copy of Mr. Morris's "Hopes and Fears for Art," which Mr. Cobden-Sanderson has bound, the design has a careful freedom of composition and an artful symmetry; the treatment of the rose-branches which form the border is almost

purely conventional, and the broad blank space in the center is restfully open.

In America the art of the binder is retarded by reasons really outside of art—by the high wages of skilled workmen, and by the high tariff on raw materials. This is one reason why book-lovers in New York have been wont to send their precious tomes on a long voyage across the Atlantic, to be bound in London or Paris. Americans were among the best cus-

well. Considering the difficulties under which the art has developed in this country, the showing made by the American binders was most creditable.

For a binding like Mr. William Matthews's "Knickerbocker's History of New York," there is no need to make any apology; it is excellent in conception and in execution, pure in style, modestly original, and most harmoniously decorative, with its appropriate ship, its tiny tulips,

INSIDE COVER OF PRECEDING.

tomers of Francis Bedford, and the catalogue of the Grolier Club exhibition proves that they have been persistent purchasers of the best work of contemporary French binders. But to send books abroad to be bound is no way to encourage the development of the art at home. This same Grolier Club exhibition showed that American craftsmen were capable of turning out work of a very high rank. The best of the books bound by Mr. William Matthews, by Mr. Alfred Matthews, by Bradstreets, by Mr. Smith, and by Mr. Stikeman, held their own fairly

and its wreaths of willow. This is proof, were any needed, of the great advantage there is in having a book bound by a countryman of the author, who will treat it with unconscious propriety of decoration. I know a wise collector in New York who makes it a rule to have his French books bound in Paris, his English books bound in London, and his American books bound here in New York. "Fifty years ago," said Mr. William Matthews in his interesting address on his art, "there was not a finely bound book, except what by chance had been procured

abroad, to be found in any collection in America. Fine binding was an unknown art." Now in the last decade of the nineteenth century, Mr. Matthews thinks "there are many examples of American workmanship in our collections that would do honor to the best French and English binders of the last half-century." If this is

handiwork. Yet Trautz was a German by birth, and earlier in this century there were several German binders established in England—Walther, Kalthoeber, Staggemeier. Even now, while one of the leading binders of London, Mr. Rivière, is of French descent, another, Mr. Zaehnsdorf, is of German. In New York many of the journeyman bookbinders are Germans. Not only was the bibliopegic art of Germany unrepresented at this recent exhibition in New York, but in none of the many recent books about binding, French, English, and American, do I find any attention paid to the work of the modern Germans. Several years ago M. Rouveyre of Paris, who had published half a dozen books about binding, arranged for a French edition of a collection of German bindings and of "La Dorure sur Cuir (Reliure, Ciselure, Gaufrure) en Allemagne." Fifty copies were issued, the same publisher having risked fifteen hundred copies of M. Octave Uzanne's "La Reliure Moderne." From the well-made reproductions in this volume, it is fair to infer that the German binding of to-day is not remarkably interesting. It is sometimes dull and sometimes pretentious; it is frequently designed by architects who are without training in the needs and possibilities of its technic; it is rather violently polychromatic; and it is often set off by elaborate panels of inserted enamel, and by richly chiseled corners and centerpieces of silver. What is best is the artful employment of vigorous blind-tooling; and what is most noteworthy is the successful revival of the medieval art of carving in leather, always best understood by the Germans.

"AUCASSIN AND NICOLETE." LONDON. 1887.

III.

true, much of the credit for the improvement of public taste is due to the influence of Mr. Matthews himself.

Of modern Italian and German binding there is no necessity or space to say anything here. The tradition of vellum binding has been kept alive in Rome and in Florence, where the bevel-edged white tomes are often relieved by an inlaid rectangle of colored calf, tooled with what might perhaps be called fairly enough a Neo-Aldine pattern. The exhibition of the Grolier Club, which has aided in the preparation and in the illustration of these pages, included no Italian work, which is evidence that our collectors, rightly or wrongly, do not hold it in high esteem.

Nor was there a single specimen of Teutonic

Much as one might expect a precious metal to enrich a tome, there is more than a hint of Teutonic heaviness in most of these carved-leather covers, girt with solid silver clasps, and armed with chased medallions. The occasional attempts of American silversmiths at book-decoration are lighter and more graceful. I have seen more than one prayer-book, the smooth dark calfskin of which was shielded by a thin shell of silver pierced with delicate arabesques. But this is almost an accidental return to a method of ornamentation long past its usefulness, and appropriate only when every book was a portly tome bound in real boards, and reposing in solitary glory on its own lectern. The future of bookbinding does not lie in any alliance with silversmithery.

Just where the future of bookbinding does

lie is very difficult to declare. Cosmopolitan commonplace is the characteristic of much of the work of to-day. Craftsmen of remarkable technical skill are content with conventionality, and they go on indefinitely repeating the old styles,—Maioli and Grolier, Padeloup and Derome,—styles which were once alive, but which have long since been void of any germ of vitality. To persist in using them is like refusing to speak any language but Latin. For a man alive to-day a living dialect, however impure, is better than a lifeless language, however perfect. There are not wanting signs of a reaction against the banality of modern bookbinding.

One of them is the instant success of Mr. Cobden-Sanderson's innovations. Another is the return to silver-mounting. Yet a third, curious only, and infertile, is the decoration of a book-cover with enamels, either incrustated or applied. The Germans have taken to letting a monogram, ornamented or metal, into the center of a book-cover; but nothing seems to be gained by this which a mosaic of leather would not have given. The late Philippe Burty, the distinguished French art-critic, and a book-lover with the keenest liking for novelty, had a copy on Dutch paper of Poulet-Malassis's essay on "*Ex-Libris*"; he enriched it with other interesting book-plates; he inserted a few autograph letters; he had it bound by R. Petit in full morocco, with his monogram at the corners; and in the center of the side he let in a metal plate on which his own book-plate was enameled in niello. This singularly personal binding is reproduced in M. Octave Uzanne's volume on "*La Reliure Moderne*," where we find another of M. Burty's experiments, a copy of M. Claudius Popelin's "*De la Statue et de la Peinture*" (translated from Alberti), also bound by Petit, and also identified by the owner's monogram, and having, moreover, in the center of the side, an enameled panel made by M. Popelin himself for his friend's copy of his own book. Burty had in his collections other volumes distinguished by enamels; and there were in the Grolier Club exhibition a set of books belonging to Mr. S. P. Avery, and quite as much out of the common as Burty's. Mr. Avery has sent certain volumes of the "*Bibliothèque de l'Enseignement des Beaux-arts*" to the authors, asking each to indicate the binding which he thought most consonant with his work; so Mr. Avery has "*La Faïence*," of M. Théodore Deck, decorated with panels of pottery, one of them being a portrait of the author executed at his own ceramic works; and he has Sauzy's "*Marvels of Glass-Making*," with covers containing glass panels enameled in colors. These ventures belong among the curiosities of the art; they are to be classed among the freaks rather than with the professional beauties.

Another book of Burty's (now owned by Mr. Avery) has an exceptional interest—an interest perhaps rather literary than rigidly artistic. It is a copy of the original edition of Victor Hugo's scorching satire, "*Napoleon le Petit*," published in 1853, a few months after Napoleon had broken his oath and made himself emperor; this copy (made doubly precious by three lines in the poet's handwriting) was bound in dark green morocco, and the side was hollowed out to receive an embroidered bee—a bee which had been cut from the throne of Napoleon III. in the Tuileries a few days after the battle of Sedan. This is the very irony of bookbinding. A copy of "*Les Châtiments*" was bound to match. Future collectors will find these bees of Burty even harder to acquire than those which mark the books of De Thou.

INSIDE COVER OF PRECEDING.

Unusual, not to say unique, as such an opportunity must be, there is here a hint for the book-lover not by him to be despised. Here at least is an exceptional binding. Here at least we leave the monotonous iteration of the cut-and-dried. Here is a method of establishing a relation between the subject of the book and

its exterior not hitherto attempted. For nine books out of ten the conventional binding suffices, Jansenist crushed levant for the costly volumes, simple half morocco for those less valuable. But for the special treasures, for the books with an individuality of their own, why may we not abandon this barren impersonality and seek to get out of the regular rut? M. Octave Uzanne avows that he would prefer to have a copy of the "*Légende des Siècles*" clad soberly in a fragment of the dark-green uniform which Hugo wore the day he was received into the French Academy, to the same volume bound with the utmost luxury by the best binder of the time. Perhaps it is carrying this fancy a little too far to bind the *Last Dying Speech and Confession* of a murderer in a strip of his own hide properly tanned, or even to cover Holbein's "*Dance of Death*" with a like ghastly integument; but I confess I should find a particular pleasure in owning the copy of Washington Irving's "*Conquest of Grenada*," which Mr. Roger de Coverly bound "in Spanish morocco from Valencia" for the Arts and Crafts Exhibition in London in 1889.

In his "*Caprices d'un Bibliophile*," published in 1878, M. Octave Uzanne urged book-lovers to seek out a greater variety of leathers. The French are not afflicted with what Dickens called "that underdone piecrust cover which is technically known as law-calf," and which is desolately monotonous; nor have they ever cared either for sprinkled calf, as dull and decorous as orthodoxy, or for "tree-marbled calf," much affected by the British. That the French do not take to tree-calf is proof at once of their taste and of their wisdom. Mr. Matthews declares that he does not recommend tree-calf, and M. Marius Michel speaks of the process of marbling it with acids as "a diabolic invention," since it rots the leather—as every one knows who has the misfortune to own books bound in this fashion half a century ago. The French, with a full understanding of the principles of bookbinding, have confined their at-

tention almost wholly to calf and to morocco, eschewing even the pleasant-smelling Russia-leather, which becomes brittle, and has a tendency to crack, unless it is constantly handled, whereby it absorbs animal oil from the human fingers.

In the employment of other leathers than calf and morocco we Americans have taken the lead. Books bound in alligator, and in seal-skin, for example, are to be found in any of the leading book-stores, not always appropriately clad, I regret to remark. There is a hideous incongruity, for instance, in sheathing the wisdom of Emerson in alligator-hide, fit as this scaly substance might be for the weird tales

of Poe. Equally horrible is a prayer-book covered with snake-skin; and both of these bibliopegic freaks have been offered to me by tradesmen more enterprising than artistic. Gautier's "*Une Nuit de Cléopâtre*," that strange tale of the serpent of old Nile, might fitly be protected by the skin of the crocodile, and Captain Bourke's book about the "Snake-Dance of the Moquis of Arizona" seems to call for an ophidian integument. So might we clothe a volume describing a voyage to Alaska in sealskin, or an account of Australia in the hide of the kangaroo. It would be a quaint fancy to put our old favorite

"Rab and his Friends" in dogskin (easily to be had from the glovers), and our new friend "Uncle Remus," in the soft coat of Brer Rabbit. Champfleury's "*Les Chats*," and M. Anatole France's old-fashioned and cheerful "*Crime de Sylvestre Bonnard*" could be bound in catskin.

In more than one of the old treatises on book-binding is mention made of an ardent admirer of Charles James Fox, who had the speeches of his idol covered with a vulpine hide—which would serve better, it seems to me, as a coat for a volume of hunting reminiscences. So might the life of Daniel Boone be bound in the skin of a "b'ar" like that which the pioneer killed; and the life of Davy Crockett could be clad in the skin of the coon, a descendant of the fa-

"LES CHÂTIMENTS." VICTOR HUGO, 1853.

Bound by Petit. Green morocco. The "Bee" from the throne of Napoleon III., Tuileries, September, 1870. Owned by Mr. Samuel P. Avery.

bled quadruped which volunteered to come down when he discovered that the backwoodsman had drawn a bead on him. Dana's "Two Years before the Mast" would look well in whale-skin, or, if that were too tough, in shark-skin — shagreen. The "Peau d'âne" of Perrault suggests the use of the hide of the animal who once disguised himself in the lion's skin; and for any edition of Æsop's "Fables," an indefinite number of appropriate leathers lies ready to one's hand.

In 1890 Messrs. Tiffany & Co. issued a catalogue of more than a hundred different kinds of leather then on exhibition in their store on Union Square, and ready for use in the making of pocket-books, bags, blotters, card-cases, and the like; and all these are available for the binding of books, if the book-lover will take the trouble to select and to seek for the leather best suited to each tome in its turn. A glance over the list of Messrs. Tiffany & Co. is most suggestive. The skin of the chameleon, for example, how aptly this would bedeck the orations of certain professional politicians! How well the porcupine would suit the later writings of Mr. Ruskin! How fitly the black bear would cover the works of Dr. Johnson, "author of the contra dictionary," as Hood called him! I have already noted one book best bound in snake-skin, but perhaps the uncanny ophidian had better be reserved for those books which every gentleman's library should be without. Yet I should like to see the speeches of Vallandigham bound in the skin of a copperhead.

M. Uzanne also advocated that the monopoly of leather should be infringed, and that books be bound in stuffs, in velvet now and again, and in old brocades. And what could be more delightfully congenial to Mr. Dobson's "Vignettes in Rhyme," wherein the poet sings of the days when

. . . France's bluest blood
Danced to the tune of "After us, the flood!"

— what could be more harmonious to his "Proverbs in Porcelain," than to robe those dainty volumes of verse in a remnant of damask or golden brocade saved from the dress of the Pompadour? What could be a fitter apparel for the "Madame Crysanthème" of Pierre Loti than a Japanese silk strangely embroidered, with a label of Japanese leather on the back, and with Japanese water-colors as end-papers?

In M. Uzanne's later volume on "La Reliure Moderne" there are photogravures of books bound in accordance with hints of his — the *cartonage à la Pompadour* for one. But of all those who were reaching out in new directions with hope of renewing the art of the bookbinder, Philippe Burty seemed to me to have been the most fertile. One of his tentatives was a bold

and frequent use of his own monogram in the decoration of his books; especially noteworthy was the skilful employment of this monogram in the *dentelle*, or border of the inside, oftener than not disfigured in America and in England by a hackneyed roulette, blurring brutally at the corners. In the bindings of Henry II. and Diana of Poitiers we can see the most admirable utilization of a monogram and a device; and here is a model modern book-decorators may follow from afar as best they can. So, too, Longepierre made use of the emblem of the Golden Fleece, for which to-day bibliopégic argonauts voyage in vain. In the cutting of special tools, monograms, devices, significant emblems, — masks, lyres, torches, or tears, — each owned by the individual book-owner, there is perhaps hope of some relief from the stereotyped insipidity of the ordinary binder's stock in trade.

It is very difficult to indicate the probable line of bibliopégic development. Only after many a vain effort and many a doubtful struggle do we ever attain the goal of our desires. Setting our faces to the future, we must let the dead past bury its dead, and we must give up the lifeless imitation of defunct styles. Greater variety is needed, greater freedom also, such as some of the other decorative arts have achieved of late years. The duty of the book-lover is equal to that of the bookbinder; they must needs work together for the advance of the art. For their collaboration to be pregnant the book-lover must educate himself in the possibilities and in the technical limitations of the art. Every architect will confess that he has had many a practical suggestion from his clients, and more often from the wives of his clients; and the influence of the book-lover on the bookbinder can be even more beneficial.

In dealing with the ordinary uninspired workman, perhaps the less said the better, and the simpler the work intrusted to him the more satisfactory it is likely to be. Here, perhaps, the most that can be done is to follow the fashion and prescribe the style. With an intelligent binder, fond of his art, and not afraid of a step aside from the beaten path, the book-lover can do much, encouraging his ally, lending him boldness, keeping him up to the mark, sustaining him to do his best, showing him the most interesting work that has been done elsewhere. The relation of the patron — offensive vocable — to the decorative artist is not unlike that of the stage-manager to the actor, Samson to Rachel, for instance, M. Sardou to Mme. Sarah Bernhardt; he can show what he wants done, even though he cannot do it himself. This is what Grolier did, and De Thou, and M. Burty. Thus the bookbinder and the book-lover fare forward together, making interesting experi-

ments, whereby the art progresses, even though the most of the experiments fail.

That the book-lover and the bookbinder can put their heads together, it is needful that the latter should be an individual and not a factory. There must be binderies for the commercial work (of which I hope to be able to speak in another paper), for "edition binding," as it is called; but "extra binding," the covering of a single volume in accord with the wishes of the owner of that one book can best be done where the artist-artisan is at liberty to meet his customer face to face, that they may talk the matter over. Most binderies are little more than factories, with many machines, and a close division of labor, and a foreman who lays out the work of the "hands." This is not the way Mr. Cobden-Sanderson is able to delight us with his lovely design, nor is it the way Trautz carried on his business. An artist as independent as Mr. Cobden-Sanderson, and as rigid in his independence, is best apart; he broods in solitude, and we profit by his dream. Trautz had three assistants at the most; he was his own forwarder and his own finisher: and the patron

had no difficulty in dealing directly with the man who was to do the work. Not only is this relation vital to the progress of the art, but the factory system is fatal to it, when the capitalist at the head of the bindery is willing selfishly to take the credit of all that is done in his shop. For a competent designer, with the proper pride of an artist, so suppressed a position is intolerable. If the forwarding and the finishing of a book are by different hands, the owner of the book ought to know it, and the two men who coöperate ought to know that he knows it. Perhaps what the art of bookbinding is most in need of just now is the establishment of the individual binder, an artisan-artist in a shop of his own with an immediate assistant or two, and maybe a pair of apprentices. Then the binder will sign the work he does, and the work will bear the name of the man who really did it and no other. The superiority of American wood-engraving over the British is due partly at least to the fact that in the United States the engraver is one individual artist, while in Great Britain he is either a shop-keeper or a factory hand.

Brander Matthews.

THE MAGIC EGG.

THE pretty little theater attached to the building of the Unicorn Club had been hired for a certain January afternoon by Mr. Herbert Loring, who wished to give therein a somewhat novel performance to which he had invited a small audience consisting entirely of friends and acquaintances.

Loring was a handsome fellow about thirty years old, who had traveled far and studied much. He had recently made a long sojourn in the far East, and his friends had been invited to the theater to see some of the wonderful things he had brought from that country of wonders. As Loring was a clubman, and belonged to a family of good social standing, his circle of acquaintances was large, and in this circle a good many unpleasant remarks had been made regarding the proposed entertainment—made of course by the people who had not been invited to be present. Some of the gossip on the subject had reached Loring, who did not hesitate to say that he could not talk to a crowd, and that he did not care to show the curious things he had collected to people who would not thoroughly appreciate them. He had been very particular in regard to his invitations.

At three o'clock on the appointed afternoon

nearly all the people who had been invited to the Unicorn theater were in their seats. No one had stayed away except for some very good reason, for it was well known that if Herbert Loring offered to show anything it was worth seeing.

About forty people were present, who sat talking to one another, or admiring the decoration of the theater. As Loring stood upon the stage,—where he was entirely alone, his exhibition requiring no assistants,—he gazed through a loophole in the curtain upon a very interesting array of faces. There were the faces of many men and women of society, of students, of workers in various fields of thought, and even of idlers in all fields of thought, but there was not one which indicated a frivolous or listless disposition. The owners of those faces had come to see something, and they wished to see it.

For a quarter of an hour after the time announced for the opening of the exhibition Loring peered through the hole in the curtain, and then, although all the people he had expected had not arrived, he felt it would not do for him to wait any longer. The audience was composed of well-bred and courteous men and women, but despite their polite self-restraint Loring could see that some of them were getting tired of waiting. So, very reluctantly, and feel-

ing that further delay was impossible, he raised the curtain and came forward on the stage.

Briefly he announced that the exhibition would open with some fireworks he had brought from Corea. It was plain to see that the statement that fireworks were about to be set off on a theater stage, by an amateur, had rather startled some of the audience, and Loring hastened to explain that these were not real fireworks, but that they were contrivances made of colored glass, which were illuminated by a powerful lens of a lantern which was placed out of sight, and while the apparent pyrotechnic display would resemble fireworks of strange and grotesque designs, it would be absolutely without danger. He brought out some little bunches of bits of colored glass, hung them at some distance apart on a wire which was stretched across the stage just high enough for him to reach it, and then lighted his lantern, which he placed in one of the wings, lowered all the lights in the theater, and began his exhibition.

As Loring turned his lantern on one of the clusters of glass lenses, strips, and points, and, unseen himself, caused them to move by means of long cords attached, the effects were beautiful and marvelous. Little wheels of colored fire rapidly revolved, miniature rockets appeared to rise a few feet and to explode in the air, and while all the ordinary forms of fireworks were produced on a diminutive scale, there were some effects that were entirely novel to the audience. As the light was turned successively upon one and another of the clusters of glass, sometimes it would flash along the whole line so rapidly that all the various combinations of color and motion seemed to be combined in one, and then for a time each particular set of fireworks would blaze, sparkle, and coruscate by itself, scattering particles of colored light, as if they had been real sparks of fire.

This curious and beautiful exhibition of miniature pyrotechnics was extremely interesting to the audience, who gazed upward with rapt and eager attention at the line of wheels, stars, and revolving spheres. So far as interest gave evidence of satisfaction, there was never a better satisfied audience. At first there had been some hushed murmurs of pleasure, but very soon the attention of every one seemed so completely engrossed by the dazzling display that they simply gazed in silence.

For twenty minutes or longer the glittering show went on, and not a sign of weariness or inattention was made by any one of the assembled company. Then gradually the colors of the little fireworks faded, the stars and wheels revolved more slowly, the lights in the body of the theater were gradually raised, and the stage curtain went softly down.

Anxiously, and a little pale, Herbert Loring peered through the loophole in the curtain. It was not easy to judge of the effects of his exhibition, and he did not know whether it had been a success. There was no applause, but, on the other hand, there were no signs that any one resented the exhibition as a childish display of colored lights. It was impossible to look upon that audience without believing that they had been thoroughly interested in what they had seen, and that they expected to see more.

For two or three minutes Loring gazed through his loophole and then, still with some doubt in his heart, but with a little more color in his cheeks, he turned away to make preparations for the second part of his performance.

At this moment there entered the theater, at the very back of the house, a young lady. She was handsome and well dressed, and as she opened the door—Loring had employed no ushers or other assistants in this little social performance—she paused for a moment and looked into the theater, and then noiselessly stepped to a chair at the very back of the house, and sat down.

This was Edith Starr, who, a month before, had been betrothed to Herbert Loring. Edith and her mother had been invited to this performance, and front seats had been reserved for them, for each guest had received a numbered card; but Mrs. Starr had had a headache, and could not go out that afternoon, and for a time her daughter had thought that she too must give up the pleasure Loring had promised her, and stay with her mother. But when the elder lady dropped into a quiet sleep, Edith thought that, late as it was, she would go by herself, and see what she could of the performance.

She was quite certain that if her presence were known to Loring he would stop whatever he was doing until she had been provided with a seat which he thought suitable for her, for he had made a point of her being properly seated when he gave the invitations; so, being equally desirous of not disturbing the performance and of not being herself conspicuous, she sat behind two rather large men, where she could see the stage perfectly well, but where she herself would not be likely to be seen.

In a few minutes the curtain rose, and Loring appeared, carrying a small, light table, which he placed near the front of the stage, and for a moment stood quietly by it. Edith noticed upon his face the expression of uncertainty and anxiety which had not yet left it. Standing by the side of the table, and speaking very slowly, but so clearly that his words could be heard distinctly in all parts of the room, he began some introductory remarks regarding the second part of his performance.

"The extraordinary, and I may say marvelous, thing which I am about to show you," he said, "is known among East Indian magicians as the magic egg. The exhibition is a very uncommon one, and has seldom been seen by Americans or Europeans, and it was by a piece of rare good fortune that I became possessed of the appliances necessary for this exhibition. They are indeed very few and simple, but never before, to the best of my knowledge and belief, have they been seen outside of India.

"I will now get the little box which contains the articles necessary for this magical performance, and I will say that if I had time to tell you of the strange and amazing adventure which resulted in my becoming the possessor of this box, I am sure you would be as much interested in it as I expect you to be in its contents. But in order that none of you may think this is an ordinary trick, executed by means of concealed traps or doors, I wish you to take particular notice of this table, which is, as you see, a plain, unpainted pine table with nothing but a flat top, and four straight legs at the corners. You can see under and around it, and it gives no opportunity to conceal anything." And then standing for a few moments as if he had something else to say, he turned and stepped into one of the wings.

Edith was troubled as she looked at her lover during these remarks. Her interest was great, greater, indeed, than that of the people about her, but it was not a pleasant interest. As Loring stopped speaking, and looked about him, there was a sudden flush on his face, and she knew this was caused by excitement, and she was pale from the same cause.

Very soon Loring reappeared, and advanced toward the table.

"Here is the box," he said, "of which I spoke, and as I hold it up I think you can all see it. It is not large, being certainly not more than twelve inches in length and two deep, but it contains some very wonderful things. The outside of this box is covered with delicate engraving and carving which you cannot see, and these marks and lines have, I think, some magical meaning, but I do not know what it is. I will now open the box, and show you what is inside. The first thing I take out is this little stick, not thicker than a lead-pencil, but somewhat longer, as you see. This is a magical wand, and is covered with inscriptions of the same character as those on the outside of the box. The next thing is this little red bag, well-filled, as you see, which I shall put on the table, for I shall not yet need it.

"Now I take out a piece of cloth which is folded into a very small compass, but as I unfold it you will perceive that it is more than a foot square, and is covered with embroidery.

All those strange lines and figures in gold and red, which you can plainly see on the cloth as I hold it up, are also characters in the same magic language as those on the box and wand. I will now spread the cloth on the table, and then take out the only remaining thing in the box, and this is nothing in the world but an egg—a simple, ordinary hen's egg, as you all see as I hold it up. It may be a trifle larger than an ordinary egg, but then, after all, it is nothing but a common egg—that is, in appearance; in reality it is a good deal more.

"Now I will begin the performance," and as he stood by the back of the table over which he had been slightly bending, and threw his eyes over the audience, his voice was stronger, and his face had lost its pallor. He was evidently warming up with his subject.

"I now take up this wand," he said, "which, while I hold it, gives me power to produce the phenomena which you are about to behold. You may not all believe that there is any magic whatever about this little performance, and that it is all a bit of machinery; but whatever you may think about it, you shall see what you shall see.

"Now with this wand I gently touch this egg which is lying on the square of cloth. I do not believe that you can see what has happened to this egg, but I will tell you. There is a little line, like a hair, entirely around it. Now that line has become a crack. Now you can see it, I know. It grows wider and wider! Look! The shell of the egg is separating in the middle. The whole egg slightly moves. Do you notice that? Now you can see something yellow showing itself between the two parts of the shell. See! It is moving a good deal, and the two halves of the shell are separating more and more! And now out tumbles this queer little object. Do you see what it is? It is a poor weak little chick, not able to stand, but alive—alive! You can all perceive that it is alive. Now you can see that it is standing on its feet, feebly enough, but still standing.

"Now it takes a few steps! You cannot doubt that it is alive, and came out of that egg. It is beginning to walk about over the cloth. Do you notice that it is picking the embroidery? Now, little chick, I will give you something to eat. This little red bag contains grain, a magical grain, with which I shall feed the chicken. You must excuse my awkwardness in opening the bag, as I still hold the wand; but this little stick I must not drop. See, little chick, there are some grains. They look like rice, but, in fact, I have no idea what they are. But he knows! he knows! Look at him! See how he picks it up! There! He has swallowed one, two, three. That will do, little chick, for a first meal.

"The grain seems to have strengthened him already, for see how lively he is, and how his yellow down stands out on him, so puffy and warm! You are looking for some more grain. are you? Well, you cannot have it just yet, and keep away from those pieces of egg-shell, which, by the way, I will put back into the box. Now, sir, try to avoid the edge of the table, and, to quiet you, I will give you a little tap on the back with my wand. Now, then, please observe closely. The down which just now covered him has almost gone. He is really a good deal bigger, and ever so much uglier. See the little pin-feathers sticking out over him! And some spots here and there are almost bare; but he is ever so much more active. Ha! Listen to that! He is so strong that you can hear his beak as he picks at the table. He is actually growing bigger and bigger before our very eyes! See that funny little tail, how it begins to stick up, and quills are showing at the end of his wings.

"Another tap, and a few more grains. Hold up, sir! Don't tear the cloth! See how rapidly he grows! He is fairly covered with feathers, red and black, with a tip of yellow in front. You could hardly get that fellow into an ostrich egg! Now, then, what do you think of him? He is big enough for a broiler, though I don't think any one would want to take him for that purpose. Some more grain, and another tap from my wand. See! He does not mind the little stick, for he has been used to it from his very birth. Now, then, he is what you would call a good half-grown chick. Rather more than half grown, I should say. Do you notice his tail? There is no mistaking him for a pullet. The long feathers are beginning to curl over already. He must have a little more grain. Look out, sir! You will be off the table. Come back here! This table is too small for him, but if he were on the floor you could not see him so well.

"Another tap. Now see that comb on the top of his head; you scarcely noticed it before, and now it is bright red. And see his spurs beginning to show — on good thick legs, too. There is a fine young fellow for you! Look how he jerks his head from side to side, like the young prince of a poultry-yard, as he well deserves to be!"

The attentive interest which had at first characterized the audience now changed to excited admiration and amazement. Some leaned forward with mouths wide open. Others stood up so that they could see better. Ejaculations of astonishment and wonder were heard on every side, and a more thoroughly fascinated and absorbed audience was never seen.

"Now, my friends," Loring continued, "I will give this handsome fowl another tap. Be-

hold the result — a noble, full-grown cock! Behold his spurs; they are nearly an inch long! And there is a comb for you. And what a magnificent tail of green and black, contrasting so finely with the deep red of the rest of his body. Well, sir, you are truly too big for this table. As I cannot give you more room, I will set you up higher. Move over a little, and I will set this chair on the table. There! Up on the seat! That's right, but don't stop; there is the back, which is higher yet! Up with you! Ha! There, he nearly upset the chair, but I will hold it. See! He has turned around. Now, then, look at him. See his wings as he flaps them! He could fly with such wings. Look at him! See that swelling breast! Ha! Ha! Listen! Did you ever hear a crow like that? It fairly rings through the house. Yes; I knew it! There is another!"

At this point, the people in the house were in a state of wild excitement. Nearly all of them were on their feet, and they were in such a condition of frantic enthusiasm that Loring was afraid some of them might make a run for the stage.

"Come, sir," cried Loring, now almost shouting, "that will do; you have shown us the strength of your lungs. Jump down on the seat of the chair, now on the table. There, I will take away the chair, and you can stand for a moment on the table, and let our friends look at you, but only for a moment. Take that tap on your back. Now do you see any difference? Perhaps you may not, but I do. Yes; I believe you all do. He is not the big fellow he was a minute ago. He is really smaller; only a fine cockerel. A nice tail that, but with none of the noble sweep that it had a minute ago. No; don't try to get off the table. You can't escape my wand. Another tap. Behold a half-grown chicken, good to eat, but with not a crow in him. Hungry, are you? But you need not pick at the table that way. You get no more grain. Now only this little tap. Ha! Ha! What are you coming to? There is a chicken barely feathered enough for us to tell what color he is going to be.

"Another tap will take still more of the conceit out of him. Look at him! There are his pin-feathers, and his bare spots. Don't try to get away; I can easily tap you again. Now, then. Here is a lovely little chick, fluffy with yellow down. He is active enough, but I shall quiet him. One tap, and now what do you see? A poor feeble chicken, scarcely able to stand, with his down all packed close to him as if he had been out in the rain. Ah, little chick, I will take the two halves of the egg-shell from which you came, and put them on each side of you. Now, then, get in! I close them up; you are lost to view. There is nothing to be seen but

a crack around the shell! Now it has gone! There, my friends, as I hold it on high, behold the magic egg, exactly as it was when I first took it out of the box, into which I will place it again, with the cloth and the wand and the little red bag, and shut it up with a snap. I will let you take one more look at this box before I put it away behind the scenes. Are you satisfied with what I have shown you? Do you think it is really as wonderful as you supposed it would be?"

At these words the whole audience burst into riotous applause, during which Loring disappeared; but he was back in a moment.

"Thank you!" he cried, bowing low, and waving his arms before him in the manner of an Eastern magician making a salaam. From side to side he turned, bowing and thanking, and then with a hearty, "Good-by to you, good-by to you all!" he stepped back, and let down the curtain.

For some moments the audience remained in their seats as if they were expecting something more, and then they rose quietly and began to disperse. Most of them were acquainted with one another, and there was a good deal of greeting and talking as they went out of the theater.

When Loring was sure the last person had departed, he turned down the lights, locked the door, and gave the key to the steward of the club.

He walked to his home a happy man. His exhibition had been a perfect success, with not a break or a flaw in it from beginning to end.

"I feel," thought the young man, as he strode along, "as if I could fly to the top of that steeple, and flap and crow until all the world heard me."

That evening, as was his daily custom, Herbert Loring called upon Miss Starr. He found the young lady in the library.

"I came in here," she said, "because I have a good deal to talk to you about, and I do not want interruptions."

With this arrangement the young man expressed his entire satisfaction, and immediately began to inquire the cause of her absence from his exhibition in the afternoon.

"But I was there," said Edith. "You did not see me, but I was there. Mother had a headache, and I went by myself."

"You were there!" exclaimed Loring, almost starting from his chair. "I don't understand. You were not in your seat."

"No," answered Edith; "I was on the very back row of seats. You could not see me, and I did not wish you to see me."

"Edith!" exclaimed Loring, rising to his feet, and leaning over the library table, which was between them. "When did you come? How much of the performance did you see?"

"I was late," she said; "I did not arrive until after the fireworks, or whatever they were."

For a moment Loring was silent, as if he did not understand the situation.

"Fireworks!" he said. "How did you know there had been fireworks?"

"I heard the people talking of them as they left the theater," she answered.

"And what did they say?" he inquired quickly.

"They seemed to like them very well," she replied, "but I do not think they were quite satisfied. From what I heard some people say, I inferred that they thought it was not very much of a show to which you had invited them."

Again Loring stood in thought, looking down at the table; but before he could speak again, Edith sprang to her feet.

"Herbert Loring," she cried, "what does all this mean? I was there during the whole of the exhibition of what you called the magic egg. I saw all those people wild with excitement at the wonderful sight of the chicken that came out of the egg, and grew to full size, and then dwindled down again, and went back into the egg, and, Herbert, there was no egg, and there was no little box, and there was no wand, and no embroidered cloth, and there was no red bag, nor any little chick, and there was no full-grown fowl, and there was no chair that you put on the table! There was nothing, absolutely nothing, but you and that table! And even the table was not what you said it was. It was not an unpainted pine table with four straight legs. It was a table of dark polished wood, and it stood on a single post with feet. There was nothing there that you said was there; everything was a sham and a delusion; every word you spoke was untrue. And yet everybody in that theater, excepting you and me, saw all the things that you said were on the stage. I know they saw them all, for I was with the people, and heard them, and saw them, and at times I fairly felt the thrill of enthusiasm which possessed them as they glared at the miracles and wonders you said were happening."

Loring smiled. "Sit down, my dear Edith," he said. "You are excited, and there is not the slightest cause for it. I will explain the whole affair to you. It is simple enough. You know that study is the great object of my life. I study all sorts of things, and just now I am greatly interested in hypnotism. The subject has become fascinating to me; I have made a great many successful trials of my power, and the affair of this afternoon was nothing but a trial of my powers on a more extensive scale than anything I have yet attempted. I wanted to see if it were possible for me to hypnotize a considerable number of people without any one suspecting what I intended doing. The result

was a success. I hypnotized all those people by means of the first part of my performance, which consisted of some combinations of colored glass with lights thrown upon them. They revolved, and looked like fireworks, and were strung on a wire high up on the stage.

"I kept up the glittering and dazzling show — which was well worth seeing, I can assure you — until the people had been straining their eyes upward for almost half an hour; and this sort of thing — I will tell you if you do not know it — is one of the methods of producing hypnotic sleep.

"There was no one present who was not an impressionable subject, for I was very careful in sending out my invitations, and when I became almost certain that my audience was thoroughly hypnotized, I stopped the show, and began the real exhibition, which was not really for their benefit, but for mine.

"Of course, I was dreadfully anxious for fear I had not succeeded entirely, and that there might be at least some one person who had not succumbed to the hypnotic influences, and so I tested the matter by bringing out that table, and telling them it was something it was not. If I had had any reason for supposing that some of the audience saw the table as it really was, I had an explanation ready, and I could have retired from my position without any one supposing that I had intended making hypnotic experiments. The rest of the exhibition would have been some things that any one could see, and as soon as possible I would have released those who were hypnotized from their spell. But when I became positively assured that every one saw a light pine table with four straight legs, I confidently went on with the performances of the magic egg."

Edith Starr was still standing by the library table. She had not heeded Loring's advice to sit down, and she was trembling with emotion.

"Herbert Loring," she said, "you invited my mother and me to that exhibition. You gave us tickets for front seats, where we would be certain to be hypnotized if your experiment succeeded, and you would have made us see that false show, which faded from those people's minds as soon as they recovered from the spell; for as they went away they were talking only of the fireworks, and not one of them mentioned a magic egg, or a chicken, or anything of the kind. Answer me this: did you not in-

tend that I should come and be put under that spell?"

Loring smiled. "Yes," he said, "of course I did; but then, your case would have been different from that of the other people. I should have explained the whole thing to you, and I am sure we would have had a great deal of pleasure, and profit too, in discussing your experiences. The subject is extremely—"

"Explain to me!" she cried. "You would not have dared to do it! I do not know how brave you may be, but I know you would not have had the courage to come here and tell me that you had taken away my reason and my judgment, as you took them away from all those people, and that you had made me a mere tool of your will—glaring and panting with excitement at the wonderful things you told me to see where nothing existed. I have nothing to say about the others; they can speak for themselves if they ever come to know what you did to them. I speak for myself. I stood up with the rest of the people. I gazed with all my power, and over and over again I asked myself if it could be possible that anything was the matter with my eyes or my brain, and if I could be the only person there who could not see the marvelous spectacle that you were describing. But now I know that nothing was real, not even the little pine table, not even the man!"

"Not even me!" exclaimed Loring. "Surely I was real enough!"

"On that stage, yes," she said; "but you there proved you were not the Herbert Loring to whom I promised myself. He was an unreal being. If he had existed he would not have been a man who would have brought me to that public place, all ignorant of his intentions, to cloud my perceptions, to subject my intellect to his own, and make me believe a lie. If a man should treat me in that way once he would treat me so at other times, and in other ways, if he had the chance. You have treated me in the past as to-day you treated those people who glared at the magic egg. In the days gone by you made me see an unreal man, but you will never do it again! Good-by."

"Edith," cried Loring, "you don't—"

But she had disappeared through a side-door, and he never spoke to her again.

Walking home through the dimly lighted streets, Loring involuntarily spoke aloud:

"And this," he said, "is what came out of the magic egg!"

Frank R. Stockton.

THE GOVERNMENT OF GERMAN CITIES.

THE MUNICIPAL FRAMEWORK.

MUNICIPAL housekeeping," as a science and an art, evolved out of the conditions of life prevailing in the last half of this century, can be observed to better advantage in Germany than in any other country. It is true that the German cities have been somewhat tardy in providing themselves with modern conveniences and improvements; but now having fairly entered upon the task, they are accomplishing it in a more systematic, thorough, and businesslike way than any other cities whether in Europe, America, or Australia. The Germans have been in their habits of life a rather primitive, simple people, less fastidious than the English, French, or Americans. In large part they have been a rural people, and whether in town or in country the average family income has been very small, and the ordinary scale of living extremely modest. The arrangements of the towns have partaken of this simple, old-fashioned régime of family and social life, and have been in like manner primitive and unsuited to the demands of a complex, artificial civilization, and altogether regardless of the new sciences of sanitation and city-making.

But a great change has come over the German nation, and nowhere is its altered character shown more distinctly than in the expansion and progress of the cities. The centers of population are growing with extraordinary rapidity by inflow from the rural districts. The Germans are in the midst of a quick transition from an agricultural into a manufacturing people. The old seats of petty princes or dukes are coming into a transformed and enlarged existence as industrial towns. Railways and traffic have lately become factors of an altogether novel importance, helping to emphasize the distinction between town and country and to modernize the character of the towns.

Simultaneously with this recent growth of industries and town population in Germany, there has been—arising in large part from military success and enhanced international prestige and importance—a marked advance in the standards of living, and a new demand for modern and luxurious appointments. An intense quickening of national pride has made the people and the governing authorities eager to adopt late improvements, and ambitious to

rival France, England, and America in matters that Germany had before neglected.

To this work of modern improvement, especially in public appointments, the Germans seem to have brought more of the scientific spirit and method than any other people. Their habits of thoroughness in research, and of patient, exhaustive treatment of any subject in hand, have fully characterized their new progress in the arts of civilized life.

Above all, the Germans had already developed a system of public administration more economical and more infallibly effective than could have been found elsewhere; and they were prepared, when the growth of their cities and the new demand for modern improvements made necessary a great increase in the number and variety of public functions, to do in the best possible way whatever it was decided to undertake. So confident were they, indeed, in the efficiency of their administrative organization, that they dared to assign to the municipalities spheres of action which elsewhere have been left to private effort and control.

GERMAN CITIES GROWING FASTER THAN AMERICAN.

IN the rapidity of its growth, in its regularity, and in its general air of newness, Berlin suggests Chicago. But while Chicago in its buildings and appointments other than governmental and municipal is for the most part superior to Berlin, the German capital is incomparably superior to Chicago in its municipal and public arrangements. Chicago and our other fast-growing American cities find great difficulty in extending urban facilities to keep pace in any decent fashion with the growth of population and the enlargement of area; but in Berlin the authorities have systematically and easily provided for the development of a city that is more than three times as large as it was in 1860, and that has within a few years been transforming all its services and appointments.

We Americans have at home such a surfeit of new towns and new extensions of older towns, that it is not surprising that we should be looking for the old rather than the new in our European travels. The guide-books are all made upon the principle that American tourists are painfully eager to lose nothing of antiquarian

or historical interest, and that they care nothing whatever for Europe as the present-day home of progressive peoples. For the most part, therefore, we fail to appreciate the full force and significance of the immense modern impetus that is transforming European cities. Most of them have an ancient or medieval nucleus, but otherwise they are as new as our American cities, and in many respects they are more modern and enterprising.

Indeed, there seems to be an almost unconquerable delusion in the popular mind that our American cities are the only ones which show the phenomenon of rapid growth, and that their newness excuses their failure to provide well for the common necessities of urban life. I must ask leave to launch a few statistics at this delusion. In 1870 New York was a considerably more populous city than Berlin. It had nearly 950,000 people, while Berlin had barely 800,000. In 1880 Berlin had outgrown New York, and in 1890 it still maintained the lead, having 1,578,794 people as against New York's 1,515,301. Chicago's relative gain has been higher, but Berlin in the last twenty years has added as many actual new residents as has Chicago. Thirty years ago Philadelphia was a larger city than Berlin, but since then it has added only half a million souls to its total number, while Berlin has added a million. These statistics are cited in order to give a comparative impression of the problems Berlin has had to meet in providing for the accommodation of its expanding municipal household.

Let us take another instance. In 1875 Hamburg had only 263,540 people, and Boston had 342,000. In 1890 Hamburg had 569,260, and Boston had 448,000. Hamburg had gained more than 300,000 in fifteen years, and Boston had gained only a little more than 100,000. Yet Boston's growth has been accounted remarkable. Baltimore is sometimes likened to Hamburg for wealth and prosperity. In the early seventies they were of equal size; but Hamburg has grown twice as fast. In 1880 the German port had 410,127 dwellers, and in 1890 569,260, while Baltimore's census for the same years showed 332,313 and 434,439.

The third German city in size is Leipsic. It is a manufacturing town, which had 127,000 people in 1875, 149,000 in 1880, 170,000 in 1885, and 355,000 in 1890. The annexation of suburbs accounts in part for the immense gain of the half decad from 1885 to 1890, but it also accounts for the comparatively small gains of the preceding decad, growth being principally in the outer belt. St. Louis grew from 350,000 in 1880 to nearly 452,000 in 1890; but Leipsic has grown at a much higher rate. It has now well-distanced San Francisco, which was considerably the larger in the seventies.

SOME SPECIFIC COMPARISONS.

MUNICH, which has now been slightly outgrown by Leipsic, though formerly much the larger of the two, is still growing at a very respectable rate. In 1875 its denizens were 193,000 in number, and in 1880, 230,000; in 1890 they were 349,000. It has grown at a much higher rate in the past decad or two than American cities of corresponding size. Breslau, the second city of Prussia, has lost much by emigration; but it grows, nevertheless. Its population had expanded from 272,900 in 1880 to 335,200 in 1890. Meanwhile Cincinnati had grown from 255,139 to 296,908.

In the decad Cologne had grown from 144,800 to 281,800. This may be compared with the gain of Cleveland, Ohio, from 160,000 to 261,000; with Buffalo's growth from 155,000 to 255,600; and with Pittsburg's, from 156,000 to 238,600. Cologne was very much the smallest of the four in 1880, and very much the largest of the four in 1890. Yet Buffalo, Pittsburg, and Cleveland have been accounted most remarkable for their expansion in that decad. Dresden, the charming Saxon capital, had 220,800 people in 1880, and New Orleans, our own charming Southern capital, had 216,000. Thus they were of nearly equal size. In 1890 Dresden had grown to 276,500, and New Orleans to 242,000. A difference of less than 5000 had increased to one of nearly 35,000. Detroit and Milwaukee had each approximately 205,000 people in 1890, and Magdeburg, Prussia, had 202,000. But Detroit and Milwaukee had each about 116,000 in 1880, while Magdeburg had only 97,500. It should be explained that Magdeburg during the decad had annexed some large suburbs; but it remains true that its rate of growth compares favorably with these two American cities. Frankfort-on-the-Main has 180,000 people by the last census, and Newark, New Jersey, has 181,800. Frankfort had 136,800 in 1880, and Newark had 136,500.

Hanover in the ten years had grown from 122,800 to 163,600, and Königsberg from 122,600 to 161,500; Louisville, Kentucky, had in the same period grown from 123,758 to 161,129, and Jersey City had grown from 120,722 to 163,003. Hanover and Königsberg had gained faster than Louisville, but not so fast as Jersey City. Each of the four had added about forty thousand to its numbers. Minneapolis, which ranks with these four in size, though somewhat exceeding them all, had a growth in the first half of the decad that was wholly exceptional. But in the last half it grew not much faster than a number of German cities of similar rank. Neither did Kansas City nor St. Paul nor Omaha. Minneapolis had 129,000 in 1885 and 164,700 in 1890. Magdeburg much outdid

that record. St. Paul had 111,000 in 1885 and 133,156 in 1890. Dusseldorf, with 95,000 in 1880, had 115,000 in 1885 and 144,680 in 1890—which quite distances St. Paul. Chemnitz, that stirring factory town of Saxony, with 95,000 in 1880 and 110,800 in 1885, had 138,955 in 1890—again distancing St. Paul.

Altona, Hamburg's next-door neighbor, had grown from 91,000 to 143,000 in ten years, while Albany, the capital of New York, beginning at just the same point,—91,000 in 1880,—had grown only to 95,000. Rochester, New York, had 89,366 inhabitants (about as many as Altona) in 1880 and 133,896 in 1890, while Altona had 143,000. Chemnitz also had fully kept its lead on Rochester. Our prosperous and growing manufacturing city of Providence, from which many cultivated men and women go to visit that quaint and stationary old German town Nuremberg, has probably never reflected, when congratulating itself upon a growth from 104,857 in 1880 to 132,146 in 1890, that "old" Nuremberg, starting with only 99,519 in 1880,—more than 5000 behind Providence,—had increased to 142,523 in 1890, more than 10,000 ahead of Providence.

Doubtless the comparison begins to grow tedious; but otherwise I could show Indianapolis, Allegheny, Columbus, Syracuse, Worcester, Toledo, Richmond, New Haven, Paterson, Lowell, Nashville, Scranton, Fall River, and all the rest, how their growth has been more than matched by that of flourishing commercial and manufacturing towns of like size in Germany—such towns as Elberfeld, Barmen, Stettin, Crefeld, Halle, Brunswick, Dortmund, Mannheim, Essen, and a dozen more.

PHYSICAL TRANSFORMATION OF GERMAN CITIES.

WHEN one ventures to suggest that American cities are meagerly provided with the best modern facilities, and make but a sorry show in comparison with European cities, there comes the unfailing reply that ours are in their infancy, while those of Europe are venerable with age and rich in the accumulations of a long-realized maturity. The existence of old churches and castles, and of various monuments and collections illustrating the history of art, has given the impression that European cities are old. But for the purposes of our discussion they are younger than their American counterparts. Their citizens are not nearly so rich as those of our cities. They suffer under the disadvantage of loss in productive energy and wealth through the emigration of hundreds of thousands of their best young men after they have reared and educated them. They stagger under such heavy burdens of taxation and com-

pulsory service to maintain the military arm of the general government, that the tax increment that can be used for municipal purposes comes with pain, and is small compared with the revenues we can raise for local outlay in America, where taxes for National and State purposes are comparatively light. Yet, in the face of disadvantages far greater than any that we can present as excuses, German cities have grappled with the new municipal problems of the last quarter of a century, and have solved them far more promptly and completely than American cities have done.

The physical transformation of these cities has been very remarkable. The ground-plan of the modern city is an essential consideration; and there has been much reconstruction of old-time thoroughfares in the central districts of German cities, while the newer parts have been laid out with care and good judgment. The suburban tendency is the key to recent municipal development everywhere. This tendency demands the distinct recognition of a series of main thoroughfares that shall make easy the movement of population to and from the business center. No such condition of things was recognized fifty years ago. All German cities are now adjusting their street systems to the demands for quick transit. The usual American system is the simple checkerboard. The German system is a combination of the radial and concentric with the rectangular and parallel; and it needs no argument to show that the combination system is by far the most convenient. Main thoroughfares in German cities are to-day more conveniently planned and carried through than in American cities.

Good streets are to a modern town what the circulatory system is to a living organism. It is not necessary in Germany to argue that good roadways are cheap at any cost, and that bad ones are so disastrously expensive that only a very rich country like the United States can afford them. New York has begun to construct good pavements, but it lays them gradually and cautiously, and for the most part the existing pavements are inexpressibly wretched. Berlin adopted asphalt some twenty years ago, and has been increasing its use year by year, though most of the city is paved with stone blocks. The maintenance of the streets in general is so much better than anything in America that comparisons are humiliating. There is no reason in the nature of things why the streets of Hanover, which are beautifully paved and kept, should be better than those of Jersey City or Newark, which cities are as large as Hanover, and richer, though their streets are probably the meanest and forlornest in the whole civilized world. The Dresden streets are much superior to those of our one exceptional city, Washington, and those

of Hamburg, Munich, Leipsic, and most of the smaller German cities, are far better and more modern than those of American cities in general.

A STRIKING SUBURBAN TENDENCY.

HAVING recognized the significance and the value of the suburban tendency, the German cities are now undertaking to control the forms of their expansion, and to prevent errors that would require costly future remedies. Annexations of outlying territory are the order of the day. Since 1870 most German cities have widened their bounds, some of them very materially. Berlin and Hamburg have made some acquisitions of ground; Munich has annexed extensive suburbs, notably in 1890; Leipsic in 1889, 1890, and 1891 brought in large bodies of suburban population, and annexed territory which makes it three and a half times as large as it was before 1889. Cologne, which was one of the most congested and constricted of the German cities, is now, by virtue of its great acquisitions of 1888, much the largest of them all. Berlin, Munich, Hamburg, and Leipsic are now of about equal area, averaging somewhat more than 6000 hectares (the hectare being about two and one half acres). Berlin will make very large acquisitions in the early future, definite steps having already been taken. Cologne's new boundaries include 11,000 hectares, and embrace much garden and farming land. But the municipality will be enabled, for purposes of the extension of the street, drainage, and transit systems, for the water and gas supplies, for park purposes, and for the regulation of building, to control from the outset an area surely destined to contain a large population. Magdeburg nearly doubled its area in 1886 and 1887; and Altona, Chemnitz, Bremen, Carlsruhe, and other towns, have in recent years widened their precincts. The movement has, however, only fairly begun, and the next ten years will almost certainly witness a development of superficies, and a distribution of now congested population-masses, that will quite eclipse the achievements of the period 1870-90. The rapid growth of these German cities has been attended, of course, with much speculative building, and the laying out of divers new quarters by private companies. Berlin has been built up in this fashion, and Hamburg, Munich, Leipsic, Dresden, and the other larger towns, all afford abundant examples. But the municipal authorities regulate in the severest fashion the arrangement and width of the new streets thus formed, require the best of paving, demand all that could be desired as to sewers, and govern the character of the buildings as to materials, height, street-lining, and general appearance. Thus the greed

of speculators is not allowed to mar the harmonious development of the city, or to endanger its future health by bad construction and inferior sanitary arrangements.

PROVISIONS FOR TRAFFIC AND TRANSIT.

IT is worth while to note, as regards the forms of German cities, that the municipal authorities fully recognize the vital importance of railways to a town's commercial prosperity, and understand that adequate and convenient terminal facilities both for passengers and for goods ought to be as fully considered by the city government as the provision of proper thoroughfares for ordinary street traffic. One of the most serious mistakes that our American cities have made is their failure to provide suitably for the entrance and exit of railroads, and for the central station and yard room that railway traffic requires. Even our newer cities have neglected this matter with a stupidity that is almost unaccountable in view of the fact that nowadays the one question of railway terminals often decides the commercial fate of a town. The European state railway systems are more fortunate than the English and American private systems in finding the towns disposed to grant the necessary facilities for the transaction of their business. Leipsic, for instance, has become a great railway center, and one is impressed with the excellent judgment shown in the location of extensive railroad yards, and of the factories, which lie on the outskirts of the town and have perfectly convenient shipping facilities. Stuttgart also furnishes us an excellent instance of admirable central railway facilities. Terminal arrangements at Berlin are magnificent; and the whole movement of traffic, both freight and passenger, is facilitated to a remarkable degree by the *stadtbahn*, or municipal railroad, crossing the city from east to west, and the *ringbahn*, an encircling railway operated in conjunction with the *stadtbahn*. These connect with all the lines that come to Berlin, and assist in the collection, distribution, and transfer of freightage.

Furthermore, it is made a municipal function in Germany to utilize to the highest advantage any water highways that a city may possess. Hamburg is the most noteworthy instance. It lies at the head of tidal water, on the estuary of the Elbe, and it has had the enterprise, within the last decad, to create at vast expense the finest harbor and dock facilities in the whole world. The docks are provided with a network of railway tracks and splendid public storage-houses, and thus the highways for the accommodation of the larger traffic of the railways and the ocean-going ships are as perfect as those for ordinary street traffic. And the city is directly or indirectly a very great gainer from these

splendid public works. At Berlin the most casual observer can hardly fail to notice the marvelous use that is made for purposes of commercial navigation of the narrow river Spree. It has been well dredged out, is held in a controllable channel by magnificent stone embankments extending for a number of miles on both sides of the river, and has, below the high quays, broad and convenient stone landings all along the water's-edge. The quantity of freight barged at cheap rates from point to point in the city by means of the Spree is enormous; and the city streets are thus greatly relieved. American cities have made comparatively small use of their watercourses. Dresden in a similar manner derives large advantage from the Elbe; and German cities in general have not spared expenditure to make their rivers or other navigable watercourses a well-utilized part of the arrangements for the convenient passage of persons and traffic.

THE MUNICIPAL STRUCTURE.

ALTHOUGH the framework and general structure of the municipal house are not of vital consequence to good housekeeping, they have a very considerable importance. It happens that the Germans care less than the French for a modern and regular system — one that shall conform to geometrical rules and harmonize with a philosophical ideal. In the United States our reformers have too often quite lost sight of the aims and objects of good government in striving after good government as an end in itself. Their attention is concentrated upon the structure and mechanism, and, so far as the cities are concerned, they keep changing it perpetually. They are forever overhauling, repairing, or reconstructing the house. But they seem to have no very attractive or inspiring uses for which they are eager to make the house ready. The Germans, on the other hand, have taken their old framework of city government as they found it, and have proceeded to use it for new and wonderful purposes, altering it somewhat from time to time, but not allowing its defects to paralyze the varied activities of the household.

The different states of Germany — Prussia, Saxony, Bavaria, Wurtemberg, Baden, and the rest — have their distinct municipal systems prescribed by general law. Variations of detail are numerous and marked, yet the systems of the different states are essentially similar. The Prussian laws providing for municipal government are a part of the great administrative scheme established in the legislation of Stein and Hardenberg early in this century. Many changes have been made, but the municipal constitutions of Prussia remain in their chief characters what

the law of 1808 made them. Through the previous century it had been the Prussian policy to sink the independence and individuality of the *gemeinden* (the municipalities) in the absolutism of the state, and even to go so far as to treat old municipal property as belonging to the state at large. The towns had practically no freedom in the management of their own local establishments and institutions.

But all this was changed in the legislation of 1808. As in the French municipal law of 1790, the municipalities were recognized as ancient units of government, organic entities, with their own properties and functions, and with the right of entire self-government within the sphere of their strictly local and neighborhood concerns. They were given elective assemblies, or councils, and an executive body, or magistracy, composed of a burgomaster and a number of associated magistrates; the burgomaster (mayor) and his executive corps (*magistrats-mitglieder*) being chosen by the popularly elected council (*gemeinderath*), and given the complete charge of administrative work. The system was from time to time extended to the provinces that Prussia absorbed. In its general principles, moreover, it was incorporated in the laws of the other kingdoms and principalities that with Prussia now make up the German empire.

THE FRANCHISE AND THE ELECTORAL SYSTEM.

It would not have been possible in the Germany of Stein and of Frederick William III. to establish representative institutions upon a basis of popular equality. The Prussian system emphasized the property qualification, and that system remains to-day. The voters are those who pay certain kinds of taxes above a minimum amount, and this restriction excludes perhaps ten or fifteen per cent. of the men of voting age. The electoral system is somewhat complicated. A city — Berlin, for instance — is laid off in a number of electoral districts. The voters are listed in the order of the sums they pay for taxes, with the heaviest taxpayer heading the list. They are then divided into three classes, each of which has paid one third of the aggregate amount. Thus the first class will contain a group of very heavy taxpayers, the second will be made up of a much larger number of men of moderate fortune and income, and the third class will comprise the great mass of workingmen and small taxpayers. In Berlin elections it may perhaps be said that 4 per cent. of the voters belong to the first class, 20 per cent. to the second, and 76 per cent. to the third. Each class in a given district elects a *wahlmann*, or elector, and the whole number of *wahlmänner*

forms an electoral college that chooses members of the *gemeinderath*.

Thus the elections are indirect, and a voter of the first class has as much weight as twenty voters of the third class, or as five of the second; and a voter of the second class counterbalances from three to five of the third. In large parts of the German empire, it is true, the class system is not maintained in municipal elections, and in other parts the voters of the three classes choose their representatives directly without the intervention of the *wahlmänner*. The Berlin system is, however, the most typical for Germany at large. At a recent Berlin election, held in one third of the districts, for the renewal of one third of the council, there were registered as qualified voters 94,765 men, of whom 3540 were in the first class, 17,336 in the second, and 73,889 in the third. It happened that of these classes 1925, 7634, and 21,830 actually appeared at the polls, considerably less than half of those empowered to vote. The first-class voters participated in the highest proportion. But each class chooses its third of the electoral college, regardless of the force it musters on election day. An extreme instance of the preponderance that this system gives to wealth is afforded by the manufacturing city of Essen, where in a population of some 80,000 there are three men who pay one third of all the taxes, and are therefore empowered to designate one third of the electors. The Krupp gun-works form the great industry of Essen, and at the last municipal election *one* voter appeared for the first class and counted for quite as much as the nearly two thousand men who appeared for the third class. In the cities of Saxony, Bavaria, and Wurtemberg, the three-class system is not in vogue, but there are considerable restrictions upon the franchise. Where the class system exists, it is not always true that the voters select men of their own class to represent them.

THE ELECTED COUNCIL AS THE VITAL FACT.

So far as the voters are concerned, whether in Berlin, Breslau, Cologne, Magdeburg, or the other cities where the class system remains, or in Stuttgart, Munich, Leipsic, or in any of the cities where there are no discriminations introduced among the enfranchised, their one task is the selection of a good municipal council. Everything in the life of the *gemeinde* revolves about this one central body. It finds the *burgomaster*, designates his expert associates of the magisterial coterie, supplies the means for carrying on the city government, and represents in its own enlightenment, ability, and aspirations the standard and the character of

the community's progress. It is to this body that one must go to discover the secret of the consistency and continuity of German municipal policy. Much of the detail of the organization and method of German city government would be only tedious and cumbersome in an article like this. But I must beg permission to make as emphatic as possible this fundamental point, that the central fact in such city government is the popularly elected municipal council. I am the more solicitous that this very simple proposition should be entertained, for the reason that I have known American students in Germany to acquire a very meritorious knowledge of much of the technical detail of municipal administration, and yet to overlook the essential principle of unity in that administration, and to regard the *burgomaster* and executive council as holding a position corresponding to that of an American mayor and his chief appointees. However peculiar in a hundred details the German system may be, it is like the British and the French systems, which I have already described in these pages, in the main fact that the voters elect and maintain a representative common council of considerable size, and sitting in one chamber, which has in its hands for exercise directly or indirectly the whole authority that exists in the municipality. It is a body large enough to contain men of various opinions, and it acts openly, with full responsibility.

Stability in the German municipal councils is secured by partial renewal. Thus the councilors of Berlin and the Prussian cities are elected for six years, and one third of the seats are vacated and refilled every two years. In Berlin there are forty-two electoral districts, and these are arranged in three groups of fourteen each. Each group elects its councilors in its turn. Thus, group I chose its forty-two councilors in 1889, group II had its turn in 1891, and group III renewed its representation in 1893. Each district elects three councilors, corresponding to the three classes of voters, and thus each group contributes forty-two to a total elective council of 126 members. Taking German cities in general, the usual period for which councilors are elected is six years, with the plan of renewal in three instalments. But Strasburg and Metz retain the French system of entire renewal at each election, their period being five years. Munich, Nuremberg, and the Bavarian towns, on the other hand, give their councilors nine-year terms, and renew one third of the body every three years. Dresden, Chemnitz, and other Saxon towns are like the English municipalities, in giving councilors three-year terms with annual renewals of one third the membership; and Stuttgart renews one half of its council every year. But the six-year term is most

prevalent, and most characteristic of the German system.

European cities all the way from Scotland to Hungary would seem to have arrived by somewhat independent processes at similar conclusions as to the advantageous size of the popular municipal body. Thus the great capitals have found a body of a hundred members, more or less, a convenient size. The London county council has 138 members, the Berlin council 126, the Paris council 80, with prospect of enlargement to more than 100, and the new Vienna council has 138. Large commercial towns, or minor capitals, find a body of from 40 to 60 men the most satisfactory. Such is the size of the councils of the great British towns and of the principal French and Italian cities. Making comparison with Germany, we find that Munich and Leipsic have councils of 60 members, Dresden one of 72, Breslau a body of about 100, Cologne one of 45, Frankfort one of 57, Magdeburg of 72, Chemnitz of 48, Strasburg of 36, Altona of 35, and Stuttgart of only 25. The average for all German cities, taking a list of forty of the most important ones, would be a municipal council of about fifty members. This is not a matter of minor detail, nor do I adduce it from a mere fondness for the statistical. In constituting our State legislatures we have shown some grasp of the question how large to make the representative bodies; but in forming our American city governments we have been utterly at sea, and have produced results of the most whimsical and bewildering variety. European conclusions need not be accepted as a guide, but they may, on the other hand, be usefully noted for purposes of comparison.

THE COUNCIL AS A FOCUS OF GOOD CITIZENSHIP.

MUNICIPAL councilors in Germany are, as a rule, very excellent citizens. It is considered a high honor to be elected to the council. Membership is a title of dignity that merchants, professional men, and scholars are usually eager to hold. No salaries are paid to the councilors, and a penalty is attached to refusal to serve if elected. The sentiment toward these positions is much the same in Germany as in Great Britain, though stronger with men of high education in German than in British towns. The reelection of good councilors term after term is common in both countries. It would be difficult to estimate fairly the influence of the class system in Prussia upon the character of city councils as regards their conservatism, intelligence, and business ability. Undoubtedly the recent growth of the social democracy would have a sharper influence upon the city councils if the class system were abolished, and if the

municipal franchise were made identical with the simple manhood suffrage that exists for purposes of representation in the imperial legislature, the Reichstag. Thus in France, with universal suffrage, the socialists have of late been entering municipal politics with much zeal, in pursuance of the plan of an increased communal activity for the benefit of the masses. Already German cities would appear, from the point of view of other countries, to be far advanced in socialistic undertakings; yet it must not be forgotten that the municipal ideals of a thrifty burgher collectivism, and those of the social democracy in German cities, may tend as far asunder as those of the *bourgeoisie* and the proletariat in France. As yet German city governments are in the hands of the educated and thrifty classes. What social overturning will some day give these splendid business machines into the keeping of the working-classes is a speculative topic that may well be suggested here, but not discussed.

To some extent the characteristics of German city councils may be inferred from the number of real-estate proprietors in them. It is common to require that a certain proportion at least shall be house-owners. In Berlin about three fourths of the councilors are proprietors, and in Breslau nearly as many. In Frankfort, Hanover, Dusseldorf, Nuremberg, and many of the smaller cities, the house-owners are eighty or ninety per cent. of the total number of councilors. But in the Saxon cities — as Leipsic, Dresden, Chemnitz, and in a few others elsewhere — existing laws require that one half the councilors shall be householders and that one half shall not be. This provision is supposed to protect property interests in a group of cities which, as I have already explained, do not give any excess of representation to propertied voters under a class system. The great mass of citizens are of course renters of apartments in "flat-" or tenement-houses, and they are assured a full half of the municipal council that has to adjust taxation, and must of necessity determine questions in which the interests of the occupying and the owning classes would seem to differ. The presence of men of eminent scientific or economic, or other expert, knowledge is another of the characteristics of the German councils. Thus the Berlin body, as those of other university cities, contains more than one learned professor whose influence is strongly felt in some important line of policy or department of administration. The councils form themselves into standing committees for working purposes, and choose one of their own members as presiding officer, and another as his deputy, although in Cologne, Dusseldorf, Elberfeld, and some other places, the chief burgomaster is brought in as the chairman of the council.

In addition to the magistracy and the council, there is in Berlin a body of about seventy-five so-called "citizen deputies," who are selected by the council for their general fitness to serve as associates on committees charged with the oversight of various municipal interests, such as parks, schools, the care of the poor, and the sanitary services. They have no authority to vote in the council, but they illustrate, at the center of administration, the excellent practice which is followed throughout the entire ramification of German city government, of enlisting the coöperation of unofficial citizens in managing the ordinary concerns of the community.

THE BURGOMASTER AND EXECUTIVE MAGISTRATES.

THE burgomaster and magistrates are the most highly trained experts that a German city can secure. The burgomaster is an expert in the general art of municipal administration. Associated with him in the magisterial council are experts in law, experts in finance, experts in education to administer the schools, experts in engineering to oversee public works of every character, experts in sanitary science, experts in public charity, experts in forestry and park management, experts in the technical and business management of water- and gas-supplies, and so on. The analogy would not be perfect, but it would answer roughly to compare the governmental structure of a German city with that of a railway corporation, in which the board of directors, chosen by the stockholders, appoint a general superintendent or manager, a general passenger agent, a general freight agent, a chief legal officer, a chief engineer, a superintendent of motive power, and other general officers, and leave to these high-salaried experts, drawn from the service of various other transportation companies, almost the entire management and operation of the road. The shareholders represent the voters of Berlin, let us say; the board of directors are the municipal council; the general superintendent is the chief burgomaster; and the general officers at the head of departments are the magistrates.

The *magistratsrath*, or *stadtrath*, of a German city is, then, a body of distinguished and honored, highly paid, professional, expert employees, and not a body of citizen representatives, although experienced members of the body of citizen representatives may be, and not infrequently are, promoted to membership in the magistratsrath. The professional civil service is a vastly greater and better-established field of employment in Germany than in England or America, and it is particularly difficult for an American to appreciate its position

and significance. The mayor of an American city is usually some well-known citizen who is called temporarily from private life to occupy the most authoritative place in the corporation. The burgomaster of a German city is a civil servant — the permanent head of a permanent body of trained officials. The difference between the two is somewhat like that between our secretary of war and the general commanding the army. I have spoken of possible changes in the spirit and the objects of German city governments when the working-men shall have become dominant at the polls, though I do not believe that there is any likelihood whatsoever of a change in what we may call the method, as distinguished from the motive, of administration. That is to say, whatever may be the political or class complexion of the citizens' representative council, that body will continue to employ experts to carry out its plans on the principle of a permanent civil service. We may deprecate German officialism as much as we like, but the Germans will not cease to manage the business affairs of their municipal corporations through the employment of a trained, professional service until American railway corporations cease to seek the best technical and expert talent, whether in administration or in engineering, to carry on their enterprises.

A COMPARISON OF THE GERMAN, FRENCH, AND ENGLISH SYSTEMS.

It may be useful to note some points of difference and resemblance between the German, English, and French systems of executive government in cities. The English have a single, central elective council, to which the councilors themselves add aldermen in the proportion of one sixth of their own number. These aldermen are almost always ordinary councilors who have served for several terms, and have become especially useful on account of their experience. They have no different functions from councilors, but hold their terms for six instead of for three years, and are very commonly made chairmen of standing committees. The mayor is designated by the council for one year, and he is usually an alderman, his duty being simply that of presiding officer and titular head of the corporation. He serves on committees like other members of the council, and when his "year in the chair" is at an end, he resumes his place on the floor. There is a standing committee for each important branch of the municipal service, and this committee selects (subject to confirmation by the full council) a permanent, expert chief of the department, who organizes it in detail, and superintends its operation. Thus, besides a permanent staff of high general offi-

cials, such as the town clerk, the borough engineer, and the medical health officer, there will be a superintendent of water-supply, a chief of the fire department, a chief sanitary officer, a chief of police, and various others. These experts will have been secured upon their pure merits, often from distant cities. The system works very satisfactorily. The expert chiefs are in constant touch with the chairmen of their supervising council committees, and always attend committee meetings. The whole municipal service is held in coördination through reports made to the full council by the committees. The council thus meets very frequently, and a large amount of labor is entailed upon the chairmen of committees.

The French system is quite different. The elected municipal council designate the mayor from their own number, and also appoint from their own body a group of their most experienced members to serve as his "adjuncts," and to form with him a *corps executif*. The mayor, in turn, assigns to each of these adjuncts the supervision of a department of the municipal service. A number of ordinary members of the council are then grouped around each such chairman as his consulting committee, but the mayor is the controlling spirit in the total executive administration. Under him and his executive corps the expert civil service is organized; and while the full council holds only a few stated meetings in the year, the executive corps is in very frequent session, and the departmental business is thus kept in harmonious relationship.

Now the German magistratsrath is the glorification of the expert chiefs of departments that one finds in the English system. It may be regarded as a fusing into one supreme executive group of these professional and salaried experts and the level-headed old chairmen of council committees. This statement will be the better understood when the structure of the magistratsrath is still further analyzed. The Berlin magistracy is composed of thirty-four members, including the chief burgomaster and his substitute and next in authority, the second burgomaster. Of this body, seventeen are salaried and are appointed for twelve-year terms, and seventeen are unpaid, and are chosen for six-year terms. The salaried men, including the mayor and deputy mayor, are selected for their expert qualifications, exactly as a board of railway directors would make up its staff of general officers. They come from the civil service of other German cities, where they have made a record, or from the departments of the royal Prussian service, from which the higher salaries paid by the city tempt the best and most ambitious men. The paid element in the magistracy includes legal officers, the city treasurer, architects, civil engineers, school ad-

ministrators, and other experts. It is perfectly understood that these men, including the mayor, will be reappointed at the end of their terms; and their tenure is practically for life, unless they forfeit their positions by their own misconduct. The seventeen unpaid magistrates may be said to represent the highest development of non-professional experience and skill in municipal affairs. They have some resemblance to the aldermanic element in the English councils, or to the chairmen of English council committees. They have in most cases served efficiently as members of the elected municipal council, and are citizens with sufficient leisure and means to devote their time to the service of the city, from the motive of public spirit mingled with that of satisfaction in the honor of high position. For these posts are held in the highest esteem, and the men appointed to them are often the equals in administrative, or even in scientific and technical, qualifications of their salaried associates. These unpaid places are also practically permanent, the incumbents being usually reappointed term after term. Sometimes vacancies in the salaried places are filled by the transfer of men from the unsalaried element of the magistracy. Naturally the most confining and arduous duties of administration are usually assigned to the paid magistrates, while the unpaid men serve in capacities more advisory than severely executive; yet it often happens that the unpaid members assume full charge of very important departments of the public service.

ADMINISTRATION BY PERMANENT EXPERTS.

THE mayor or head of the municipality — in some cities called the *oberbürgermeister* and in some simply the *bürgermeister* — is the general manager of the whole mechanism of administration, and usually the guiding spirit as well in the economic policies of the municipality. He may feel that success in the management of a smaller city will perhaps be rewarded by the prize of the mayoralty of a greater one. Thus the late Dr. Forckenbeck, mayor of Berlin, had made his reputation as mayor of Breslau, and was called to fill a vacancy in the same position at the capital. Many cities appoint their mayors for life, and some make a trial appointment for a term of years and then grant a life lease. Thus the mayors of Munich, Leipsic, Dresden, Hanover, Stuttgart, Chemnitz, and various smaller cities, are life incumbents; while those of Berlin, Breslau, Cologne, Magdeburg, Frankfort, Königsberg, Dusseldorf, and numerous other places, are appointed for twelve-year terms. Strasburg, Metz, and the Alsace-Lorraine towns, on the other hand, grant only five-year terms, following French rather than German modes of city organization.

The tenure of the paid magistrates in general follows that of the mayors, and the cities which give life appointments to the chief of the municipality commonly give them also to the expert professional element among his associates, while limiting the unpaid magistrates to terms corresponding with those of the popularly elected councilors. Duties are so well distributed among the magistrates that there results the highest type of executive efficiency, and the least possible friction or waste of energy. New departments of administration may either be assigned to the portfolios of existing magistrates, or may be provided for by the appointment of additional members. Thus the magistratsrath is sufficiently flexible to respond to the changing circumstances of a city, and the presence of its unsalaried citizen members keeps it always sufficiently in touch with the spirit of the community. It should further be said that in the details of administration the magistrates have the coöperation in various ways of numerous unofficial citizens serving in a voluntary or honorary capacity on countless sub-committees.

Nearly all the cities in Germany, great and small, maintain the plan of a magisterial council composed of paid and unpaid members. In Dresden 14 are paid and 18 are unpaid. The 14 have been very largely drawn from the service of other and smaller cities, while the 18 have been promoted to the magistracy after valuable service in the elected council. Leipsic has 12 paid and 15 unpaid magistrates, Munich 16 and 20 respectively, Breslau 11 and 13, Frankfurt 9 and 8, Hanover 8 and 9, Nuremberg 9 and 17, Chemnitz 9 and 16. In many of the smaller cities, the unpaid members predominate largely. Stuttgart pays its mayor alone, and appoints all its other magistrates from its own public-spirited citizens, who give their services freely. But it is a marked exception to the rule.

OFFICIALISM AND EFFICIENCY.

CIVIL-SERVICE salaries in general are very small in Germany, for the reasons that positions are permanent, pensions are given to retiring officials, and such posts are considered socially desirable, and are much sought after. Comparatively, therefore, the pay of burgomasters and

magistrates is considered very large by the German official class. The mayor of Berlin receives 30,000 marks (\$7500), and the salaries of other German mayors range from that figure down to about 10,000 marks (\$2500). The deputy burgomaster has the next highest salary — 18,000 marks in Berlin, and from 6000 to 12,000 in other cities. The average pay of the Berlin magistrates is about 12,500 marks, while if one should average a hundred or more German towns, great and small, the current yearly pay of this class of expert officials would be found to be about 6000 marks (\$1500). Such remuneration is tempting enough to give the cities an abundant supply of trained talent from the universities and technical schools, and from the various lines of state service. Under the mayor and magistrates are the numerous officials of all grades and ranks who constitute the membership of the municipal civil service, and who are trained men in their respective departments.

Such, then, is the framework and structure of the German municipality. It meets the demands made upon it. The German mind has a clear conception of the municipality as an organization for business and social ends, and of the municipal government as a mechanism for the accomplishment of those ends. "Officialism," so called, expert and highly organized, results inevitably. I am not advocating the introduction of precisely the German type of officialism into our American city life. Indeed, I have no desire to hold any argument with those who do not believe in the development, for our purposes, of a permanent, skilled, non-political body of city officials. My only object in this paper, as in some others I have written, is to make comparison easier. For my own part, I see no possible reason why, having city business to do, we should be unwilling to have it performed in as businesslike a manner as we should demand in the conduct of a private enterprise. Nor do I see how an acceptance of the idea that the municipal corporation exists for the conduct of a series of business and social enterprises can comport with the rejection of the idea of a permanent, expert body of administrators; that is to say, a somewhat highly developed officialism.

In another article I will speak of the working functions and practical results of German city government.

Albert Shaw.

THE CONSULAR SERVICE AND THE SPOILS SYSTEM.

THE following letter was addressed by the editor of THE CENTURY to a list of ex-ministers of the United States without regard to their political associations or supposed opinions on civil-service reform; with the letter were sent the resolutions of the National Board of Trade. We publish the replies received.

DEAR SIR: We are intending to publish a group of brief opinions — a few paragraphs by ex-ministers — on the proposition to take the consulships out of the spoils system, and possibly some of the minor offices of the diplomatic service. May we ask the favor of a few words from you on this subject, within a short time?

Yours sincerely,

THE EDITOR.

RESOLUTIONS ADOPTED BY THE NATIONAL BOARD OF TRADE, January 23, 1894.

Resolved, That the National Board of Trade heartily approves the action of the Boston Merchants' Association and the Boston Chamber of Commerce, in agitating for a reform of the consular service of the United States, and believes it to be the duty of this national organization and its constituent bodies to take up and push the good work in utter disregard of all party feeling, party prejudices, and party affiliations.

Resolved, That to this end a special committee of seven be created, to whom shall be committed all plans, methods, and recommendations designed to place this great national service on a footing corresponding to that of other nations, removing it from the spoils system.

EX-MINISTER TO CHINA.

THE duties of consuls may be described as, first, notarial — certifying to the genuineness of papers, especially of invoices of goods to be shipped to this country; second, judicial — settling controversies between officers and crews of our vessels in foreign parts, and trying civil and criminal cases in Oriental lands; third, protective — caring for our destitute seamen, and sending them home; and fourth, collecting and reporting information of value to our merchants and manufacturers. It needs no argument to show that men who are to discharge such duties should have some natural aptitude for them, and should have some special preparation for them. They should have a familiarity with our business methods in manufactures and commerce. Some knowledge of law, a command of the language of the country in which they serve, and the faculty of making themselves agreeable and welcome in the society in that country, are obviously desirable.

That these qualifications are best secured by having a permanent body of trained men is the conclusion to which most nations have been brought by long experience. That the conclusion is sound I have no doubt.

I am, equally convinced that our secretaries of legation should be men prepared by special training for their duties.

We ought also to provide for a body of interpreters for our consulates and legations in China and Japan. Years ago a bill was framed providing for consular clerks, who were to be paid small salaries while preparing themselves

in China for the duties of interpreters. But the appropriations were not continued. Our consuls, who are sent to China with no knowledge of the Chinese language, have sometimes had to depend on Chinese who had learned a little "pigeon English," or on missionaries, for interpreters. The former have often proved to be dishonest. There are serious practical objections to employing the latter.

The British maintain a special establishment at Peking for training young Englishmen for the work of interpreting. These young men gradually rise to the positions of vice-consul and consul. One of the reasons for the success of British trade in the East is the thorough equipment of their consular service.

I believe it would be of great service to our commerce to take the offices of consul and secretary of legation out of politics, and to make special provision for training interpreters for service in China and Japan.

James B. Angell.

EX-MINISTER TO SPAIN.

CONSULS, being commercial agents, special qualifications are needed to fit them for the discharge of their legitimate duties. Their appointment should be preceded by diligent inquiry as to their fitness, or by a thorough and appropriate examination. A corps of consular clerks, trained in the State Department, with occasional visits to the best consulates, would furnish excellent material for consular service.

Secretaries of legation are invaluable to a

minister or ambassador, and should not be removed with every incoming administration, or at the will or whim of the minister. Occasionally, as rewards for special or superior competency, they should be promoted to higher places. A diplomatic career, such as is recognized by European governments, is not in accordance with our political theories. My observation and experience did not convince me of the need of such a special class. A comparison of our ministers—appointed for fitness, and not as rewards for partizan services, or to atone for defeat by the people in elections—with foreign ministers who have achieved places step by step in a “career,” does not show an inferiority on the part of American representatives.

J. L. M. Curry.

EX-MINISTER TO SPAIN.

AN American consul is judged and graded by the people to whom he is accredited according to his intelligence and ability, just as the business agents of other countries are judged and graded. They recognize his good points, and are keen to take advantage of those wherein he lacks. He comes in contact, socially and commercially, constantly with the trained agents of other countries, and unless he is their equal in equipment, he goes to the wall as surely as does the raw, unarmed recruit before the veteran soldier. A consul is a commercial agent, and what house would consider it good business to send an agent to Spain, for instance, who did not understand Spanish? Such a man would be at the mercy of his Spanish clerk, whose price to an exporter, for obtaining a signature to an *ad-valorem* invoice, would not be above one dollar, unless he were exceedingly high-priced, and then it might be two dollars.

I believe that the best material from which to choose our consuls would be found among those who have been educated by the Government at West Point or Annapolis, and who are either supernumerary in the army or navy, or have been retired for some slight disability. These men have the necessary qualification as regards languages. They have been obliged to acquire more or less business method in their study of the quartermaster and commissary departments; they have deep patriotism, and a keen sense of national and personal honor; they would make public servants, of whom every American at home and abroad would be proud and whom every foreigner would be obliged to respect.

A good consul is a better consul every year he is at his post. He knows his ground better, and is more known and appreciated by those with whom he has to deal. Once appointed, he

should not be removed except for misconduct; and there is no more common sense in the people of the United States discharging their consuls every four years than would be shown if all the merchants of New York discharged their chief clerks because Gladstone has resigned.

Edward Burd Grubb.

EX-MINISTER TO AUSTRIA AND TO GERMANY.

IN 1864, Mr. Seward being Secretary of State, the administration desired authority for the appointment of thirteen consular clerks, at a small compensation, to be assigned, and transferable, to different consulates at the discretion of the President. As a member of Congress from Iowa in his first term, and not yet corrupted by the spoils system then prevailing, I had some innocent and childlike conceptions of what was due to good government, and of the fitness of things. After some struggle I secured the adoption of the following regulation as a part of the proposed legislation: “Before the appointment of any such consular clerk shall be made, it shall be satisfactorily shown to the Secretary of State, after due examination and report by an examining board, that the applicant is qualified and fit for the duties to which he shall be assigned; and such report shall be laid before the President. And no clerk so appointed shall be removed from office except for cause stated in writing, which shall be submitted to Congress at the session first following such removal.” (Rev. Stat. U. S., Sec. 1705.) So far as I know, this was the first legislative attempt to abolish any part of the spoils system by act of Congress; and was the informal and unpretending beginning of civil-service reform through Congressional action.

The purpose of this provision was, first, to secure to the consular service at least this number of young men who would acquire the language of the country to which they were assigned, and the regulations and usages of the consular system. Second, by this knowledge, increasing always with the lapse of years, to save each new representative of the spoils system from the errors, blunders, and inefficiency which must always attend ignorance and inexperience of foreign affairs and foreign methods. Third, to build up a trained corps of consular experts, who, assignable to any post in special emergencies, would also be available for regular consular appointments by way of promotion.

While the system adopted was generally successful in results, it wholly failed in the last named object. This, for two reasons: all

desirable posts were strongly held by successive administrations for distribution under the the customary rules of political spoils; and these clerks, even when growing old in service under meager pay, were afraid of being promoted to an office from which the spoils-men would probably drive them with the next change of administration, and so leave them wholly destitute.

Consular reformers may, nevertheless, find in Sec. 1705 of the Revised Statutes, and our experience thereunder, a text which is prolific of suggestions for the reconstruction of our consular service. The subject requires an article, not "a paragraph," for its development. I will only add here that no candidate for a consulate who respects himself, and wishes to make the office respectable, will disdain an examination by a competent board into his qualifications for such foreign service; and no patriotic administration can object, after some equalization of appointments between two administrations of different politics, to a limitation of the removals from consular office to causes which they are willing to report to Congress. The commercial interests of our country, as well as the protection of the tariff revenues by an honest enforcement of the laws, require a better qualified consular service for the prevention of fraud.

The wisest and most practicable method of securing this reform demands the concurrence of Congress with a President friendly to reformation. This method can be comprised in any ordinary paragraph of legislation, or in a brief joint resolution of Congress, without trenching upon the constitutional rights of the President in respect to appointments and removals.

John A. Kasson.

EX-MINISTER TO ENGLAND.

I AM earnestly in favor of the inclusion in a permanent civil service of all employees of the Government who themselves perform the routine duties of the public service, and I think that ordinary consular officers are among those in respect to whom it is specially for the public interest, as a matter of mere business, that their tenure of office should depend only upon their efficiency. The principal duties of an American consular officer are to report to his government upon the industries and business in his district, and, by his knowledge of those industries to prevent frauds upon the customs revenues through undervaluations of products exported to the United States. It needs no argument to show that until adequate knowledge is acquired by a new officer, he cannot really perform his principal duties, and that much time

must be taken by each new appointee in acquiring such knowledge in a foreign country, if he ever does so. Thus our prevailing custom of frequently putting wholly inexperienced men in such places results, in fact, in an equal number of periods, of greater or less length, of mere pupillage (often, indeed, in the very language he must use in his daily transactions) and business inefficiency. It must be considered also that the uncertain and usually short tenure of office, and the too prevalent view of the place being only a reward for petty political service, rather than one of important duties, tend to make the incumbent think it hardly worth his while to make a serious effort to qualify himself for his duties. The result is, I think, that at the more important places the public work, both that of discretion and that of routine, is usually done, after a fashion, by old employees of very inferior position and pay, frequently natives and subjects of the foreign country; and at the less important places, where there is no provision for such employees, the quality of the public service rendered cannot fail to be greatly injured, often and for prolonged periods, by the inexperience of the incumbent. The business of a great private establishment could not be carried on under such a system as that prevailing, but happily not universal, with respect to our consular officers; they are merely our practical business agents abroad, and should, in my opinion, be chosen and retained upon the same considerations that would affect a private employer of large affairs.

Robert T. Lincoln.

EX-MINISTER TO SPAIN.

As to the proposition "to take the consularships out of the spoils system," by which is meant, I imagine, to create a consular service where there should be no change save for cause, I would say that I doubt very much whether the service would be improved thereby, from the fact that men secure in their places would lose in animus while they might gain in knowledge. Under our present system men of superior adaptation to their places have been retained through several administrations of different politics—notably the Hon. Ramon O. Williams, Consul-General at Havana.

Again, I do not believe that efficient service should be the only aim of our Government, but that individuality should be encouraged in every reasonable way. To that end it should be the privilege of every American to aspire with some hopes of success to any place within the gift of his country. Furthermore, too long a residence abroad denationalizes a man. It is well that he should come home once in a while, touch elbows, breathe the atmosphere, and live

the life of an American. We have been well served under the present system; why change?

T. W. Palmer.

EX-MINISTER TO AUSTRIA AND TO GERMANY.

WITHOUT caring at this time to make such a sweeping statement as to other branches of the public service, where I have had less experience, I am ready now to say that I am sure that the consular service ought to be freed from all influences based on the party affiliations or party services of its personnel; equally sure that it requires such training and experience as makes that career almost a professional one.

William Walter Phelps.

EX-MINISTER TO COLUMBIA AND TO VENEZUELA.

THERE are only three branches of our public service that can be said to be out of the "spoils system." The officers of our army and navy, and the judges of our national tribunals, hold their commissions for life or during good behavior; and when they become too old and infirm for efficient service, are decently retired on pensions. So long as these officers faithfully discharge their duties, and otherwise comport themselves properly, they feel secure in their positions, no matter what political changes take place; and they feel equally sure of a modest competency in old age. They can thus give their entire time and talents to their official duties, and are removed from temptations to dishonesty which might otherwise beset them. Men of all political parties recognize the wisdom and justice of this policy, and he would be a reckless man indeed who would now seriously propose to change it for the "spoils system," and thus to destroy discipline, stimulate official corruption, and hopelessly degrade the judiciary to the low level of our partizan politics.

But all the reasons usually urged in favor of keeping the military, naval, and judicial service out of politics will apply with equal force to our diplomatic and consular service. It is quite as important a branch of the public service as either of the three named. It is hardly less technical in character, and it requires even a higher order of talents supplemented by more extensive and varied learning. As civilization advances, nations seek higher methods of adjusting their differences than those usually adopted by the ants and beetles. Friendly arbitration takes the place of war, and the services of the professional soldier are discounted by those of the trained and skilful diplomat. To

be an efficient consul, a man must have a thorough knowledge of commercial and maritime law; and in pagan and Mohammedan countries where, in addition to his purely consular duties, he is called upon to exercise judicial functions, he needs to be well versed in all the technicalities of the legal profession. In addition to these attainments, it is very little less necessary that he should be able to speak at least two of the modern languages besides his own. When he is thus equipped for his work, and proves himself honest and faithful, it is extremely detrimental to the service, and to our interests abroad, to dismiss him for some half-educated and vulgar politician who claims the office as a reward for work at the primaries. It is not a whit more absurd in principle, nor less demoralizing and damaging in results, than it would be to dismiss a district or circuit judge in order to provide for some needy political henchman.

Another consideration, though of infinitely minor importance, merits attention. We have about three hundred consulships, the salaries of which average about \$3000 per annum. When the quadrennial "clean sweep" takes place, the newly appointed consul is allowed thirty days at home on full pay before departing for his post of duty; and the average time allowed for making the transit, after he begins his journey, is about thirty days more. When he finally arrives at his post, and relieves his predecessor, the latter is entitled to thirty days' time for making the transit to his home in the United States—thus making a total of ninety days during which both men are drawing full salary. Here, then, is an unnecessary expenditure of \$750 on a single consulate—making an aggregate loss of \$225,000. In the short period of four administrations, covering only sixteen years, our "spoils system," as applied to the consular service, thus costs us \$900,000, an amount equal to the aggregate of all the salaries for one whole year. Or, to change the phraseology, we pay for seventeen years' service in order to get sixteen.

Our commercial interests as a first-class power, to say nothing of the scandals incident to our present methods, demand that our consular service at least be taken entirely out of the spoils system; and it would greatly augment our influence and prestige abroad, if, like all other first-class powers, we could take our diplomatic service out of politics as well.

William L. Scruggs.

EX-MINISTER TO RUSSIA.

THE reform of the consular service is one of the urgent public questions of the hour. I am clearly of the opinion that this service should

have more permanence and stability, and that it should be more surely based upon approved fitness and qualifications. My experience and observation abroad, though limited, were sufficient to deepen this conviction. I am not prepared to accept the view that our diplomatic service — so far at least as relates to the chiefs of missions — should be grounded on the principle of longer or permanent tenure. It would be enough to let this become the accepted and recognized rule for the secretaries and minor officials, as is now somewhat the case in actual practice. But as to the consular service, there can be no shadow of doubt about the incalculable gain that would accrue from a reform which should make fitness the sole test of appointment, and efficiency the sole test of continuance. The changes which come with every new administration are an unmixed evil. It takes time to learn the business of the consul, to know the community to which he is sent, to understand the elements of its trade, to measure its resources and capabilities, and to comprehend the influences which may promote commercial intercourse. Under the present system it often happens that the consul has just begun to feel at home in his place, and to be capable of useful service, when he is recalled, and another green man is sent to go through the same difficult experience, and to be dismissed as soon as he gains the same degree of qualification. We sadly need a reform which will lift the service out of these manifest evils, and will make the first consideration in the consular office the promotion of the interests of the country rather than the reward of political claims.

Charles Emory Smith.

EX-MINISTER TO TURKEY.

DIPLOMACY not only precedes war, but its highest functions are to prevent it. The diplomat is the peaceful arm of a nation. He extends the hand of friendship, and by him differences are adjusted and rights maintained. The consul is the commercial representative, and the higher his qualifications the better will he discharge his duties. In all countries excepting ours there is a fixed tenure of office in the diplomatic and consular service dependent upon good behavior, and the service is entirely separated from the change of parties in the home government. This is as it should be. The conflicts of parties should end at the border of the country. For a nation to recruit its diplomatic and consular service with men untrained for their duties is bad enough, but to duplicate this method every four years is the greatest error conceivable, and this is virtually what we do.

We require our consuls to furnish reports

on commerce, manufactures, etc., in various countries. A careful inquiry would doubtless disclose that many of such reports are prepared for, instead of being prepared by, the consuls purporting to make them. It requires time and experience in order to possess adequate knowledge for the collection of facts in the preparation of such reports in one's own country; the difficulties are much greater in a foreign country. Uncertainty of tenure is the most glaring disadvantage to which our consular service is subjected. I know men who would have applied themselves diligently to fit themselves adequately for their duties, and to acquire the language of the country, but the uncertainty of tenure hanging over them discouraged such effort.

First and foremost, let us have a fixed tenure, dependent upon good behavior; secondly, more adequate compensation; and thirdly, some standard of qualification based upon fitness for office. I know of no better way to obtain these results than by bringing these offices under civil-service regulations. I should prefer not to include the heads of missions; I should leave their appointment as now, placing them in that respect in the same category as the President's cabinet. There are in all about 775 consular offices, of which about 325 are principal offices. The rest are consular agencies which are subordinate to the principal offices within the jurisdiction of which such agencies come. The rapidity of communication between countries within recent years has brought nations nearer together, and their commerce into closer and more active competition. The commercial interests of our country would be largely promoted by having a trained corps of consular officers. This can be attained only by having a fixed tenure of office, so that persons entering the service will be encouraged to make a career of it, and to qualify themselves for the better discharge of their duties. It is not to be expected that men who have made repeated failures in their own private affairs would thereby be qualified to become consular officers, and yet it is from this class that many of our consuls are selected. No one who has been in our service abroad can have failed to recognize the disorganizing effect of a change of administration upon our foreign service; pending negotiations drop, advantages gained and rights secured are often lost with the coming of new and inexperienced men. Let us place the service under civil-service regulations; thereby we will relieve the President and the Department of State from a considerable pressure for office, will improve the service, and will make it more creditable and beneficial to our country.

Oscar S. Straus.

EX-MINISTER TO CHINA.

THERE is no question of graver import than civil-service reform. Appointments in pursuance of this policy mean essential fitness and special training. Valuable in all public stations, it is invaluable in the consular and diplomatic service. In diplomacy we may stumble upon an exceptionally competent man, without antecedent experience—like Franklin, who introduced the youngest of civilizations into the family of nations; or Burlingame, who did the same office for the oldest of civilizations. These exceptions do not invalidate the rule. Moreover, Franklin and Burlingame were surrounded with circumstances beyond the ordinary range of diplomacy.

I have a personal knowledge of most of our American legations—all in Asia with the exception of Persia; and all in Europe outside of St. Petersburg, and The Hague. The result of my observations is the conviction that in no branch of public service does the present system do more harm than in the management of our relations with foreign nations.

As I have had, however, an official experience with our consuls and legations in the East, I will, with your permission say a word regarding them. My observations in China emphasized the conviction that appointments to Oriental posts should be governed by strenuous rules of civil service. I use the term "Oriental" as embracing China, Corea, Siam, and Japan. Our interests in those countries are unique. They require special study, and their own methods of administration; assuredly so, if we look toward an American policy, with its splendid possibilities, in the Pacific.

No one can study our El Dorado empire on the Pacific, with its impending, imminent future, and what may be achieved with wisdom and courage, without feeling that our influence should be paramount at all points between San Francisco and Singapore. The definite step toward this will be found in a consular and diplomatic service carefully educated for the work, its members familiar with the language, customs, superstitions, traditions, and history of extraordinary races of men. This service should be a permanent one, for the reason that the qualities and attainments requisite in Oriental countries would impair usefulness at other posts. The ethics of success in the East would have questionable value in Western nations.

England, ever wise in the conservation of her empire, is especially wise in Asia. The career of an English official in the East is as a rule permanent. Sir Thomas Wade spent his public life in China; was many years Her Majesty's minister at Peking, and retired only when too old for public employment. Sir Harry Parkes, who died while English minister at Peking, had served, as he told me, forty-three years in the East. Beginning as student-interpreter in China, he passed through all the grades until he became envoy to Japan as well as to China. Sir Robert Hart, now at the head of Chinese customs, and the most powerful foreigner in the Chinese empire, has held that post for a generation. This policy of unmenaced consecutive service results in an earnest, logical, determined policy, and its effect is seen in the steady growth of English prestige—a prestige that should rest with the United States. We had it under Burlingame. We have lost it as among the wretched consequences of the political methods which govern our public life.

Appointments to these Eastern points should be made from college graduates as far as possible—from the best material open to executive selection. The standard of choice should be high. Candidates should be taken in their youth, at a cadet age, and be submitted at their posts of duty to a rigid elementary training, becoming at first student-interpreters. We should take as much pains in fitting them for this peculiar work as we do with our cadets at Annapolis and West Point. All higher appointments should be made from this class, and promotions should be the reward of experience and merit. There should be a bureau in the State Department charged with Oriental interests, dealing with China, Corea, Siam, Japan, and perhaps Hawaii, as a distinct branch of the government economy. Years would pass before this system would have full fruition. It would come, however, and be of inestimable value.

It was my privilege, as it was my duty, to urge this policy upon the Arthur administration when I had the honor of serving it as minister to Peking. My regret that it was not adopted deepens with experience. I am persuaded that civil-service reform would have made America paramount in the East. I am afraid we have lost the opportunity, and that in the coarse and greedy lust for patronage we have, "like the base Indian, thrown a pearl away richer than all his tribe."

John Russell Young.

TOPICS OF THE TIME.

A National Injury and Idiocy.

THE absolute necessity of abolishing the spoils system in connection with consular offices was never more lucidly set forth than by the ex-ministers of the United States whose interesting opinions are given in this number of *THE CENTURY*. Only one opinion is in favor of the old system. The boards of trade of the country are putting themselves on record to the same effect. The reform is demanded by the business interests of the nation, but it is even more peremptorily demanded by the conscience of the country, which is continually offended by the spectacle afforded by the foolish and cruel displacement of public officers in order that their salaries may be used as party rewards.

At the recent dinner of the New York Board of Trade, Representative W. L. Wilson, chairman of the Committee of Ways and Means, announced, amid enthusiastic applause, his opposition to the spoils system, and pledged his services to the cause of its abolition, declaring that "the greatest of all the reforms yet to be accomplished is the reform of the civil service, National, State, and municipal." This is far from being the opinion of the ordinary partizan, but it is, we believe, the feeling of the most intelligent and disinterested statesmen of both parties; and both parties are thoroughly committed to the reform. Even some of the old-fashioned "politicians" are beginning to look to the merit system as a relief from dangerous and unendurable annoyance—are beginning, in fact, to realize that patronage is the stumbling-block of parties as well as of partizans.

The spoils system is an evil wherever it is applied, but in connection with the consular service it is a palpable and continuing national injury and idiocy.

Bosses.

REFORMERS of our political methods, especially in municipal affairs, will not be able to start with clear eyes upon the work before them until they realize that the machines and bosses of all parties differ only in their party labels. In their principles and practices they are all alike, and are all bad. They are all in politics for what "there is in it," and their chief purpose is to make the profits of the business as great as possible. Rather than see their business injured by the success of reform movements and the enactment of reform legislation, they waive their party differences and unite for mutual protection. They do this sometimes openly, sometimes in secret; but they never fail to do it when a reform movement becomes formidable enough to threaten their welfare.

Instances of this can be cited in abundance. A few years ago there had been revealed gross abuses in the conduct of municipal officers in Philadelphia. The honest citizens of all parties united in the support of candidates of high character and ability as successors of the unfaithful officials. The machines of the two great political parties united openly upon the two most objec-

tionable of these officials, and by combining their votes upon them reflected them. In the city of New York it has been a regular practice for many years for the machine of one political party to help the machine of an opposing party to carry its primaries and to defeat movements which had been designed to rid the organization of dishonest members. This has been done in order to keep both machines in the hands of men who will be willing at election time to make "deals" for the benefit of both, at the public expense. Sometimes the reward for aid in the primaries has been given in the form of a nomination of a third candidate in a critical campaign, thus bringing about a three-cornered contest, and insuring the success of the least desirable candidate.

In the larger field of State politics the same union has been made many times. One corrupt machine, after several years of misgovernment and debasing use of office and power, has been overthrown, and the people have looked confidently to the establishment of many and lasting reforms by the party which has succeeded it. But the reforms, though promised profusely before election, are not granted. They are talked about, formulated in bills, and debated in the legislature, but they seldom become laws unless they have been shorn of nearly or quite all their reforming qualities. Before election it may have been shown that the public service of the State had been filled with incompetent and dishonest employees, that the number of places had been enormously increased by the straining of the provisions of the laws, that the civil-service regulations had been either defied or suspended, and that all this had been done to give greater sustenance to the machine at the expense of the taxpayers. After election there may have been heard for a time much brave talk about a full exposure of these abuses, and about their complete reform, but it has soon died away. Rarely is an exposure made, or a thorough reform attempted, simply because the machine that has come into power has caught sight of the good things which the outgoing machine has been enjoying, and desires to possess them.

The first object of every machine is to obtain places and spoils for its followers. For this reason it always opposes any reform which will diminish the number of offices, and the amount of the spoils. It is accordingly always opposed to any movement for the overthrow of a corrupt machine, unless the outcome is to be its own succession to the emoluments of the position. If it can rule in the place of the overturned machine, it will fight the latter to the death; but if the result is to be the destruction of the system of politics behind the offending machine, it will compromise with it for a division of the spoils, and for the perpetuation of the system which nourishes them. For this reason so notoriously corrupt an organization as Tammany Hall has been spared repeatedly from exposure and overthrow by the opposing machine, which was ostensibly its bitterest enemy.

There was an election in a small city in New York

State not long ago in which the honest citizens of all parties made a determined effort to oust from power a corrupt and intolerable local machine. The contest was a fierce one, resulting in a murder at the polls; but the figures of the returns show that the ruling machine was saved from overthrow by the support given to it by its rival organization. In another city in the same State, where the respectable members of the Democratic party repudiated their party machine, and put in nomination a ticket of honest and capable men, the leaders of the machine joined hands with the Republican machine, and put up a "mixed" ticket composed in equal parts of men of their own kind, which was elected.

Instances of this kind are of frequent occurrence in all parts of the land in which modern machine politics have been developed. They show that the source of all machine evil is the spoils system, and that the deadliest blow that could be struck at bosses and their business would be the abolition of that system. If they had no spoils to distribute, the bosses could not keep their machines together for an hour. Yet so long as they have spoils, the bosses will live and flourish, and will use all their bad power to increase the evils upon which their machines exist and fatten. It is folly to think that one boss or one machine is any better than another boss and another machine, simply because the two wear different party labels. Both are corrupt, and are the agents and promoters of corruption. They are not politicians in any reputable sense of the word, but are the gamblers and brigands of politics, who are doing more than all other influences combined to make popular government a byword and a reproach the world over.

Hard Times and Business Methods.

It was said in the first few months of the "hard times" which during the past year have been felt all over the world, that only those business concerns had failed which deserved to fail. By this was meant that the first and surest victims of the contraction of credit or confidence, which was the main cause of the hard times, were those persons or houses that were conducting their business on other than the most approved and conservative methods. Some of them had been mixing politics with their business, trusting in political influence to atone for shortcomings in their methods, or deficiencies in their capital. Others had for years been gradually increasing their business, without a corresponding increase in their capital, till they had passed the point of safety.

When the pressure of hard times came, the weakest went to the wall first, because their credit was the least able to withstand contraction. As we have pointed out in our financial discussions in this department of THE CENTURY, ninety-five per cent. of all the business of the world is conducted on credit, and only five per cent. of it on actual money. The first shock to credit, which is another word for confidence, is fatal to those persons who have not the five per cent. basis of money. They cannot sustain even the first suspicion as to their credit. The moment that they cannot borrow they are doomed. Next after them must fall those who, while having a sufficient basis of money in times of ordinary confidence, cannot keep their heads above water after the conditions of borrowing have become more stringent.

VOL. XLVIII.—40.

The whole credit system, having once taken the alarm, becomes so sensitive that all borrowers are more or less under suspicion, and all of them find it more and more difficult daily to obtain that credit which is necessary to their business existence.

The result is that as the hard times continue, many a business that has been conducted successfully and honorably for years, mainly upon borrowed capital, is forced to suspend. Sometimes its creditors consent to a settlement at 30 cents, or 50 cents, or 75 cents on a dollar, and the business is resumed. At other times the failure is so complete as to become permanent, and the business ceases to exist. In all cases there are heavy losses to many persons besides those immediately involved. Business of all kinds suffers because every suspension or failure adds to the impairment of credit by making it more timid. Many people find their income impaired because their capital is earning less than before or is lying idle. The banks and other financial institutions, not being able or willing to lend the funds intrusted to their care, are able to pay only reduced dividends or interest upon them, or none at all. Thus society suffers in all its ranks—the careful and honorable business man with the reckless and dishonest one, the workingman who is deprived of employment, the widow and orphan who live upon invested money, the merchant who can transact only a third or a half of his ordinary business, the rich man who can no longer lend his wealth with safety.

What is the lesson of this experience? In the first place, it is that only the best and most honorable business methods are safe in time of severe trial. Whoever else survives such crises, the lax and unsound business man is certain to go under. The business which is conducted on the most conservative and honorable lines stands the best chance of surviving all shocks.

We do not think it one of the lessons of the hard times that business should not be transacted so largely upon credit. While many a business honorably and carefully conducted mainly on credit has been carried down during the prolonged depression we are considering, we doubt very much if the number would have been less had the proportion of actual money to credit been larger. A liberal credit basis is of great value to the whole community. It increases enormously the volume of business, and reduces the prices of commodities because it is actually cheaper to conduct a business on borrowed, than upon one's private, capital. Free and general borrowing of money makes the loaning of it easy, and thus earns for its possessors, the great bulk of whom are always the poor and those in moderate circumstances, a sure income upon their savings.

The great lesson to be learned is the same one that was taught by our silver experience, and has been taught by all cheap-money experiments that the world has ever known, and that is that any and every kind of public agitation or legislation which impairs credit by shaking public confidence is to be avoided like a scourge. When credit is unquestioned, there is no danger to any honorably and intelligently conducted business with only five per cent. basis of actual money. A man who can keep a bank account of \$20,000 in visible cash can do a business of half a million dollars with perfect safety so long as he fulfils all his obligations and maintains the confidence or good opinion of his fellow-merchants. The first duty of every merchant, and in

fact of every citizen, is to oppose at all times every scheme or proposal which in the slightest degree disturbs public confidence, for upon the preservation of this the welfare of the entire community hangs. The harm done by shaking public credit is only less than that done by destroying it, for there is no more paralyzing influence to put into the channels of industry and business than the element of uncertainty, either

as to the money standard of value, or as to the prices of commodities as these are influenced by legislation. It would be an incalculable boon to the country were Congress to realize that promptness is the first and imperative requisite of all financial or industrial legislation. It is uncertainty rather than change which does the harm. This* is a lesson of the hard times which our National legislators would do well to take to heart.

OPEN LETTERS.

The Reform of Secondary Education.

THE National Educational Association began in July, 1892, a movement for the reform of secondary education in the United States that seems destined to accomplish even more than its most enthusiastic promoters dared to hope for. This fortunate outcome is in part due to the systematic and authoritative way in which the task was undertaken, and in part to the ability and skill with which the Committee of Ten who were selected to plan and carry on the investigations that have now resulted in an elaborate report¹ discharged their functions.

Representing as it does teachers of every grade and from all parts of the country, the National Educational Association was perhaps the only body large enough and comprehensive enough to give authority to an undertaking of this kind. Its directors took the initiative in the matter, selected the Committee of Ten, and made an appropriation to pay the necessary expenses that they might incur. The Committee of Ten consisted of President Charles W. Eliot of Harvard University (chairman); Dr. William T. Harris, Commissioner of Education; President James B. Angell of the University of Michigan; President James H. Baker of the University of Colorado; President Richard H. Jesse of the University of Missouri; Professor Henry C. King of Oberlin College; President James M. Taylor of Vassar College; Principal James C. Mackenzie of the Lawrenceville (New Jersey) School; Principal O. D. Robinson of the Albany (New York) High School; and Principal John Tetlow of the Girls' High School, Boston.

At a preliminary session held in the autumn of 1892 this Committee determined to call nine special conferences of ten members each, one conference for each leading subject or group of subjects taught in secondary schools, and to submit to them, as experts, a series of searching and comprehensive questions concerning secondary-school work. The members of these conferences were selected with great care. The ninety experts chosen were drawn in almost equal numbers from the schools and the colleges, and pains were taken to give representation to every part of the country and every type of school. Conferences were called in Latin; Greek; Mathematics; English; other Modern Languages; Physics, Astronomy, and Chemistry; Natural History; History, Civil Government, and Political Economy; and Geography.

The several conferences assembled in December, 1892. Two met at Ann Arbor, Michigan; one at Poughkeepsie, New York; one at Washington, District

¹ Published by the Bureau of Education, Washington, D. C., and to be obtained on request.

of Columbia; one at Cambridge, Massachusetts; one at Madison, Wisconsin; and three at Chicago, Illinois. The questions submitted by the Committee of Ten were fully considered and answered in elaborate reports (which appear as appendices to the report of the Committee of Ten), that are alone most important contributions to educational literature. The last of these conference reports was not completed until August, 1893, and in November last, after having considered these reports for some weeks, the Committee of Ten met a second time in order to complete their task. How well they did it, their report shows; and it must stand as the most important single discussion of the aims, methods, and content of secondary education that has ever been made. It will be eagerly studied, as it ought to be, in every college and high school of the country. If its suggestions are generally acted upon, as there is good reason to hope that they will be, there will result a most healthy reform of our secondary instruction, and a long-wished-for improvement in the relations of the secondary schools to the colleges.

One of the most useful features of the report is a series of four plans for four-year courses in secondary schools. These four plans are not submitted by the Committee as final, but as sample school programs, each of which conforms, as nearly as may be, to the desires of the special conferences. The Committee's tables are as follows, the abbreviation "p" standing for a period of forty-five minutes, and this work of the school being limited to twenty periods a week:

CLASSICAL.

Three foreign languages (one modern).

A careful study of these four programs discloses the fact that they are constructed with great skill and according to fixed principles. They postpone to a period as late as possible the necessary bifurcation of classical and scientific courses; but no classical student is permitted to ignore science, and no scientific student is deprived of good linguistic training. In the classical program history and English suffer serious contraction, but this is atoned for, in part at least, by the fact that no inconsiderable amount of history is learned through the classical writers, and that accurate translation from a foreign tongue is itself admirable training in the use of English. All four of the sample programs, as the Committee points out, conform to the general recommendations of the conferences: they treat each subject in the same way for all pupils, with trifling exceptions; they give time enough to each subject to win from it the kind of mental training it is fitted to supply; they put the different principal subjects on an approximate equality so far as time-allocation is concerned; they omit all short information courses; and they make sufficiently continuous the instruction in each of the main lines, namely, language, science, history, and mathematics. Very slight modifications in them would be necessary in order to prepare pupils for admission to the appropriate courses in any American college on the present requirements.

The Committee is unanimous in the opinion that under existing conditions in the United States as to the training of teachers, and the provision of necessary means of instruction, the two programs called respectively Modern Languages and English must in practice be distinctly inferior to the other two. In this opinion the Committee recognizes, as fair-minded observers must also do, that the subjects that have been longest in the school curriculum are those that we are able to teach to the best advantage.

It is also suggested by the Committee that requirements for admission to college might be much simplified, though not reduced, and so brought into harmony with the above programs, thus closely articulating the secondary schools and the higher institutions in a way that would be advantageous both for themselves and for the country.

In this country, where no central educational administration exists, and private persons are almost unrestricted in their freedom to establish schools and colleges, any comprehensive scheme of reform is exceedingly difficult. It must be begun, just as has been the case in this instance, by a voluntary association of individuals. It must be carried on by the enthusiasm and energy of those enlisted in its service. It can only be successful if it is so reasonable and practicable as to

command willingly universal assent. It may safely be predicted that the work of the Committee of Ten, in principle and outline as well as in most points of detail, fulfils these conditions.

Nicholas Murray Butler.

An Honest Election Machine.

THE city of Montreal is not perhaps generally regarded as the most progressive city upon this continent, but it has been one of the first to learn that the only road to substantial reform in municipal administration is through the sanctity of the ballot-box, and the adoption of "machine" methods on lawful lines. On a winter evening, three years ago, the members of a social club of that city were informally discussing the influence of money in politics. There were several politicians of experience present, and, being among friends, they felt free to reveal what are usually held as state secrets. Many were the tales of electoral corruption, and the verdict rendered by those who knew was in effect that fraud in the preparation of the voters' lists, and "personation" (that is, one man voting in the name of another), were responsible for the election of many, if not all, of those who corruptly administered Montreal's civic affairs. Among the listeners were a few earnest young men who determined to test the truth of these statements, and, if found to be correct, to make at least one honest effort to devise a remedy. An extended inquiry was made. It was established that frequently fifteen per cent. of the vote polled was fraudulent, and that, where majorities were narrow, this fraudulent vote always elected the more unworthy candidate. The general belief appeared to be that the only way to elect good men was to fight the devil with his own fire. It was, however, evident to the would-be-reformers that just so long as corruption was necessary to elect candidates, stainless men would not offer themselves, and honorable workers would not take active part in election contests. It was necessary to discover some means by which honest men could be elected by honorable means, or else to surrender the entire business of municipal politics to the unscrupulous element of the community. With this end in view the young men made the following experiment: A parliamentary election was close at hand, and, supporting a candidate whose character was good, they offered to man and operate, free of expense, the two worst polls in his constituency, provided they were given full control. Thirty-five fraudulent votes had been polled in this locality on a previous election, and the "heelers" of the district fully expected to maintain their reputation. Their offer accepted, the first step on the part of the would-be reformers was to devise the printed card which follows at the top of the next column.

One of these cards was issued to correspond with each elector. The heading was filled in from the voters' list, the description being obtained through personal visitation, and when election day arrived, at each poll sat the "watcher" with his packet of description cards, and no man polled his vote unless the watcher was satisfied. Six attempts at personation were made, but when it became evident that further trial was not only useless, but extremely dangerous, these efforts ceased.

Encouraged by their success, the young men determined to form an independent organization, and on

April 1, 1892, the first constitution of the "Volunteer Electoral League" was promulgated. The objects as therein set forth are as follows:

1. To revise and perfect the voters' lists.
2. To encourage the nomination of candidates of known integrity for public office.
3. To use all legitimate means to secure their return.
4. To prevent fraudulent and dishonest practices in elections.
5. To cause to be followed up and prosecuted, to the full extent of the law, those detected in any violation of the election act.
6. To suggest and promote any legislation, approved by the League, having for its object the purity of elections.

It was also clearly stated that the organization should be purely non-political, in the belief that civic affairs should be wholly divorced from national issues; that it should not aspire to become a nominating body, leaving this task for municipal organizations composed of older men; that possible aspirants for municipal honors and officers of political clubs should be excluded from membership; that funds should be raised by subscription among citizens, no gift to be received from any civic official, representative, or candidate; that the services of every member should be voluntary, and the organization absolutely independent even of candidates which it had selected, being equally as ready to unseat as to elect in case a representative proved unworthy of trust. Matters relative to the general policy should be determined by a council composed of three representatives from each ward organization, while those which related solely to a single ward should be left to the ward council, the minority, however, always having the right of appeal to the central body. This, in brief, constituted the platform of principles as laid down by the Volunteer Electoral League at its inception.

By the close of the year 1892 the League had grown sufficiently in numbers to warrant it in undertaking the management of the election for an entire ward. This it did successfully, and again the system was given a wider trial and was not found wanting.

Finding many defects in the city charter statutes regarding elections, the League prepared a series of amendments which were laid before the Provincial legislature in the fall of 1893. Nearly all these provisions

in due course became law, and in the hands of the organization which fashioned them have proved most efficient weapons.

When once again a civic contest drew near, the League prepared to combat election fraud on still more extended lines. Five wards were now undertaken. Hitherto it had been sufficient to watch the ballot-box and to insure the proper casting of the vote as registered; now it was determined to investigate the composition of the registry-list while there should yet be time, according to law, to make alterations. Heretofore the battle had been waged upon ground chosen by the enemy; now the field should be of the League's own selection. A fund was collected, for the work was now too large to be undertaken by volunteer effort. An office, with paid secretary and canvassing staff, was established for each ward, identification cards were prepared, and the canvassers were sent forth with instructions to secure accurate descriptions of every bona-fide voter, and ample data regarding cases where the right to vote could be questioned.

There is not in Canadian cities, as in the United States, a system of personal registration. The assessors make their rounds, and inscribe upon their blotters the names of the tenants or proprietors as assessed. Such parties as, prior to December 1, pay their taxes are entitled to be entered on the municipal voters' list for the coming year.

The civic elections in Montreal are held February 1. Nomination takes place on January 20, after which date no change can be made in the voters' lists. The board of revisors meets on January 5, and from that date until nomination considers objections and makes additions to the list that has been prepared for them by the assessors. Usually the work of the revisors has been a sinecure. They hold a few sittings, add several names, and certify the lists as a mere matter of form. But when the board met on January 5, 1894, they found that the Electoral League had prepared sufficient work to occupy them at every possible sitting until the date of nomination. The house-to-house canvass of fifteen thousand electors, prosecuted by the League's identifiers, had resulted in many astonishing discoveries. Over 600 names upon the assessors' lists were found to be incorrectly inscribed, the error being frequently so serious as to jeopardize the vote. Upward of 400 permanent non-residents, together with 208 deceased persons, 47 minor heirs, 210 civic employees, and nearly 300 duplicates, were entered as voters. These names, the League, through its attorney, notified the board of revisors it would challenge. The board did not do its duty by all the complaints. How could it be expected to do so when composed of aldermen on the verge of an election? Still, there was much gained by the exposures. In the largest two wards the lists were found to contain, when the *enquete* was concluded, 580 fewer names than the previous year, although a natural growth of population had continued. Furthermore, public sentiment had been aroused, and by legal enactment the pernicious system of appointing aldermen to revise the lists that their own allies had tampered with came to an end. Hereafter a judge of the superior court will appoint a board of revisors.

With the lists tolerably correct, and their identification material ready, the next problem before the League was to raise a sufficient volunteer force of trustworthy men to operate the polls in five wards on election day.

In nearly every civic community the good element plus the indifferent outnumbers the bad. In order to win an election, it is necessary to raise sufficient men not only to watch the polls, and thus to checkmate the enemy, but also to bring to the polls every careless voter, who, if he voted at all, would vote right. The members of the League set forth, therefore, to preach a crusade among the young men of the city from the text which is their motto, "Every man is individually responsible for just so much evil as his efforts might prevent." This line of action, followed in each ward, gathered a force of 354 volunteers, ready for whatever work they might be called upon to do. This body was then divided and subdivided. Each man was trained for his particular duties, and was given printed instructions to refresh his memory.

At length the first of February, 1894, drew near. It was admitted that now or never a successful stand could be made against the ward boss and his corrupt machine. Better candidates than usual were induced to take the field, and as the lines became clearly defined, the League made its selection. In all, eight men received its support; of these, three were sitting members deserving reflection and five were new men. Opposed to them were aspirants wholly objectionable. It is possible to sum up the result of the contest in a word. Three of the corrupt aldermen retired before election, four were beaten at the polls, and one retained his seat only by a narrow majority of seventy-three. Out of 11,100 votes cast, less than one fifth of one per cent. was fraudulent, though determined and repeated attempts were made to bribe, and bulldoze the League watchers. Throughout the entire campaign none but lawful methods had been employed, and in Montreal at least it has been conclusively proved that illegal practices are not necessary to elect honorable men.

This narrative would be incomplete without some account of the method employed for bringing to the poll the indifferent voter. It is largely borrowed from the "machine," and can best be illustrated by the detailed account of a particular contest. An identification canvass of a certain ward had already been made. A second canvass was then prosecuted to ascertain the sentiments of each elector respecting the candidates, his address during business hours, and the time most convenient for him to vote. The ward was then divided into districts of five polls each. Each district had a committee-room, where all information pertaining to the five polls was collected. In each committee-room were five large cardboard sheets called "*tableaux*," placed upon separate tables, each sheet containing the names, alphabetically arranged, of all persons entitled to vote at a given poll. A mark before the name denoted the elector's sentiments, while after the name was entered the business address. To each sheet were assigned on election day two men, a "receiver" and a "despatcher," whose duties will be presently defined. At every poll was a team of three League members. Two of these were inside watchers, or "scrutineers," by whom every elector, upon presenting himself, was carefully inspected, and, failing to correspond with his identification card, was sworn. Few dared swear falsely, but where this occurred, the watchers were prepared to fill out warrants, and secure the instant arrest of the personator. Outside the poll stood the third League representative, in his hand a packet of card-stubs, one for each elector,

with name and sentiments written thereon. As the voter entered the booth, and his identity was ascertained, the outside man withdrew from his pack the corresponding card-stub. Every half-hour a runner from the district committee-room collected the voted card-stubs, and delivered them to the proper "receiver," who promptly lined off the names from his "tableau." At the door of the committee-room were a number of sleighs, loaned for the day by well-wishers of the cause. Opposite the "receiver" sat the "despatcher." It was his constant duty to copy off several unvoted names, with addresses, upon a slip, and to despatch a sleigh to bring up the voters from the business addresses indicated. This system, steadily and quietly worked, resulted in polling the largest vote ever cast in that ward at a municipal contest, and the return of the League's candidate by a majority of 655.

The methods employed, and the results attained, in Montreal are possible, *mutatis mutandis*, in any city on the American continent. There is ample call and room for municipal-reform organizations on many lines. Good-Government clubs can do much toward exposing administrative unfaithfulness, arousing public sentiment, securing better legislation, and inducing worthy men to present themselves for municipal offices; but unless such efforts can be supplemented by other organizations, recognizing the necessity of the sanctity of the ballot-box, and prepared to engage in conflict with the "machine" on its own battle-ground, the triumph of righteousness and good government will be long delayed. Few are the cities on the American continent in which there does not exist a band of patriotic citizens sufficiently large amply to endow any working organization that can be trusted; in which there are not enough sincere, enthusiastic, determined young men to recruit an electoral league to full fighting strength; in which a lawful registry-list, an honestly polled ballot, and the ingathering of the indifferent vote, will not bring about the triumph at the polls of any just cause.

Herbert Brown Ames.

Military Drill in the Schools.

EX-PRESIDENT HARRISON's distinguished services to his country, his eminence as a citizen, and his high intellectual and moral character, entitle what he says on any subject on which he may choose to speak to most respectful consideration. What he utters in reference to the welfare of his country may be taken without question as inspired by patriotic motives, and, as a rule, as the outcome of careful and comprehensive thought. It has been a matter of no little surprise, therefore, to many of the warm friends and admirers of ex-President Harrison to see, from his open letter published in the January CENTURY, that, along with many others, he advocates the introduction of military drill into the schools and colleges of the country, or, in other words, the training of the millions of American boys in the arts of war. Such a training seems to many so useless, so out of harmony with the spirit of our time,—and specially of our American civilization and historic character,—so tending to bring our people ultimately into a state of militarism like that of the Old World which is universally detested on this side of the water, that they are at a loss to know exactly how to explain the attitude taken by a considerable number of our citizens in its favor.

The first reason given in favor of the drill is that it develops the whole man, that it gives a free, erect, graceful carriage. What Mr. Harrison says of athletics, as tending to develop the body unsymmetrically, is true only of certain kinds of athletic exercises. Any one thoroughly acquainted with the calisthenic systems of the gymnasiums knows that they train every part of the body, and that, too, to movements of greater variety, and susceptible of more natural applications, than the military drill. The latter trains the body perfectly for its own purposes, and for the time being has a certain amount of physical value. But its ultimate utility to the citizen in ordinary life has been greatly overestimated. The forms and positions which it enforces are stiff and unnatural, and cannot well be maintained any great length of time. Hence the notorious fact that soldiers when they are out of the ranks are among the most careless of their bodily positions and movements. So true is this that if one should try to pick out from a promiscuous crowd of men those who had had a soldier's training, he could not do it; he would almost certainly get the wrong men. It is often assumed that the soldier's position and bearing are carried over into the ordinary citizen's life, but a little careful thought and observation will convince any one that this is not and cannot be the case. The military drill is admirably adapted to train men to a mechanical obedience to others, but it has little in it that tends to produce that voluntary control of the bodily forms and movements which every citizen, man or woman, ought to have. There are systems of physical culture now in use in many places which, at small expense, might be put into all the schools and colleges of the land, and which have already proved their great superiority to the military drill.

As to the argument drawn from our poor preparation for the civil war, one feels inclined to ask whether, if previous to that time all the citizens had had military training, the South would not have reaped as much advantage from it as the North. If the young men of the Southern States had all been previously trained to military service, the rebellion would probably have struck a blow at the Government so much more sudden and powerful as almost certainly to have succeeded in establishing the Confederacy on a permanent basis.

A nation that tries to outstrip its neighbors in war preparation, so as to have things all its own way, always finds that it has started a game at which two can play. If the plea that swiftness and suddenness of war in the future require that all our boys should have a military training is worth anything as an argument, it would require us to have a large standing army, the absence of which is given as one of the reasons why we should have the military drill in the schools and colleges of the country. A lot of school-boys drilled in military tactics, or even a great militia force trained as well as militia ever is, would very inadequately meet the emergency of a swift and sudden attack by a nation having already in the field an immense standing army. If the course of military training now recommended from several quarters is ever entered upon, its logical result will be half a million soldiers continually under arms. That has been the fact in Europe. Germany, prior to 1866, began with her citizen soldiery, which enabled her to whip Austria and then France; the result has been that she finds herself compelled to crush her people with overwhelming burdens in order to keep even with her

neighbors, who have at last shown themselves quite as shrewd as she in using the lesson which she unintentionally taught them. The people of the United States may well pause, and look the final result well in the face, before they go any further in a course so un-American and so dangerous. We are already well on the way with our navy; a great militia, into which it is thought the taste for the military acquired by the drill in the schools will lead the boys, will be the next step, and then will come the large standing army, with its burdens and its perils.

The course of safety and of honor for the United States lies in a different direction. The fear which has recently taken hold of so many of our citizens that a considerable part of our business in the near future may consist in warding off hostile nations which are to come breaking in upon us "like a thief in the night," is altogether groundless. There is not a particle of evidence that any nation whatever has the remotest idea of attacking us. We are looked upon as the great peace nation, and respected for our pacific character. We have had no war with a foreign power for over eighty years, except that with Mexico, which we brought on by our own wickedness. In building up our national greatness, we have never depended much on militia, army, or navy, except in times of emergency. We have really had none on which to depend. The United States, because of its non-military character, has done more than any other three nations toward creating that spirit of international concord and trust which is to revolutionize the world. Why, at this late period in our history, should we begin a course of action growing out of groundless fear and suspicion, and thus put ourselves on a plane with those nations whose military thralldom we have so far happily escaped?

The military drill as a training for war is entirely out of harmony with the purpose and ideals of the schools, and if introduced into them will unfortunately keep alive that excessive admiration of the soldier ideal which has been anything but a blessing to mankind. We ought to educate for peace and the future, and not for the past and war.

Benjamin F. Trueblood.

"The Century's" American Artist Series.

CHARLES H. DAVIS. (See page 179.)

AN artist acquaintance of mine of many years ago—an old landscape-painter of the Düsseldorf school—used to remark during the period when the naturalistic school was having full swing: "No, I don't think any landscape right which is merely a reflection of what any Philistine may see; there must be something more than *that* in it, or it cannot live. It must contain mystery. My dear boy, the fairies must dance in it." We used to think this man old-fashioned, behind the times. I speak of the time when Ruskin had inspired and Hamerton had bewildered us. It is interesting to see how, to-day, the landscape which is valued is of the kind my old friend would have admired. Cazin, Lestelle, Inness, and Davis have taught us to look for the fairy-dance in the landscape. They have made for us, not transcriptions, but translations, of nature. They have taken the commonplace of nature, distilled it in the alembic of their brain, and made it precious. Without undertaking to establish the comparative status of these men, it may be said of the two Americans that, while Inness reminds one of the music of a full orchestra,—the grand swell of sound, the sonorousness of Wagner,—Charles H. Davis makes one think of the reeds and strings of Delibes. Davis certainly must be placed in the foremost rank of the landscape-painters. His range is not so wide as Inness's, but he is possessed in eminent degree of the instinct of the subtle, the beautiful.

Charles H. Davis was born at Amesbury, Massachusetts, in 1856. He began the study of art at the Museum of Fine Arts, Boston, and later went to Paris, where he worked under Boulanger and Lefebvre. He has been the recipient of an honorable mention at the Salon, a medal at the Paris Exposition of 1890, a gold medal of honor at a Prize-Fund Exhibition of the American Art Association, and the next year, at the same exhibition, a cash prize of \$2000. He also received the Potter Palmer Prize of \$500 at Chicago in 1888, and a medal at Chicago last year. One of the best of his pictures, "The Brook," was purchased by the Pennsylvania Academy of Fine Arts. He is a member of the Society of American Artists.

W. Lewis Fraser.

IN LIGHTER VEIN.

En Route.

I DO not know to this day why I was allowed to see and hear so much, unless it was because I wore blue spectacles on that particular journey, and you know that the wisest of us with this adornment look blind, and deaf, and often idiotic.

I know that until that day I would have told all my private affairs before a blue-spectacled neighbor, with a feeling of certainty that he could neither hear, see, nor understand me. Now, however, I know what keenness of interest and comprehension may lie behind those screens, and I am wary.

I was sitting quietly in my chair when the party came into the car, and the gentleman and lady seated themselves almost opposite me, while the daughter took the only empty seat several chairs beyond them.

I watched them idly for a moment as they settled

themselves. The train started almost immediately, and the first words that I heard distinctly were in the clear, somewhat hard voice of the lady as she said:

"Are n't you thankful that we have managed so well?"

After an apparent assent from her husband she surveyed the occupants of the car through her eye-glass, and, bowing graciously to some one at the other end, went on:

"There is Mrs. Telfer, of all people; I am always afraid of what she will see. She is the only woman who makes me feel uncomfortable, and I always think of her as one of the women in those 'feline amenities' in 'Life,' or 'Punch,' or wherever you see them. She watches you so—and when I am watched I always feel sure that something will be found out whether there is anything to find or not."

I settled myself shamelessly to listen, thinking,

"This is just the kind that I have always wanted to see outside of novels." I lost her husband's answer, but the lady went on:

"Of course you do not mind, for you can put your feet up, cover your face with a newspaper, and pretend to go to sleep; but how would I look doing so?" A pause; and then, "Henry, don't go to sleep; I want to talk things over with you."

"Henry" straightened up, looking good-naturedly at his anxious spouse, and I caught a word or two: "Don't worry so, dear, . . . we shall get her away all right. She will forget him."

His wife shook her head slowly. "I am not so sure; she is persistent, like you —"

He, interrupting her: "*Firm*, you mean."

His wife went on, without noticing: "Mrs. Telfer saw her on Thursday evening when Bert put her cloak over her shoulders. I was watching them, too, and thinking how sweet Nell was, and Mrs. T. said, with a smile, 'How significant a parting may be, even a quiet one, in public!' and I — O Henry, just think, I was mean enough, feline enough, to look over to the stairs and say, 'It seems so!' and as her eye followed mine, there was that horrid, red-faced German count just bending down to kiss Sally Telfer's hand. Was n't it hateful in me — and vulgar, too? Of course we both knew that it did not mean anything, or it could not have been done in public; but it stung Mrs. Telfer, and I have felt ashamed ever since."

A few indistinct words in answer to this confession ended with, "think you might."

She began again: "After we went home, and Nell told me that she had accepted Bert, she looked up at me and said: 'Mama, I know that you do not like it, and we shall have to begin in a horrid flat or outside of the city, but it is done — and won't you kiss me?' So of course I did, and would not talk about it then because it was so late; and then came the two telegrams from Berlin and from poor mama. Was n't it fortunate that you were with her in Boston? She might not have had anybody but those new servants. Things do seem to arrange themselves sometimes. I sent down, before we started, to the office and just caught two state-rooms as they were given up by somebody, and now we can start for Berlin to-morrow. I think that I will tell Mrs. Telfer about Tom's illness, so she cannot have time to make up reasons for our sudden start."

Henry stopped her as she was rising. "My dear, I have n't had a chance to ask any questions, — I was too anxious about mother, until the doctor reassured me, — but now I should like to know what you expect Bert to do about this."

"Oh, he won't have time for anything. I did not tell Nell that we were all going to Tom until we reached the station this noon. And Bert goes to Chicago to-day, and we start early to-morrow morning."

The gentleman leaned back meditatively, saying: "What a pity it is that all the — what do the English novels call 'em? Oh, yes! — the 'detrimentals' are the nice, manly fellows, and the desirable sons-in-law are generally such undesirable husbands?"

"Yes," was the answer, with a sigh. "Bert is a good fellow, but —" Her husband looked at her with a twinkle as he said, "I am glad that you did not look so sharply after money twenty-two years ago."

She looked at him reproachfully. "You make me feel like a worldly society mother, and you know that I am not; only I do want Nell to have what she is worthy of."

(*Silence and lunch.*)

"Miss Nell" partaking of both, with a little talk afterward about passports, letter of credit, etc. Books were read for a short time, and the girl sat quietly looking out of the window, without a shade of the worry that clouded her mother's face.

At last the latter said: "Look at Nell; she can't feel so very sad, or she would not be so placid under the certainty of not seeing Bert for perhaps a year without even a good-by. I could not have taken it so quietly."

Nell's father looked gravely at his daughter's face a moment, and then said:

"I don't pretend to understand any woman but you and my dear old mother. I saw Nell kissing her this morning, and heard her say, 'I'll try to be.' And then mother kissed her again. I did not know so much then or I should have taken it in."

The lady rose, saying, "Well, it is all right now, and here we are in the tunnel."

The train slowed up a moment as we left the tunnel. The door opened and let in a well-set-up young fellow with a manly, lively face, who walked quickly to Miss Nell's chair. She sprang up, and they exchanged one look, when, without hesitation, he leaned forward and kissed her quietly on the lips.

Her mother gave a slight gasp, with a look at her father, and a full appreciation of Mrs. Telfer's impressive lognette.

Quicker than it takes to write it, Nell's father left his seat, and, coming forward, met the two young people as they approached him, and held out his hand with a hearty, "Bert, my boy, I am glad that you did not miss us!"

His wife's presence of mind did not forsake her under fire, and she bore the frank kiss bestowed upon her by her resolute son-in-law to be with much graciousness. When Mrs. Telfer pressed forward with friendly words, and said, "You did not tell me the other evening," she quietly answered, "It was not out then."

I crammed my books into my bag, and walked after the party in time to hear Nell say to her mother: "Mama, you must forgive me. I paid a boy to telegraph for me to Bert while we were at the station. When you told me that we were going to Europe, I understood, and I was desperate, so I just wrote my telegram: 'Meet me at 4:30 train, and claim me. We start for Europe to-morrow.'"

"I should think he did claim you!" answered her mother. "Mrs. Telfer said, 'I see that a meeting may mean as much as a parting, even in public.' Well, dear, you know that we are all fond of Bert, and it was only because —"

The rest I lost, probably because I had taken off my blue spectacles.

M. S. Woodbury.

What Not to Do.

To know thy bent, and then pursue,
Why, that is genius, nothing less;
But he who knows what not to do,
Holds half the secret of success.

Ella Wheeler Wilcox.

A PORTRAIT OF THOMAS WILLIAM PARSONS.

A FOOT-NOTE BY THOMAS BAILEY ALDRICH.

THE face which is engraved on the opposite page of this magazine is that of a poet who will, I think, be better known to our grandchildren than he has been to us. For time saves and sanctifies as well as destroys.

During the last twenty-five or thirty years a tall, slight figure, somewhat bent of late, with Dantean eyebrows overhanging eyes of a singularly penetrative sweetness when they looked at you, was a frequent figure on the streets of Boston. Here and there it encountered a friendly glance of recognition, but to the hurrying throng in the city of his birth Thomas William Parsons was virtually a stranger. The passers-by, brushing against him, were unconscious that that shy man with the inward-looking eyes was a poet of rare gifts, who, however lacking in variousness, occasionally managed in his own direct artesian way to pierce as deep as any of his great contemporaries, excepting, possibly, Emerson. There was something abstracted and evasive about the man's very walk; in the midst of the crowd he was not of it. He carried his solitude with him into the street. Indeed, he was not of the crowd, though allied to it by subtle threads of sympathy. In his poetic as well as in his personal quality he did not address himself to the general.

Dr. Parsons had much in common with Landor, outside of the Englishman's fine moroseness. Each possessed that delicate precision of touch which, to the observing, betrays the steel gauntlet under the velvet glove. Both were scholars, both loved Italy, and both wrote

marvelously finished verse, which poets praised, and the public neglected to read.

Dr. Parsons's lighter lyrics have a grace and distinction which make it difficult to explain why they failed to win wide liking. That his more serious work failed to do so is explicable. Such austere poetry as the stanzas "On a Bust of Dante," for instance, is not to the taste of the mass of readers: but such poetry, once created, becomes a part of the material world; it instantly takes to itself the permanency of mountains, prairies, and rivers; it seems always to have existed. The scant measure of appreciation which his work in this kind met with was in some degree the result of Dr. Parsons's own methods. Though he wrote his poems with infinite care and labor, he was curiously indifferent to their subsequent fate. He gave them, usually, to the newspapers, rarely sending his best to the magazines. Now and then a leaflet, in strange typography, fluttered down into the hand of the passer-by, like a rich leaf blown from a maple. From time to time a handful of his rhyme was tenderly gathered into a privately printed volume, and offered to friends.

The possessors of these furtive little books do not, I have noticed, show any striking eagerness to part with them. Since the Ticknor and Fields volume in 1854, and a rearrangement of it with additions, issued in London in 1872, Dr. Parsons published nothing of his own in a permanent shape. He had high ideals touching his office as man of letters, but a very modest estimate of himself. It was

a lesson to mediocrity to find this consummate artist and deep thinker at times

Desiring this man's art, and that man's scope.

For the most part he dwelt in book-world, and held that nothing was so real as imagination.

The study of the great Florentine and his period was a life-long pursuit of Dr. Parsons. His translation of "The Divine Comedy," so far as he carried it, for it was left like "the unfinished window in Aladdin's tower," places him in the first rank of Dante's disciples. He brought to this labor of love something of his master's own passion. Whether or not the translation is literal in detail, Dr. Parsons's fragmentary versions have a spell beyond that of all other metrical versions, in being poems in themselves. Such pleasure as a translation affords is usually monopolized by the translator. Though the influence of Dante's manner is nowhere traceable in the original writings of Dr. Parsons, it is to be remarked that his noblest lyric was inspired by a portrait of the Tuscan poet—the lines "On a Bust of Dante" already mentioned.¹

Dr. Parsons went seldom into society; he was a beloved guest in the few houses he visited. His own fireside, until it was darkened by ir-

reparable loss, was a happy one. He was a man of great simplicity and alert sympathies; a charming companion, when he was out of his cloud, and, even when in his cloud, a most courteous dreamer. That he sometimes dropped his reserve with me, in his enthusiasm over some question of literature or art, is now among my cherished memories. I frequently urged him to collect his scattered poems, as he alone could adequately perform the task, but I never succeeded in getting more than a faint-hearted promise that he would undertake it. It was left for other hands to do. The recently published collection is not, I imagine, the collection that will definitely represent him. It contains pieces which doubtless his severer taste would have excluded; an important stanza is omitted from one of the notable poems, and the volume is wanting in several lyrics that must be classed with his choicest. How choice those are is something the world will gradually discover. Like Beddoes and Landor, however, he will always be the poet of exceptional lovers. During his life-time Parsons's verse found only a narrow circle of readers, but they were of that kind which in each age keeps the fire burning on the altars. The many make popularity; the few make fame.

Thomas Bailey Aldrich.

¹ Five or six years ago Dr. Parsons told me that the original appearance in book form of these lines was in connection with his translation of the first ten cantos of the "Inferno," published by W. D. Ticknor, 1843. Copies of that little pamphlet in stiff brown paper covers, with the grim profile of Dante regarding Parsons's poem on the opposite page, are now very much sought after by collectors.

ON A BUST OF DANTE.

See, from this counterfeit of him
Whom Arno shall remember long,
How stern of lineament, how grim,
The father was of Tuscan song:
There but the burning sense of wrong,
Perpetual care and scorn, abide;
Small friendship for the lordly throng;
Distrust of all the world beside.

Faithful if this wan image be,
No dream his life was—but a fight!
Could any Beatrice see,
A lover in that anchorite?
To that cold Ghibeline's gloomy sight
Who could have guessed the visions came
Of Beauty, veiled with heavenly light,
In circles of eternal flame?

The lips as Cumæ's cavern close,
The cheeks with fast and sorrow thin,
The rigid front, almost morose,
But for the patient hope within,
Declare a life whose course hath been
Unsuited still, though still severe,
Which, through the wavering days of sin,
Kept itself icy-chaste and clear.

Not wholly such his haggard look
When wandering once, forlorn, he strayed,
With no companion save his book,
To Corvo's hushed monastic shade;
Where, as the Benedictine laid
His palm upon the convent's guest,
The single boon for which he prayed
Was peace, that pilgrim's one request.

Peace dwells not here—this rugged face
Betrays no spirit of repose;
The sullen warrior sole we trace,
The marble man of many woes.
Such was his mien when first arose
The thought of that strange tale divine,
When hell he peopled with his foes,
Dread scourge of many a guilty line.

War to the last he waged with all
The tyrant canker-worms of earth;
Baron and duke, in hold and hall,
Cursed the dark hour that gave him birth;
He used Rome's harlot for his mirth;
Plucked bare hypocrisy and crime;
But valiant souls of knightly worth
Transmitted to the rolls of Time.

O Time! whose verdicts mock our own,
The only righteous judge art thou!
That poor, old exile, sad and lone,
Is Latium's other Virgil now;
Before his name the nations bow;
His words are parcel of mankind,
Deep in whose hearts, as on his brow,
The marks have sunk of Dante's mind.

COASTING BY SORRENTO AND AMALFI.

WITH PICTURES BY HARRY FENN.

SORRENTO.

THE *genius loci* of the ancients is not altogether a myth. A truer mysticism than their mythology teaches us that places retain for ages something of the lives that have been lived in them, an echo of the voices that have made them musical, a fleeting shadow of the men and women who found in them their happiness or their sorrow. Those who have spent much time in secluded spots learn to feel that lonely places have souls; and the soul of a place is indeed its *genius loci*, its familiar spirit, its peculiar essence, as real a thing as the scent of a rose or the smell of the sea. There are rose-gardens in the East that are fair with the accumulated happiness of past generations. There are shady ilex-groves in Italy wherein still dwells the silent spirit of contemplation; perhaps the phantasms of tragic loves sigh out their little day beneath the ancient trees. In Italy, in Greece, in Asia, in distant Indian glens, dim temples stand to this day, haunted or blest, perhaps, by the presence of that mystic spirit which outlasts all ages. And the market-place has its familiar genius also, the busy center of the crowded city, the broad thoroughfare of the great metropolis, silent for a few hours under the summer moonlight or the winter rain. Old castles too, deserted villages, uninhabited homes of dead populations—all have wraiths,

the ghosts of what they have been, silent to the many, but more eloquent to the few than any human speech can ever be. And besides all these, there are spots where nature has never been molded by man, where she is sovereign and he is subject—lonely places by the sea, great sunlit silences where man has not dared to dwell because nature there would give him nothing, nor was he able to take anything from her. And the spirit of those places is more lonely, and grander, and mightier, than the *genius loci* of the market-place, or of the deserted Italian villa, “where the red dog-star cracks the speechless statues,” or even of the shady cloister or of the wind-swept temples of banished gods. The song of songs is still unwritten, though nature’s music makes man’s grandest symphonies ridiculous, and sounds night and

morning in the ears of him who has ears to hear.

But those are not the ears of the Cook's tourist, the German water-color painter, or the English spinster, all of whom come yearly southward to the Sorrento coast, as regular in their migration as the swallow, and far more welcome to the bankrupt hotel-keeper and the starving boatman, though less suggestive of poetic thoughts when a prominent object in the landscape. They come, they eat, they sleep, and their scarlet guide-books catch the sun and mark them for the native's prey. And then, thank heaven! they go. But it is easy to get away from them, for they keep to the beaten track, a vast flock of sheep for most of whose actions Mr. John Murray of Albemarle street will be held responsible at the last judgment. It may be doubted whether any church, any creed, or any despotic form of government which the world has ever seen, has disposed more completely of men's consciences, men's money, and men's movements, than the compilers and publishers of famous guide-books. Mr. Murray says to the tourist, "Go," and he goeth, or, "Do this," and he doeth it, in the certain consciousness that he cannot do wrong, which is more than the spiritual pastors and masters of the world generally succeed in accomplishing without assistance. I will not venture to impugn the judgment of the great guide-books, but I will venture to say that the average tourist in Italy sees very little that is distinctively Italian. The places he visits have been visited by such an infinite number of tourists before him that they have acquired a certain tourist color, so to say, and have suffered a certain localization of small iniquity which passes in the eyes of foreigners for native character. The least prejudiced of tourists is perhaps the German artist. He is also as a rule the most ready to undergo small hardships and considerable fatigue in the pursuit of the beautiful. But even he sees little. To him Capri seems wild, Naples picturesque, and Vesuvius romantic, and when he has painted the Capri Needles, has eaten shell-fish at Santa Lucia, and has picked up a handful of scorix on the edge of the crater, he has generally had his fill of southern Italy, and goes home to talk about it. So far as Sorrento is concerned, he and his colleagues in the land come to the most beautiful place in the world, stay three days in the modern hotel, drive a dozen miles or so over a modern road in a particularly shaky modern carriage, read "*Agnes of Sorrento*," and go to the next place mentioned in the guide-book. It never seems to strike them that they could hire a little boat with a couple of men for a week, and wander in and out among the rocks and caves and beaches

and fishing-villages all the way from Sorrento to Pæstum, seeing sights not dreamed of in their guide-books, and calling up visions of the great romantic past, of Amalfi's doges, of Robert Guiscard, Tancred, and Pope Hildebrand, or else idle away half a day with the old fishermen of Crapolla or Prajano, listening to their strange tales, their stories of Arabian Nights in Italian dress, their amazing versions of Scripture history, and, more interesting still to those who love the sea, to their accounts of hairbreadth escapes in winter storms and summer squalls. And yet it is very easy to do all these things, and very pleasant, and there is no particular hardship to be undergone. Macaroni is not bad eating, and to most people it is a pleasant novelty to dine on mackerel, lobster, red mullet, or *murænæ*, just out of the sea. There is nothing particularly uncomfortable, either, in sleeping in the warm, dry sand, or in a boat-house on a pile of nets, or even in the bottom of the boat itself, with the Bay of Naples or the Gulf of Salerno for a bathtub in the morning, and the Southern moonlight for a bedroom candle.

Far be it from me to inflict upon any one who reads this sketch a history of Sorrento, or a dissertation upon the antiquities of the peninsula and the republic of Amalfi. The charm that clings to so many spots in Italy does not lie in the accurate knowledge of what has been, so much as in dreaming of what might have been, or may have been, or may yet be. The memory of one or two names, great, romantic, or even mythological, which live in the tales told by the people, has power to call up wonderful pictures. And sometimes wild places, rugged and lonely, to which no shadow of definite tradition belongs, appeal even more directly to the human heart.

Here the sirens still breathe the sea spray, and sing in the enchanted moonlight as Ulysses, lashed to the mast, sweeps by in his dark ship. Still, in the misty dawn, or in the purple twilight, the Barbary pirate's shadowy craft steals silently shoreward, laden with murder and fire and sudden death, but watched from a hundred towers, from which the warning beacon of smoke or flame will presently shoot up to the Southern sky. On those same sirens' isles, blind wretches still starve out their life on the remembrance of the greatness they misused for a little while over there in Amalfi, the price of which was blindness, hunger, and solitude. Here, under the Sorrento Cape, in the rock-girt bath of Joanna, the laughter of the queen and her court ladies still rings in tune with the ripple of the wind-blown water. Far back in the other gulf to southward, above Atrani, stands the solitary Devil's Tower wherein, in darker moods, Joanna performed her incantations; while farther still, away in Salerno, in Guis-

card's city, her mother, Margaret of Anjou, sleeps beneath the marble canopy of her lovely tomb.

It is easy to fancy them alive again as one lies under the shadow of the rocks at noon-day, or by the water's edge when the moon is full, or as one steers in and out along the fantastic

hardly worth while to enter into a description of what many will allow to be the most beautiful spot in the world. As a rule, too, all description is a failure unless it appeals in some slight degree to memory. I might give a long account of its strange geological conformation;

POSITANO.

shore; the truth of history becomes a very secondary consideration, and the weird tales of the old man of Ellera seem very probable. The story-teller of the crew gives us an appalling version of Sinbad's adventure with the roc, as the embers of the camp-fire die away, and none of us would be much surprised if the gigantic bird loomed up suddenly behind the tower on the cliff, to descend bodily in the very midst of us with an Eastern prince or two in his beak. It is fairy-land, after all, and why should anything be too improbable to happen?

So much has been said of Sorrento itself, and so many people see it nowadays, that it seems

I might talk of its marvelous climate, for the Bay of Naples is the coolest place in Italy on the sea-level; I could describe its more or less civilized people, its oranges and lemons and olives, and even its extremely modern hotels: but he who sees and knows Italy dwells not in large buildings illuminated by electric light, and made lively by the perpetual whisk of the waiter's coat-tails, and though a man might spend many months in Sorrento, and gaze to satiety upon the lovely view, he might not see anything that would strike him as strange if he had much experience of the world, nor hear anything more amusing than the conversation

of his fellow-tourists. We all know what that is like. Two of the species meet in their own country. "Where have you been?" "Egypt." "Ah, yes; Egypt. I remember Cairo. Capital steak at Shephard's." But even in progressive Sorrento there are quiet villas far from electric lights and steak-critics, and underneath the villas at the base of the long perpendicular cliffs are green and blue caves, and natural arches, and deep openings to unfathomable Roman quarries. And there are gorges, too, in the hills, and lovely walks when one has got above the range of the narrow, high-walled lanes among which it is so hard to find one's way. There are endless fruit-trees, besides the orange and lemon, and there is everywhere and all summer an abundance of fruit—real Italian fruit, always unripe or over-ripe, but pretty to look at, and not poisonous. About Sorrento also there is something of a Neapolitan flavor in the air. The Neapolitan small boy is half monkey, half comedian, and all thief, and here as elsewhere the boy is father to the man. In Sorrento there is the municipal band, more inexorable in Italy than death itself; there are little companies of men and women who dance the tarantella in costume on the terraces of the hotels, and sing vulgar songs, which the foreigner takes for national airs. There are not, indeed, so many beggars as in Naples itself and its neighborhood, but the perpetual attempt to extract small coin from the visitor occupies the sole and undivided attention of at least one portion of the population. Here, as in Naples, the guide guides not, but chatters, butchering what he supposes to be the foreigner's language in order to make himself a holiday. Here, as elsewhere, the lively donkey boy twists the patient ass's tail, ultimately requests you to dismount at the steep places, and gets on himself. Here, as in all southern Italy, the small deceptions of a very poor and not very clever people bring a smile to the keen but often good-natured Northerner's face. All this I might describe at endless length had it not been done so often, and in one or two instances so well. There it all is, more or less lovely as to its surroundings, more or less modern in its buildings, more or less civilized by the people that move upon the scene. And below it, and before it, and facing it, stretches the sea, the eternal, ever-changing, ever-abiding sea. The splashes of human-wrought color, and the deeper tones of man-planted orange-gardens, and olive-groves, and vines, are forever contrasted with God's own palette, with that broad water wherein are mingled the precious things of day and night, the maiden rose-mallow of dawn, and the gorgeous purple of imperial evening, the gold of the sun and silver of the moon and the precious

stones of the stars, all blending at last in the depths of the great liquid sapphire of that sea which wise men of old believed to be the source of all living things.

Here at least, if he chooses, man can leave dusty lanes and gorges, Neapolitan dances and improved hotels behind, and be alone with the sea a day, a week, or a month. There is no lack of boats, or of men who know the coast better than the lanes up there behind the town. There is no waiting for ebb or flow by this tideless water; by day or night, when fancy whispers the word, you may be borne swiftly and safely westward, by the rocks, round the Capo di Sorrento, past the Capo di Massa, in full sight of Capri, and altogether beyond civilization.

The first bold rock that juts out beyond Massa is the Cala Grande, with its ruined tower. Then comes the cape itself, and just beyond it the sequestered bay where the old man of Ellera lives alone in his cave. Ellera, or Erete, is a strange place, and the old man who dwells among the rocks there is a queer character. The second point of the Sorrentine peninsula is known as the Cape of Minerva, or more familiarly as the Campanella, from a tradition that a bell once hung in the beacon-tower, just above the modern lighthouse. The Barbary pirates stole the bell one day, but a storm came up, and they were obliged to drop it overboard to lighten their felucca. It is still heard to ring at the bottom of the sea on St. John's eve, or, as some say, on the eve of Sant' Antonino. None of my crew have ever heard it, but they admit the fact reluctantly and with grave faces, as though it were rather a reproach to them. Behind the tower again are the Roman ruins of Minerva's temple, and ancient cisterns of which the hard cement will turn the edge of a modern chisel. Then round the point below the desolate cliff, and in a moment you are in one of those spots where man never dwelt—except the old man of Ellera, who lives in his cave over the sea from May to November, and retires higher up the mountains in the winter. The beach is long and straight, but not deep, ending abruptly at each side below gigantic cliffs, and backed by a perpendicular wall of flinty rock. The little gulf runs in fully three quarters of a mile, and, if the wind is not south-westerly, is a perfect natural harbor. On the right are a few small caves at the water's edge, and higher up one larger than the rest, before which the old man has built up a wall of loose stones.

It is impossible to describe the utter loneliness and desolation of the place, and it is not easy to see at first wherein lies its special charm. Possibly that is due to the combination of the most rugged scenery conceivable with the softest and most beautiful shades of color, varying

AMALFI.

with each hour of the moon and sunlight, and then at last, when the full moon rises, turning all at once to the magnificent simplicity of black and white. There is hardly ever a living thing to be seen. Now and then, indeed, the gulls shoot in on level wings, and sail away again in a disappointed sort of way. Now and then, too, a solitary hawk drops from the cliff to the water, and flies upward again almost as suddenly. Last year a pair of blackbirds had built their nests, and reared their young, in an inaccessible cranny high up among the rocks. That is all—except the old man. He is the oldest, the dirtiest, the most dried-up, the most miserably clad specimen I have ever seen. He must be at least eighty years of age, and has

lived in this solitude the greater part of that time. He gets a very precarious living by cutting, drying, and storing the scanty grass that grows along the top of the ridge, and by cultivating a few miserable fig-trees, which produce little bullet-like figs, dried by the southerly winds and the hot, rocky soil on which they grow. Somehow the old fellow keeps himself alive, and for many years, whenever I have run my boat to the lonely beach, he has not failed to appear, climbing down over places on which many a young man would find it hard to get a foothold. At first we looked at the old man in surprise. He seemed to be a creature from another world, a sort of animated brier, as dry and dusty as the rocks themselves. He was very grateful

for a little hardtack and a drink of wine, and used to sit at a short distance from us, watching us with his curious, bleared old eyes. One night, a year or two ago, we suddenly discovered that he possessed a remarkable talent. He can tell stories and repeat verses, and possesses a most surprising memory, a keen sense of humor, and considerable power of acting. He sits by the camp-fire, doubled up like the Quangle-Wangle in Lear's story of the "Four Children," and in a cracked voice goes on without hesitation from one tale to another until most of us are asleep. Ghost-stories, tales from the Arabian Nights, and of the "Lives of the Saints," scripture history, and endless yarns in very fair Italian verse, succeed one another with a fluency that is positively startling. It is true that as he lives in almost total solitude, and has only two or three chances in every summer of hearing himself talk, one would naturally expect him to make the best of them. One dreams of the old creature's stories after listening to them a whole evening. There is one about a man who cheats death again and again which, I think, exists in Northern folk-lore, and it is strange that so many of the Arabian Nights' Tales should have found their way into his collection. I have been told, indeed, that many years ago the master of a felucca procured an Italian version of the "Thousand and One Nights," which he read aloud—a rare accomplishment—to his crew in the long evenings when the boat was beached on the Calabrian shores; but I do not think that this solitary instance accounts for the number of these stories extant among the Southern fishermen and sailors. It is more than possible that they may have found their way by oral tradition from their Eastern home to the ears of the old man of Ellera. The question can never be settled, and few indeed of the few foreigners who stray to these out-of-the-way places could understand half a dozen words of the dialect in which the story-tellers express themselves. As we glide away from the beach in the mist of the early morning, the dried-up old chip of humanity stands at the water's edge, all black against the gray rock behind him, waving his ragged hat to us, and wishing us a pleasant voyage; and we sail away, wondering at the still smoldering sparks thrown off by the fire of civilization, which passed as a whirlwind along the Southern coast.

Leaving Ellera behind, and skirting the bold rock to eastward, one comes suddenly upon the great anchored nets of a tunny fishery. There are many of these along the shore from Sorrento to Salerno. They are lowered and anchored out in the springtime, and taken up in the late autumn, when the heavy weather sets in. On the surface of the sea one sees long

rows of cork floats stretching star-like in many directions from the three old boats which are moored in the middle. Below the surface there is a great labyrinth of corridors and traps of netting, extending to the bottom of the sea, and all leading to the central trap, a net finer and stronger than the rest. This is about sixty yards long and ten yards wide, the net coming up at each end of one of the old boats. All day long in the summer's sun, three or four old men lean over the gunwale, their heads and shoulders shielded by sacks, or coverings of old canvas, while they peer down into the clear water, and keep a look-out for fish. When a certain number have found their way into the net, from which they cannot escape, it is hauled up on board one of the boats, which is thus gradually brought alongside of the other, the fish being constantly forced into the ever-narrowing sack until at the end they fall alive into the boat itself. The fish caught are by no means always tunny, though these are the most valuable, and the strength of the nets is calculated to match theirs. Vast numbers of *scolmi* and *palamiti*—the former a coarser, and the latter a very fine, variety of herring, I believe—are taken out daily, and instantly carried ashore by the third boat, which is always in waiting. From the nearest fishing-village, which from this point is Nerano, they are carried by men on foot across the steep hill to Sorrento, whence they are sent to Naples by steamer. The owners of the nets generally pay a considerable sum to the owners of the nearest land—sometimes as much as three thousand dollars yearly for the right of mooring.

At Nerano there is a break in the cliffs, and the overhanging hills slope more gently down to the water's edge. Above, in the shoulder of the mountain, below the sharp-peaked Santo Constanzo, lies a little village called Termini. The fishermen say and believe that Christ, when he had walked over the whole earth with his disciples, reached this point, and declared that it was the end of the world; hence the name.

Soon the rocks rise sharply from the sea again to break at the deep beach of Lucumona, haunted, as every one knows, by the specter of a mounted carbineer. Then rocks again, and then the hidden gorge of Crapolla, scarcely distinguishable from the sea, an abrupt and almost perpendicular cleft in the enormous rock wall facing the Isles of the Sirens. There are ghosts here, too, in plenty, of men and boys who, in the pursuit of quails with hand-nets, have fallen some fifteen hundred feet to the bottom of the gorge. Here also lives a solitary old man, a sort of familiar spirit of the place, nicknamed Garibaldi from his supposed resemblance to the national hero. He lives in one of the three or four little vaulted stone boat-houses which are said to have been built to shelter a handful of

soldiers who guarded the approach from this point in the days of King Joachim Murat. "Garibaldi" tells me, and the fact is known to every one, that he came down to live in Crapolla in 1860, from Sant' Agata on the hills above, and has scarcely ever spent a night away from the place in thirty-four years. But Crapolla is not so lonely a spot as Ellera. A winding path and steep stone steps lead from it to

tell: the one of his precipitate departure from the navy in 1860, and the other of the young fellow who fell from the cliff almost at his feet on a September evening. He tells them over and over again without any apparent consciousness that he is repeating himself, and his dullness has made him an object of the most intense hatred to the story-teller of my crew. After supper he is sometimes a little absent-minded.

AMALFI, FROM THE CAPUCHIN MONASTERY.

the heights above, and its sheltered position makes it a first-rate harbor and beach for about twenty little *gozzi*, or fishing-boats. The fishermen descend from Sant' Agata at night, and most of them go back in the morning, taking with them what they have caught to the market there. Garibaldi gets a pretty fair livelihood by setting night-lines, with which he catches the big bass so highly prized in Naples. He is in all respects an absolute contrast to the old man at Ellera, for he is a jovial soul, with a big white beard, red cheeks, small beady eyes, and intensely black eyebrows; hale and hearty in spite of his sixty years. He has only two stories to

I remember that on one moonlight night some years ago he and I launched his little boat for a nocturnal fishing expedition. Before we had pulled two hundred yards from the shore the water was up to my knees in the skiff. Garibaldi had quite forgotten to plug the hole in the bottom, which is always opened to drain the boat when she is beached. I got very wet, and we caught no fish, but the story is still told as a joke against the old man, and has acquired that permanent and historical quality which distinguishes fishermen's tales. There is a ruin on the little point at the west side of the gorge, the ruin of an ancient church, the destruction of which is of course attributed

to Napoleon; and the spot is pointed out from which an immense treasure was carried off in 1798, though it has always struck me as improbable that any one possessing vast wealth should have deposited it in such a particularly unprotected neighborhood. It is of very little use to describe minutely all the ins and outs of abrupt cliffs and little coves beyond Crapolla. The coast is very wild and rugged, and it is only when half a mile to seaward that one sees the green, velvet-like carpet which covers the top of the great promontory, and the dark, glistening carob-trees and soft gray olives, which grow out so thickly wherever a few feet of soil will feed a root. Before reaching Positano, however, it is worth while, to run out to the Isles of the Sirens, and to lie an hour in the shadow of the rocks, to call up visions of Amalfi's doges, or to dream of the sister singers who lured the wanderer of old. There are ruins still on two of the three islets, and at night one hears strange echoes and breathings from the sea as it rocks the seaweed to sleep.

Almost opposite the islands lies the deep amphitheater of Positano, with its half deserted town built up from the water's edge to the base of the cliffs. Until a few years ago this place had no connection with any other except by sea, or by a steep and almost impracticable bridle-path leading up into the overhanging mountain. The inhabitants emigrated almost in a body, removing the doors and windows from their dwellings in order to escape paying taxes. Some went to other parts of Italy, many to North or South America, leaving whole streets of silent habitations windowless and doorless, while the few people who remained congregated together by the beach. Now that a magnificently planned but poorly executed road connects Positano with Sorrento on the one hand, and is to join it with Amalfi before long on the other, the little place has begun to revive. An enterprising individual has opened a nice little inn under the somewhat ambitious sign of "*Pension du Paradis*." It is prettily situated, with a terrace, and is not a bad place in its way; and as for the name, the blessed who attain to paradise may perhaps be less fastidious than we in the question of food and lodging. Positano, as I have said, lies in the coast like an amphitheater—the stage was the sea, the scenery the Isles of the Sirens, the actors were the doges and merchants, the sailors and the slaves, of Amalfi, pitted for ages against their mighty Pisan adversaries, before whose ships and beneath whose blades the great southern republic sank at last, overpowered, into the waves out of which it had arisen. And in a more literal sense, too, Amalfi has subsided into the blue water, which in the course of centuries has washed away its harbors, its breakwaters,

its arsenals, and its fortifications, leaving the long, pebbled beach in the undisturbed possession of the fishermen, and of the light craft which carry the macaroni of Amalfi up and down the coast of Italy; for the descendants of the doges and the admirals are macaroni-makers and wine-growers, and if the sword has not literally been beaten into a plowshare, it has at least, metaphorically, been turned into a press for squeezing dough through little holes. Perhaps in Italy no better symbol could be taken for peace and plenty than a double fringe of the thin, tawny paste hung on a reed to dry in the sun.

Amalfi is much more a paradise for foreigners than the little inn at Positano is ever likely to be. Its white walls, tiled domes, and shady *loggie* look southward, facing the blazing sun in winter, and the great old Capuchin monastery, which runs along a level terrace above the western end of the town, has become an inn and a city of refuge for rheumatic Englishmen and consumptive Russians at the Christmas season.

The many people who have been there have found plenty to say about it, and the scarlet vision of the guide-book rises up and warns me to silence. Nevertheless, few places in the world have survived so much visiting without receiving and retaining the deadly impression of the tourist's cloven foot. Perhaps I owe the tourist some slight apology for the simile, but, all things considered, I prefer to remain his debtor, since I can owe him nothing else. I cannot put out his eyes, and leave him with his white helmet, his cotton umbrella, and his guide-book, to perish on the rocks in the sea, as he deserves, and as I heartily wish that he might. But I will not apologize to him for hating him. For my own part, when I go to Amalfi, I make my visits in July and August, in weather of which the spring tourist can form no adequate conception—as yet.

The deep blue bay is treacherous and squally here, and, indeed, all the way from Positano to Salerno. The changes are sudden, violent, and sometimes wonderful to see. Thunder-storms roll booming up from the deep pass of La Cava, and break in torrents of rain and small, mad, aimless hurricanes, to disappear an hour later into blue space, leaving no trace behind except perhaps a deeper sapphire tint on the crisped water, and a fresher greenness upon the orange-trees and vine-leaves of fertile Amalfi. One of the most violent little storms I remember to have met with in any sea broke upon the bay one night two years ago, as I was coming up from Calabria in an open boat, and was still five or six miles from land. Though the moon was past the first quarter, the darkness for five hours, during which time the storm lasted, was

ATRANI, NEAR AMALFI.

so thick that, seated in the stern-sheets, I could see neither mast nor sail, nor the faces of the men close to me, though I knew their exact positions from each quick succeeding flash of lightning. We were beginning to consider the question of "saving our legs," as the Italian sailors put it, when the storm suddenly vanished without the slightest warning, the sky cleared, the moon shone out brightly, and cast a magnificent moon-bow, without break or dimness, upon the misty air astern of us — the only complete moon-bow I ever saw, except at Niagara. The colors, as I remember, were

vivid and distinct, but were those of the opal rather than those of the prism. The bow was high, and its arc was considerably greater than half a circle.

Flavio Gioja, a citizen of the Amalfitan republic, and born in Positano, a few miles to the westward, is said to have invented the mariner's compass at a time when Amalfi was the first naval power in European waters; but its needle was not destined to guide his fellow-republicans to victory in their endless struggles with Pisa. Even the possession of St. Andrew's body could not save them from defeat, humiliation, and

ultimate destruction. Nor could the splendid bronze doors of the cathedral, cast by Staurachios in Constantinople, preserve the dead Apostle himself from decapitation. It was Pius II., I believe, who carried St. Andrew's head to Rome, where it is now preserved among the Vatican relics.

Amalfi must have been very magnificent once, rich in wealth and strength and beauty, as each of the gorgeous medieval republics became in turn. But Amalfi goes in rags to-day, and its inhabitants do a small trade in macaroni, wine, and coarse brown paper. They are very good sailors still, however, and their small boats may be found on every beach from Naples to southern Calabria. As for the aspect of the place itself as seen from the sea and from some little distance, it reminds me of a ragged Eastern carpet caught, as it were, on jagged rocks, and left to the mercies of wind and sun and rain — a carpet of Ispahan, ragged, time-worn, threadbare, and soft, once wonderful, and beautiful still to the very last, in its harmony of color and originality of design. It has still that something which is never lost so long as one stone stands upon another in places once gilded by the splendor of the middle ages, once inhabited by that daring, gifted, generous, and magnificent cross-breed of Latin, Goth, and Norman, whose rise and fall were Italy's second life. The romance of Italy began when Alaric, twice merciful, stormed Rome at last in vengeance upon thrice-false Honorius, and it ended with Garibaldi's exile to Caprera.

It sometimes seems as though modern civilization tended, broadly speaking, to transfer life from the mountains to the plains, leaving behind just what we are pleased to call romance. In other days no man, as a rule, built in plain or valley when he could possibly build upon the top of a hill. Now, no one who can dwell in the plains takes the trouble to live on the top of the mountain, unless for some very particular reason. The security that once lay in stone walls and iron bars is now sought in strategic position and in earthworks. There are no small, daily dangers in our time against which man barricades himself in towers, and behind iron-studded doors of oak. The great perils of our age are few, far between, and general. Military power once meant an agglomeration of desperate individuals devoted to a common cause, bad or good, not one of whom could find a place in the well-ordered, unreasoning, and mechanically obedient ranks of a modern conqueror's army. The more we live in plains the less we can understand the hills; the more systematically we obey laws and regulations having for their object the greatest good of the greatest number, the less able are we to understand the reasoning of such men as

Alaric, the great Count of Sicily, Tancred, Cæsar Borgia, Gonzalvo de Cordova, or Garibaldi. It is singular that while most intelligent people undoubtedly prefer the conditions of modern civilization for their daily life, they should by preference also like to dream of the times when civilization was still unrealized, and of lives lived in circumstances against which modern common sense revolts. These are machine-made times; those were hand-made: and true art is manual, not mechanical.

The southern peninsula is dominated by a central mountain nearly five thousand feet in height, and bearing, of course, the name of Monte St. Angelo, like so many other isolated peaks in Italy. The "holy angel" in question is of course St. Michael, in whose gleaming blade students of mythology will doubtless find the thunderbolt of Jupiter Tonans, god of high places. There is a little lonely chapel on the very summit, dedicated to the archangel, and commanding what is in point of extent one of the most magnificent views in the world. East and west of the peak, and still at a great height above the sea, the land stretches in an undulating plateau inhabited by a race which differs considerably in aspect and tradition from the sailor folk of the coast below. At this high level there is much snow in winter, especially on the eastern side of the mountain, and the houses are all built with very high-peaked roofs, as in old German towns, to prevent the dangerous accumulation of snow on the house-tops. Above Agerola, which itself is almost directly above Prajano on the southern side of the peninsula, stands an enormous palace, visible from the sea at a great distance. It is known as the Palazzo degli Spiriti (the palace of the ghosts), and I once took the trouble to climb up from Prajano, and go all over it. It is entirely deserted, and has neither doors nor windows, a building almost royal in proportions and plan, standing on a vast terrace overlooking the sea, by no means ancient, and in some parts decorated with frescos and stucco work, which are fast falling a prey to the weather. It was built by a personage known as General Avitabile, who came to a tragic end before he had completed his magnificent residence, and whose heirs are, I believe, still quarreling about the division of the property, while the building itself is allowed to fall into ruins. It would be hopeless to attempt to disentangle the tales told about the family by the simple hill-folk. There were women in the case, who poisoned one another and the general, and whose spirits, venomous still, are believed to haunt the vast halls and corridors and staircases and underground regions of the palace. Whether they do or not, a more appropriate place for hobgoblins, banshees, ghouls, and vampires could

scarcely have been created by a diseased imagination in a nightmare. Even at midday, under the Southern sun, the whole place seems as uncanny as a graveyard on St. John's eve. Bits of staircase lead abruptly into blank walls, passages end suddenly in the high air, without window-railing or parapet. Lonely balconies lead round dizzy corners to dismal watch-turrets whence a human voice could hardly find its way to the halls within. The most undaunted explorers of the Society for Psychical Research might learn what "goose-flesh" means in such a place as this.

In all this region one is much struck by the difficulty of communication, and by the disinclination of the inhabitants to communicate, between the little scattered settlements above and below. The character itself of the people and the fishermen seems to differ widely in spots less than a mile apart. In coasting in an open boat one is often obliged by the weather to spend a day or two in one of the deep ravines of which I have spoken. In one place, from the moment the keel grates on the pebbles until the boat is launched again, the people are a perpetual torment, begging, screeching, wrangling, and quarreling, and making life temporarily unbearable. In the next, you will very probably find a set of men and women, quiet, hospitable, and anxious only to help you with your boat, and then to leave you in peace, sending you perhaps a handsome present of fish half an hour later, for which they will indignantly refuse any payment. It is of course impossible that these little distinct populations should have had each a distinct origin. One can only suppose, and it is reasonable enough, that the peculiarities of character are the result of local traditions handed down from father to son by a sort of patriarchal system. The angelic disposition of the small boys in some of these fishing-villages contrasts vividly with the fiendish iniquity of their cousins in the next.

Eastward of Amalfi begins the chain of more or less fertile, orange-growing spots, each with its little town upon the beach, which were once Amalfi's wealth, and which succeed one another all the way to Salerno, interrupted only where the bold point of Capo d'Orso divides the bay of Amalfi from the one beyond, in which Vietri and Salerno lie—the point at which in thunderstorms the heavy squalls meet at an angle, coming from opposite directions, and making the sea very dangerous for small craft. And there at the end of the gulf rises Salerno itself, a pile of white, terraced houses, with narrow, shady streets, crowned by the half-ruined castle which Robert Guiscard wrested from the Lombard princes of Salerno, and long held by Tancred, who, to the Italian mind, is the very embodiment of Italy's romance.

There in the ancient cathedral lies Pope Hildebrand, at rest at last—one of the greatest, and perhaps one of the best, men who played great parts in a great age; a brave man, a reformer, almost a martyr, and now a canonized saint with a hard-earned place in the calendar of the blessed, dead in exile, as he said himself, because he loved justice. And there, beneath a lovely marble canopy, high on a sculptured couch, sleeps Margaret of the house of Anjou, mother of wild Joanna II. of Naples, wife of Charles III. of Durazzo—another tragic figure. For Joanna I. caused, or allowed, her husband, Andrew of Hungary, to be murdered at Aversa, and then caused, or allowed again, that innocent Durazzo to be executed for the deed in which he had no hand. But she paid the penalty at last, for she herself was smothered to death in gloomy Muro, far to southward.

And bishops lie there, too, and archbishops, and one cardinal at least,—Caraffa,—and many more of the great of the earth, in the silent aisles of the cathedral, not least of them all that daring Sigelgaita, Guiscard's wife, who fought by him in battle, and defended castles for him in his endless wars, and then, they say, tried to poison his first wife's son, Bohemund. But no one knows how true that may be, or how false.

Outside the church, the narrow, whitewashed streets lead beneath arches and overhanging eaves by many winding ways, and down by the harbor there are the modern quarter, and pleasant green trees, and the inevitable band-stand, from which, on holidays, discordant brazen instruments play cheap and coarse dance-music and tunes from operettas in the very hearing of the harmonious sea. Doubtless the blare of Guiscard's trumpets was discordant, too, when he besieged the great citadel upon the heights eight hundred years ago, but there must have been passion in it, if little music. Up there beyond the town he got that deep wound in his breast which could not kill him, and seems hardly to have shortened his strong life.

Court within court, rampart behind rampart, tower upon tower, the ancient pile rises from the rocks to the sky, labyrinthine in its intricacy and colossal in its strength. Somewhere beneath one of those deserted courts lies the hidden underground chamber to which Ghismonda went daily by the secret passage from her room above, while Guiscardo, her lover, let himself down by a knotted rope through the aperture, overgrown with shrubs, and with thorns so sharp that he wore leathern clothes to protect himself. Ghismonda was Tancred's daughter, and Guiscardo was one of her father's gentlemen-at-arms. It is a grim and yet a tender story of a very true love. For some reason which deeper students may discover, Ghismonda did not marry again when her husband,

SALERNO.

the Duke of Capua's son, died after a few months of wedlock, and she loved the handsome young soldier to despair, though his station was too far beneath her own for an open alliance.

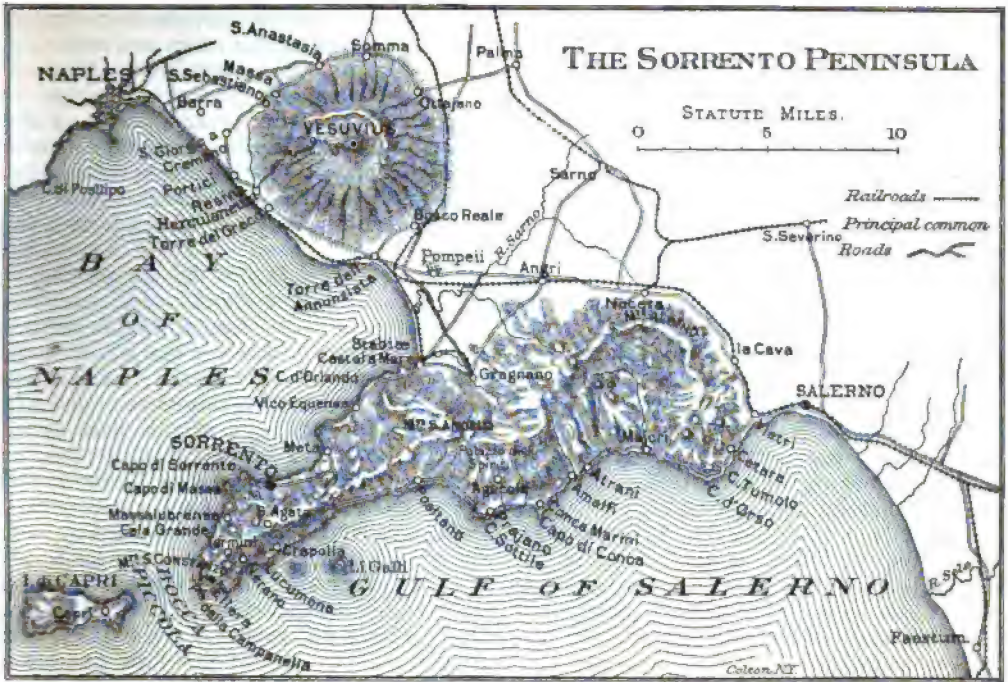

So they met and loved, and met again, till one day, growing bolder, she led him in an evil hour up the secret stair to her own apartment, where, though she did not guess it, Tancred sat nodding behind a curtain, half asleep in the noonday heat after dinner, and waiting for his daughter, with whom he loved to spend an hour in pleasant conversation during the long afternoons. And as the lovers were there together, Tancred saw them and heard them, unseen and unheard. Being as wise as he was brave, he choked down his anger, and waited a whole day before he spoke. Then Guiscardo was taken at nightfall by two men, and brought secretly to his lord, and Tancred reproached him with tears. But the young man made only one short answer. "Love is far stronger than you or I," he said, and so was led away to his death. And Tancred, heavy at heart, spoke bitterly to his daughter, and most bitterly of all because she had loved one beneath her. Then he was silent, and waited for her reply with bowed head. Ghismonda turned upon him, dry-eyed and brave, as women sometimes were

in those desperate days; and Messer Giovanni Boccacci has recorded what she said, defending her faith and honor. "For it is true," she answered, "that I have loved Guiscardo, and love him now, and shall love him while I live, though that be not long; and if beyond death one loves, I shall not cease from loving him. For you, Tancred, my father, are of flesh and bone and blood, and your daughter is like you, and not of stone or iron; and see, I have lived so little that I am still young"—and much more to a like intent. "And so," she said at last, "if you are grown cruel in your old age, as you used not to be, be cruel now, even to me; for I tell you that if you do not to me as you have done to Guiscardo, my own hands shall do that same mischief on myself."

And Tancred was cruel indeed, for he took Guiscardo's heart, and placed it in a precious golden vessel, and sent it to his daughter. But she brewed poison, when she had wept many tears, and filled the cup, and drank her death from her lover's heart, and lay down to die, pressing it to her own, and crying: "O much-loved heart, my service to thee is fulfilled, nor is there anything left for me to do but to come with my own soul and bear thine company forever." And Tancred came and wept over her, and repented of what he had done; but she spoke bitterly once more, and asked only that her body might be buried with him she loved. Then she pressed the dead heart once more to her bosom. "God be with you," she said, "for I am going." So she died, and was laid beside her lover somewhere in Salerno.

People were in earnest in those days. To love was to live; to be cut off from love was death—real, literal, cruel death.

F. Marion Crawford.

THE HIGHROAD FROM SALERNO TO SORRENTO.

OUR route lay from Salerno on the Gulf of Salerno to Amalfi, twelve miles away, thence three miles by boat to Prajano, and thence on to Sorrento by twenty-five miles of the wildest of wild roads. The country below Salerno was flat and uninteresting; southward stretched the dreary waste on which twenty miles away one could fancy that he saw the famous ruined Grecian temples of Pæstum, while beyond was *terra incognita* of the truest type, an insignificant marsh that presented no allurements to the most enthusiastic traveler. But to the north and west rose the mountains of St. Angelo, running out into the Sorrentine peninsula, and dividing the Bay of Naples from the Gulf of Salerno. These picturesque mountains, dotted with romantic villas and charmingly situated little hamlets, look down on the soft and dazzling blue waters of the Mediterranean, making that peculiar mystic union where perfect land meets perfect water.

Beginning at Salerno, and skirting this scene from fairy-land, is the famous highroad cut into the surface of the rock for miles, crossing deep ravines by artistic spans of heavy stone that show no suggestion of modern cantaliver, but seem as much a part of the scenery around them as though made by the hand of God. In

this land of fine roads it is superlatively fine; broad, sweeping, and as clean and hard as a marble floor. Built in 1852, modern improvements and devices can show no road to excel it; like the scenery, it is perfection.

As we rolled out of Salerno, we could see the road running from promontory to promontory as far as the eye could reach. Occasionally it disappeared up some rocky gorge; but if the eye was keen, a faint, ribbon-like effect could be seen in the solid rock, which betrayed its course. Now the road climbed the mountain-side to Capo Tumolo, where the whole scene unfolded like a map at our feet; again it dived down to the water's edge to skirt Capo d' Orso, or crept along the edge of some precipice, from which the village of Cetara could be seen below, stretched along the bottom of a narrow ravine. Now the road penetrated the picturesque towns of Minori, Majori, or Atrani, where it ran between the high white walls of the peasants' houses, under the shadow of which lingered a decided chill and gloom, while for hundreds of feet above the road were the whitest of white houses, hanging to their terraces like overgrown white goats. Everywhere that the eye could see were these terraces; no rock was too barren, no ledge too narrow, no gorge too deep to escape being covered to the very edge with terraces of orange- and lemon-trees. These

groves are watched most tenderly, each orange and lemon being frequently tied up in a little paper bag to protect the fruit from insects and the sudden winds, which, notwithstanding the sunniness of the climate, occasionally blow up from the sea.

This region is one of beauty, but not of fertility; a paradise for the rich, but a purgatory to the poor man. The natives must eke out their scanty crops with their fishing-boats. Looking down over the edge of the road in any gorge wide enough to hold some sand and a fishing-smack, one can see the dark houses, and the gaily painted sails and sides of the boats. Human beings live down there, away from sunshine and contact with their fellows, and yet they are light-hearted, sunny children, easily pleased, easily angered, and easily satisfied. It will not do to look below the surface in one of these picturesque villages; disease and ignorance need not be sought far. The houses are dark, damp, and unclean; the inhabitants are miserably poor; the children are rachitic and white-faced. Taxes are certainly the curse of Italy, especially of this southern country. The Italian peasant is taxed fully fifty per cent. of his labor and products; his beds are taxed, his furniture, his windows, his very movements to town and back cost him money—money, to be sure, that builds beautiful roads and holds Italy together as a nation, but still a grievous tax.

Picturesque scenery is hard to farm; fishing with medieval apparatus is slow and poor, especially with no near market to consume the catch. Nature has followed her usual course: to the visitor who has she gives more; but from the native who has not she is taking away his little. But we did not think of this as we whirled along; it is easy enough to moralize when our ride is done, but while we breathed this glorious air, and saw these inspiring sights, we could not conceive that misery could exist in such a country. These people are an uncomplaining race; they are not particularly obtrusive with their woes, although they see possible sold for miles, and are willing to run as many more to get them.

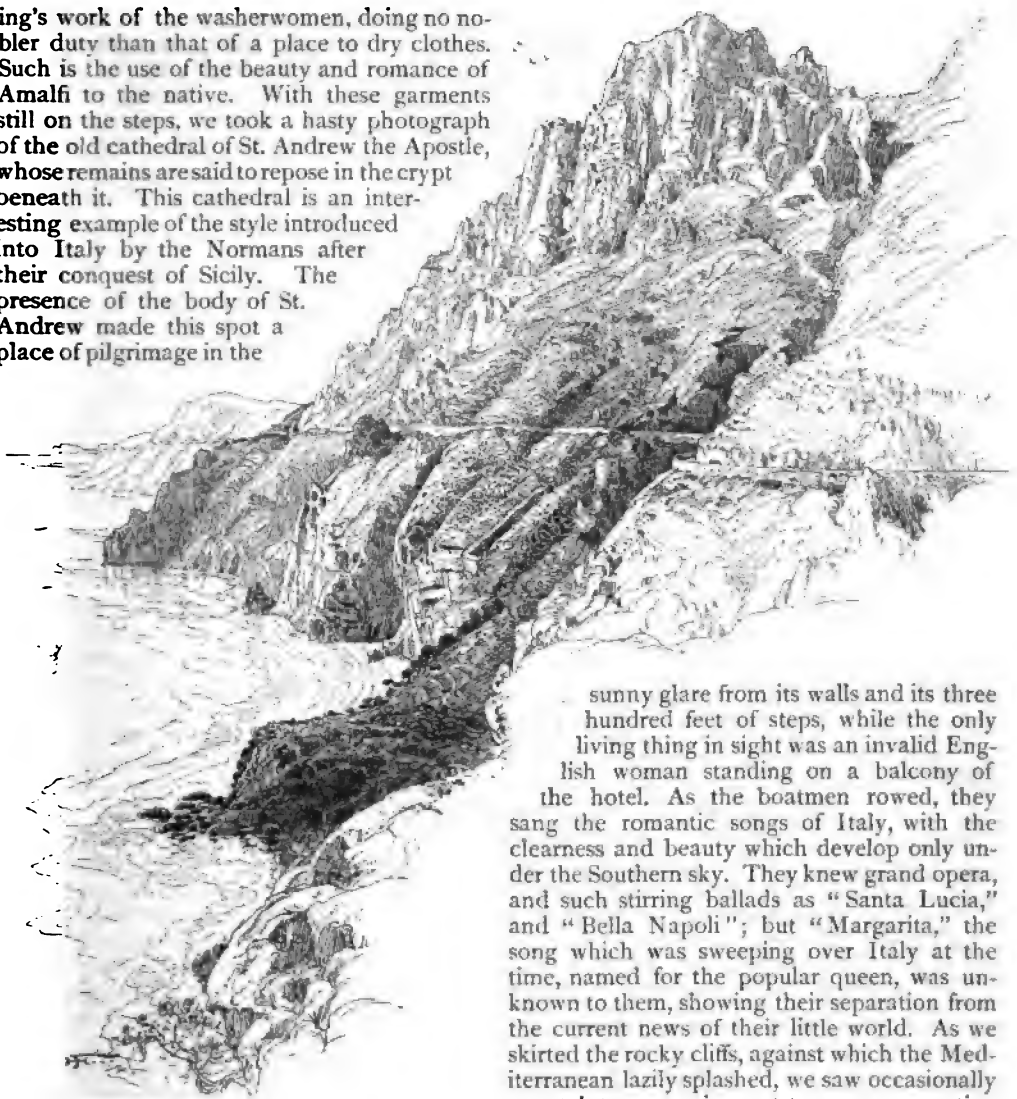

Our plan, which was the best of many, included a stop at Amalfi over-night; staying there as long as we desired, and then pushing on to Sorrento. Our driver kept up his gait through town after town, through ravine after ravine, past wayside shrine and bubbling fountain, until at last we rolled in triumphant state into that painter's paradise, the world-renowned Amalfi. The first and last impression of this ride to Amalfi was that of sunshine—of sunshine so warm, so unrelenting, and so absorbing of energy, that cold and snow seemed utter impossibilities: in this stimulus life had no

sorrow or death; beauty and pleasure controlled the senses in this medley of sea and mountain, villa and ravine. This impression was the chief charm of the trip and its brightest legacy, for it increased as the petty annoyances of the avaricious Italian were forgotten; for even here we were reminded of the contemptible human element, although any business and profit-getting seemed strangely out of touch with the place.

There are two Hotels dei Cappuccini at Amalfi, one being the *dépendance* of the other, belonging to the same family. This is another exhibition of the wiliness of the Italian landlord, who is far too bright for the American traveler. The first hotel of this name is down in the town of Amalfi, on a narrow, dark street, shut in from any view except seaward; it is the first one reached by the traveler, however, and unless he has been there before, or is very wary and determined, he will be persuaded by both driver and porter that this is the far-famed Hotel dei Cappuccini of his dreams. But the real Hotel dei Cappuccini is half a mile beyond, as the driver will suddenly remember if one flatly refuses to stop at this little one-horse village inn. He will be amply repaid for making this stand, for here, perched three hundred feet above the road, unapproachable except by a series of white stone steps, stands this unique hotel. In America there would be a huge Kaaterskill perched on such a spot, but the Italians, far more in sympathy with the artistic demands of the surroundings, have turned the one-time famous old Capuchin monastery into a well-appointed home, for home it is for the traveling world. The guests sleep in the cells of the old monks, and dine in the old whitewashed chapel. There is the customary orange- and lemon-grove on a narrow terrace alongside the hotel, flanked by a broad, sweeping path, which afforded the only cloister for the monks, while on the other side of this walk stands a row of white, plastered pillars supporting a roof of arching vines; from here a superb view of Amalfi and the blue Gulf of Salerno lies before the eye. The stairs to the dining-room come down into the room from the sleeping-rooms without intervention of hall or wall, and as we descended these massive whitewashed stone steps, we could see the dining-table stretched along, covered with bright lamps and dainty flowers, while the high-arched roof betrays the old chapel. It was as attractive to the hungry traveler as the mountains on the outside had been to the other senses.

We left Amalfi at three o'clock on a bright, sunny afternoon, in late April. The theatrical little town was sound asleep; its bird-box houses were deserted; its streets were vacant and quiet. The cathedral steps were covered with the morn-

ing's work of the washerwomen, doing no nobler duty than that of a place to dry clothes. Such is the use of the beauty and romance of Amalfi to the native. With these garments still on the steps, we took a hasty photograph of the old cathedral of St. Andrew the Apostle, whose remains are said to repose in the crypt beneath it. This cathedral is an interesting example of the style introduced into Italy by the Normans after their conquest of Sicily. The presence of the body of St. Andrew made this spot a place of pilgrimage in the

DRAWN BY HARRY FENN.

ROAD BETWEEN SORRENTO AND AMALFI.

middle ages. "The manna of St. Andrew," oily droppings from his casket, enjoyed a high reputation in southern Europe for its miraculous power in curing disease. Its efficacy has been sung even by the great Tasso.

Our rowboat, which was to carry us from Amalfi to Prajano, three miles away along the coast of the Gulf, lay close to the shore, but no wharf or board to reach its side was in sight. Our wonder was short-lived, however, for suddenly the ladies of the party gave sudden screams, as each was clasped by waist and feet by two sturdy, barefooted boatmen, and before they could protest, they were safe in the little craft.

As we looked back, the little town slept on; the old monastery hotel reflected a dazzlingly

sunny glare from its walls and its three hundred feet of steps, while the only living thing in sight was an invalid English woman standing on a balcony of the hotel. As the boatmen rowed, they sang the romantic songs of Italy, with the clearness and beauty which develop only under the Southern sky. They knew grand opera, and such stirring ballads as "Santa Lucia," and "Bella Napoli"; but "Margarita," the song which was sweeping over Italy at the time, named for the popular queen, was unknown to them, showing their separation from the current news of their little world. As we skirted the rocky cliffs, against which the Mediterranean lazily splashed, we saw occasionally a watch-tower gazing out to sea, a suggestion of the days of Barbary pirates and their sudden swooping charges on the hapless peasant of the middle ages. Under the shadow of the rocks grows the bright red "vegetable coral," the "apples of the sea," a curious form of growth, which attracts the traveler's eye so constantly that the boatmen have learned its English names and habits.

In the year before our journey the road was extended from Positano to Prajano; in a year or so it will be cut through from Prajano to Amalfi, and then the traveler will miss this beautiful trip by boat, which makes a unique part of the journey from Salerno to Sorrento. It will be another instance where improvement in travel will destroy some of its picturesqueness. As we approached the opening ravine in which lies the sheltered fishing-hamlet of Prajano, we

saw, dashing down to meet us from all directions, over the rocks and crags, swarms of barefooted women and girls. The men had all gone to Naples or America, looking for steadier work than landing chance passengers. Down came this barefoot, dirty, motley crew, as sure-footed as goats, and running as rapidly. They overwhelmed the passengers, seized the luggage, and made themselves nuisances. No words, gestures, or blows from the boatmen could drive them away. They were as patiently persistent as a swarm of mosquitos; the moment one stopped his expostulation, back they came.

Now we found ourselves in a dilemma, for our carriages, which were to come from Sorrento, had not arrived. In vain did we search the place; the town of Prajano boasted neither an inn nor a horse; we must patiently wait. Five o'clock came, and then six; dusk began to settle on the hills, and we were just deciding to go back to Amalfi, when over a distant point we saw two small carriages traveling along. We were anxious to reach Sorrento, and were assured by the drivers that the ride would be quickly made. Our horses, driven at break-neck speed for twenty-five miles, were in no condition to start back; but start back we did, and soon the town of Prajano was a memory. In ten minutes we reached Positano, where the landings were formerly made before the road was built to Prajano. In the weird, dusky light that appears early under the edge of these precipices, Positano was a ghostly place. No peasants walked the streets; the windows of the houses were knocked out; it looked like a haunted town, or a place dead with the plague. Its oppressiveness was terrible, and we were glad to leave it, and to get out into the healthier desolation of the next ravine.

The road was far wilder than from Salerno to Amalfi. The rocks were higher, the ravines deeper, and after leaving the outskirts of Positano there were no villages. Soon the moon came up, and, while we could not see it, for we were a thousand feet below the upper edge of the cliff, it threw a ghastly light over the sea, which was thrown back into our faces, and made them seem blanched and careworn. We remembered with sudden distinctness that Baedeker speaks of one road in this region which by some good authorities is scarcely regarded as free from brigands; we believed that this was the one. It was a happy, inspiring thought, and we tried to reassure ourselves of it by looking into the guide-book; but the wind blew too hard to keep a match going, and we would not stop our driver for worlds. So on we went, dipping into ravine

after ravine, until the road seemed endless. As we rounded each point, we looked for the place from which we must bend to cross the mountains to Sorrento. Time crawled from seven to half-past seven, to eight. We saw out in the dim distance in the bay the uncertain forms of the Islands of the Sirens, as they are called; we knew that a long stretch still lay before us.

At half-past eight we had settled down to our fate, whatever it was to be, when suddenly we saw the gleam of a light around a neighboring cliff. We had not passed man, bird, or beast since leaving Positano two hours before. This was interesting; who would have a light on this lonely, forsaken road with honorable purpose? But before we could conclude as to the motives of our rapidly approaching friends, we ran into a band of soldiers, tax-collectors, who were looking for peasants smuggling their wares to Sorrento untaxed. They glanced carelessly into our carriage, and allowed us to pass, giving us the first opportunity of our lives of being heartily glad to welcome a custom-house officer. This sudden visitation in this desolation was a pleasant break; it brought life and law back to us again. Nine o'clock came on; but the scenery was gradually changing—the hills grew lower, the vegetation higher. We were evidently approaching the break in the mountains through which we were to reach Sorrento. Soon we left the sea, and pierced the thick underbrush, and started on a dreary climb over the hills. This was worse than the sea, for there no one could approach us from the sea in ambuscade, or from the mountain-side either, for that matter, unless they were more than goat-like in agility. But here were darkness and silence doubly intense. Every tree hid a figure, and the moonlight brought out slinking movements in every bush. Up, up we crawled, until, finally, at nearly ten o'clock, we stood on the summit of the ridge, and the Bay of Naples, glorious in the moonlight, lay at our feet five miles away. In the distance the lights of Naples gleamed, each light with a welcome in it, while closer, under our feet almost, lay the twinkling lamps of Sorrento.

Now came merry work; down the steep hills we bowled, through high-walled roads, past silent villas, until the famous road from Castellammare to Sorrento was reached. Now we laughed our fears to scorn, and when we drove into the yard of the famous Hotel Tramontano at Sorrento, our heads were held up boldly, as though wild drives like this were of daily occurrence.

J. Howe Adams.

FRANZ SCHUBERT.¹

N less than three years, on January 31, 1897, a century will have elapsed since Franz Schubert was born, and sixty-nine years since he died. He lived only thirty-two years, yet in this short time—or, more accurately, in eighteen years—he wrote more than eleven hundred compositions. This fact, in itself sufficiently astounding, becomes more so when we consider the conditions of his life as described by his biographers—his poverty and privations, from his early years, when we find him suffering from hunger and cold, and unable to buy music-paper to write down his inspirations, to his last year, when typhoid fever ended his career and left his heirs about ten dollars, not enough to pay for his funeral expenses—and no wonder, since even in his last years twenty cents was considered pay enough for some of those songs on which many publishers have since grown rich.

Surprise has often been expressed that the Viennese (among whom he lived) and the publishers should not have appreciated him more substantially; yet it is not difficult to find reasons for this in the circumstances of the case. While a pianist or singer may find immediate recognition, a composer, especially if he has so original a message to deliver as Schubert, has to bide his time. We must bear in mind how very young he was when he died. Dr. Hanslick has urged, in defense of the Viennese, that only seven years elapsed between the publication of Schubert's first works and his death, and that during his lifetime he became known chiefly as a song composer; and songs were at that time not sung at public concerts, but only in the domestic circle. Moreover, Rossini on the one hand, and Beethoven on the other, overshadowed the modest young Schubert, and it is significant that Beethoven himself did not discover his genius till the year of his own death. As regards Schubert's orchestral works, we must remember that orchestras were not at that time

what they are to-day. The best Viennese organization, the Gesellschaft der Musikfreunde, found the symphony in C "too long and too difficult" at the rehearsal, and substituted an earlier work. This was in 1828, the year of the composer's death. Ten years later the zealous Schumann discovered the great symphony in C and took it to Leipsic, where the equally enthusiastic Mendelssohn secured for it a noteworthy success. In Vienna, too, it was taken up again in the following year, but only two movements were given, and these were separated by a Donizetti aria! Three years later Habeneck attempted to produce this symphony in Paris, but the band rebelled over the first movement, and the same result followed in London, two years later still, when Mendelssohn put it in rehearsal for a Philharmonic concert. These things seem strange to us, but they are historic facts, and help to explain why Schubert, with all his melody and spontaneity, made his way so slowly to popular appreciation. He was young, modest, and unknown, and musicians did not hesitate to slight a symphony which they would have felt bound to study, had it borne the name of Beethoven or Mozart.

But his fame has grown steadily from year to year, and will grow greater still in the next century. Rubinstein has, perhaps, gone farther than any one, not only in including Schubert in the list of those he considers the five greatest composers,—Bach, Beethoven, Schubert, Chopin, Glinka—but in exclaiming, "Once more, and a thousand times more, Bach, Beethoven, and Schubert are the highest summits in music" (*Die Musik und Ihre Meister*, p. 50). I am asked whether I approve of this classification. Such questions are difficult to answer. I should follow Rubinstein in including Schubert in the list of the very greatest composers, but I should not follow him in omitting Mozart. Schubert and Mozart have much in common; in both we find the same delicate sense of instrumental coloring, the same spontaneous and irrepressible flow of melody, the same instinctive command

of the means of expression, and the same versatility in all the branches of their art. In their amazing fertility, too, they were alike; and herein lay, and still lies, one of the greatest impediments to their popular appreciation. The longer I live the more I become convinced that composers, like authors, mostly follow the impulse of writing too much. There are a few exceptions, like Berlioz and Chopin—not to forget Wagner, who condensed all his genius into ten great music-dramas. Would it not have been better for their immortality and the perpetual delight of mankind, had Rossini written ten operas instead of forty, Donizetti seven, instead of seventy? Even Bach's magnificent cantatas would have had a better chance of appreciation if there were not quite so many (the first 34 volumes of Bach's collected works contain 160 of them.) At the same time we should be sorry to lose a single one of them.

If we are often amazed at the prevailing ignorance and neglect of many of the great works of the masters, we are at the same time obliged to confess that they themselves are largely to blame: they have given us too much. However, it is easier to give advice than to follow it. There is in creative minds an impulse to write, which it is difficult to curb, and this was especially the case with Schubert, whose genius was like a spring which nothing but exhaustion could stop from flowing. Fortunately, the works of the great masters have at last been made accessible in complete editions; the Schubert collection is just being completed by Breitkopf and Härtel. It contains many gems unknown to the public, or even to the profession; and it now behooves artists and conductors to select from this embarrassing wealth what most deserves revival.

Schubert contributed to every form of his art; he was, as I have said, as versatile as Mozart, to whom he bears so many points of resemblance. But in one respect these two masters differ widely. Mozart was greatest in the opera, where Schubert was weakest. Schubert's attempts to exercise his genius and improve his fortunes by writing operas came at an unpropitious moment—a time when Vienna was so Rossini-mad that even Beethoven was discouraged from writing for the stage. It took several rebuffs to discourage Schubert; indeed, though all his attempts failed, he is said to have had further operatic projects at the time of his last illness. He was always unlucky with his librettos, which are, without exception, inadequate. There were other untoward circumstances; yet the chief cause of his failure lay, after all, in the nature of his genius, which was lyrical, and not dramatic, or, at any rate, not theatrical. When Liszt produced "*Alfonso und Estrella*" at Weimar in 1854, it had only a *succès d'estime*, and Liszt himself confessed that its performance

must be regarded merely as *ein Act der Pietät*, and an execution of historic justice. He called attention to the strange fact that Schubert, who in his songs contributed such picturesque and expressive accompaniments, should in this opera have assigned to the instruments such a subordinate rôle that it seemed little more than a pianoforte accompaniment arranged for the orchestra. At the same time, as Liszt very properly adds, Schubert influenced the progress of opera *indirectly*, by showing in his *songs* how closely poetry can be wedded to music, and that it can be emotionally intensified by its impassioned accents. Nor must we overlook the fact that there are in these Schubert operas not a few melodies, beautiful as such, which we can enjoy at home or in the concert hall. These melodies were too lyrical in style to save the operas; they lacked also the ornamental brilliancy and theatrical dash which enabled Rossini to succeed temporarily with poor librettos, and with a less genuine dramatic instinct than Schubert has shown in some of his songs, such as the "Erl King" and especially the "Doppelgänger," where we come across chords and modulations that affect us like the weird harmonies of *Ortrud's* scenes in "*Lohengrin*."

Besides the opera there is only one department of music in which Schubert has not in some of his efforts reached the highest summit of musical achievement. His sacred compositions, although very beautiful from a purely musical point of view, usually lack the true ecclesiastic atmosphere,—a remark which may be applied, in a general way, to Haydn and Mozart, too. To my mind, the three composers who have been most successful in revealing the inmost spirit of religious music are Palestrina, in whom Roman Catholic music attains its climax; Bach, who embodies the Protestant spirit; and Wagner, who has struck the true ecclesiastic chord in the Pilgrims' Chorus of "*Tannhäuser*," and especially in the first and third acts of "*Parsifal*." Compared with these three masters, other composers appear to have made too many concessions to worldly and purely musical factors—of course, not without exceptions. One of these exceptions is Mozart's "*Requiem*," especially the "*Dies Iræ*," which moves us as few compositions do, and attunes the soul to reverence and worship. Such exceptions may also be found among Schubert's sacred compositions. "*Miriam's Song of Victory*" is a wonderful work, as are some of his masses. In the Psalms, too, he has achieved great things, especially the one for female voices in A flat major, which is celestial without worldly admixtures. It must not be forgotten, too, that the notions as to what is truly sacred in music may differ somewhat among nations and individuals, like the sense of humor. To the Viennese of

their time the masses of Haydn, Mozart, and Schubert probably did not seem too *gemüthlich*, as the Germans say — too genial and sentimental. As for Schubert himself, although he was one of the most modest of men, he was thoroughly convinced of the truly devotional character of his church music. We know this from a letter he wrote to his parents in 1825, and in which occurs the following passage: "Surprise was also expressed at my piety, to which I have given expression in a hymn to the Holy Virgin, and which, as it seems, moves every one to devotion. I believe that this comes of the circumstance that I never force myself into a devout attitude, and never compose such hymns or prayers unless I am involuntarily overcome by it; but in that case it usually happens to be the genuine spirit of devotion."

Schubert's chamber music, especially his string quartets and his trios for pianoforte, violin, and violoncello, must be ranked among the very best of their kind in all musical literature. Of the quartets, the one in D minor is, in my opinion, the most original and important, the one in A minor the most fascinating. Schubert does not try to give his chamber music an orchestral character, yet he attains a marvelous variety of beautiful tonal effects. Here, as elsewhere, his flow of melody is spontaneous, incessant, and irrepressible, leading often to excessive diffuseness. Like Chopin and Rossini, Schubert has frequently shown how a melody may be created which can wonderfully charm us even apart from the harmonic accompaniment which naturally goes with and enriches it. But he was accused by his contemporaries of neglecting polyphony, or the art of interweaving several melodious parts into a contrapuntal web. This charge, combined with a late study of Handel's scores, induced him shortly before his death to plan a course in counterpoint with Sechter. No doubt his education in counterpoint had been neglected. It is not likely, however, that such study would have materially altered his style. That was too individual from the beginning to undergo much change, for Schubert did not outgrow his early style so noticeably as did Beethoven and Wagner, for example. Besides, Schubert had no real need of contrapuntal study. In his chamber music, as in his symphonies, we often find beautiful specimens of polyphonic writing,—see, for instance, the andantes of the C major quintet and of the D minor quartet,—and though his polyphony be different from Bach's or Beethoven's, it is none the less admirable. Mendelssohn is undoubtedly a greater master of polyphony than Schubert, yet I prefer Schubert's chamber music to Mendelssohn's.

Of Schubert's symphonies, too, I am such an enthusiastic admirer that I do not hesitate to place him next to Beethoven, far above Men-

delssohn, as well as above Schumann. Mendelssohn had some of Mozart's natural instinct for orchestration and gift for form, but much of his work has proved ephemeral. Schumann is at his best in his songs, his chamber music, and his pianoforte pieces. His symphonies, too, are great works, yet they are not always truly orchestral; the form seems to hamper the composer, and the instrumentation is not always satisfactory. This is never the case with Schubert. Although he sometimes wrote carelessly, and often too diffusely, he is never at fault in his means of expression, while mastery of form came to him spontaneously. In originality of harmony and modulation, and in his gift of orchestral coloring, Schubert has had no superior. Dr. Riemann asserts with justice that in their use of harmony both Schumann and Liszt are descendants of Schubert; Brahms, too, whose enthusiasm for Schubert is well known, has perhaps felt his influence; and as for myself, I cordially acknowledge my great obligations to him.

I have just observed that mastery of form came to Schubert spontaneously. This is illustrated by his early symphonies, five of which he wrote before he was twenty, at which, the more I study them, the more I marvel. Although the influence of Haydn and Mozart is apparent in them, Schubert's musical individuality is unmistakable in the character of the melody, in the harmonic progressions, and in many exquisite bits of orchestration. In his later symphonies he becomes more and more individual and original. The influence of Haydn and Mozart, so obvious in his earlier efforts, is gradually eliminated, and with his contemporary, Beethoven, he had less in common from the beginning. He resembles Beethoven, however, in the vigor and melodious flow of his basses; such basses we find already in his early symphonies. His "Unfinished Symphony" and the great one in C are unique contributions to musical literature, absolutely new and original, Schubert in every bar. What is perhaps most characteristic about them is the song-like melody pervading them. He introduced the song into the symphony, and made the transfer so skillfully that Schumann was led to speak of the resemblance to the human voice (*Aehnlichkeit mit dem Stimmorgan*) in these orchestral parts.

Although these two symphonies are by far the best of Schubert's, it is a pity that they alone should be deemed worthy a place on our concert programs. I played the sixth in C major and No. 5 in B major a dozen times with my orchestral pupils at the National Conservatory last winter; they shared my pleasure in them, and recognized at once their great beauty.

It was with great pleasure and feelings of

gratitude that I read not long ago of the performance in Berlin of the B major symphony by Herr Weingartner, one of the few conductors who have had the courage to put this youthful work on their programs. Schubert's fourth, too, is an admirable composition. It bears the title of "Tragic Symphony," and was written at the age of nineteen, about a year after the "Erl King." It makes one marvel that one so young should have had the power to give utterance to such deep pathos. In the adagio there are chords that strikingly suggest the anguish of *Tristan's* utterances; nor is this the only place wherein Schubert is prophetic of Wagnerian harmonies. And although partly anticipated by Gluck and Mozart, he was one of the first to make use of an effect to which Wagner and other modern composers owe many of their most beautiful orchestral colors—the employment of the brass, not for noise, but played softly, to secure rich and warm tints.

The richness and variety of coloring in the great symphony in C are astounding. It is a work which always fascinates, always remains new. It has the effect of gathering clouds, with constant glimpses of sunshine breaking through them. It illustrates also, like most of Schubert's compositions, the truth of an assertion once made to me by Dr. Hans Richter—that the greatest masters always reveal their genius most unmistakably and most delightfully in their slow movements. Personally, I prefer the Unfinished Symphony even to the one in C; apart from its intrinsic beauty, it avoids the fault of diffuseness.

If Schubert's symphonies have a serious fault, it is prolixity; he does not know when to stop; yet, if the repeats are omitted, a course of which I thoroughly approve, and which, indeed, is now generally adopted, they are not too long. Schubert's case, in fact, is not an exception to, but an illustration of, the general rule that symphonies are made too long. When Bruckner's eighth symphony was produced in Vienna last winter, the Philharmonic Society had to devote a whole concert to it. The experiment has not been repeated anywhere, and there can be no doubt that this symphony would have a better chance of making its way in the world if it were shorter. This remark has a general application. We should return to the symphonic dimensions approved by Haydn and Mozart. In this respect Schumann is a model, especially in his B flat major and D minor symphonies; also in his chamber music. Modern taste calls for music that is concise, condensed, and pithy.

In Germany, England, and America, Schubert's instrumental works, chamber and orchestral, have long since enjoyed a vogue and popularity which have amply atoned for their neglect at first. As for the French, they have

produced two Schubert biographies, but it cannot be said that they have shown the same general sympathy for this master as for some other German composers, or as the English have, thanks largely to the enthusiastic efforts of my esteemed friend, Sir George Grove. It is on record that after Habeneck had made an unsuccessful effort (his musicians rebelled at the rehearsal) to produce the great symphony in C at a Conservatoire concert, no further attempt was made with Schubert's orchestral compositions at these concerts for forty years.

This may help to explain the extraordinary opinion of the eminent French critic, Fétis, that Schubert is less original in his instrumental works than in his songs, the popularity of which, too, he declared to be largely a matter of fashion! The latter insinuation is of course too absurd to call for comment to-day, but as regards the first part of his criticism I do not hesitate to say that, greatly as I esteem Schubert's songs, I value his instrumental works even more highly. Were all of his compositions to be destroyed but two, I should say, save the last two symphonies.

Fortunately we are not confronted by any such necessity. The loss of Schubert's pianoforte pieces and songs would indeed be irreparable. For although much of their spirit and substance has passed into the works of his imitators and legitimate followers, the originals have never been equaled in their way. In most of his works Schubert is unique in melody, rhythm, modulation, and orchestration, but from a formal point of view he is most original in his songs and his short pieces for piano. In his symphonies, chamber music, operas, and sacred compositions, he follows classical models; but in the *Lied*, the "Musical Moment," the "Impromptu," he is romanticist in every fiber. Yet he wrote no fewer than twenty-four sonatas for pianoforte, two or four hands, in which he follows classical models, and we can trace the influence of Beethoven's style even in the three which he wrote in the last year of his life. This seems strange at first when we consider that in the *Lied* and the short pianoforte pieces he betrayed no such influence even in his earliest days. The "Erl King" and "The Wanderer," written when he was eighteen and nineteen respectively, are Schubert in every bar, whereas the piano sonatas and symphonies of this period are much more imitative, much less individual. One reason for this, doubtless, is that just as it is easier to write a short lyric poem than a long epic, so it is easier for a young composer to be original in short forms than in the more elaborate sonata and symphony; and we must remember that Schubert died at thirty-one.

But there was another reason. The tendency

of the romantic school has been toward short forms, and although Weber helped to show the way, to Schubert belongs the chief credit of originating the short models of piano-forte pieces which the romantic school has preferably cultivated. His "Musical Moments" are unique, and it may be said that in the third "Impromptu" (Op. 90) lie the germs of the whole of Mendelssohn's "Songs without Words." Schumann has remarked that Schubert's style is more idiomatically pianistic (*claviermässig*) than Beethoven's, and this is perhaps true of these short pieces. Yet it can hardly be said that either Schubert or Schumann was in this respect equal to Bach or Chopin, who of all composers have written the most idiomatically for the piano. I cannot agree with Schumann in his rather depreciatory notice of Schubert's last sonatas (he speaks of "greater simplicity of invention," "a voluntary dispensing with brilliant novelty," and connects this with Schubert's last illness). I would not say that Schubert is at his best in these sonatas as a whole, but I have a great admiration for parts of them, especially for the last one in B flat with the exquisite andante in C sharp minor. Taking them all in all, I do not know but that I prefer his sonatas even to his short pieces for the piano. Yet they are never played at concerts!

Just as the "Impromptus" and "Musical Moments" were the source of the large crop of romantic short pieces, so Schubert's charming waltzes were the predecessors of the Lanner and Strauss dances on the one hand, and of Chopin's waltzes on the other. There is an astounding number of these Schubert dance pieces; they are charming as originally written, and Liszt has given some of them a brilliant setting for the concert hall. In this humble sphere, as in the more exalted ones we have discussed, historians have hardly given Schubert full credit for his originality and influence.

In Schubert's pianoforte music, perhaps even more than in his other compositions, we find a Slavic trait which he was the first to introduce prominently into art-music, namely, the quaint alternation of major and minor within the same period. Nor is this the only Slavic or Hungarian trait to be found in his music. During his residence in Hungary, he assimilated national melodies and rhythmic peculiarities, and embodied them in his art, thus becoming the forerunner of Liszt, Brahms, and others who have made Hungarian melodies an integral part of European concert music. From the rich stores of Slavic folk-music, in its Hungarian, Russian, Bohemian, and Polish varieties, the composers of to-day have derived, and will continue to derive, much that is charming and novel in their music. Nor is there anything objectionable in this, for if the poet and the painter base much

of their best art on national legends, songs, and traditions, why should not the musician? And to Schubert will belong the honor of having been one of the first to show the way.

Perhaps the luckiest accident in Schubert's life was his acquaintance and friendship with the famous tenor Vogl. This was brought about deliberately by his friends, in order to secure for his songs the advantage of that singer's artistic interpretations. Vogl at first pretended to be "tired of music," and showed some indifference to his modest young accompanist's songs; but this was soon changed to interest, followed by genuine enthusiasm. Thus it came about that these songs were gradually made familiar in Viennese social circles. Schubert himself sang, though only with a "composer's voice"; but he must have been an admirable accompanist. In a letter to his parents he says: "I am assured by some that under my fingers the keys are changed to singing voices, which, if true, would please me greatly." This, written only three years before his death, illustrates his great modesty. In some recently published reminiscences by Josef von Spaun¹ it is related how, when Vogl and Schubert performed together at soirées in Vienna, the ladies would crowd about the tenor, lionizing him and entirely ignoring the composer. But Schubert, instead of feeling annoyed or jealous, was actually pleased. Adoration embarrassed him, and he is known to have dodged it once by escaping secretly by the back door.

Little did the Viennese dream that the songs thus interpreted for them by Schubert and Vogl would create a new era in music. In the *Lied* or lyric song, not only is Schubert the first in point of time, but no one has ever surpassed him. Haydn, Mozart, and Beethoven did indeed write a few songs, but merely by the way, and without revealing much of their genius or individuality in them. But Schubert created a new epoch with the *Lied*, as Bach did with the piano, and Haydn with the orchestra. All other song writers have followed in his footsteps, all are his pupils, and it is to his rich treasure of songs that we owe, as a heritage, the beautiful songs of such masters as Schumann, Franz, and Brahms. To my taste the best songs written since Schubert are the "Magelonen-Lieder" of Brahms; but I agree with the remark once made to me by the critic Ehlert that Franz attained the highest perfection of all in making poetry and music equivalent in his songs.

In the best of Schubert's songs we find the same equivalence of poem and music, and it was lucky that Vogl was an artist who, as Spaun says, "sang in such a way as to interest his hearers not only in the music, but also in the

¹ "Classisches und Romantisches aus der Tonwelt," von La Mara. 1892.

poem," which so few singers do. In the absence of singers who could imitate Vogl in this respect, Liszt was justified in arranging these songs for the pianoforte, whereby he greatly accelerated their popularity. To hear the real Schubert, however, we must have the voice, and the poem, too, so that we may note how closely the poem and the music are amalgamated, and how admirably the melodic accent coincides with the poetic. In this respect, Schubert marks a great advance over his predecessors. He was almost as averse to word-repetitions as Wagner, whom he also resembles in the powerful emotional effects he produces by his modulations, especially in his later songs.

Schubert's melodic fount flowed so freely that he sometimes squandered good music on a poor text, as is shown in his operas and in some of his songs. Usually, however, the best poems evoked the best music from his creative fancy. His fertility is amazing. It is known that he composed as many as eight songs in one day,

and ninety-nine in one year (1816), while the whole number of his songs exceeds six hundred. The best of these songs are now so universally known, and have been so much discussed, that it is difficult to offer any new comment on them.

There is only one more point to which attention may be called here—Schubert's power of surrounding us with the poetic atmosphere of his subject with the very first bars of his *Lieder*. For such a stroke of genius recall his song "Der Leiermann," the pathetic story of the poor hurdy-gurdy player whose plate is always empty, and for whose woes Schubert wins our sympathy by his sad music—by that plaintive, monotonous figure which pervades the accompaniment from beginning to end, bringing the whole scene vividly before our eyes and keeping it there to the end. Before Schubert no song writer had conceived such an effect; after he had shown the way others eagerly followed in his footsteps.

*Antonín Dvořák.*¹

WHERE GOEST THOU?

I.

"WHERE goest thou?"

"To help the Weak, who throng

My gates and cry continually for aid:

Where goest thou?"

"To help the unpitied Strong,

Whom those that thou wouldst help do overlade."

II.

"Where goest thou?"

"To judge the souls that stray;

They best can judge who spotless hands can show."

"Fall back! The rod of judgment I will sway;

They judge of evil best who do and know."

III.

"Where goest thou?"

"To see the laughing mime;

I go for respite — sorrow haunts my hearth.

And thou?"

"To look on pageant grief sublime;

Joy dwells with me, and I am cloyed with mirth."

IV.

"Thou goest to mold thy life, brave youth? Well, go:

But whosoever thou shalt take to friend,

And wheresoever thou shalt turn thee — know

'T is Life itself shall mold thee, in the end."

Edith M. Thomas.

THE EVOLUTION OF A BATTLE-SHIP.

HERE was general surprise when in less than one month after the launch of the first modern American battle-ship, Mr. Tracy, ex-Secretary of the Navy, announced that the United States was entitled to rank fifth among the naval powers of the world. The announcement was made a year ago last March at a dinner given in Brooklyn in honor of himself and of his successor, Mr. Herbert. Mr. Tracy spoke as a naval expert merely, but had he dwelt upon the full significance of his declaration, the surprise would have been much greater. He and Mr. Herbert, in the presence of a distinguished company, which included the President of the United States, had witnessed only a few days before, at the Cramp shipyard in Philadelphia, the launch of the *Indiana*, one of three sister battle-ships now building in this country, so complete in all their details, and so equipped with powers of almost inconceivable destruction, that, although they are to be twenty-five per cent. smaller than the great battle-ships now being finished in England, and therefore that much less of a target, they are acknowledged by naval experts here and abroad to be superior to any engine of war yet constructed. Mr. Tracy might have added interest to his statement, had he said that in the Cramp shipyard alone there was at that time \$32,000,000 worth of ship-building under contract, an amount not only greater than has ever been known in one establishment in the history of this country, but larger, so far as is known, than has ever been under contract at one time in any shipyard in the world. As a direct result of the encouragement of naval ship-building, Mr. Tracy might have declared that of this \$32,000,000 of work, \$11,000,000 is for the revival of the American merchant marine, to be spent on the construction, not of mediocre vessels, but of four splendid craft, destined to rival the best creations of foreign design and workmanship. He might have pointed out that the remaining \$21,000,000 is to be used in building seven enormous men-of-war not only equal to any of their grades in other navies, but surpassing them one by one in finish and capabilities. Mr. Tracy might have gone still further, and referred to the fact that in San Francisco, in Boston, in Bath, in Baltimore, in Dubuque, are splendid plants

not only engaged in building naval vessels, some of them counterparts of those under construction at Cramp's, but capable of constructing merchantmen of high grade. He might also have declared that scores of ship-builders on the great lakes have felt the impulse of this enormous revival of American shipping, and that into the construction of steel vessels, which in this country to-day may be estimated, at a low figure, at \$50,000,000, there are entering new ideas which mean greater efficiency in speed and carrying capacity.

To be the fifth naval power of the world, therefore, means vastly more than the ability to fight, to cripple, to destroy, or to subjugate the fleet of some other nation. It means the encouragement of a great variety of industries of vast scope. It means greater achievements in mastering the forces of nature, and best, perhaps, of all, it means greater scientific attainment; for such is the legitimate work of a navy in time of peace. It means more knowledge of wind and wave currents, more study of astronomical phenomena, more explorations, more mapping of coasts, more extension of civilization, more growth of commerce. Finally, it means much for the preservation of peace, and the consequent development of human progress.

It is not difficult to account for the great popularity of the new navy. It can best be explained by saying that the new navy is the most stirring embodiment of what has been called the National Idea. It is something concrete. It has life. It has the power of science grown to full manhood, and rejoicing in its strength, easily provoked to anger, and more terrible in its wrath than the powers that mythology ascribed to the gods of its creation. Any intelligent person can easily appreciate the idea of patriotism in the abstract. It is that which makes the American raise the flag on his housetop or in his yard on the Fourth of July, or which causes an Englishman to raise his hat when "God Save the Queen" is played. But how much more vigorous is the patriotic impulse when it finds something living to exult over, and to be proud of! Those who saw that remarkable scene nine years ago, when Jefferson Davis, ex-president of the Southern Confederacy, unforgiven and unforgiving, but himself the son, as he said proudly, of a Revolutionary soldier, came from his humble Mississippi home down to the railroad track, there to bare his head, and to bow to and apostrophize the Liberty

Bell from Independence Hall on its way to the New Orleans Exposition, can understand what sentiment in the concrete means. Those who saw the tokens of affection bestowed on that same bit of metal on its recent journey to Chicago may easily understand why a man-of-war, gleaming white in the sun, swan-like in its graceful curves, but endowed with devastation, and breathing fire from its nostrils, thrills the citizen of a country where every man is an equal partner in its possession.

To build a battle-ship is of itself a mighty achievement for any country, but to build one better than any other nation is building, and that in face of the fact that only six years ago we had no plants capable of making shafts, armor, or gun-forgings, and none of the mighty tools required in this work, is surely a triumph. American steel, our experts assert, is superior to that made abroad. Certainly American workmanship is more finished, and, ship by ship, we have beaten the world ever since we began turning out our commerce-destroying cruisers like the *Baltimore*, *Philadelphia*, *Newark*, and *San Francisco*, that average in cost more than \$1,250,000, look so formidable, and were the objects of so much pride at the naval review last year, but of which the sides would offer little more resistance to even the smallest rapid-fire guns of an enemy than so much pasteboard. These vessels have cost from twenty to twenty-five per cent. more than similar vessels of other nations, but there can be no question that they are that much more effective.

It is worth while to consider what a battle-ship like the *Indiana* really is. In the first place, the cost approximates \$3,500,000, or only \$250,000 less than the sum this Government, under the wise policy of Thomas Jefferson, paid for the entire Louisiana purchase, with its immense territory. This sum is almost exactly one half of what Alaska cost this government, and a little more than one quarter of what England paid to this country as the result of the *Alabama* arbitration. Surely a craft like this is a stupendous bit of machinery. Like all other steel or iron vessels, a battle-ship is a matter of frames, plates, and rivets, put together after most skilful planning and much hammering. It is constructed with due regard to that mathematical quality known as specific gravity, but which the layman can best understand by the word steadiness. It is a delicate adjustment of curves of solid steel to the changeable resistance of waves of air and water. It is as much superior to the ordinary vessel, and as much more complicated, as an opera is to an ordinary hymn-tune. It is simply packed with machinery. Unlike the merchantman, speed is not the thing most desired. The battle-ship *Indiana* when finished will weigh 10,296 tons.

This is within 200 tons of the gross register of the well-known American liner, the *Paris*, but the *Indiana* will be four knots an hour slower, will be 179 feet shorter, six feet broader, and will draw two feet more water. Of these 10,296 tons of her displacement 4,400 tons will be of magnificent steel for the hull. The armor, rolled and toughened until it is the best in the world, some of it eighteen inches thick, will weigh 2700 tons. The engines and machinery, acknowledged to be superior to those constructed abroad, will weigh 875 tons, and the rest of the weight will consist of armament, coal, and stores. In putting all this together about 700 tons of rivets are used. For the hull alone 25 principal plans must be made, and fully 400 separate drawings must be prepared, and duplicated by photograph. This of itself is enough work to keep a force of expert draftsmen busy continuously for eight months. For the engines more than 250 separate drawings are required, and these, in all their delicate details, would take a force of fifty men nearly a year to complete, if engaged continuously at the task. The preparation of plans continues as the vessel is building, and does not cease until almost the very day she goes into commission. Not only must every rivet, every joint, be marked out and noted, but there must be the most complicated computation of strains and weights. Space must be economized in every way, and the interior fittings, and the machinery with its two main engines and four tremendous boilers, through any of which a horse car might almost be driven, must not only be so placed as to do the best work as quickly as possible, but also so as to preserve the equilibrium of the ship. Here, then, is a fascinating problem, to the solution of which marine engineers must apply complexities of mathematical formulæ such as would bewilder the brain of an ordinary civil engineer. Except for the belt of armor along its sides and on its turrets and conning-tower, the steel plates of the ship are only five eighths of an inch thick, made to keep out water rather than projectiles. A ship like this has one large military mast, a steel tower ninety feet tall, protruding at intervals through saucer-like receptacles called "fighting-tops" and extending above the uppermost one like an old-fashioned candlestick from its standard. The vessel's two elliptical smoke-stacks have 16 feet of diameter the broadest way across. Inside of this vessel are 66 separate engines. Each of the two main engines is so tremendous that, tucked away under its arms, as its frames reach up two or three stories high, are two little engines, the sole purpose of which is to start the big ones going. The condensing-tubes of this craft alone would make a single tube nearly 12 miles long. It takes 30 tons of water to fill her boilers full before steam is generated. The

boilers, about 16 feet in diameter, and 20 feet long, must stand a pressure of 160 pounds to the square inch. Mile upon mile of tubing is used in them, and numerous engines for pumping, for ventilation, for steering, are scattered through the hold. Three immense dynamos, each of 300 amperes' capacity, are used in the ship — an electric plant that could light up a town of 5000 inhabitants. Twenty-one sets of speaking-tubes run throughout the vessel, and center at 12 telephone stations. Electric call-bells, automatic signals, registering-devices of various sorts, add to the complication of the details. Clad with 19 inches of steel are two turrets, one fore and one aft, in each of which are two big 13-inch guns. Each of these guns weighs 61 tons, and is 49 feet long. Far down beneath the turrets are the two main magazines, where ton upon ton of powder and ball made into projectiles, some of which weigh 1100 pounds each, is stored. These magazines are steel-clad rooms, and are lighted by electric lights sunk into glass wells in the corners of each room. They are fitted with little thermometers that ring a fire-alarm when the mercury reaches a certain height. They have also a system of tubes through which a flood of water may be poured in time of danger. One story above the four 13-inch guns on the main deck are eight 8-inch guns, on a superstructure, in sets of twos, and bunched about the smoke-stacks. Amidships, on the main deck, are four 6-inch guns, crowded still closer together. Subordinate to all these, and peeping from various open nooks and crevices, are 26 smaller weapons, with long needle-like barrels, called rapid-fire guns, each capable of firing projectiles of chilled steel weighing from one to three pounds at the rate of fifteen shots a minute. Around on the superstructure are arranged 14 boats, steam launches, whale-boats, gigs, and one electric launch. Down in the water, at the end of the shafts that project from each side of the flanks, are two screws to propel the ship, and at the bow, curving only a few feet under the water like a protruding chin, not too pronounced to be ungainly, is the ram, a single steel-casting, so buttressed and strengthened that with sufficient momentum it could cut steel armor like a knife.

But not until a battle-ship is endowed with life, and not until we see what it can do, may we appreciate fully what it is. It is its power that appals us. Perhaps the best definition of a battle-ship is that it is a fort of toughened steel under and around which a boat has been built. In other words, it is a floating fortress. It is meant to fight, and never to run away. When Mr. Tracy decided to build these modern battle-ships, he summoned Lieutenant Lewis Nixon, now the superintending constructor at Cramp's yard, then under 30 years of age, and

told him to make a crude design for such a craft as he had indicated. At that time no vessel larger than 7500 tons had been launched in this country. Proceeding upon an 8500-ton basis, Mr. Nixon built a steel fort, put as heavy guns in it and on it as he could with safety, and then calculated the dimensions of the boat on which it must float. After Mr. Tracy looked at the figures, and listened to the explanation of them, he thrust them aside with this remark:

"I don't know much about these details and dimensions. What I want to know is whether, if you let all these guns go off at once, they would beat the delivery of the guns on those battle-ships the English and French are building."

"They would not, I am sorry to say," replied the young constructor.

"Go back and make them do it," said the Secretary.

Mr. Nixon went back and added 1000 tons to the displacement of the vessel, and in a day or two sought the Secretary.

"Now will they beat those foreign boats?" asked the Secretary.

"Well," said the constructor, "I am afraid they won't beat them; but they'll nearly do so."

"Go back and make them do it," said the Secretary again; adding, "We can launch just as big boats as any one else."

Mr. Nixon went back, and the third time hit the mark, producing plans for a 10,300-ton vessel such as the *Indiana*. That he did successfully what he was ordered to is shown by the fact that the main batteries of the English battle-ships *Victoria* (sunk last year in the Mediterranean) and *Royal Sovereign* are planned to hurl 6000 pounds of metal at a single discharge, while the *Indiana*, of nearly 4000 tons' less displacement, and drawing 3 feet less of water, hurls 6800 pounds of metal at a single discharge of her main batteries.

The steel fort that Mr. Nixon planned is 190 feet long, 7½ feet deep, and 18 inches thick. At each end a barbette rises to protect the monster 13-inch guns. These barbettes are 35 feet in diameter, 17 inches thick, and 12 feet high. Built around this fort, and with its smoke-stacks, conning-tower, and military mast rising above it from the inside of the steel fortress, is a sturdy craft which may be entirely shot away at the ends, and is 348 feet long, 69 feet broad, and 24 feet deep. Its speed was to be 16 knots an hour, and its steam power that of 10,000 horses.

One can only conjecture what damage its guns can do. We know that one of these 13-inch guns, hurling an 100-pound projectile at a velocity of certainly 2000 feet a second, will pierce 30 inches of wrought iron at its muzzle, and probably 25 inches of the same material a mile away. We know that such a gun would throw its projectile with accuracy a distance

of 12 miles. The 8-inch guns would throw projectiles of 250 pounds' weight effectively eight miles. The 6-inch guns would fire with certainty a distance of six miles, and all the smaller weapons might be used at distances up to two and a half miles. In ten minutes, by using all the guns at their full powers, each 13-inch gun firing once in two minutes, and some of the rapid-fire guns once in every four seconds, the *Indiana* could fire about 60 tons of metal. In an engagement where her main batteries could be in constant use, with only part of her second battery, she would hurl, in ten minutes, from 15 to 18 tons of projectiles, each going with a velocity of, say, 2000 feet a second, and weighing from 1 pound up to 1100 pounds. When one thinks of this appalling power, and realizes that after these missiles have landed their work has only just begun,—for they are arranged to burst, and some of them to send forth noxious gases, poisoning every one within their reach,—the capabilities of destruction pass beyond comprehension. Added to all this is the ability to keep up the bombardment at this speed for between four and five hours. In the magazines will be stored 1095 tons of ammunition. For the 13-inch guns there will be 400 shells, each 66 inches long, the height of the average man, and each weighing 1100 pounds. There will also be 800 half-charges, 45 inches long. There will be 800 charges, each weighing 250 pounds, for the 8-inch guns; 400 charges, each weighing 100 pounds, for the 6-inch guns; 800 charges for the 6-pound rapid-firing guns; 40,000 charges for the Gatling guns, and 150,000 charges for the other rifles. Figures such as these, even if used about so many bricks, would be startling.

The power of the smaller of these breech-loading rifle-gun had an illustration in the recent Chilean civil war. A shot weighing 250 pounds from an 8-inch gun of Fort Valdivia in Valparaiso harbor struck the cruiser *Blanco Encalada* above the armor belt, passed through the thin steel plate on the side, went through the captain's cabin, took the pillow from under his head, dropped his head on the mattress with a thump, but without injuring a hair, passed through the open door into the mess-room, where it struck the floor, and then glanced to the ceiling. Then it went through a wooden bulkhead one inch thick into a room 25 by 42 feet where forty men were sleeping in hammocks. It killed six of them outright, and wounded six others, three of whom died, after which it passed through a steel bulkhead five inches thick, and ended its course by striking a battery outside, in which it made a dent nearly two inches deep. It was filled with sand. Had it released deadly gases no one knows what damage it might have done. A 450-pound missile from a 10-inch gun in the same fort

struck the same vessel on its 8-inch armor. It hit square on a bolt. The shell did not pierce the armor, but burst outside the vessel. It drove the bolt clear through, and in its flight the bolt struck an 8-inch gun, completely disabling it. Such is the power of the smaller-sized guns.

But we have not exhausted the power of the *Indiana*. Under nearly an acre of heating surface the boilers have been generating a force of steam that pushes the vessel fiercely through the water, and the ram becomes a terrible weapon. Mr. Nixon has calculated roughly that if the *Indiana* were driven at full force against a stationary object, such as one of the Brooklyn Bridge towers, she would strike with a force of 100,000 foot tons, that is, a force that could lift 100,000 tons one foot. The writer leaves it to engineers of much leisure and large mental endowments to calculate what the effect of such a blow would be on the tower or on the boat. He knows one man who would not like to take his chances on the bridge. Certainly no vessel struck by such a blow could live. In addition to all this, remember that with her four powerful search-lights for eyes this terrible craft has the power of discerning small boats, mere specks on the water, at a distance of one to three miles in the night, and she becomes a monster for the imagination to deal with. The wonder is, not that it costs \$3,500,000 to build her, but that it does not cost five times that much. Truly such a vessel may be termed the highest mechanical achievement of man, far surpassing any bridge or building in its complexities and in its capabilities. From beneath the earth man has torn its steel and dug its fire, and has constructed a machine that not only defies air and water, but, guided by human intelligence, asserts its mastery over them with a mocking, shrieking power that one can imagine to have been borrowed only from the noises and forces of chaos.

It is worth while to look about a place that produces such a monster. The Cramp shipyard has nearly a quarter of a mile of water-front. Along this frontage are ships in various stages of construction, some on the stocks and some in the water, illustrating almost every step in the building of a vessel. Here, near the entrance to the yard, is an acre or more of punching-machines, enormous contrivances that, as they close their jaws, with their ungainly teeth bite out holes for rivets in the plates and frames as easily as a farmer's wife takes out the core of an apple. Over there is a steel checker-board frame into which big pins are set in a curve. Against the pins stalwart sledge-swingers, half naked, bend the cherry-red frames and plates, as they are slid out of the furnace, into the shapes they must assume for use in the vessels. Here is a great

row of blacksmith forges. Over there is a building where a dozen monster boilers are in construction, and where a traveling crane lifts and moves them as easily as a hotel porter does big trunks. Here are big ship-engines, some set up and some taken down. Here are foundries where manganese-bronze screws are cast, and where brass and iron are fashioned into a thousand forms. Here is the great mold-loft where every line in the ship is laid down, and from which wooden counterparts of the vessels are made before the steel construction begins. Here are the wood-working shops, the gun factory, the great store-house, and there is the floating derrick that can pick up a 70-ton boiler, move it 300 feet, lift it high in the air, and place it in a ship in thirty minutes, with as careful an adjustment as a watchmaker uses in fitting a movement in its place. And here are 5000 men employed in various capacities—machinists, wood-workers, molders, and perhaps most noticeable of all, riveters in sets of three, one man to hold a big sledge against the red-hot rivet, and two, one a right-handed worker and the other left-handed, to pound it until it becomes a part of the ship. So the work goes on until after about two years the ship that existed only in specifications becomes a living thing.

In putting this ship together the same methods are used as in a merchantman. The keel is first laid on big blocks, arranged at intervals of about three feet, on an incline of about five eighths of an inch to a foot, so as to give the requisite pitch in launching. The *Paris* had an incline of half an inch to the foot, but for the battle-ships, which are shorter and nearly as heavy, a steeper incline is required. After the keel is laid the two frames in the center of the boat are put up, and then others fore and aft follow until the stern-post and ram are fixed into place. The plates on the sides are riveted on, and it is not until the hull is half finished that we notice a radical difference between it and the hull of the merchantman. Then we catch the first glimpse of the protective deck. This is a turtle-back of steel from three to four inches thick reaching from side to side, and in most naval vessels from bow to stern. At the sides it extends about three feet below the water line. Below this deck are the engines, boilers, and a spare steering-apparatus. If a shot could get through the sides of the vessel it might kill men,—that is to be expected in warfare,—but it must pass through this sloping inner deck of steel before it can disable the vital parts of the vessel. It is this protective deck that makes valuable the cruisers that at present constitute the main strength of our navy. A shot might go through their pasteboard sides easily, but it would be a long time before the engines would be disabled in an engagement. It is on this pro-

tective deck that the steel fort of the *Indiana* rests. From the ends of the redoubt this protective deck runs fore and aft, to bow and stern, and if all this frail part of the vessel were shot away, the ship could still float and fight.

So the building goes on until the launching day comes, and two broad ways are built up against the bottom of the vessel, and the keel-blocks on which it has been resting are knocked away. In the launch of the *Indiana* Mr. Nixon ran a row of electric lights beneath the bottom of the vessel, adding another innovation to the details of Americanship-building. Each launching way consists of upper and lower planking, between which is spread thousands of pounds of the best tallow. At the bow of the boat these upper and lower planks are clamped together, and when all is ready they are sawed apart, and the vessel starts. The upper part of the ways slides into the water with the vessel, and the lower part with the smoking hot tallow remains stationary. A launch in these days is so smooth, and so soon ended, rarely occupying more than twelve seconds from start to finish, that one scarcely realizes its difficulties. Three things are absolutely necessary: it must be on time, when the tidal water is highest; it must be of smart speed, so as not to stick on its downward journey to the water; and it must be accomplished without straining. So complex a thing is a launch that the careful engineer-in-charge is able to estimate the strain on every part of the vessel for every position it occupies, at intervals of one foot, on its way down the incline. There is one supreme moment. It is when the vessel is nearly two thirds in the water. The buoyancy of the water raises the vessel, and throws its weight on its shoulders. Here is where the greatest danger of straining comes, and should the ways break down, the vessel would be ruined, a matter of nearly \$2,000,000 in a ship like the *Indiana* when it was launched.

The launch over, the machinery is lifted in and fitted, and then comes the board of government experts, who look the vessel over inch by inch, the fires are started, and the trial trip follows. For four hours, amid suppressed excitement that answers nervously to every quiver of the vessel, the engines are run at full speed. A premium or a penalty is at stake now. The breakage of a bolt or the disarrangement of a valve may mean thousands of dollars of loss to the contractors. Trained workmen are locked in the fire-rooms, not to be released until the test is over. Cooled drinking-water with oatmeal sprinkled upon it is run down to them in a rubber tube from a barrel on the deck. A hose is played on the costly machinery in places where there is danger from overheating, as though it were on fire. Almost every pound of coal used on the trip is carefully selected.

When the four hours are passed and the strain is over, a sigh of relief from every one on board, and even from the vessel herself, goes up, and the ship passes from the contractor to the Government, and day after day while she is in commission the flag will be saluted, and the score or more of other ceremonies and formalities observed on a man-of-war will follow.

Such is the evolution of a battle-ship in these days. It is thirty-one years since the first American, armor-clad, sea-going battle-ship, the *New Ironsides*, was finished. That, too, was built at Cramp's yard. The monitors were not sea-going fighters, and may better be termed harbor defenders. But what a contrast between the *New Ironsides*, that splendid fighter of the civil war, and the *Indiana*! Within seven months after the contract was signed the *New Ironsides* was steaming to Charleston. Splendid white oak timbers were used in her construction. There were 120 timbers in it, each 38 feet long, 22 inches wide, and 14 inches thick, all cut within 25 miles of Philadelphia in the middle of winter, and after the contract was signed. No white oak for ship-building may be found there now, but the iron mines and the forges and the furnaces have taken its place. The *New Ironsides* had a slightly sloping armor of 4 inches of wrought-iron on her sides, and the armor served her well. The vessel was of 3580 tons' displacement, had a speed of 10 knots, was 255 feet long, 56 feet broad, 14 feet deep, carried 16 11-inch Dahlgren guns, and 2 100-pounder Parrott guns. Under the *Indiana's* 6-inch guns this vessel, majestic and stately as she was, would not last fifteen minutes, and her heaviest guns would scarcely dent the armor of the *Indiana*.

When the *Indiana* sails down the Delaware in commission, she will be the ninety-second man-of-war built for the United States navy on the Delaware. The list begins in 1776 with the good ship *Randolph*, armed with 32 guns, which in 1778 blew up at sea, 311 men perishing with her. That and three others were built by Joshua Humphreys, a far-seeing ship-constructor, who set forth a rule of practice that obtains to-day, that, inasmuch as our vessels must be inferior in numbers to those of European navies, they must always be better fighters, and, ship by ship, improve on those built across the sea. The list of the 92 vessels includes the *Guerrière* and the *Franklin*, and the great ship-of-the-line *Pennsylvania*, launched in 1837, a wonder in her time. Further on in the list is the steamer *Mississippi*, the second of the steam war-vessels built on the Delaware. This was the vessel that took Kossuth from Turkey to France, and brought his comrades in exile to this country. It was Commodore Perry's flag-

ship in the Mexican war, and it was from her decks, in his expedition to Japan, that Perry made his successful demand for admission to the ports of that country.

Worthy successors to all these will be the *Indiana* and her sister ships, the *Massachusetts* and the *Oregon*. It will doubtless satisfy the ardent spirit of patriotism that always demands advance to know that the battle-ship *Iowa*, which also is under contract at Cramp's, and which will probably be the ninety-fourth vessel in the list of Delaware-built war-ships for the United States, will surpass the *Indiana* as much as the *Indiana* surpasses foreign-built battle-ships. The *Iowa* will be king rather than queen of the seas.

And as all these vessels leave the various ship-yards of the country to take their places in its fleet, adding by their numbers to the moral strength of the country, increasing its dignity and influence among the nations of the earth, so long as force and brute strength shall continue to be signs of a nation's sovereignty, what do they leave behind? They leave magnificent ship-building plants which are ready and eager to build an American merchant marine—nay, have already begun to build it; vessels that shall be the sign of commercial and internal prosperity. During our civil war England scattered the contracts for her new iron ships among as many private yards as possible. The result was that by wise legislation in favor of shipping interests every advantage was taken of her opportunities, and her splendid merchant marine sprang into existence almost like magic. Here was an industry fostered not by protective laws, but by alert business strategy. When we consider that in letting their contracts for the steel for the new American Line vessels that the Messrs. Cramp are building, they secured the material cheaper than they could have imported it duty-free from England, ship-building in this country takes on a most serious and pleasing aspect. With the repeal of present legislation discriminating against this industry, what may we not look forward to? We have the plants and the tools, the workmen and the designers.

When we thus consider the scope of the new navy and its meaning, the possibilities of the situation appeal not only to our love of country, but to our commercial common sense. To use, perhaps, an ugly figure of speech, we may say, in a spirit of not over-confidential anticipation, that this new navy of ours is intended to be, and we may express the hope that it soon will be, simply the advance guard of police, the body of force and authority, clearing a path on the highway of nations for the procession of peace that is sure to follow.

Albert Franklin Matthews.

THE BATTLE-SHIP "INDIANA."

—Frederick Schell.

SUSANNA.

WITH PICTURES BY A. CASTAIGNE.

IN those rose- and lavender-scented days in the beginning of the century all men were chivalrous and all women beautiful; at least so we are led to believe by art, by romance, and by our grandmothers. Who ever had a grandmother, or maiden aunt, or elderly female relative of any degree, for that matter, who was not a beauty in her youth? And if we can trust these sources of information, there were no winters in those days, no clouds, no broken hearts; there was no poverty, no misery. Our ancestors were gay and debonair, dressed like Brummels and Récamiers, and drank tea out of old-fashioned china-cups—which, by the way, were not old-fashioned then—in shady arbors, or whispered poetry and high-flown compliments in garden walks between trim hedges of clipped box. And they were always in love, too—at least the men were; the girls, I am told, were arrant flirts. But then it was a graceful, philosophical sort of love that relieved itself in tender verse, and was as happy in being trampled on as in being smiled on. We believe all this because the old ladies that we know have had so many love-affairs, and never strike a

tragic note in telling of them, but sometimes laugh till the tears fill the cracks and crevices around their eyes as spring rains fill dry ditches. “Yes,” we think, and sigh; “all was comedy and sunshine then.”

For some reasons I should like to have lived then; for one, I should have known my great-aunt Susanna as a girl. Her miniature is very beautiful. To look at that arch face smiling at you from its setting of brilliants and enamel, you would not think that she could ever have had a grief; to remember her as I knew her during the last years of her life, wrinkled, toothless, kind, with a brown mole sprouting several long hairs upon her chin, you could not think that she had ever had a romance. Oh, if the world has changed since she was young as she has changed, how beautiful it must have been!

And yet of grief and romance she had had enough, as I learned the other day when I found her diary in the garret. I found it, this record of a woman's youth, in a trunk full of deeds of property and land grants—a musty company. It was sealed, and on the back was written in a feminine hand, “To be opened when I am

dead." It was signed "Susanna Gale," and dated "1820." I opened it (she had been dead for many years), and my story is the one I found therein.

Bonfield was granted to my ancestors in sixteen hundred and something — I have forgotten the exact date. In the early years of this century my great-grandfather lived here (it is at Bonfield that I write) with his daughters, Susanna and Peggy. Peggy was my grandmother, and, judging from their portraits, I am compelled to say she was not near so handsome as her sister, whose junior she was by five or six years. Susanna was proud, strong, and fiery tempered, while my grandmother was timid and yielding. Susanna was her father's favorite; he made no secret of his intention to leave her the bulk of the property, including Bonfield and the pick of the negroes, while Peggy was to have merely an outlying farm with enough negroes to run it. The reason for this partiality is unknown and unimportant. He also intended that Susanna should marry a certain young man of whom she speaks in her diary as D——.

D—— was a distant relative, and spent much of his time at Bonfield. My great-grandfather, having no son, felt a fatherly love for him, and he had been brought up to call my great-grandfather and the girls "cousins." You know, in Maryland we claim cousinship to very remote degrees. From the first it was understood, though not a word had been said about it, that he would eventually marry Susanna and be master of Bonfield. However, in the first pages of her diary she rebels against this decision, and writes: "I would not marry him if he were the only man in the world! I do not love him, and it is absurd to suppose he loves me, or ever will." And farther on: "He is dark, and I do not like dark men. I prefer blonds like Will Paca and Sam Hayward. Besides, he is cruel and hard-hearted. Only this morning he rode over Sallie's little Jim, who was making mudpies in the lane, and Saturday he had Calista whipped because the poor thing had scented herself up with some of his favorite perfumery."

It was about this time — she was sixteen and he twenty-one — that D—— began to drop the cousinly rôle and to take up that of a lover. I am quite sure she scorned him, shrugged her shoulders in the face of his little attentions, and openly favored her blonds; also that his temper did not improve under this treatment. But on this she touches lightly. There is one scene, however, that she gives in detail and with spirit, to say nothing of righteous anger. It is an important scene, and shapes the lives of three people.

It was an afternoon in spring. Susanna was going to ride with her cousin. Clad in her habit, — I have only a vague idea of the cut and style

of a lady's habit of that day, but am sure she looked charming, otherwise things might not have happened as they did, — with a whip in one hand and her skirt held up in the other, she ran downstairs and almost into the arms of D——, who was waiting at the bottom; the hall was somewhat dark, and she had not seen him in her hurry. She waited a moment, but he did not move; then she haughtily requested him to let her pass.

He leaned toward her, and his dark eyes glowed. "Not till I have kissed you!" He spoke softly, as Peggy (my grandmother) was in an adjoining room singing to her doll.

Her face flushed with anger; she gathered in her skirts to free them from his touch. "Let me pass!" she cried. Then, with the scorn and indignation that she felt, "I hate you!"

"And I love you!" Before she could defend herself he had seized her in his arms, and kissed her square upon the mouth.

She wrenched herself away (my aunt had great strength even in her age), beside herself with rage; cried, "Coward! Fortune-hunter! You love my money; take that for your love!" and, quick as a flash, the riding-whip came stinging down across his face.

He did not wince, but stood and looked at her; and there was that in his eyes, she says, that made her drop her own. When at last he spoke, each word had the force of a leaden bullet, and seemed to carry a curse with it.

"I love you. Your money — curse it! Some day I will show you how I scorn it," he said slowly and wrathfully, and, turning on his heel, he left her.

She rode that evening, it is true, but with the groom for escort. On her return she found that D—— had gone.

HE was gone a year, traveling abroad, as was the vogue for young gentlemen of family in those days. When he came back he resumed his intimacy with the family at Bonfield, visiting them as often and staying as long as formerly. He seemed to have forgotten the cause of his voluntary exile. In many ways he was greatly changed; the hot-headedness and wilfulness of old times had given way to gaiety, gentleness, and calm philosophy. Once he had been selfish and intolerant; now he was always ready to do a kindness or to yield an opinion. At first Susanna was stiff and haughty with him, but his persistent courtesy shamed and disarmed her. No one was so quick as he to pick up her handkerchief when she dropped it, or to wrap a shawl about her shoulders when they sat on the piazza in the cool of the evening. A woman is susceptible to such attentions; Susanna remarks upon them in her diary, and adds (perhaps with a sigh for the breaking up of her preju-

IN THE GARDEN.

dices), "I never thought that I could like him half so well."

As time went on, he made himself quite indispensable. In summer, when the house was full of guests, he devised novelties in the way of entertainments; in winter,—there were winters in those days after all,—when the family sat huddled about the blazing fire at night, he told stories of his travels, of London and Paris, of Waterloo and Rome, or ghost-stories that made the brave Susanna glance furtively behind her, and little Peggy hide her face in terror. Then he could sing—ah, how he could sing! In "Alan Water," and the "Soldier Bridegroom's Song," his voice was so sweet and tender that tears sprang to all eyes. Meanwhile his attentions to Susanna were marked, yet chivalrous and delicate; but he said no word of love, nor alluded to their unfortunate rencounter on the stairs. "Can he have forgotten?" she queries in her diary.

About this time she writes of him in this vein: "He is so handsome, so brilliant, so kind and good to me. Since I have known him as he is, the country men seem stupid and insipid." After this the entries are monologues on D—. One day she writes, "He loves me." Though she did not have his word, she had undoubtedly good reason for her statement. A woman is rarely mistaken when she says to herself, "He loves me." Later she writes, "I love him."

So Fate took up the harp of love—that magic harp of many strings, whose highest note is the highest, and whose lowest is the lowest of all notes struck on earth—and played to her a joyous melody.

A year, two years, passed, and yet this strange pair of lovers had come to no agreement. Eyes had gazed into eyes, hearts had beat tumultuously,—one had, at least; I have no guarantee of the condition of the other,—and that was all. Susanna's impatient spirit chafed under this uncertainty. "Why does he not speak—why does he not speak?" she asked herself continually. Yet well she knew. A proud man such as he could not forget. The roses might fade from her cheeks, her hair might turn gray, but he would not speak. How could he, remembering the past? She too was proud, but when love and pride fight for the mastery of a woman's heart, it is usually love that wins. And so she resolved to challenge, to compel, a second declaration by a humble apology for her former scorn.

One summer evening after tea she said to him: "Will you walk in the garden with me, cousin? There is something I should like to say to you."

It was a peaceful evening. The scent of flowers was heavy in the air; crickets chirped in the shrubbery; the evening star sparkled like

a yellow diamond in the reddened west; on the calm surface of the river an oyster-boat was floating homeward with its sails spread dark against the sky. They walked the length of a graveled path in silence before she spoke.

"Cousin," she said at last, blushing and paling by turns, but holding her head erect, "there is something that has been troubling me for a long time—since you came home from abroad. It is that I was once cruel and unjust to you. Can you forgive me? I was a child then—I did not know. But now I know. I could cut off my hand for that blow and my tongue for those untrue words."

She paused, but he did not reply. His face was turned away. "Speak to me," she entreated; "I am a proud woman, cousin; it has cost me much to humble myself. You loved me once. Tell me, do you love me now?"

He turned and looked at her steadily, intently, passionately, and for a long time; the red light of the evening was in his eyes, and she felt herself tremble and grow weak beneath their spell. "I love you; I have always loved you; I have not changed," he said.

"Then take back the kiss you gave me; take it back with my love," she said, and, raising herself on tiptoe, she laid her lips to his.

He took her in his arms,—she did not resist them now,—and drew her to his heart.

That night D— did not linger long with the family, but, pleading letters, went to his room early. Later, lying happy and wakeful in her great four-posted bed, Susanna heard his footsteps as he paced his floor till early morning, when she fell asleep from weariness.

He did not appear next morning till the family were at breakfast. He was pale, but gave a pleasant "Good morning," and, as usual, led the conversation, though it was evident that he took no interest in it. There was something on his mind, and at last he came out with it.

"Sir," he said, addressing my great-grandfather, "you have been a kind friend to me from my youth up; you have done many things for me that my father, on account of having other sons, could not do. All that I have asked of you I have received. Now I am about to make a final request that will, maybe, tax your generosity: I want one of your daughters."

The old man beamed. "Your request delights me, my dear boy," he said. "And it is not a surprise; I have been expecting it a long time. Take her—take my girl, and may you both be happy. But," he added, looking archly from one girl to the other, and finally letting his fond eyes rest upon his favorite, who sat blushing prettily beneath them, "I have two. Which is it?"

D— laid his hand on Peggy's hand. "This one," he said.

THIS, then, was a story of revenge — revenge so cruel that the victim could not even cry for mercy; and D—— was Daniel Leeds, my grandfather.

There is one more entry in the diary, written a few months later, and telling of great preparations for a wedding — of gowns, of pastry, etc.,

and how "our cousins Goldsborough and Tilghman are coming in a sailing-vessel from Baltimore to be present at the festivities, which will be kept up for at least a week." There is no word of the writer. Her silence is sadder than the saddest words; and in it I read, also, her bravery and her proud determination to forget.

Nannie A. Cox

"THE STAR-SPANGLED BANNER."

ON August 18, 1814, Admiral Cockburn, having returned with his fleet from the West Indies, sent to Secretary Monroe at Washington, the following threat:

SIR: Having been called upon by the Governor-General of the Canadas to aid him in carrying into effect measures of retaliation against the inhabitants of United States for the wanton destruction committed by their army in Upper Canada, it has become imperiously my duty, in conformity with the Governor-General's application, to issue to the naval forces under my command an order to destroy and lay waste such towns and districts upon the coast as may be found assailable.

His fleet was then in the Patuxent River, emptying into the Chesapeake Bay. The towns immediately "assailable," therefore, were Baltimore, Washington, and Annapolis.

Landing at Benedict's, on the Patuxent, the land forces, enervated by a long sea-voyage, marched the first day to Nottingham, the second to Upper Marlborough. At the latter place, a town of some importance, certain British officers were entertained by Dr. Beanes, the principal physician of that neighborhood, and a man well known throughout southern Mary-

land. His character as a host was forced upon him, but his services as a physician were freely given, and formed afterward the main plea for his lenient treatment while a prisoner.

As the British army reached Upper Marlborough, General Winder was concentrating his troops at Bladensburg. The duty of assigning the regiments to their several positions as they arrived on the field was performed by Francis Scott Key, a young aide-de-camp to General Smith. Key was a practising lawyer in Washington who had a liking for the military profession. He was on duty during the hot and dusty days which ended in the defeat of the American army. Subsequently, he could have read a newspaper at his residence in Georgetown by the light of the burning public buildings at Washington, and he passed with indignant heart the ruins left by the retreating army when, after a night of frightful storm, they silently departed, in a disorderly forced march of thirty-five miles, to Upper Marlborough. He then knew what any other city might expect upon which the "foul footsteps' pollution" of the British might come.

The sorry appearance of the British army gave the Marlborough people the idea that it had been defeated, and on the afternoon of the following day Dr. Beanes and his friends celebrated a supposed victory. Had they stayed

in the noble old mansion that the worthy but irascible doctor inhabited near Marlborough, "The Star-Spangled Banner" would never have been written. Tempted by the balminess of a warm September afternoon, however, the party adjoined to a spring near the house, where, the negro servant having carried out the proper utensils, the cool water was tempered with those ingredients which mingle their congenial essences to make up that still seductive drink, a Maryland punch. It warms the heart, but if used too freely it makes a man hot-tempered, disputatious, and belligerent. Amid the patriotic jollity, therefore, when three British soldiers, belated, dusty, and thirsty, came to the spring on their way to the retreating army, their boasting met with an incredulous denial, which soon led to their summary arrest as chicken-stealers and public enemies. Confined in the insecure Marlborough jail, one of them speedily escaped, and reached a scouting-party of British cavalry, which, by order of Cockburn, returned to Upper Marlborough, roused Dr. Beanes out of his bed at midnight, and conveyed him to the British ships at Benedict's.

As soon as Key heard of the arrest of Dr. Beanes, one of his most intimate friends, he hurried, under the protection of a flag of truce, to the British fleet at the mouth of the Patuxent to arrange for his release. John S. Skinner of Baltimore, then commissioner for exchange of prisoners, accompanied him with his cartel ship.

When Key and Skinner reached the British fleet it was already on its way up the Chesapeake Bay to the attack on Baltimore. Its destination was too evident for Cockburn to allow Key to depart and give the alarm. He was informed in the admiral's grimmest manner, that while he would not hang Dr. Beanes at the yard-arm, as he had threatened, yet he would have to keep every man on board a close prisoner until certain circumstances occurred which would render their release advisable. When the ships arrived at their destination he assured them that it would be only a matter of a few hours before they would be free.

From the admiral's flag-ship the *Surprise*, upon which he was then detained, Key saw some of the finest soldiers of the British army, under General Ross, disembarked at North Point, to the southeast of the city of Baltimore. Then on Tuesday morning, September 13, 1814, the fleet moved across the broad Patapsco, and ranged themselves in a semicircle two and a half miles from the small brick and earth fort which lay low down on a jutting projection of land guarding the water approaches to Baltimore on that side.

Cockburn's boast to Key that the reduction of the city would be "a matter of a few hours" did not look improbable. It was garrisoned by a

small force of regulars under General Armistead, assisted by some volunteer artillerists under Judge Nicholson. It was armed with forty-two pounders, and some cannon of smaller caliber, but all totally ineffective to reach the British ships in their chosen position. In addition, a small earth battery at the Lazaretto — which, it will be seen, did good service — guarded the important approach to the city by the north branch of the Patapsco; while Fort Coventry protected the south branch. These batteries were armed only with eighteen and twenty-four pounders.

From seven on the morning of Tuesday until after midnight of Wednesday the fleet bombarded Fort McHenry at long range; occasionally the gunners in the fort fired a useless shot at the ships. But at midnight word was brought to Cockburn that the land attack on the North

THE FLAG OF FORT MCHENRY. FROM A PHOTOGRAPH MADE IN 1873 FOR A PAMPHLET BY CAPTAIN PREBLE. (DIMENSIONS OF FLAG, 29 BY 32 FEET.)

Point road to the east of the city had failed. Therefore, unless the fleet could take Fort McHenry on the west, retreat was inevitable.

Taking advantage of the darkness, a little after midnight sixteen British frigates, with bomb-ketches and barges, moved up within close range. At one o'clock they suddenly opened a tremendous and destructive fire upon the fort. Five hundred bombs fell within the ramparts; many more burst over them.

ENGRAVED BY T. JOHNSON.

FRANCIS SCOTT KEY.

FROM THE OIL PORTRAIT IN POSSESSION OF MR. F. K. PENDLETON.

The crisis of the fight came when, in the darkness, a rocket ship and five barges attempted to pass up the north channel to the city. They were not perceived until the British, thinking themselves safe and the ruse successful, gave a derisive cheer at the fort under whose guns they had passed. In avoiding Fort McHenry, however, they had fallen under the guns of the fort at the Lazaretto, on the opposite side of the channel. This fort, opening fire, so crippled the daring vessels that some of them had to be towed out in their hasty retreat.

From midnight till morning Key could know nothing of the fortunes of the fight. At such close quarters dense smoke enveloped both the

ships and the fort, and added to the blackness of the night.

After the failure to ascend the north branch of the Patapsco, the firing slackened. Now and then a sullen and spiteful gun shot its flame from the side of a British vessel. Key, pacing the deck of the cartel ship, to which he had been transferred, could not guess the cause of this. The slackened fire might mean the success of the land attack, in which case it would not have been necessary to waste any more powder on the fort. Again, it might be that the infernal rain of shells had dismantled the little fort itself, and the enemy was only keeping up a precautionary fire until daylight enabled him to take possession.

The long hours were nearly unbearable. Key had seen the fate of Washington, and anticipated the fate of Baltimore.

At seven the suspense was unrelaxed. The firing from the fleet ceased. The large ships loomed indistinct and silent in the mist. To the west lay the silent fort, the white vapor heavy upon it. With eager eyes Key watched the distant shore, till in a rift over the fort he dimly discerned the flag still proudly defiant. In that supreme moment was written "The Star-Spangled Banner."

The British ships slowly dropped down to North Point. Dr. Beanes went home to Upper Marlborough, very thankful as he saw the yard-arm of the *Surprise* melt out of sight, unburdened.

Of all national airs, it breathes the purest patriotism. Those of England, Russia, and Austria are based upon a sentimental loyalty long outgrown by this agrarian and practical age. The "Marseillaise" is a stirring call to arms, and upholds only the worst—the passionate military—side of a nation's character. "The Star-Spangled Banner," while it is animated, patriotic, defiant, neither cringes nor boasts; it is as national in its spirit as it is adequate in the expression of that spirit. Believing, then, that Key's poem will be the national air of succeeding generations of Americans, the facsimile of the original draft is here reproduced by the kindness of Mrs. Edward Shippen, a granddaughter of that Judge Nicholson who took the first copy of the poem to the "American" office, and had it set up in broad-sheet form by Samuel Sands, a printer's apprentice of twelve. He was alone in the office, all the men having gone to the defense of the city. It is written in Key's hand. The changes made in drafting the copy will be seen at once, the principal one being that Key started to write "They have washed out in blood their foul footsteps' pollution," and changed it for "Their blood has washed out their foul footsteps' pollution." In the second stanza, also, the dash after "'T is the star-spangled banner" makes the change more abrupt, the line more spirited, and the burst of feeling more intense, than the usual semicolon. The other variations are unimportant. Some of them were made in 1840, when Key wrote out several copies for his friends.

The song, in its broad-sheet form, was soon sung in all the camps around the city. When the Baltimore theater, closed during the attack, was reopened, Mr. Hardinge, one of its actors, was announced to sing "a new song by a gentleman of Maryland." The same modest title of authorship prefaces the song in the "American." From Baltimore the air was carried south, and was played by one of the regimental bands at the battle of New Orleans.

The tune of "Anacreon in Heaven" has been objected to as "foreign"; but in truth it is an estray, and Key's and the American people's by adoption. It is at least American enough now to be known to every school-boy; to have preceded Burr to New Orleans, and Frémont to the Pacific; to have been the inspiration of the soldiers of three wars; and to have cheered the hearts of American sailors in peril of enemies on the sea from Algiers to Apia Harbor. If the cheering of the *Calliope* by the crew of the *Trenton* binds closer together to-day the citizens of the two English-speaking nations, should its companion scene, no less thrilling, be forgotten—when the *Trenton* bore down upon the stranded *Vandalia* to her almost certain destruction, and the encouraging cheer of the flag-ship was answered by a response, faint, uncertain, and despairing?

Almost at once, as the last cheer died away :

Darkness hid the ships. As those on shore listened for the crash, another sound came up from the deep. It was a wild burst of music in defiance of the storm. The *Trenton's* band was playing "The Star-Spangled Banner." The feelings of the Americans on the beach were indescribable. Men who on that awful day had exhausted every means of rendering some assistance to their comrades now seemed inspired to greater efforts. They dashed at the surf like wild creatures; but they were powerless.

No; it is too late to divorce words and music.

The song is generally accorded its deserved honor; the man who wrote it has been allowed to remain in unmerited obscurity. The Pacific coast alone, in one of the most beautiful of personal monuments,¹ has acknowledged his service to his country—a service which will terminate only with that country's life; for he who gives a nation its popular air, enfeoffs posterity with an inalienable gift. Yet Key was the close personal friend of Jackson, Taney,—who was his brother-in-law,—John Randolph of Roanoke, and William Wilberforce. He it was, in all probability, who first thought out the scheme of the African Colonization Society; the first, on his estate in Frederick County, to open, in 1806, a Sunday-school for slaves; who set free his own slaves; and who was, throughout his whole career, the highest contemporary type of a modest Christian gentleman. This religious side of Key's character found expression in that fine hymn found in the hymnals of all Protestant denominations,

Lord, with glowing heart I'd praise thee.

Foote, in his "Reminiscences," leads us to think highly also of Key's personal appearance, and of his powers as a public speaker.

¹ In Golden Gate Park, San Francisco.

O say can you see ~~through~~ by the dawn's early light
What so proudly ~~we~~ hail'd at the twilight's last gleaming,
Whose broad stripes & bright stars through the perilous fight
O'er the ramparts we watch'd were so gallantly streaming.
And the rocket's and glare the bomb bursting in air,
To prove through the night that our flag was still there,
O say does that Star-spangled Banner yet wave
O'er the land of the free & the home of the brave?

On the shore dimly seen through the night of the deep,
Where the foe's haughty host in dread silence reposes,
To see the which the breeze, o'er the towering steep,

(1) it fitfully blows half conceals half discloses?

How it catches the gleam of the morning's first beam,
In full glory reflected now shines in the stream,

(2) the Star-spangled Banner — O long may it wave
O'er the land of the free & the home of the brave!

And where is that band who so vauntingly swore,
That the havoc of war & the battle's confusion

It would a Courtesy should leave us no more?

~~And~~ Their blood has wash'd out their foul footsteps' pollution.
No refuge could save the hireling & slave
From the terror of flight or the gloom of the grave;

(3) And the Star-spangled Banner in triumph doth wave
O'er the land of the free & the home of the brave.

(4) Thus be it ever when freemen shall stand
Between their lov'd home & the war's desolation,
Blest with vict'ry & peace may the heav'n rescued land
Rejoice the power that hath made & preserved us a nation.
Then conquer we must when our cause it is just,
And this be our motto — "In God is our trust."
And the Star-spangled Banner in triumph shall wave
O'er the land of the free & the home of the brave.

FRANCIS SCOTT KEY was the son of John Ross Key, a Revolutionary officer. He was born in Frederick County, Maryland, August, 1780. He studied law, was admitted to the bar at Frederick, subsequently moved to Georgetown, and was district attorney for three terms. He was frequently intrusted with delicate missions by President Jackson. A volume of his poems was published in 1856. He died in 1843, and is buried in the little cemetery at Frederick, Maryland. Efforts have been made in his native State to erect a monument over his grave, but unsuccessfully. In justice such a memorial shaft should be the gift of the whole American people.

As it is, his grave is not without tributes which are curious and honorable. During the war Frederick was quietly a "rebel town," but it contained one good patriot besides Barbara Frietchie. This loyal Mr. B——, when he received favorable news from the Northern army, or whenever his patriotism had need of bubbling over, regularly made a pilgrimage to Key's grave, and there, standing at the

head of it, exultantly and conscientiously sang through the whole of Key's song.

On every Decoration Day the grave is covered with flowers, and the flag which always waves there—the Star-Spangled Banner which his strained eyes saw on that 14th of September, 1814, rise triumphant above the smoke and vapor of battle—is reverently renewed.

Perhaps, after all, it is his best monument.

The flag of 1814 and that of 1894 are nearly identical, the greatest change being merely in smaller stars in the cluster. The flag of the United States, adopted June 14, 1777, was one of thirteen stripes, alternate red and white, with a union of thirteen white stars in a blue field. Upon the admission of Kentucky and Vermont, two stripes and two stars were added. This flag continued in use until 1818, when, five more States having been admitted, the bars were reduced to the original thirteen, with an added star for every new State, the star to be placed in position on the Fourth of July following the admission.

John C. Carpenter.

OLD DUTCH MASTERS.

JACOB VAN RUISDAEL (1625(?)–1682).

IT is to be regretted that we know so little of Ruisdael's life, since he stands at the head of the Dutch school of landscape-painting, and, taking the school as a whole, is one of its most distinguished figures. Landscape-painting is the creation of the Netherlands. It was half a century before Claude Lorraine that Pauwel Bril of Antwerp (born in 1554) began painting landscapes pure and simple, and for their own sake; for before his time landscape was employed merely as a scenic background and accessory to figure pieces, no painter appearing inclined to make it attractive in itself, to endow it with poetry, and thus, by its means, to touch the imagination and the heart of man.

Ruisdael was born at Haarlem about 1625—some say 1630. It was formerly supposed that he was born in 1645, but on the discovery of a picture by him bearing this latter date, it was thought prudent to put back the date of his birth some fifteen years or so. His father, who was a cabinet-maker, designed him for the study of medicine, but his remarkable inclination toward art, evincing itself at a very early age, determined his profession: he produced pictures at the age of twelve years that astonished artists and amateurs.

Of all the Dutch masters, Ruisdael is the

most reserved, the least likely to captivate the eye at first sight. He is one of those rare spirits whose inwardness is revealed little by little: a lofty soul, grave, tender, and tranquil, who loved the country, where silent nature ruminates far from the world and its restless eagerness to shine; a solitary rambler, simple, natural, and dignified; a painter of the gray side of nature, as harmonizing best with his own reflective and habitually pensive mood; a lover of mists and clouds, of moist and shady glens, of rocky declivities, and mountains. It has been said of his works that they are the embodiment of the poetry of melancholy. He certainly shows no liveliness, and in this respect he is singular among his more sprightly brethren. But he possesses a charm which is peculiarly his own—his supreme quality is repose. Before his works one is impressed with a feeling of serenity and profound peace. No one expresses better than Ruisdael the grandeur and amplitude of the heavens; he veils them with clouds, which gratefully temper the light that is delicately diffused in subtle gradations of values. His coloring is gray and cool, somewhat darkish in character,—the effect of time, perhaps,—varying from green to slate-color and brown, rather monotonous, but strong and harmonious; seemingly the outcome of a serious, aus-

tere, and robust nature. In the choice of subjects he did not confine himself to his native land, and while his journeyings are sometimes doubted, yet the majority of his works depict scenes of a Norwegian, German, or Swiss character, and are rendered in so admirable a manner, and with an accent so true to nature, that it is impossible not to believe that they were studied in these countries. He is supposed to have utilized the studies of Everdingen, and to have been inspired by them. Everdingen (1621-1675) was Ruisdael's senior, and exercised a great influence over him. He was more prolific as an engraver than as a painter, and the British Museum possesses a good collection of his prints, while of his paintings, which are rare, the Louvre has one, and the Amsterdam Museum four, mostly of Norwegian subjects, and similar to some of Ruisdael. Everdingen, while on a voyage to the Baltic, was wrecked off the coast of Norway, and was so profoundly impressed with the rugged beauty of the scenery of that country that he brought back numerous studies, thus introducing into Dutch painting the landscape of the extreme North, in contrast with those artists who went south, and brought back Italy to Holland.

Ruisdael never knew how to put figures of men and animals into his pictures, and for this purpose sought the aid of his fellow-artists Berchem, Van der Velde, Wouwerman, and Lingelbach. Berchem is said to have been his teacher, though Salomon van Ruisdael, his uncle, was his earliest instructor. Hobbema is said to have been Jacob's pupil. Ruisdael was not appreciated in his day, and his great labors did not enrich him. Neglected and obscure, he fell into dire want in his old age; and finally, in commiseration of his distress, rather than from respect for his genius, which was hardly suspected by any one, he was admitted to the almshouse of Haarlem, his native town, where he died March 14, 1682.

One of the most imposing and beautiful of Ruisdael's paintings—certainly, a magnificent work, before which one might linger unconscious of all time—is the river view of the Ryks Museum at Amsterdam, which will be better remembered as "The Windmill." It is a singularly impressive piece, representing a dead calm before a storm. The mill, with its dark, wide-spread arms, rises high in the canvas to the right, upon the summit of a terraced ground—a palisade lapped by the dark and quiet river. The white sail of a boat, toward mid-stream,—flat, and unruffled by the slightest breeze, and of exquisite value in its relief and in its delicate reflection in the water,—rises softly against the far-off horizon. Above is the

widesky, heavy with clouds, which break as they scale toward the top of the canvas, disclosing the gray blue of the heavens through the watery vapors. All is one harmonious and powerful tone composed of rich neutral browns and dark slate-colors, flowing and melting the one into the other in subtle gradations of shades—all shadow, so to speak, everywhere except the pink flush of light crowning the disks of two clouds high up near the middle of the sky, which is the final gleam of the retiring sun. The mysterious sense of expectancy which is the essence of this work is heightened by the strange light, as of an eclipse, that is diffused over all. I have felt at times that this picture was really the most entrancing thing I had ever beheld.

Equally charming and impressive is the "Gleam of Sunshine" of the Louvre. One is confounded by the beauty and the astonishing quantity of work in this most refined piece. In this, one would say, Ruisdael touches the limit of his skill.

The National Gallery of London, in addition to the many fine works it possesses by Ruisdael, has lately acquired another very fine one, which is remarkably well preserved. It is entitled "A Coast View at Scheveningen,"—Scheveningen is a watering-place near The Hague,—and is the gayest Ruisdael that I have seen. The sea is in shadow and the coast in sunlight, while the sky is piled with light, warm clouds. Figures of ladies and gentlemen dot the beach, some shading their eyes from the sun with their fans. Of a piece with this in sentiment is "Le Buisson" ("The Thicket") of the Louvre, shown on page 364. A bush, tormented by the wind, comes out with great force in the foreground, while the sunlight, which gilds the cumulus clouds, brightens the road where the man and dogs are, and glances along the fence, behind which is a glimpse of the village in the distance veiled in gray and watery vapors.

In these rich galleries, where masterpieces crowd one another, one may pause often before a rare piece, acknowledge its beauty, and pass on unmoved. But there comes a time, in the course of repeated visits, when the same picture discloses itself, and fills one with the rapture of a new discovery. Then, in the enthusiasm of the moment, one is ready to attribute to the new-found love every possible and imaginable excellence. Only in this way can I account for such a writer as Michelet, for instance, calling "The Tempest" by Ruisdael "the prodigy of the Louvre." But one might commit the same excess with all of these wonderful works of art; each one seems to tyrannize over everything else during the time one devotes to it.

WITH PICTURES BY LOUIS LOEB.

IX.

ALL were smoking and silent. Several spoke from the shadows as Rome stepped on the porch, and Rufe Stetson faced him a moment in the doorway, and laughed.

"Seem kinder s'prised?" he said, with a searching look. "Was n't lookin' fer me? I reckon I 'll s'prise sev'ral ef I hev good luck."

The subtlety of this sent a chuckle of appreciation through the porch, but Rome passed in without answer.

Isom lay on his bed within the circle of light, and his face in the brilliant glow was white, and his eyes shone feverishly. "Rome," he said excitedly, "Uncle Rufe is hyar, 'n' they laywayed him, 'n' —" he paused abruptly. His mother came in, and at her call the mountaineers trooped through the covered porch, and sat down to supper in the kitchen. They ate hastily and in silence, the mother attending their wants, and Rome helping her. The meal finished, they drew their chairs about the fire. The pipes were lighted, and Rufe Stetson rose, and closed the door.

"Thar 's no use harryin' the boy," he said; "I reckon he 'll be too puny to take a hand."

The mother stopped clearing the table, and sat on the rock hearth close to the fire, her withered lips shut tight about a lighted pipe, and her sunken eyes glowing like the coal of fire in its black bowl. Now and then she would stretch her knotted hands nervously toward the flames, or knit them about her knees, looking closely at the heavy faces about her, which had lightened a little with expectancy. Rufe Stetson stood before the blaze, with his hands clasped behind him, and his huge figure bent in reflection. At intervals he would look with half-shut eyes at Rome, who sat with troubled face outside the firelight. Across the knees of Steve Marcum, the best marksman in the mountains, lay the barrel of a new Winchester. Old Sam Day, Rufe's father-in-law and counselor to the Stetsons for a score of years, sat as if asleep on the opposite side of the fireplace

from the old mother, with his big square head pressed down between his misshapen shoulders.

"The time hev come, Rome," Rufe spoke between the puffs of his pipe, and Rome's heart quickened, for every eye was upon him. "Thar 's goin' to be trouble now. I hear as how young Jasper hev been talkin' purty tall about ye — 'lowin' as how ye air afeard o' him."

Rome felt his mother's burning look. He did not turn toward her or Rufe, but his face grew sullen, and his voice was low and harsh. "I reckon he 'll find out about thet when the time comes," he said quietly — too quietly, for the old mother stirred uneasily, and significant glances went from eye to eye. Rufe did not look up from the floor. He had been told about Rome's peculiar conduct, and, while the reason for it was beyond guessing, he knew the temper of the boy and how to kindle it. He had thrust a thorn in a tender spot, and he let it rankle. How sorely it did rankle he little knew. The voice of the woman across the river was still in Rome's ears. Nothing cuts the mountaineer to the quick like the name of coward. It stung him like the lash of an ox-whip then; it smarted all the way across the river and up the mountain. Young Jasper had been charging him broadcast with cowardice, and Jasper's people no doubt believed it. Perhaps his own did — his uncle, his mother. The bare chance of such a humiliation set up an inward rage. He wondered how he could ever have been such a fool as to think of peace. The woman's gossip had swept kindly impulses from his heart with a fresh tide of bitterness, and, helpless now against its current, he sullenly gave way, and let his passions loose to drift with it. "Whar d' ye git the guns, Rufe?" Steve was testing the action of the Winchester with a kindling look, as the click of the locks struck softly through the silence.

"Jackson; 'way up in Breathitt, at the end of the new road."

"No wonder ye hev been gone so long."

"I hed to wait thar fer the guns, 'n' I hed to travel atter dark comin' back, 'n' lay out 'n the bresh by day. Hit 's full eighty mile up thar."

"Air ye shore nobody seed ye?"

"WE HAIN'T FIGHTIN' WOMEN!"

ENGRAVED BY S. G. PUTNAM.

The question was from a Marcum, who had come in late, and several laughed. Rufe threw back his dusty coat, which was ripped through the lapel by a bullet.

"They seed me well 'nough fer thet," he said grimly, and then he looked toward Rome, who thought of old Jasper, and gave back a gleam of fierce sympathy. There were several nods of approval along with the laugh that followed. It was a surprise — so little consideration of an escape so narrow — from Rufe; for, as old Gabe said, Rufe was big and good-natured, and was not thought fit for leadership. But there was a change in him when he came back from the West. He was quieter; he laughed less. No one spoke of the difference; it was too vague: but every one felt it, and it had an effect. His flight had made many uneasy, but his return, for that reason, brought a stancher fealty from these; and this was evident now. All eyes were upon him, and all tongues, even old Sam's, waited now for his to speak.

"Whut we've got to do, we've got to do mighty quick," he began at last. "Things hev changed sence I left the mount'ins. I seed it over thar in Breathitt. The soldiers 'n' that scar-faced Jellico preacher hev broke up the fightin' over thar, 'n' ef we don't watch out, they'll be a-doin' it hyar, when we start our leetle frolic. We hain't got no time to fool. Old Jas knows this as well as me, 'n' thar 's goin' to be mighty leetle chance fer 'em to layway 'n' pick us off from the bresh. Thar 's goin' to be fa'r fightin' fer once, thank the Lord. They bushwhacked us durin' the war, 'n' they've laywayed us 'n' shot us to pieces ever sence; but now, ef God A'mighty 's willin', the thing 's a-goin' to be settled one way or t' other at last, I reckon."

He stopped a moment to think. The men's breathing could be heard, so quiet was the room, and Rufe went on telling in detail, slowly, as if to himself, the wrongs the Lewallens had done his people. When he came to old Jasper his voice was low, and his manner was quieter than ever.

"Now old Jas hev got to the p'int whar he says as how nobody in this county kin undersell him 'n' stay hyar. Old Jas druv Bond Vickers out 'n' the mount'ins fer tryin' hit. He druv Jess Hale away; 'n' them two air our kin."

The big mountaineer turned then, and knocked the ashes from his pipe. His eyes grew a little brighter, and his nostrils spread, but with a sweep of his arm he added, still quietly:

"Ye all know whut he 's done."

The gesture lighted memories of personal wrongs in every breast; he had tossed a fire-brand among fagots, and an angry light began to burn from the eyes that watched him.

"Ye know, too, thet he thinks he hez played the same game with me; but ye don't know, I reckon, thet he hed ole Jim Stover 'n' thet mis-

'able Eli Crump a-hidin' in the bushes to shoot me"—again he grasped the torn lapel; "thet a body warned me to git away from Hazlan; 'n' the night I left home they come thar to kill me, 'n' s'arched the house, 'n' skeered Mollie 'n' the leetle gal 'most to death."

The mountaineer's self-control was lost suddenly in a furious oath. The men did know, but in fresh anger they leaned forward in their chairs, and twisted about with smothered curses. The old woman had stopped smoking, and was rocking her body to and fro. Her lips were drawn in upon her toothless gums, and her pipe was clenched against her sunken breast. The head of the old mountaineer was lifted, and his eyes were open and shining fiercely.

"I hear as how he says I'm gone fer good. Well, I hev been kinder easy-goin', hatin' to fight, but sence the day I seed Rome's dad thar dead in his blood, I hev hed jes, one thing I wanted to do. Thar was n't no use stayin' hyar. I seed that Rome thar was too leetle, and they was too many fer me. I knowed it was easier to git a new start out West, 'n' when I come back to the mount'ins, hit was to do jes—whut—I'm—goin'—to—do—now." He wheeled suddenly upon Rome, with one huge hand lifted, and, under it, the old woman's voice rose in a sudden wail:

"Yes; 'n' I want to see it done befoh I die. I hain't hyar fer long, but I hain't goin' to leave as long as ole Jas is hyar, 'n' I want ye all to know it. Ole Jas hev got to leave fust. You hear me, Rome; I'm a-talkin' to you, boy; I'm a-talkin' to you. Hit 's yo' time now!" The frenzied chant raised Rome from his chair. Rufe himself caught the spirit of it, and his voice was above all caution. "Yes, Rome! They killed him, boy. They sneaked on him, 'n' shot him to pieces from the bushes. Yes; hit 's yo' time now! Look hyar, boys!" He reached above the fireplace and took down an old rifle,—his brother's,—which the old mother had suffered no one to touch. He held it before the fire—pointing to two crosses made near the flash-pan.

"Thar 's one fer ole Jim Lewallen! Thar 's one fer ole Jas! He got Jim, but ole Jas got him, 'n' thar 's his cross thar yit! Whar 's your gun, Rome? Shame on ye, boy!"

The wild-eyed old woman was before him. She had divined Rufe's purpose, and was standing at his side with Rome's Winchester in one hand and a hunting-knife in the other. Every man was on his feet; the door was open, and the boy Isom was at the threshold, his eyes blazing from his white face. Rome had strode forward.

"Yes, boy; now 's the time, right hyar before us all!"

The mother had the knife outstretched. Rome took it, and the scratch of the point on the hard steel went twice through the stillness. "One

more for the young un"; the voice was the old mother's. Twice again the scratching was heard.

The moon was sinking when Rome stood in the door alone. The tramp of horses was growing fainter down the mountain. The trees were swaying in the wind below him, and he could just see the gray cliffs on the other shore. The morning seemed far away; it made him dizzy looking back to it through the tumult of the day. Somewhere in the haze was the vision of a girl's white face — white with distress for him. Her father and her brother he had sworn to kill. He had made a cross for each, and each cross was an oath. He closed the door; and then he gave way, and sat down with his head in both hands. The noises in the kitchen ceased. The fire died away, and the chill air gathered about him. When he rose, the restless eyes of the boy were upon him from the shadows.

X.

It was court-day in Hazlan, but, so early in the morning, nothing was astir in the town that hinted of its life on such a day. But for the ring of a blacksmith's anvil on the quiet air, and the fact that nowhere was a church-spire visible, a stranger would have thought that the peace of Sabbath overlay a village of God-fearing people. A burly figure lounged in the porch of a rickety house, and yawned under a swinging sign, the rude letters of which promised "private entertainment" for the traveler unlucky enough to pass that way. In the one long, narrow main street, closely flanked by log and framed houses, nothing else human was in sight. Out from this street, and in an empty square, stood the one brick building in the place, the court-house, brick without, brick within; unfinished, unpenciled, unpainted; panes out of the windows, a shutter off here and there, or swinging drunkenly on one hinge; the door wide open, as though there were no privacy within — a poor structure, with the look of a good man gone shiftless, and fast going wrong.

Soon two or three lank, brown figures appeared from each direction on foot; then a horseman or two, and by and by mountaineers came in groups, on horse and on foot. In time the side alleys and the court-house square were filled with horses and mules and even steers. The mountaineers crowded the narrow street, idling from side to side; squatting for a bargain on the wooden sidewalks; grouping on the porch of the rickety hotel, and on the court-house steps; loitering in and out of the one store in sight. Out in the street several stood about a horse, looking at his teeth, holding his eyes to the sun, punching his ribs, twisting his tail; while the phlegmatic owner sat astride the submissive beast, and spoke short answers to

rare questions. Everybody talked politics, the crop failure, or the last fight at the seat of some private war; but nobody spoke of a Lewallen or a Stetson unless he knew his listener's heart, and said it in a whisper. For nobody knew when the powder would flash, or who had taken sides, or that a careless word might not array him with one or the other faction.

A motley throng it was — in brown or gray homespun, with trousers in cowhide boots, and slouched hats with brims curved according to temperament, but with striking figures in it: the patriarch with long, white hair, shorn even with the base of the neck, and bearded only at the throat — a justice of the peace, and the sage of his district; a little mountaineer with curling black hair and beard, and dark, fine features; a grizzled giant with a head rugged enough to have been carelessly chipped from stone; a bragging candidate claiming everybody's notice; a square-shouldered fellow surging through the crowd like a stranger; an open-faced, devil-may-care young gallant on fire with moonshine; a skulking figure with brutish mouth and shifting eyes. Indeed, every figure seemed distinct; for, living apart from his neighbor, and troubling the law but little in small matters of dispute, the mountaineer preserves independence, and keeps the edges of his individuality unworn. Apparently there was not a woman in town. Those that lived there kept housed, and the fact was significant. Still, it was close to noon, and yet not a Stetson or a Lewallen had been seen. The stores of Rufe and old Jasper were at the extremities of the town, and the crowd did not move those ways. It waited in the center, and whetted impatience by sly trips in twos and threes to stables or side alleys for "mountain dew." Now and then the sheriff, a little man with a mighty voice, would appear on the court-house steps, and summon a witness to court, where a frightened judge gave instructions to a frightened jury. But few went, unless called; for the interest was outside: every man in the streets knew that a storm was nigh, and was waiting to see it burst.

Noon passed. A hoarse bell and a whining hound had announced dinner in the hotel. The guests were coming again into the streets. Eyes were brighter, faces a little more flushed, and the "moonshine" was passed more openly. Both ways the crowd watched closely. The quiet at each end of the street was ominous, and the delay could last but little longer. The lookers-on themselves were getting quarrelsome. The vent must come soon, or among them there would be trouble.

"Thar comes Jas Lewallen!" At last; a dozen voices spoke at once. A horseman had appeared far down the street from the Lewallen end. The clouds broke from about the sun, and

a dozen men knew the horse that bore him; for the gray was prancing the street sidewise, and throwing the sunlight from his flanks. Nobody followed, and the crowd was puzzled. Young Jasper carried a Winchester across his saddle-bow, and, swaying with the action of his horse, came on.

"What air he about?"

"He's a plumb idgit."

"He mus' be crazy."

"He's drunk!"

The wonder ceased. Young Jasper was reeling. Two or three Stetsons slipped from the crowd, and there was a galloping of hoofs the other way. Another horseman appeared from the Lewallen end, riding hastily. The newcomer's errand was to call Jasper back. But the young daredevil was close to the crowd, and was swinging a bottle over his head.

"Come back hyar, Jas! Come hyar!" The newcomer was shouting afar off while he galloped. Horses were being untethered from the side alleys. Several more Lewallen riders came in sight. They could see the gray shining in the sunlight amid the crowd, and the man sent after him halted at a safe distance, gesticulating; and they too spurred forward.

"Hello, boys!" young Jasper was calling out, as he swayed from side to side, the people everywhere giving him way.

"Fun to-day—fun to-day! Who 'll hev a drink? Hyar's hell to the Stetsons, whar some of 'em 'll be 'fore night!"

With a swagger he lifted the bottle to his lips, and, stopping short, let it fall untouched to the ground. He had straightened in his saddle, and was looking up the street. With a deep curse he threw the Winchester to his shoulder, fired, and before his yell had died on his lips, horse and rider were away like a shaft of light. The crowd melted like magic from the street. The Stetsons, chiefly on foot, did not return the fire, but halted up the street, as if parleying. Young Jasper joined his party, and they too stood still a moment, puzzled by their resolution of the other side.

"Watch out! they're gittin' round ye! Run for the court-house, ye fools! — ye, run!" The voice came in a loud yell from somewhere down the street, and its warning was just in time.

A wreath of smoke came about a corner of the house far down the street, and young Jasper yelled, and dashed up a side alley with his followers. A moment later judge, jury, witnesses, and sheriff were flying down the court-house steps at the point of Lewallen guns: the Lewallen horses, led by the gray, were snorting through the streets; their riders, barricaded in the forsaken court-house, were puffing a stream of fire and smoke from every window of court-room below and jury-room above.

The streets were a bedlam. The Stetsons were

yelling themselves hoarse with triumph. The Lewallens were divided, and Rufe placed three Stetsons with Winchesters on each side of the court-house, and kept them firing. Rome, pale and stern, hid his force between the square and the Lewallen store. He was none too quick. The rest were coming on, led by old Jasper. It was reckless, riding that way right into death; but the old man believed young Jasper's life at stake, and the men behind asked no questions when old Jasper led them. The horses' hoofs beat the dirt street like the crescendo of thunder. The fierce old man's hat was gone, and his mane-like hair was shaking in the wind. Louder — and still the Stetsons were quiet — quiet too long. The wily old man saw the trap, and, with a yell, whirled the column up an alley, each man flattening over his saddle. From every window, from behind every corner and tree, smoke belched from the mouth of a Winchester. The last three or four Lewallens went down. A horse screamed; another struggled to his feet, and limped away with an empty saddle. Still another was rolling with his rider on the ground; two of the fallen men sprang into safety behind a house, and one lay still, with his arms stretched out, and his face in the dust.

From behind barn, house, and fence the Lewallens gave back a scattering fire; but the Stetsons crept closer, and were plainly in greater numbers. Old Jasper was being surrounded, and he mounted again, and all, followed by a chorus of bullets and triumphant yells, fled for a wooded slope in the rear of the court-house. A dozen Lewallens were prisoners, and must give up or starve. There was savage joy in the Stetson crowd, and many-footed rumor went all ways that night.

Despite sickness and Rome's strict order, Isom had ridden down to the mill. Standing in the doorway, he and old Gabe saw up the river, where the water broke into foam over the ford, a riderless gray horse plunging across. Later it neighed at a gate under Wolf's Head, and Martha Lewallen ran out to meet it. Across under Thunderstruck Knob, that night, the old Stetson mother listened to Isom's story of the fight with ghastly joy in her death-marked face.

XI.

ALL night the court-house was guarded and on guard. At one corner of the square Rufe Stetson, with a few men, sat on watch in old Sam Day's cabin — the fortress of the town, built for such a purpose, and used for it many times before. The prisoners, too, were alert, and no Stetson ventured into the open square, for the moon was high; an exposure anywhere was noted instantly by the whistle of a rifle-ball, and the mountaineer takes few risks except under

stress of drink or passion. Rome Stetson had placed pickets about the town wherever surprise was possible; and all night he patrolled the streets to keep his men in such readiness as he could for the attack that the Lewallens would surely make to rescue their living friends and to avenge the dead ones.

But the triumph was too great and unexpected. Two Baytons were dead; several more were prisoners with young Jasper in the court-house; and drinking began.

As the night deepened without attack, the Stetsons drank more, and grew reckless. A dance was started. Music and "moonshine" were given to every man who bore a Winchester. The night was broken with drunken yells, the random discharge of fire-arms, and the monotone of heavy feet. The two leaders were helpless; the inaction of the Lewallens puzzled them. Chafed with anxiety, they kept their eyes on the court-house or on the thicket of gloom where their enemies lay. But the woods were as quiet as the pall of shadows over them. Once Rome, making his rounds, saw a figure crawling through a field of corn. It looked like Crump's, but before he could fire, the man rolled like a ball down the bushy bank to the river. An instant later some object went swiftly past a side-street—somebody on horseback. A picket fired an alarm. The horse kept on, and Rome threw his rifle on a patch of moonlight; but when the object flashed through, his finger was numbed at the trigger. In the moonlight the horse looked gray, and the rider was seated sidewise. A bullet from the court-house clipped his hat-brim as he ran recklessly across the street to where Steve Marcum stood in the dark behind old Sam's cabin.

"Jim Hale 'll git him as he goes up the road," said Steve, calmly—and then with hot impatience, "Why don't he shoot?"

Rome started forward in the moonlight, and Steve caught his arm. Two bullets hissed from the court-house, and he fell back.

A shot sounded from the bushes far away from the road. The horse kept on, and splashed into Troubled Fork, and Steve swore bitterly.

"Hit ain't Jim. Hit's thet mis'able Bud Vickers; 'n' he 's been a-standin' guard out'n the bushes 'stid o' the road. Thet was a spy, I tell ye, 'n' the coward let him in and let him out. They 'll know now we 're all drunk! Whut's the matter?"

Rome's mouth was half open. He looked white and sick, and Steve thought he had been hit, but he took off his hat.

"Purty close!" he said, with a laugh, pointing at the bullet-hole through the brim, and Steve, unsuspecting, went on. "Hit was a spy, I tell ye. Bud was afeerd to stan' in the road, 'n' I 'm goin' out thar 'n' twist his neck. We

've got 'em, Rome! I tell ye, we've got 'em! Ef we kin git through this night, and git the boys sober in the morning—we 've got 'em sure!"

The night did pass in safety, darkness wore away without attack, and morning broke on the town in its drunken stupor. Then the curious silence of the Lewallens was explained. The rumor came that old Jasper was dead, and it went broadcast. Later, friends coming to the edge of the town for the bodies of the dead Lewallens confirmed it. A random ball had passed through old Lewallen's body in the wild flight for the woods. During the night he had spent his last breath in a curse against the man who fired it.

Then each Stetson, waked from his drunken sleep, drank again when he heard of the death. The day bade fair to be like the night, and again the anxiety of the leaders was edged with fear. Old Jasper dead and young Jasper a prisoner, the chance was near to end the feud. There would be no Lewallen left to lead their enemies. But again, they were well-nigh helpless. Already they had barely enough men to guard their prisoners. Of the Marcums, Steve alone was able to handle a Winchester. Outside the sounds of the carousal were in the air and growing louder. In a little while, if the Lewallens but knew it, escape would be easy, and the Stetsons could be driven from the town.

"Oh, they know it," said Steve. "They 'll be a-whoopin down out o' them woods purty soon, 'n' we 're goin' to ketch it. I 'd like to know mighty well who that spy was last night. That cussed Bud Vickers says it was a harnt, on a white hoss, with long hair flyin' in the wind, 'n' thet he shot plumb through it. I wish I 'd hed a chance at it."

Still, noon came again without trouble, and the imprisoned Lewallens had been twenty-four hours without food. Their ammunition was getting scarce. The firing was less frequent, but the watch was as close as ever. Twice a Winchester had sounded a signal of distress. All knew that a response must come soon; and come it did. A picket, watching the river road, saw young Jasper's horse coming along the dark bushes far up the river, and brought the news to the group standing behind old Sam's cabin. The gray galloped into sight, and, skirting the woods, came straight for the town—with a woman on his back. The stirrup of a man's saddle dangled on one side, and the woman's bonnet had fallen from her head. Some one challenged her.

"Stop, I tell ye! Don't ye go near thet court-house! Stop, I tell ye! I 'll shoot! Stop!"

Rome ran from the cabin with a revolver in each hand. A drunken mountaineer was raising a Winchester to his shoulder. Springing

from the back of the gray at the court-house steps was Martha Lewallen.

"I 'll kill the fust man that lifts his finger to hurt the gal," Rome said, knocking the drunken man's gun in the air. "We hain't fightin' women!"

It was too late to oppose her, and the crowd stood helplessly watching. No one dared approach, and, shielding with her body the space of the opening door, she threw the sack of food within. Then she stood a moment talking, and, turning, climbed to her saddle. The gray was spotted with foam, and showed the red of his nostrils with every breath as, with face flushed and eyes straight before her, she rode slowly toward the crowd. What was she about? Rome stood rigid, his forgotten pistols hanging at each side; the mouth of the drunken mountaineer was open with stupid wonder; the rest fell apart as she came around the corner of the cabin, and, through the space given, rode slowly, her skirt almost brushing Rome, looking neither to the right nor to the left; and when she had gone quite through them all, she wheeled and rode, still slowly, through the open fields toward the woods which sheltered the Lewallens, while the crowd stood in bewildered silence, looking after her. Yells of laughter came from the old court-house. Some of the Stetsons laughed also, some swore, a few grumbled; but there was not one who was not stirred by the superb daring of the girl, though she had used it only to show her contempt.

"Rome, you 're a fool; though, fer a fac', we can't shoot a woman; 'n' anyways I ruther shoot her than the hoss. But lemme tell ye, thar was more 'n sump'n to eat in thet bag! They air up to some dodge."

Rufe Stetson had watched the incident through a port-hole of the cabin, and his tone was at once jesting and anxious.

"Thet grub won't last more 'n one day, I reckon," said the drunken mountaineer. "We 'll watch out fer the gal nex' time. We 're boun' to git 'em one time or t' other."

"She rid through us to find out how many of us was n't dead drunk," said Steve Marcum, still watching the girl as she rode on toward the woods; "'n' I 'm a-thinkin' they 'll be down on us purty soon now, 'n' I reckon we 'll have to run fer it. Look thar, boys!"

The girl had stopped at the edge of the woods; facing the town, she waved her bonnet high above her head.

"Well, whut in the—" he said with slow emphasis, and then he leaped from the door with a yell. The bonnet was a signal to the beleaguered Lewallens. The rear door of the court-

house had been quietly opened, and the prisoners were out in a body, and scrambling over the fence before the pickets could give an alarm. The sudden yells, the crack of Winchesters, startled even the revelers; and all who could, headed by Rome and Steve Marcum, sprang into the square, and started in pursuit. But the Lewallens had got far ahead, and were running in zigzag lines, to dodge the balls flying after them. Half way to the woods was a gully of red clay, and into this the fleetest leaped, and turned instantly to cover their comrades. The Winchesters began to rattle from the woods, and the bullets came like rain from everywhere.

"T-h-up! T-h-up! T-h-up!" there were three of them—the peculiar soft, dull, messages of hot lead to living flesh. A Stetson went down, another stumbled, and another. Rufe Stetson, climbing the fence, caught at his breast with an oath, and fell back. Rome and Steve dropped for safety to the ground. Every other Stetson turned in a panic, and every Lewallen in the gully leaped from it, and ran under the Lewallen fire for shelter in the woods. The escape was over.

"Thet wuz a purty neat trick," said Steve, wiping a red streak from his cheek. "Nex' time she tries thet, she 'll git herself into trouble."

At nightfall the wounded leader and the dead one were carried up the mountain, each to his home; and there was mourning far into the night on one bank of the Cumberland, and, serious though Rufe Stetson's wound was, exultation on the other. But in it Rome could take but little part. There had been no fault to find with him in the fight. But a reaction had set in when he saw the girl flash in the moonlight past the sights of his Winchester, and her face that day had again loosed within him a flood of feeling that drove the lust for revenge from his veins. Even now, while he sat in his own cabin, his thoughts were across the river where Martha, broken at last, sat at her death vigils. He knew what her daring ride that day had cost her, with old Jasper dead out there in the woods; and as she passed him he had grown suddenly humbled, shamed. He grew heartsick now as he thought of it all; and the sight of his mother on her bed in the corner, close to death as she was, filled him with bitterness. There was no help for him. He was alone now, pitted against young Jasper alone. On one bed lay his uncle—nigh to death, There was the grim figure in the corner, the implacable spirit of hate and revenge. His rifle was against the wall. If there was any joy for him in old Jasper's death, it was that his hand had not caused it, and yet—God help him—there was the other cross, the other oath.

(To be concluded in the next number.)

A DREAM.

I HAD a dream of Love.
It seemed that, on a sudden, in my heart
A live and passionate thing leaped into being
And conquered me. 'T was fierce and terrible,
And yet more lovely than the dawn, and soft,
With a deep power. It roused a longing
To do I know not what — to give — ah yes!
More than myself! and failing that — to die —
(If only death were harder) could it make
One moment happier for that other soul.
This was the dream — but what is Love itself?

THE ATTACK ON THE SENATE.

RELATION OF THE STATES TO THE UNITED STATES.

THAT a government theoretically founded upon the rights of man, and on the hypothesis that the object of life is the pursuit of happiness, could exist for more than a century, and be stronger than it was at the beginning, requires some explanation. For, logically, Mazzini is right in expecting that a government so founded would end in despotism or anarchy.

In commenting on the French Revolution he says: "The political theory which dominated alike the great achievements and the great legislative manifestations of that revolution was the theory of Rights; the moral doctrine which promoted and perpetuated it was the materialistic doctrine which has defined life as a search after happiness on earth. The first inaugurated the sovereignty of the Ego; the second inaugurated the sovereignty of Interests. . . .

"The rights of different individuals, or of different orders of society, when neither sanctified by sacrifice fulfilled, nor harmonized and directed by a common faith in a providential moral

law, will sooner or later come into collision and lead to reciprocal shock; and each reassertion of such rights will wear the aspect of war and hatred. The absence of a law of duty, supreme over all rights, and to which all can therefore appeal, gradually and inadvertently leads men to the acceptance of *les faits accomplis*; success is gradually taken for the sign and symbol of legitimacy, and men learn to substitute the worship of the Actual for the worship of the True; a disposition which is shortly after transformed into the adoration of Force." And Force, says Mazzini, is in France translated into "administrative centralization."

And again: "The error of the French Revolution was not the abolition of monarchy. It was the attempt to build up a republic upon the theory of Rights, which, taken alone, inevitably leads to the acceptance of *les faits accomplis*; upon the sovereignty of the Ego, which leads us, sooner or later, to the sovereignty of the strongest Ego; upon the essentially monarchical methods of extreme centralization, intolerance, and violence — upon that false definition of life of which I have spoken above [of well-being as the aim of life], given by men educated

by monarchy, and inspired by a materialism which, having canceled God, had left itself nothing to worship but Force."

This government has not only endured for a century, but it has been steadier than any of the great powers existing at the time of its birth; it has changed less in form, and been subject to fewer fluctuations, and it has shown itself quite as adaptable as any of them to meet the changes in modern society. These changes have been so universal and deep as to affect all existing institutions. They are not alone the result of inventions which have revolutionized labor, production, distribution, and intercourse round the globe, but of the new spirit of this era, namely, that of associated humanity, which seems to be the providential and logical sequence of the extreme development of individualism in the eighteenth and nineteenth centuries. These associations are many of them only an enlargement and continuation of the struggle for rights, the conflict of classes, the formation of hostile camps; but the very fact of association, though selfish in motive, is a recognition of the interdependence of men, and in its way a dim perception that there are duties as well as rights in the social state. The United States has not only borne the strain of this revolution in modern life with quite as little disturbance of its fundamental economy as any other nation, but it has shown an elasticity and adaptability in it that is of good promise for the future.

This is the more remarkable, and the more requiring explanation, considering that we came into national being in the epoch in which individualism came to its extreme exposition in the French Revolution, when the very air was hot with the rights of man, and all minds were given up to a dream of well-being in *laissez-faire*; it requires explanation the more because we have not remained stationary with a territory and a population small and easily handled. We have increased our territory from a narrow strip on the Atlantic to the dimensions of a continent, and our population from three millions and a half to sixty millions, and meantime have been trying to assimilate a greater diversity of races, languages, and religious and irreligious conceptions than ever before were thrown together into a forming nation in the same space of time.

What is the secret of the stability and development of the United States?

It is a truism to say that no nation was ever made, out of hand, by statesmen in a closet, nor was any enduring government ever created by politicians. It is a growth, a perfectly logical growth, out of a past, and no form of government worthy the name is without traditions. The American Revolution did not create any-

thing; it severed our connection with Great Britain, and left us free to continue our historic development. Courage and action were stimulated doubtless by a solid as well as a rhetorical consideration of the rights of man. The Declaration put these into a proclamation which was a trumpet-call throughout the world. But the Revolution over, separation attained, the instinct of nationality on historic lines began to construct not only a *modus vivendi*, but a permanent form of national life in the most practical and businesslike manner, without the slightest reference to the *doctrinaire* propositions of the Declaration of Independence.

This, then, is the first word of explanation of the perpetuity of a government popularly supposed, especially by foreign observers, to be founded on the doctrine of the rights of man and the pursuit of happiness. It was not built on phrases. Even so sympathetic an observer as Mazzini did not apprehend our political discovery, nor the freedom of development in our double political state, which in a manner corrects the tendencies of that theoretical American school "which [he says] makes of the individual the center of all things; and by its doctrine that the law is atheist, and its belief in the sovereignty of rights and interests, instills materialism, individualism, egotism, and contradiction into the minds of men."

How early a national consciousness was defined and diffused among the independent colonies, become sovereign States, it may not be possible to determine. On June 21, 1783, Congress in the city of Philadelphia was threatened by "armed soldiers in the service of the United States." This was more than two months before the recognition of our independence by Great Britain in the Treaty of Versailles, and more than four years before the adoption of the Federal Constitution. In view of the peril to Congress, a proclamation was issued summoning the delegates to meet at Princeton on June 26:

BY HIS EXCELLENCY, ELIAS BOUDINOT, ESQUIRE.

President of the United States in Congress assembled.

A PROCLAMATION:

Whereas, a body of armed soldiers in the service of the United States, and quartered in the Barracks of this city, having mutinously renounced their obedience to their officers, did, on Saturday the twenty-first day of this instant, proceed, under the direction of their Sergeants, in a hostile and threatening manner, to the place in which Congress was assembled, and did surround the same with guards. And whereas Congress, in consequence thereof, did on the same day, resolve,

"That the President and Supreme Executive Council of the State should be informed, that the authority of the United States having been, that Day, grossly insulted by the disorderly and menacing appearance of a body of armed Soldiers, about the Place within which Congress was assembled; and that the Peace of this City

being endangered by the mutinous disposition of the said Troops then in the Barracks; it was, in the opinion of Congress, necessary, that effectual Measures should be immediately taken for supporting the public Authority:” And also whereas Congress did at the same time appoint a committee to confer with the said President and Supreme Executive Council on the practicability of carrying the said Resolution into due effect: And also whereas the said Committee have reported to me, that they have not received satisfactory assurances for expecting adequate and prompt exertions of this State for supporting the Dignity of the federal Government. And also whereas the said Soldiers still continue in a state of open Mutiny and Revolt, so that the Dignity and Authority of the United States would be constantly exposed to a repetition of Insult, while Congress shall continue to sit in this City, I do therefore, by and with the advice of the said Committee, and according to the Powers and Authorities in me vested for this Purpose, hereby summon the honorable the Delegates composing the Congress of the United States, and every of them, to meet in Congress on Thursday, the Twenty-Sixth day of June instant, at Princeton, in the State of New Jersey, in order that further and more effectual Measures may be taken for suppressing the present Revolt, and maintaining the Dignity and Authority of the United States, of which all Officers, of the United States, civil and military, and all others whom it may concern, are desired to take notice and govern themselves accordingly.

Given under my Hand and Seal at Philadelphia, in the State of Pennsylvania, this Twenty-Fourth Day of June, in the year of Our Lord one thousand seven hundred and eighty-three, and of the Sovereignty and Independence of the United States the seventh.

ELIAS BOUDINOT.

Attest

SAMUEL STERETT, *private secretary*.

[NOTE. This proclamation is printed, except that in the last line “our” is erased and “the” written in before the word Sovereignty, and “of the United States” is written in after the word Independence.—C. D. W.]

The proclamation began with this title: “By His Excellency Elias Boudinot, Esquire. President of the United States in Congress assembled.” It contained the phrases, “supporting the Dignity of the federal Government,” “the Dignity and Authority of the United States,” “all Officers of the United States, civil and military,” and was dated as “of the Sovereignty and Independence of the United States the seventh” year.

If a document of this importance and notoriety, assuming the style of “President of the United States in Congress assembled,” and using as comprehensible and descriptive such terms as “Dignity of the federal Government” and “Authority of the United States,” passed without contemporary challenge, there must have been at least a tacit conception of nationality such as these terms imply. This is, however, a minor consideration in view of the historic consciousness in the colonies that they were set apart from the rest of the world, and were so far one that the main business of the Constitution of 1787 was to form them into “a more perfect Union.”

When the convention of 1787 came together it had in hand the practical business of putting in shape a national idea, already well grown, and which could be fulfilled only in one way—that is, in a political system which should present it as a unit to the other nations of the world. It was probably not much concerned with theories, either of rights or of duties. It had to deal with facts, and these facts compelled it to construct the best political machine which had ever been devised. I am speaking here of politics in its lower sense, of a political machine which is able to keep in motion and on the track, and which, so far as we can see, is giving as fair play as any other to the great ideas that are transforming the world, bringing in that high conception of God and the human race recognized, but not much lived, in the Christian formula of “Love God supremely, and thy neighbor as thyself.” I believe, indeed, that no other form of government can so easily adapt itself to the coming political conception of worship and duty as ours.

Fortunately for the result, this national idea was confronted at the outset by another idea, just as firmly fixed in the consciousness of the colonies, now become States, as the need of federal union, and that was the consciousness of State autocracy and sovereignty. Neither could be surrendered. It was like the problem in mechanics of the meeting of an irresistible body with an immovable body; or like the dogmatic pillars of foreknowledge and free will. For union there must be concession and compromise. Now compromise of principle never settles anything; but compromise of methods, where the aim is the same, is the universal law of effective human action.

The result, in brief, was the organization of a kind of government absolutely new in the world. It was neither an Amphictyonic League nor a new dominion; it was not a confederation or a democracy; and if it could best be called a republic, it was a republic of a new type. Grouped around a national necessity, already having historic traditions and substance, was a congeries of sovereignties. The Constitution declared that the powers not delegated to the United States are reserved to the States respectively, or to the people. Both the surrender and the retention became not only parts of a bargain in a constitutional compact, but integral and necessary parts of the system of government itself. That which was surrendered—and it may be larger than at the time supposed—can never be recalled, and that retained can never be absorbed by the central authority without a fundamental change in the form of government—a form on which we are justified by the experience of a century in basing our expectation of the perpetuity of

the national entity which we call the United States. The portion of sovereignty retained is as essential as the portion surrendered to the perpetuity of the central authority.

Into the nature of the growth and the organization there entered a certain elasticity. It is fortunate that from the outset different views were taken of the Constitution. This fact gave play to the centrifugal and centripetal forces, to the conservatism and the radicalism that are the necessary constituents of every vital human society or government. This conflict of views badly strained the government in our civil war; but better that conflict and strain than the death involved in an absolute acquiescence in the sole sovereignty of the Federal Nationality on the one hand, or of the sole sovereignty of the individual States on the other.

The lesson of the war, to those who can see straight and think clearly, is that we cannot have an indestructible Union except of indestructible States—that is to say, that the life of the Union is in the life of the States.

The resistance to Federal centralization, that impairs the retained dignity and privileges of the States, is not a criticism upon our Federal government as it stands in its constitutional limits. The Federal government is to-day better administered than any State government, in regard to financial integrity, and freedom from bribery, and the undue influence of powerful corporations. But one reason why it is so is found in the liberty of diverse action in the freedom of the individual States. The peculiar double government gives room for experiment, for ambition in many arenas, and saves us many a time from what would be irreparable failures if tried in an absorbing centralization. Our system from top to bottom allows immense play for the vagaries as well as for the wisdom of men; in this way the States save the Federal government, and the towns save the States. Individual initiative, which might be fatal in a consolidated government, is comparatively harmless in one in which powers and duties are so distributed.

The forces which make for progress in humanity continually swing backward and forward. It is a continual fight to keep or restore the equilibrium. In this present moment of our national life the struggle must be to preserve to the States their territorial integrity, their dignity, their equality as States in the Federal union. If the theory is correct as to the two forces that make our peculiar national life, there can be no doubt that there is danger in the impairment of either of these forces. In a historic and true sense the Federal government was a growth inevitable in the circumstances, but the States ratified the Constitution. There can be no dispute about this origin, and the origin determines

forever the relation. The form of government can be changed, but it can be changed, except by revolution, only by the action of the States in the manner that they prescribed in the Constitution.

It seems to me that these simple statements cannot be made any plainer by argument and illustration. Accepting them as true as to the nature of our government, the practical question is, Whether the government would be better suited to the conditions of the people of the territory of the United States if the power and dignity of the States were abased, and the Federal authority grasped continually—for power grows by exercise—new authority and right of interference in State affairs. It is a very practical question, and vital. We are yet far from being a homogeneous people. Our territory embraces all climates, soils, industries, productions, with the consequent diversity of interests. In all these respects no two countries of Europe are more dissimilar than Maine and Louisiana, Florida and Minnesota, or the Atlantic coast and the Pacific slope. Close inspection increases the appearance of dissimilarity; it extends to habits, social and political methods of action, institutions, all educational and economic matters, and the spirit of the popular life. Nothing else is so striking in our history as this development of distinct State characteristics, in spite of similar bills of rights and general laws. Nothing should be more gratifying to the statesman who believes in the American system than the strong State pride which springs up in it the moment a new State is organized, as vigorous as it exists in any of the original thirteen.

This diversity of State development has another important aspect. It tends to make the United States interesting, and all our energies and ambitions are comparatively fruitless unless they make an interesting world for us to live in. A great part of the charm of Italy, in the outcome of both art and character, is due to the free evolution of local peculiarities in the self-governing cities and states.

It is as clear as sunlight that the harmonious expansion of the United States nation would have been impossible without this State autonomy and pride, and free play for diverse interests and character in real local self-government; and that its perpetuity and destined further expansion, in soundness and integrity, will be impossible if central authority should absorb and dominate all important State action.

I know that it is the opinion of many who would call themselves practical statesmen, that the government has already vitally changed, that it is not at all that which the founders made, and that it is fortunate that it is not; for the original Constitution was not, they say, a

working instrument, in our unexpected growth, and in the influx of new ideas and methods in modern society. It is true that every government, whether it holds by a written instrument or by custom and tradition, unless it is dead or moribund, must grow and adapt itself to the spirit of its age. But it must grow according to its nature, and it must not lose sight of its aim. We can accept great changes with equanimity so long as we adhere to the vital principle of our government, that which distinguishes it from all others. The danger is — and it is our especial danger — that we put success in the place of merit, that the immediate seeming advantage assumes greater proportions than the traditional sense of right, that a sordid materialism obscures our conception of the very foundations of our prosperity, and that more and more we have an easy-going acquiescence in *les faits accomplis*, with scarcely a protest or a struggle for the violated principle.

So powerful is the Federal government when it can be got to throw its weight on one side, and so accessible is it to a log-rolling combination of different interests, that the temptation is very strong to invoke its interference. Notwithstanding State pride, materialism has so eaten away patriotism and manliness, the desire for quick success is so exigent, the hunger for uninterrupted trade and far-reaching financial combination is so pressing, that there is a growing impatience of State limitations, and even of State lines. The same impatience is exhibited by politicians, — not by all politicians, — whose chief aim is personal gain by party success, when they find the States individually not as manageable as they fancy a more democratic and consolidated government would be. Even the Federal authority itself, in the presence of certain exigencies, like the New Orleans Italian incident, feels cramped, and inclined to take or demand new powers in the affairs of the States, apparently forgetting for the moment that the vital system of our government is of more importance to us than the opinion of any foreign nation concerning it. And these hosts of well-meaning men who have schemes of uniformity and conformity, — many of them excellent, and which the separate States ought to adopt, — unable to get State action, or even to try seriously for it (take divorce as an illustration), are rushing to the Federal government for interference, disregarding the fact that the morale and character of the nation will suffer much more from an attack upon its vital distinctive nature than from bearing these inconveniences, serious as many of them are.

The indications of impatience with State autonomy, and even with State lines, are many. These are some of them :

A lack of delicacy in the Supreme Court in

reaching into State conflicts, and too great readiness to take out a kink which it were much better for the State's honor that it should take out itself, at any inconvenience.

A demand, arising every four years, after the election, for a popular election of President, disregarding State lines.

The opinion that the small States should not have the same representation as the large States in the United States Senate, nor their senatorial weight in the electoral college. A practical illustration of this is the recent action of Michigan, voting to choose Presidential electors not on a State ticket, but by congressional districts, by which the weight of the State as a unit is lost. It is one of the vagaries of democracy. Originally in the formation of the government the democratic idea opposed a strong Federal union, and insisted upon greater reserved powers in the States; now the democratic idea seems to see its prosperity in an extension of Federal power, in centralization, and in weakening the weight of the States as units.

The abolition of the United States Senate altogether; as if this democratic representation of the States had any analogy whatever to the House of Lords, which represents an aristocracy.

The demand that the Federal government shall take larger control of education and agriculture, and according to some views become actually schoolmaster and farmer.

The demand that the government shall become the factor of productions, and that it shall push certain powers — like that to regulate interstate commerce — to any extent that greed and combination on the one hand, or agrarianism on the other, may dictate.

The demand for pecuniary relief and aid in every State emergency, as if the States were merely dependents on Federal bounty.

The statement of these proposals, in view of the principles here laid down, ought to be their refutation; for each one of them tends to lessen the dignity and importance of the States, and to cultivate that centralization which it is the glory of our American system to avoid. Of course none of these arguments affect those who desire, in place of our republic of republics, a vast democracy with an absolute centralized administration. It is the testimony of history that such governments have fallen into the grasp of the strongest hand, and then have disintegrated in confusion. Those who prophesy that this great nation cannot hold together, but must ultimately separate into East, South, West, and North fragments, contradict their fears only by their hope that the individual States, retaining their dignity and independence, will give full play to diversity of temperament and of interests.

If this conception of the nature of our government is the true one, the abolition of the Senate, or its change into a body representing population instead of States, would be a long step toward degrading the States and to removing the conservative element in our system; for the Senate, representing the States, is not merely a second chamber to check hasty legislation, but, chosen just as it is, an integral part of our peculiar government. The objections to the Senate at present are two: that it is an obstructive body, and that it is becoming a club of rich and incompetent men. As to obstruction, it can be said that the double chamber is the best safeguard against hasty, immature, and class legislation. If what is alleged against the character of the senators were true (as a matter of fact, comparatively few of them are rich¹), the deterioration would not be due to the form of our government, but to our general false, materialistic conception of life. And the character of the senators will be raised by the appreciation of the dignity and importance of the individual States, as it will be lowered by a degradation of the States. In the effort to maintain the equilibrium in a nation of home-ruled communities, it becomes imperatively necessary for the States, and especially the small States, to put forward their best men to represent them. The elevation of the State idea, therefore, contributes to the national character and greatness. It is a question in government, as it is in literature, of ideals. If the ideal is materialistic, of success without merit, no form of government can long hinder national degeneration.

The discontent with the American system,—the sovereignties limited within a sovereignty

¹ There were 88 senators in the Congress of 1892. Of them 6 could be classed as millionaires; 16 others as rich or very well off, having fortunes of from \$100,000

limited,—so far as it is expressed in the efforts to give the Federal government increased control over the States, is not a reasoned dislike of home rule. It mainly comes from ignorance, from a misconception of the power of legislation to better all individual material conditions. It is an ancient illusion that a change in the form of government is pretty certain to be for the well-being of all citizens. A man is unsuccessful and poor; he is in debt; he can get no help from his neighbors, for they are also in debt; business is dull; crops are poor, or crops are abundant and the market low; no help in the town, in the country, in the State. In this stagnation the man fancies that there is somewhere a power that can put new life into his affairs. Naturally he thinks of the distant, powerful Federal government. This unknown, vague power appeals to his imagination. Why does not the Federal government do something? This cry came from the West not long ago in tones of irritation, if not of threatening. It was the cry of the wagoner to Jupiter when his cart was stalled in the mire. If the Federal government had not power enough to make agriculture, manufacturing, transportation, in short all business, prosperous, then give it more power. It was the duty of the Federal government to give everybody money, and to make every speculation profitable.

In all this the political conception of the strength of our government is lost sight of, and the moral conception of what makes a great nation is wholly obscured. A great nation is made only by worthy citizens, and the American system, shorn of its distinctive feature of States tenacious of their ungranted powers and full dignity, joins the experiments that have failed.

to say \$700,000. The remainder of the 88 were of very moderate fortunes, and many of them could fairly be called poor.

Charles Dudley Warner.

POSTSCRIPT.

SINCE the above paper was written, over two years ago, there have been some changes in the personnel of the United States Senate. There have been also new causes of popular irritation against it, as an obstructive body tied to inaction and impotency by its own rules, and by its own conception of senatorial courtesy. However well founded this irritation may be, it should be directed against the individual members, and the methods by which some of them are chosen, and not against the Senate as an institution. The preservation of the Senate, with its full constitutional powers, as an integral part of our peculiar form of government, was never more necessary than at the present time of wild populist and communist agitation and misconception. The Senate is no more a rich man's club than it was when this paper was written, though it contains members who would not be there if they had not been rich, and members who were elected by methods subversive of all pure and permanent government. Even granting everything that has been charged against the Senate, a case is made out for its reformation (in material) and not for its destruction, or for any impairment of its powers and dignity. And that is a matter which rests with the people of each State, acting as a State. If the Senate at any time lacks ability and integrity, that is because the States choose to send their inferior and untrustworthy men. The voters alone are to blame. No good government can exist with ignorant and corrupt voters.

C. D. W.

WHAT GERMAN CITIES DO FOR THEIR CITIZENS.

A STUDY OF MUNICIPAL HOUSE-KEEPING.

IN Germany the community, organized centrally and officially, is a far more positive factor in the life of the family or the individual than in America. The German municipal government is not to be sharply distinguished from the municipality, and the municipality is the aggregation of human beings and human interests included within the territorial boundaries that fix the community's area and jurisdiction. There are, in the conception of a German city government, no limits whatever to the municipal functions. It is the business of the municipality to promote in every feasible way its own welfare and the welfare of its citizens. This conception must be carefully distinguished from socialism, with which it seems to have much in common, although I could easily give a great number of illustrations to show how independent of each other the two things are.

The German city holds itself responsible for the education of all; for the provision of amusement, and the means of recreation; for the adaptation of the training of the young to the necessities of gaining a livelihood; for the health of families; for the moral interests of all; for the civilizing of the people; for the promotion of individual thrift; for protection from various misfortunes; for the development of advantages and opportunities in order to promote the industrial and commercial well-being; and incidentally for the supply of common services and the introduction of conveniences. The methods it employs to gain its ends are sometimes those advocated by the socialists, and sometimes they are diametrically opposite.

PUBLIC WORKS IN GERMAN CITIES.

It is not strange that the American observer should at first be most impressed by the splendid efficiency of German city governments in the prosecution of public works and enterprises. This is largely due, of course, to the superb and continuous organization of the executive administration. The burgomaster is actually or virtually a life incumbent, and his magisterial associates who conduct the various departments either hold their places by life tenure or else upon terms practically as permanent. The city council, representing the people's will, is renewed by instalments. The terms are long, and reëlections are so usual that the personnel

of the body is transformed very slowly, and nothing like an abrupt or capricious change of policy is ever to be feared. Consequently it is possible to make long plans, to proceed without haste, to distribute burdens through periods of years, to consult minute economies, and to make an even, symmetrical progress that has far more of tangible achievement to show for every half decad than could be possible under our spasmodic American methods. A German city, let us say, decides to have well-paved streets, and to modernize its whole thoroughfare system. It proceeds to learn everything that can possibly be known about street-making. The effect of its immediate climatic conditions upon different kinds of materials is studied theoretically and experimentally. The municipal department of public works does not move a step until every detail of the problem from the engineering and from the financing standpoint has been thoroughly solved.

All over Germany these departments are busy carrying out the mandates of their respective municipalities, and creating on permanent lines the material attributes of the well-ordered modern city. Nothing is hurried, yet nothing seems to lag when once begun. Street systems are rectified. New suburbs are judiciously laid out. Here a new water-supply, introduced from high sources, employs engineers, architects, and conduit-builders. In another city new sewers are in progress, on a plan for the complete and final drainage of the place. River frontages are undergoing magnificent improvement for purposes of water-traffic. Gas-works, electric plants, market-houses, public abattoirs, school-buildings, epidemic hospitals, bridges, wharves, subways, or whatever else the expanding requirements of the municipality may ordain — all are under construction by methods that insure the highest utility and the greatest permanence. All goes on with a combination of close economy and generous foresight such as no other nation has ever exhibited.

THE MODERNIZING OF BERLIN.

BERLIN's new era of municipal progress may be said to date from 1861. In that year it annexed considerable suburban territory. The old city walls were torn down to give free communication with the new quarters. The emperor William I. came to the Prussian throne in 1861, and his accession marked the beginning of a

liberal policy on the part of the state toward the city of Berlin. The new *rath-haus* (city hall) was begun in that year. Prussia's advance among European powers gave Berlin an ambition to rival Paris. The influence of the Haussmann transformation of Parisian streets was felt in the German capital. The successive wars and Prussian victories of 1864, 1866, and 1870-71, ending with the formation of the German empire and the designation of Berlin as its capital, enormously stimulated the municipal life. A policy of bold initiative was entered upon. Boulevards were constructed, and the new suburbs were handsomely laid out. The royal government had always controlled the inner street-system,—together with the paving, the drainage, the Spree navigation, and the bridges,—and had allowed a private company to furnish the water-supply. A private company also controlled the gas-supply. Education was largely in private or clerical hands. But the awakened municipality acquired from the general government in 1874 the control of the streets, and set about reforming them. It entered upon projects of widening and straightening lines of main thoroughfare, and of laying good pavements. The process has gone on steadily to this day, with magnificent results. The city acquired control of the shallow and sluggish Spree, embanked it with massive walls, flanked it with broad stone quays, dredged it for heavy traffic, and replaced its old wooden bridges with modern structures of stone and steel.

In 1873 the municipality acquired control of the water-supply, and at once proceeded to create a new and improved system. It also determined to abandon the growingly dangerous practice of draining the city sewage into the diminutive Spree; and it entered not only upon a marvelous system for the disposal of sewage, but also proceeded, in the interest of the public health, to create a great series of sanitary institutions, including municipal slaughter-houses and market-halls, hospitals for infectious diseases, unified arrangements for public and private cleansing, and systematic inspection of food, houses, and all conditions affecting the public health. The beginnings of the municipal gas manufacture had dated from about 1870, and the success of the experiment led to very great enlargements in 1875. Meanwhile, education had been municipalized with an energy and thoroughness perhaps unprecedented anywhere. Manufactures and railways had been encouraged, and technical and practical education had been so arranged as to promote Berlin's development as a center of industry. Parks, recreation-grounds, and gymnastic establishments were provided for the people. Housing was at length brought under

municipal regulations of a very strict character, in the interest of the working-masses; and an excellent and comprehensive system of street-railways was devised—under municipal inspiration, though under private management—for the better facilitation of local transit, and the wider distribution of the rapidly growing population. Berlin is about four times as large as it was in 1860, and the immense influx of people, chiefly of the working-classes, has been received and accommodated with an ease that seems nothing short of magical.

BERLIN'S WATER-SUPPLY AND DRAINAGE.

THE sanitary authorities at Berlin have led the world in recent inquiries into the relation of water-supply to public health, and the character of the service rendered by the Berlin water-works is constantly improving. Science has triumphed notably over natural difficulties, and the municipality will be able, in developing the service, to keep pace with the demand. When the Berlin authorities decided to establish a metropolitan water-supply, they also determined upon another and still greater undertaking. They perceived that the modern city requires, as the complement of a good system of pure water distributed through every street and every building, an equally good system of house-drainage and of sewage-removal and -disposition. The modern ideal is a strong, pure volume of water, derived from sure and constant sources that are beyond danger of pollution, forced by ample pressure through a network of mains and pipes penetrating every abode, and then, contaminated by use and saturated with refuse from closets, kitchens, and street-drainage, collected again, and carried off in sewage tunnels to some safe destination.

Berlin had drained into the Spree, and had used vaults for solid waste instead of the modern all-receiving sewers. Good drainage was as necessary as good water, and the permanent discharge of unpurified sewage into the Spree was out of the question. Artificial purification, and the manufacture of fertilizers from the precipitated solids, would have been possible; but Berlin wisely adopted the better plan of natural purification by the irrigating of land. Immense research was bestowed upon the subject, with the result that the Berlin drainage is the most perfect in the world, and, so far as physical forms and conditions are concerned, is unquestionably that city's most notable achievement in municipal housekeeping. The city was divided into twelve drainage districts, called "radial systems," the divisions being arranged upon topographical considerations. The sewers of each district were to converge at a common center, at which would be located a receiving-

basin and steam pumping-works. A tunnel was to connect each of these district centers with the reservoirs and pumping-works of a sewage-farm some miles distant.

THIRTY SQUARE MILES OF SEWAGE-FARMS.

EXCEPTING for some thinly populated outskirts, all the houses of Berlin are now connected with the new drainage-works, which are carrying annually from 60,000,000 to 70,000,000 cubic meters of sewage to be distributed by scientific irrigation over the surface of municipal farms having an aggregate extent of more than 20,000 acres, or upward of thirty square miles. Additional land has been bought from time to time. It is interesting to note that a city the municipal limits of which include only twenty-five square miles should have acquired an outside domain of thirty square miles as a place for the discharge of its liquid waste. The Berlin sewage-farms were tracts of rather poor and sandy soil; but land is not very cheap in the vicinity of so great a city, and the purchase-money reached about 15,000,000 marks. An additional 15,000,000 marks had been spent prior to 1893 in laying out the farms, trenching and tiling them for irrigation purposes, and equipping them with the necessary buildings and improvements. At that time there had been expended upon the radial system in Berlin and the discharging-tunnels about 65,000,000 marks, making a total investment of nearly 100,000,000. With the further outlay to be made in completion of the system as a whole, the new Berlin sewage-works, including the farms and their improvements, may perhaps be said to constitute a 120,000,000-mark (\$30,000,000) plant.

From an American point of view it is novel to consider a city's drainage-works as a self-sustaining or productive enterprise, like its waterworks and its gas-works; but it is in that light that Berlin regards it. Before the new system was introduced, the citizens had to pay for the removal of night-soil, etc. The city now charges a moderate sewage rate against all property that the system serves. The parts of the farms that have been brought under closest cultivation are already very profitable, although the net income from the entire thirty square miles does not yet pay the full interest on the investment, for purchase and improvement, of 30,000,000 marks. The fertilizing value of the sewage is so great, and the administration of the farms is so superb, that within a very few years the investment will have become enormously productive. On each of the farms are nurseries of young fruit-trees, and considerable areas of orchard have already begun to yield some fruitage. Prodigious crops of vegetables are grown, and the yield per acre of cereals and

grass is similarly remarkable. Within a reasonable period the sewage-farms will have earned profits enough to pay back all that was invested in them, and eventually they will be a source of surplus income that will materially lessen the load of municipal taxation. Meanwhile, from the sanitary point of view, the system is an unqualified success.

HAMBURG'S NEW SYSTEM OF FILTERED WATER.

THE problems of water-supply and drainage—one or both—have in recent years forced themselves upon many other German cities besides Berlin. Hamburg's experience is especially worthy of note. The second city in the empire, with a population of 600,000, with great wealth, and vast shipping and commercial interests, Hamburg had long been aware of the need of a pure water-supply. Its situation in a flat region at the head of tidal water in the Elbe, had seemed to make necessary the continued use of the river water, in spite of its unwholesome condition. But Hamburg received a great impetus in all directions from its inclusion in the German Zollverein, a few years ago, and from the success of the joint municipal and imperial project of great harbor improvements. As had happened earlier in Berlin, a conjunction of political, commercial, and sanitary motives now stirred the Hamburg authorities to an unprecedented activity. A magnificent new city hall, to be opened this year, was entered upon as a symbol of the new municipal era. As the prime sanitary reform, it was determined to construct the greatest and most complete filtration plant in the world, to supply the city with an unlimited quantity of Elbe water purified to meet the severest tests of chemist or bacteriologist. The new works were under construction when the frightful cholera epidemic of 1892 swept away thousands of victims. It was demonstrated that the disease had been propagated through the use of Elbe water, and that filtration would remove the cholera germs. The new works were to have been ready for use in 1894; but by great effort they were completed and put into operation in May, 1893.

During last summer and autumn, the river water, when introduced into the subsidence basins and filters, contained millions of cholera germs to the cubic inch. As it emerged, and was supplied to the city, the water was as safe and wholesome as if it had been brought from high Alpine sources. The filtered water averted the return of the epidemic in 1893. So striking an object lesson in municipal health administration has never been presented before, and its effect will have been felt everywhere in Europe. Hamburg, meanwhile, is introducing various other sanitary reforms of great value.

REFORMED WATER AND DRAINAGE AT
BRESLAU AND MUNICH.

BRESLAU, which ranks fifth in population among German cities, is one of the model municipalities. It lies on both banks of the river Oder, from which stream it pumps its water-supply. It has for some years successfully filtered the water, and it also has carried into full execution a system of modern sewers and *rieselfelder* (sewage-farms) which leaves little to be desired. The waterworks are a source of large net income to the city, and the farms, which are rented to tenants, seem also to be a profitable investment. The entire population is served by the waterworks, and all the house and street drain empty into the tunnels that discharge into the basins of the *rieselfelder*.

Munich had long suffered from an unenviable reputation throughout Europe for its high mortality rate, and particularly for the prevalence of malignant forms of typhoid fever. There were thousands of cases of fever every year, and the number of deaths from that cause alone was high in the hundreds, in some years exceeding a thousand. In 1883 a new water-supply from pure springs in the Alps was brought into Munich, tainted wells were closed, and the foul river water was superseded for drinking purposes. As soon as the new order of things had become fairly established, the yearly deaths from typhoid fever could almost be counted upon the fingers of one's two hands. The new water-supply of Munich was attended by other sanitary reforms, including improved sewers and the substitution of a magnificent municipal abattoir, with all modern conveniences and ample cattle-markets and yards, for about eight hundred small private slaughter-houses that had existed in different parts of the city. The introduction of Alpine water seemed a bold undertaking at the time but it has been an easy matter to make the works earn surplus profits after paying all expenses and providing for interest and sinking-fund. I should be glad if space allowed me to describe the improved water and drainage of Frankfort-on-Main and of smaller cities such as Brunswick and Dantzig.

STREET-CLEANING IN GERMANY.

CLEAN streets and alleys, and immaculate back yards, were certainly not conspicuously characteristic of German cities twenty years ago; but the recent improvements in water-supply and drainage, as well as in general sanitary administration, might naturally be expected to have the accompaniment of reformed cleansing arrangements. Moreover, clean streets had been made feasible by the smooth, new paving of roadways and sidewalks. As a

rule, the streets of German cities are now kept in a state of enviable cleanliness. Berlin's thoroughfares are scrubbed and swept continually, under a system that is perfectly organized, and that costs less than \$500,000 a year. It is a flexible system, which provides for the prompt increase of workmen in bad weather, and is never helpless in the presence of a sudden snow-fall. The central streets of all the leading German cities are thoroughly cleansed once a day, at night or very early in the morning, in addition to which "flying columns" of street-cleaners are on constant day duty to remove horse-manure and other accumulations. In the residence quarters of most German cities it is still the rule that street sweeping is an obligation that rests upon the property-owners or occupiers. Berlin, Dresden, Hamburg, Frankfort, and some smaller cities, provide a full municipal service, while in Leipsic, Cologne, Stuttgart, and other places, the cleansing is partly municipal and partly private.

So far as I am aware, Dresden is the most fastidiously clean of all the German cities. It extends the uniform daily cleansing to a large area. Berlin's district of daily cleansing is comparatively small; but the area the streets of which are swept from three to five times a week is large, and all the important outlying streets are well cleaned twice a week. If I should name the small sums for which Hamburg, Dresden, Bremen, Dusseldorf, Essen, and other cities obtain remarkably thorough and satisfactory results, I am afraid I should not be believed by American municipal authorities. Everywhere in Germany one notes the perfect organization of these services, and their rapid improvement as the standards of civilized life become more rigorous. The trend in Germany is toward a unified direct municipal service of street-cleansing, sprinkling, and garbage-removal; and, while much diversity of system exists at present, there is no failure in any large German town of that exercise of full municipal authority and responsibility which prescribes what shall be done, and sees that the prescription is carried out.

SUCCESS OF MUNICIPAL GAS-WORKS.

ABOUT two thirds of the larger German cities own and operate gas-works as municipal enterprises. The list of such cities numbers approximately thirty. Public lighting, under modern conditions, has grown to be a very extensive and necessary social service. Nearly a quarter of all the artificial light required by the denizens of many modern European cities is used in streets and public places. Obviously, the cities that reserve the gas-supply as a municipal monopoly are enabled to provide for public lighting at the lowest absolute cost of

manufacture. With the unlimited technical and administrative skill that they control, German cities are in my judgment at a distinct advantage over private corporations in the economical conduct of the gas business. The tendency of municipal ownership is, moreover, toward a more complete street-illumination, and a more thoroughly diffused private use of an article that is at once a civilizing agent and a police protection. As a monopoly enterprise it is of course easy to make the works pay good profits. The cities which are now supplied by private companies will probably, one after another, as franchise periods terminate, assume municipal control.

Meanwhile, most of these cities secure gas for public illumination at greatly reduced prices, and the cost to private consumers is strictly regulated. Munich is the largest of the cities that are supplied by a private company; and I remember at one time observing with satisfaction that the municipal laboratory of that city tests the illuminating power of the gas every day, in order to protect the citizens from an inferior quality. This Munich circumstance fairly illustrates the full municipal supervision that is exercised in Germany over the gas-supply, even when under private ownership. For the benefit of American cities entertaining the absurd delusion that there can be beneficial competition in the gas business, it should be remarked that only one of all the cities of Germany, namely, Frankfort-on-Main, has chartered rival private gas companies; and the price of gas is higher there than anywhere else in the country. Among the cities that own their own gas-works are Berlin, Hamburg, Breslau, Leipsic, Dresden, Cologne, Königsburg, Bremen, Dusseldorf, Nuremberg, Dantzic, Magdeburg, Chemnitz, Barmen, Stettin, and Brunswick. The principal ones supplied by private companies are Munich, Stuttgart, Frankfort-on-Main, Hanover, Strasburg, and Altona.

PUBLIC CONTROL OF ELECTRICAL PLANTS.

In the matter of municipalizing electricity, the German cities have moved somewhat slowly; but the marked tendency is toward the appropriation for the welfare of the community of all advantages and profits to be derived from the distribution of light and power from central electric stations. The governmental operation of telegraph and telephone lines, and the municipal supply of gas for lighting and for motors, would naturally have predisposed the German communities to a public control of such newer services as electric lighting and the electric distribution of power. Berlin is an exception to the rule, perhaps because the feasibility of public control was not so apparent when the Berlin Electrical Company obtained

its franchise. The Berlin works were opened in 1886.

Hamburg's municipal plant was ready in 1889, and that city is peculiar among its German contemporaries, in the fact that it leases out both its gas-works and electrical works to be operated for it by a private contractor. Lubeck, Barmen, Königsberg, Metz, Darmstadt, and Duisburg were operating general municipal electrical works before the end of 1890. More recently, the five important cities of Breslau, Cologne, Dusseldorf, Altona, and Cassel have built municipal plants. And within a few months both Dresden and Stuttgart have decided to enter at once upon the same policy. Leipsic, on the other hand, has preferred a different arrangement, and has given a franchise to the Siemens & Halske Company, on terms regarded as specially favorable to the city and the public. The works are to be in operation in 1895, and at the end of the franchise period, which is a long one, they are to become municipal property without cost.

TERMS OF THE BERLIN ELECTRIC-WORKS FRANCHISE.

ALTHOUGH Berlin and Leipsic have given electric-light franchises to private companies, let no reader imagine that the interests of the municipalities and of the citizens were betrayed or left at any point unguarded. As an example of what is considered a suitable form of franchise in Germany, I wish I could quote the entire revised contract made in 1888 between the Berlin city authorities and the Berlin Electric Works Company. It defines the area within which the company may operate. It requires, under heavy penalties, that the area be fully provided with main wires within a brief period specified in the contract. As compensation for permission (not exclusive) to use the streets, it is agreed that the municipal treasury shall receive ten per cent. of the company's gross receipts, and, further, that whenever the company earns a net profit of more than six per cent. on its actual investment of capital, the city treasury shall receive twenty-five per cent. of such excess profits, in addition to its ten per cent. of the gross income. Still further, it is agreed that the company shall provide the magnificent electric illumination of Unter-den-Linden, together with that of Potsdamer-platz and the Leipziger-strasse, with all expense of maintenance and attendance, at a price so low as to be nominal. Besides this, a special and favorable rate is provided for such further electric street-lighting as the municipality may desire. The city authorities retain the fullest rights of inspection both technical and financial, and all the company's affairs are open

to the knowledge of responsible public officials. The city requires the deposit of 250,000 marks as caution money, and holds the company down to the strictest rules in regard to the laying of wires and the breaking up of street or sidewalk surfaces. The company is required, moreover, to maintain a renewal fund equal to twenty per cent. of its invested capital, and this fund, in the form of Berlin municipal bonds, must be kept on deposit with the city magistrates. Accompanying the agreement was an official schedule of rates that the company was authorized to charge its private patrons. No departures from established rates can be made without consent of the city authorities. Finally, the municipality reserves the right to buy the entire plant and all its appurtenances at any time after October 1, 1895, upon a fair basis of valuation carefully provided for in the contract. The arrangement is the perfection of business lucidity and intelligence. What if New York, Chicago, Boston, and Philadelphia had based all their grants of valuable municipal privileges in the past thirty years upon principles as sound as those that protect German municipal interests in contracts with quasi-public-supply corporations!

It would be interesting, if space allowed, to enter into details regarding German franchises to street-railway companies. It is enough, perhaps, to say that while the business of passenger transit in cities is far more highly developed and profitable here than in Germany, it is under incomparably closer municipal control there than here, and it is customary to pay all they are worth for privileges. Such payments in many cities are in the form of a tax of from 8 to 10 per cent. or more upon gross receipts.

THE HOUSING QUESTION AND THE BERLIN DEATH-RATE.

ALL thorough students of the problems of life in modern cities are now agreed that the housing of the people is the question that requires, from this time forth, the deepest consideration and the boldest and most serious treatment. It is a problem that has many phases. It was the unapproached excellence of their statistical work that enabled the Germans to grasp the social importance and pressing nature of this problem. Circumstances that I have recounted were, and are, causing their cities to grow very rapidly. The temptation was strong upon property-owners to make their tenement hives hold the largest possible swarms. Rear buildings were hastily run up to fill court-room spaces that ought to have been spared for necessary air and light.

German cities count and classify everything with a minuteness that Americans would think

absurd. In fact, however, this statistical work is of all things the best service that German municipalities render to their citizens. It was about ten years ago that Berlin began to give the most exhaustive statistical attention to the relation of the housing of the people to their condition of health.

In 1885, in Berlin, it was found that 73,000 persons were living in the condition of families occupying a single room in tenement houses; 382,000 were living in houses (I mean by "house" the distinct apartments of a household) of two rooms; 432,000 occupied houses of three rooms; and 398,000 were quartered in the luxury of houses having at least four rooms. It was found that although the one-room dwellers were only one sixth as numerous as the three-room dwellers, their rate of mortality was about twenty-three times as high, and the actual number of deaths among them was four times as great. Compared with dwellers in houses of more than four rooms, the mortality of the one-room dwellers was at a thirty times greater rate. In a total population at that time of 1,315,000, the 73,000 people who lived in one-room tenement quarters supplied nearly half the entire number of deaths. Their death-rate per thousand for the year was 163.5, or about one sixth their entire number, while the two-room dwellers sustained a death-rate of only 22.5, the three-room dwellers escaped with the marvelously low rate of 7.5, and the well-to-do people, who had four or more rooms for their household, suffered by death only at the rate of 5.4 per thousand of population. We are wont to regard an annual city death-rate of from twenty to twenty-five per thousand of the total population as normal, and satisfactorily small. We have not, however, become accustomed to the minute analysis of such a rate, which might show that the respectable and "normal" average was made up of rates for different classes varying from 3 or 4 per thousand to 200 per thousand. Half the mortality of the Berlin one-room dwellers occurred in households where five or more persons occupied the one apartment.

SOME STATISTICAL REVELATIONS.

RESULTS of the more special inquiries set on foot in connection with the last census of Germany have within a few months become available, and some of them seem to me intensely interesting. For example, it is highly significant of the efficiency of recent municipal measures to find that the process of depopulating the congested districts in the heart of Berlin has fairly begun. Thus, while the city's total population within unchanged municipal boundaries has, in the five years from 1885 to 1890, in-

creased from about 1,300,000 to nearly 1,600,000, there has been a marked falling off in the five most central districts. In one there has been a loss of 178 families in every thousand. In two others the decline has amounted to 110 families in every thousand, or more than one tenth. Meanwhile the outer districts have grown enormously, two of them doubling their population in the five years. In general it may be said that the growth of Berlin's population has lately been concomitant with a movement from the center toward the suburbs that is proceeding at a higher velocity than the increase in total numbers. The new construction of houses conforms to the strict sanitary regulations to which I have referred, and to the broad and bold projects of the municipality for the control of population density in all the new neighborhoods.

Berlin's population as yet is almost wholly housed in tenement or apartment buildings. About half the inhabitants of the city now live in buildings containing not fewer than one hundred people. Such a system has its advantages and its disadvantages. It makes the distribution of water and gas easier, and renders perfect sewer-connections more feasible. Everything depends upon the question whether or not the building is a proper one of its kind. In 1885 about 120,000 Berliners lived in cellar or basement rooms. The actual number of such subterranean dwellers was about the same in 1890, but the relative number had decreased somewhat. It is the policy of the authorities to discourage or forbid as rapidly as possible the occupancy of unwholesome basements.

ONE-ROOM HOUSEHOLDS IN VARIOUS GERMAN CITIES.

BERLIN is not alone in the employment of measures to promote improved housing. All the other leading German cities have made similar statistical investigations, and most of them are endeavoring to reform the evils that they now fully comprehend. Breslau's population is the most seriously congested in all Germany, the number of one-room families being almost incredible. Including some forty thousand people who enjoy the privilege of a *zubehör* (a small unwarmed, closet-like appurtenance of a room), there were in 1885 not less than 150,000 people, out of a total Breslau population of 287,000, who lived in houses of only one warmable room. It should be remarked that besides the 73,000 Berliners who lived on the absolutely one-room family basis, there were 498,000 who had only one main living room per household, but were lifted somewhat above the status of the 73,000 by possessing the boon of one or two of those precious

zubehör. Dresden appears to the visitor so spacious and lovely that it is hard to believe that its working-classes are huddled miserably into one-room tenement apartments. Yet it was true, in 1885, that 110,000 people out of a total Dresden population of 228,000 were living in the condition of families occupying one main room. Fortunately, most of these Dresden people were able to command the advantage of a *zubehör*, as a possible retreat from the otherwise absolute necessity of being born, eating, sleeping, suffering, and dying within the four walls of one stuffy room. Among the smaller cities, the housing conditions of Magdeburg and Görlitz have been notably bad. Considerably more than half of Magdeburg's population has belonged to the status of the one-room dwellers. Hamburg has housed a full quarter of its population on this dense plan, and its compact neighbor Altona has had to confess a much worse condition of affairs. Leipzig and Munich, the third and fourth cities of Germany, afford strikingly better accommodations for their working-people.

Happily, in all the cities the worst is already past. The conditions revealed in 1885 have led to municipal policies that are making appreciably for a better average quantity and quality of house room.

MUNICIPAL MEASURES AGAINST EPIDEMICS.

BERLIN's sanitary system has been growing more and more perfect for many years. Isolation in crowded tenement-houses being practically impossible, the city has constructed, on the most elaborate scale, great hospitals for the treatment of all forms of epidemic malady. Disinfection stations also, fitted up with huge apparatus for the treatment of clothing, bedding, and various movables from homes where cases of infection have been found, are in constant use. Berlin has no further fear of inability to cope with any hitherto dreaded form of contagious or infectious disease, for its health-appliances are in readiness for the most dire emergency that experience has taught its medical and bacteriological experts to anticipate as possible. It has for many years enjoyed the services and advice of Professor Virchow as a member of the municipal government, and its health department is manned or immediately counseled by a brilliant array of scientific talent. Moreover, in the rank and file of the various sanitary services are many skilled, highly trained officials. Recent tests have shown that Berlin can defy even the cholera; and as for typhus, smallpox, and other dreaded scourges, they seem near the point of total extermination. Even consumption has been marked for governmental conquest by Germany's militant men of science.

Hamburg's sanitary equipment was sadly imperfect up to 1893, the bad water-supply being the grossly vulnerable point. I have already explained how that most grievous fault has been remedied. At the same time, the general service of cleansing and scavenging has been vastly improved; house-to-house sanitary inspection has become thorough; disinfection stations equal to those of Berlin have been established; hospital accommodations and transport facilities have been made well-nigh perfect; the official inspection of food-supplies has been rendered far more complete and rigid, and housing conditions have, as never before, been made a matter of municipal solicitude and regulation. A new era has begun for that great city. Munich, Dresden, Leipsic, and various other German cities, have established similarly complete services for the protection of their people against the epidemic spread of infection.

ABATTOIRS, MARKET-HALLS, AND FOOD INSPECTION.

THE great municipal central slaughter-house and cattle-market, superseding hundreds or thousands of private butcher-shops, and managed in such a way as to protect the public health, is now the rule in the cities of Germany.

It is also the German policy to bring under official oversight so far as possible all articles of ordinary food consumption. To this end the ancient custom of open public market-places is just now being metamorphosed into a marvelous modern system of vast municipal market-halls, erected in the populous quarters of the greater cities, and at a convenient central point in smaller places. Berlin has of late been adding rapidly to the number of its housed markets, and its debt on account of the recent cost of land and buildings for this one purpose has reached about 25,000,000 marks. The value of the total investment is considerably greater than the outstanding bonded indebtedness. It is the policy of the market-hall administration to rent stalls and stands on a purely commercial basis, and to make the business profitable. The markets are on an admirable financial footing, and already help to lighten rather than to increase the burdens of the general city treasury. There is perhaps no function that the German cities would more unanimously consider as belonging within the sphere of good municipal housekeeping than the anxious and aggressive oversight of the food-supply. This is a service that the private family, especially the poor family, cannot possibly secure on its own account. It is therefore proper that the authorities should intervene. The abattoir monopoly is conducted under rules requiring that it shall pay its way, but shall not earn profits.

A MODEL SYSTEM OF POOR-RELIEF.

FOR the care of the poor and the relief of all forms of distress, whether temporary or permanent, the German cities are superbly organized. The policy under which relief is administered has the advantage of being a national and uniform one. Thus, while the practical working of the policy belongs to the municipal administration, there is perfect harmony of method, not only throughout Prussia, but also throughout the whole German empire, with the exception of Bavaria and Alsace-Lorraine. Let us glance at the organization of Berlin, for example, as a typical city. There is a strong central department of the city government with a magistrate at its head, and with competent specialists and general advisers attached to it. But the practical work of relief is administered by about 250 local committees, the city being divided for purposes of poor-relief into that number of districts. Each district committee has attached to it, *ex officio*, a member of the municipal council, and a physician who has been appointed as the regular city physician for that neighborhood. In addition to these officers, the local committee contains from five to twelve citizens who reside in the district, and who have been appointed on the ground of character and trustworthiness.

To be designated a member of one of these local committees for the relief of the poor is regarded as a mark of respect, and is esteemed a substantial honor. It shows that a man has good standing with his neighbors, and also that he possesses the confidence and regard of the ruling authorities of Berlin. No man would dream of refusing to serve on such a committee. Moreover, refusal would carry with it the penalty of increased taxes, and, under certain circumstances, a suspension of civil and political privileges. No remuneration is attached to these appointments, and the duties connected with them are far from nominal, and may not be shirked. Each district is subdivided so that every citizen-member of the local committee is made responsible for a certain number of families and houses. He is expected to know the condition of his little parish. He is fully authorized to administer prompt relief in pressing cases, and is under obligation to examine thoroughly into all cases which require continued assistance.

Germany has not been satisfied, however, with the establishment of a more satisfactory method of poor-relief than any other country has put into practice. It has seemed to German administrators and philanthropists that the whole modern plan of public alms ought to be superseded by a system of publicly managed insurance against sickness, accidents, permanent invalidism, and the feebleness of old age

— a system aiming at nothing else than the ultimate abolition of poverty. Toward this ideal the Germans have been very bravely and creditably making their way for some years. The business of insurance against sickness has now for a decad or more been carried on by numerous German municipalities, in order to supplement the various relief funds of the trades-unions, and of the volunteer benefit-associations existing in the different wards and localities of all the larger German towns. It has been the policy both of the general government, and also of the municipal authorities, to encourage and protect in every way the formation of these neighborhood and trade societies for insurance against illness or accident. The system as a whole, whether municipal or otherwise, has had very great development throughout Germany; and at length the German empire has added the crowning touch by enacting a law for the insurance of the working-classes against the helplessness of old age.

THE MUNICIPALITY AS THE PEOPLE'S BANKER AND PAWNBROKER.

MUNICIPAL savings-banks are a venerable institution in Germany, and are to be found almost without exception in all the large towns of the empire. In most of the important German towns, the number of depositors in the publicly managed savings-banks considerably exceeds the whole number of families. The rules and methods of municipal savings-banks differ considerably in matters of detail. Most of them pay an interest of about three per cent. The convenience of depositors is served in the larger places by the maintenance of a great number of branch offices scattered through the different wards and neighborhoods. Thus the Berlin savings-bank system has seventy-five or more receiving offices, and the Hamburg system has about forty. Berlin has more than 400,000 depositors, with total deposits at the present time approaching 150,000,000 marks. The Hamburg deposits had passed the 100,000,000 point several years ago, and were rapidly growing in volume. Dresden makes the remarkable showing of nearly 200,000 outstanding depositors' books, with total deposits well exceeding 50,000,000 marks. Leipsic, Magdeburg, Frankfort-on-Main, Hanover, Königsburg, and Düsseldorf carry, in proportion to their population, marvelously large sums in the municipal savings-banks, distributed among very great numbers of depositors. Altona and Bremen show statistics almost incredible; and it would seem that in Aachen (Aix) almost every man, woman, and child in the city holds a bank-book.

Municipal pawnshops (*Leihhäuser*) are quite

as general in the German cities as the municipal savings-banks. These, like the savings-banks, are a venerable institution in Germany. Thus the public loan-office of Augsburg dates from the year 1601; Nuremberg's was founded in 1618, and Hamburg's in 1650. Those of Dresden, Munich, Breslau, Frankfort-on-Main, and several smaller cities, are now more than a hundred years old. Berlin's was established just sixty years ago. Leipsic and Cologne began the business early in this century, as did Strasburg and a dozen other cities. On the other hand, a considerable number of the rapidly growing industrial centers of Germany have established municipal pawnshops as a part of the new municipal activities of the last ten or fifteen years. Experience has fully satisfied the German cities as to the feasibility, and the practical benefit to the poor, of an assumption by the municipality itself of the function of loan agent.

PRACTICAL TRAINING AS A MUNICIPAL TASK.

THE conception entertained in Germany of the community's duty toward the child is a broader one than that which prevails in our American cities. Every thoughtful man in the empire has recognized the fact that the industrial and commercial, as well as the military and political, future of Germany depends upon the universality of the best kind of education. The German cities have been trying to make their school systems fit the necessities of their population. They have made elementary education universal and compulsory. They have introduced much manual training and physical culture into their school courses, and are many years in advance of our American cities in adapting the quality of instruction to the practical ends that common-school education ought to serve. The fresh and practical character of popular education in German cities owes very much to the fact that, in addition to the permanent school-officials who supervise the entire educational system of any given municipality, there are numerous local school-boards upon which a great number of competent citizens are asked to serve. This service is required upon principles similar to those which call citizens of character to the work of administering poor-relief. Thus in Berlin there are some thousands of reputable citizens who are responsibly and intimately connected with the city's educational system. Here again we find a safeguard against the mechanical and perfunctory tendencies of routine officialism. I am sure that, so far as elementary education is concerned, our American cities have much to learn from the methods and results attained by German cities.

DRAWN BY W. H. DRAKE.

THE CONVEYANCE OF A PERSIAN OFFICIAL TRAVELING IN DISGRACE TO TEHERAN AT THE CALL OF THE SHAH.

ACROSS ASIA ON A BICYCLE.

III. THROUGH PERSIA TO SAMARCAND.

IT is all bosh," was the all but universal opinion of Bayazid in regard to our alleged ascent of Ararat. None but the Persian consul and the mutessarif himself deigned to profess a belief in it, and the gift of several letters to Persian officials, and a sumptuous dinner on the eve of our departure, went far toward proving their sincerity.

On the morning of July 8, in company with a body-guard of *zaptiehs*, which the mutessarif forced upon us, we wheeled down from the ruined embattlements of Bayazid. The assembled rabble raised a lusty cheer at parting. An hour later we had surmounted the Kazlee Gool, and the "land of Iran" was before us. At our feet lay the Turco-Persian battle-plain of Chaldiran, spreading like a desert expanse to the parched barren hills beyond, and dotted here and there with clumps of trees in the village oases. And this, then, was the land where, as the poets say, "the nightingale sings, and the rose-tree blossoms," and where "a flower is crushed at every step!" More truth, we thought, in the Scotch traveler's description, which divides Persia into two portions—"One desert with salt, and the other desert without salt." In time we came to McGregor's opinion as expressed in his description of Khorassan. "We should fancy," said he, "a small green circle round every village indicated on the map, and shade all the rest in brown." The mighty hosts whose onward sweep from the Indus westward was checked only by the Grecian phalanx upon the field of Marathon must have come from the scattered ruins around, which reminded us that "Iran was; she is no more." Those myriad ranks of Yenghiz Khan and Tamerlane brought death and desolation from Turan to Iran, which so

often met to act and react upon one another that both are now only landmarks in the sea of oblivion.

Our honorary escort accompanied us several miles over the border to the Persian village of Killissakend, and there committed us to the hospitality of the district khan, with whom we managed to converse in the Turkish language, which, strange to say, we found available in all the countries that lay in our transcontinental pathway as far as the great wall of China. Toward evening we rode in the garden of the harem of the khan, and at daybreak the next morning were again in the saddle. By a very early start we hoped to escape the burden of excessive hospitality; in other words, to get rid of an escort that was an expensive nuisance. At the next village we were confronted by what appeared to be a shouting, gesticulating maniac. On dismounting, we learned that a harbinger had been sent by the khan, the evening before, to have a guard ready to join us as we passed through. In fact, two armed *ferashes* were galloping toward us, armed, as we afterward learned, with American rifles, and the usual *kamma*, or huge dagger, swinging from a belt of cartridges. These fellows, like the *zaptiehs*, were fond of ostentation. They frequently led us a roundabout way to show us off to their relatives or friends in a neighboring village. Nature at last came to our deliverance. As we stood on a prominent ridge taking a last look at Mount Ararat, now more than fifty miles away, a storm came upon us, showering hailstones as large as walnuts. The *ferashes* with frantic steeds dashed ahead to seek a place of shelter, and we saw them no more.

Five days in Persia brought us to the shores of Lake Ooroomceeyah, the saltiest body of water in the world. Early the next morning we were wad-

following were driven to revolt by the persecuting mollahs, and the sanguinary struggle of 1848 followed. Bab himself was captured, and carried to this "most fanatical city of Persia," the burial-place of the sons of Ali. On this very spot a company was ordered to despatch him with a volley; but when the smoke cleared away, Bab was not to be seen. None of the bullets had gone to the mark, and the bird had flown—but not to the safest refuge. Had he finally escaped, the miracle thus performed would have made Babism invincible. But he was recaptured and despatched, and his body thrown to the canine scavengers.

Tabreez (fever-dispelling) was a misnomer in our case. Our sojourn here was prolonged for more than a month by a slight attack of typhoid fever, which this time seized *Sachtleben*, and again the kind nursing of the missionary ladies hastened recovery. Our mail, in the mean time, having been ordered to Teheran, we were granted the privilege of intercepting it. For this purpose we were permitted to overhaul the various piles of letters strewn over the dirty floor of the distributing-office. Both the Turkish and Persian mail is carried in saddle-bags on the backs of reinless horses driven at a rapid gallop before the mounted mail-carrier or herdsman. Owing to the carelessness of the postal officials, legations and consulates employ special couriers.

The proximity of *Tabreez* to the Russian border makes it politically, as well as commercially, one of the most important cities in Persia. For this reason it is the place of residence of the *Emir-e-Nizam* (leader of the army), or prime minister, as well as the *Vali-Ahd*, or Prince Imperial. This prince is the Russian candidate, as opposed to the English candidate, for the prospective vacancy on the throne. Both of these dignitaries invited us to visit them, and showed much interest in our "wonderful wind horses," of the speed of which exaggerated reports had circulated through the country. We were also favored with a special letter for the journey to the capital.

On this stage we started August 15, stopping the first night at *Turkmanchai*, the little village where was signed the famous treaty of 1828 by virtue of which the Caspian Sea became a Russian lake. The next morning we were on the road soon after daybreak, and on approaching the next village overtook a curious cavalcade, just concluding a long night's journey. This consisted of a Persian palanquin, with its long pole-shafts saddled upon the back of a mule at each end; with servants on foot, and a body-guard of mounted soldiers. The occupant of this peculiar conveyance remained concealed throughout the stampede which our sudden appearance occasioned among his hearse-bearing

mules, for as such they will appear in the sequel. In our first article we mentioned an interview in London with *Malcolm Khan*, the representative of the Shah at the court of St. James. Since then, it seemed, he had fallen into disfavor. During the late visit of the Shah to England certain members of his retinue were so young, both in appearance and conduct, as to be a source of mortification to the Europeanized minister. This reached the ears of the Shah some time after his return home; and a summons was sent for the accused to repair to Teheran. *Malcolm Khan*, however, was too well versed in Oriental craft to fall into such a trap, and announced his purpose to devote his future leisure to airing his knowledge of Persian politics in the London press. The Persian Minister of Foreign Affairs, *Musht-a-Shar-el-Dowlet*, then residing at *Tabreez*, who was accused of carrying on a seditious correspondence with *Malcolm Khan*, was differently situated, unfortunately. It was during our sojourn in that city that his palatial household was raided by a party of soldiers, and he was carried to prison as a common felon. Being unable to pay the high price of pardon that was demanded, he was forced away, a few days before our departure, on that dreaded journey to the capital, which few, if any, ever complete. For on the way they are usually met by a messenger, who proffers them a cup of coffee, a sword, and a rope, from which they are to choose the method of their doom. This, then, was the occupant of the mysterious palanquin, which now was opened as we drew up before the village caravansary. Out stepped a man, tall and portly, with beard and hair of venerable gray. His keen eye, clear-cut features, and dignified bearing, bespoke for him respect even in his downfall, while his stooped shoulders and haggard countenance betrayed the weight of sorrow and sleepless nights with which he was going to his tomb.

At *Miana*, that town made infamous by its venomous insect, is located one of the storage-stations of the Indo-European Telegraph Company. Its straight lines of iron poles, which we followed very closely from *Tabreez* to Teheran, form only a link in that great wire and cable chain which connects Melbourne with London. We spent the following night in the German operator's room.

The weakness of the Persian for mendacity is proverbial. One instance of this national weakness was attended with considerable inconvenience to us. By some mischance we had run by the village where we intended to stop for the night, which was situated some distance off the road. Meeting a Persian lad, we inquired the distance. He was ready at once with a cheerful falsehood. "One *farsak*" (four miles), he replied, although he must have known at

the time that the village was already behind us. On we pedaled at an increased rate, in order to precede, if possible, the approaching darkness; for although traditionally the land of a double dawn, Persia has only one twilight, and that closely merged into sunset and darkness. One, two farsaks were placed behind us, and still there was no sign of a human habitation. At length darkness fell; we were obliged to dismount to feel our way. By the gradually rising ground, and the rocks, we knew we were off the road. Dropping our wheels, we groped round on hands and knees, to find, if possible, some trace of water. With a burning thirst, a chilling atmosphere, and swarms of mosquitos biting through our clothing, we could not sleep. A slight drizzle began to descend. During our gloomy vigil we were glad to hear the sounds of a caravan, toward which we groped our way, discerning, at length, a long line of camels marching to the music of their lantern-bearing leader. When our nickel-plated bars and white helmets flashed in the lantern-light, there was a shriek, and the lantern fell to the ground. The rear-guard rushed to the front with drawn weapons; but even they started back at the sound of our voices, as we attempted in broken Turkish to reassure them. Explanations were made, and the camels soon quieted. Thereupon we were surrounded with lanterns and fire-brands, while the remainder of the caravan party was called to the front. Finally we moved on, walking side by side with the lantern-bearing leader, who ran ahead now and then to make sure of the road. The night was the blackest we had ever seen. Suddenly one of the camels disappeared in a ditch, and rolled over with a groan. Fortunately, no bones were broken, and the load was replaced. But we were off the road, and a search was begun with lights to find the beaten path. Footsore and hungry, with an almost intolerable thirst, we trudged along till morning, to the ding-dong, ding-dong of the deep-toned camel-bells. Finally we reached a sluggish river, but did not dare to satisfy our thirst, except by washing out our mouths, and by taking occasional swallows, with long intervals of rest, in one of which we fell asleep from sheer exhaustion. When we awoke the midday sun was shining, and a party of Persian travelers was bending over us.

From the high lands of Azerbeidjan, where, strange to say, nearly all Persian pestilences arise, we dropped suddenly into the Kasveen plain, a portion of that triangular, dried-up basin of the Persian Mediterranean, now for the most part a sandy, saline desert. The argillaceous dust accumulated on the Kasveen plain by the weathering of the surrounding uplands resembles in appearance the "yellow earth" of the Hoang Ho district in China, but remains

sterile for the lack of water. Even the little moisture that obtains beneath the surface is sapped by the *kanots*, or underground canals, which bring to the fevered lips of the desert oases the fresh, cool springs of the Elburz. These are dug with unerring instinct, and preserved with jealous care by means of shafts or slanting wells dug at regular intervals across the plain. Into these we would occasionally descend to relieve our reflection-burned — or, as a Persian would say, "snow-burned" — faces, while the thermometer above stood at 120° in the shade.

Over the level ninety-mile stretch between Kasveen and the capital a so-called carriage-road has recently been constructed close to the base of the mountain. A sudden turn round a mountain-spur, and before us was presented to view Mount Demavend and Teheran. Soon the paved streets, sidewalks, lamp-posts, street-railways, and even steam-tramway, of the half modern capital were as much of a surprise to us as our "wind horses" were to the curious crowds that escorted us to the French Hotel.

From Persia it was our plan to enter Russian central Asia, and thence to proceed to China or Siberia. To enter the Transcasian territory, the border province of the Russian possessions, the sanction of its governor, General Kuropatkin, would be quite sufficient; but for the rest of the journey through Turkestan the Russian minister in Teheran said we would have to await a general permission from St. Petersburg. Six weeks were spent with our English and American acquaintances, and still no answer was received. Winter was coming on, and something had to be done at once. If we were to be debarred from a northern route, we would have to attempt a passage into India either through Afghanistan, which we were assured by all was quite impossible, or across the deserts of southern Persia and Baluchistan. For this latter we had already obtained a possible route from the noted traveler, Colonel Stewart, whom we met on his way back to his consular post at Tabreez. But just at this juncture the Russian minister advised another plan. In order to save time, he said, we might proceed to Meshed at once, and if our permission was not telegraphed to us at that point, we could then turn south to Baluchistan as a last resort. This, our friends unanimously declared, was a Muscovite trick to evade an absolute refusal. The Russians, they assured us, would never permit a foreign inspection of their doings on the Afghan border; and furthermore, we would never be able to cross the uninhabited deserts of Baluchistan. Against all protest, we waved "farewell" to the foreign and native throng which had assembled to see us off, and on October 5 wheeled out of the fortified square on the "Pilgrim Road to Meshed."

AN OLD CASTLE NEAR SULTANIA.

Before us now lay six hundred miles of barren hills, swampy *kevirs*, brier-covered wastes, and salty deserts, with here and there some kano-fed oases. To the south lay the lifeless desert of Luth, the "Persian Sahara," the humidity of which is the lowest yet recorded on the face of the globe, and compared with which "the Gobi of China and the Kizil-Kum of central Asia are fertile regions." It is our extended and rather unique experience on the former of these two that prompts us to refrain from further description of desert travel here, where the hardships were in a measure ameliorated by frequent stations, and by the use of cucumbers and pomegranates, both of which we carried with us on the long desert stretches. Melons, too,

the finest we have ever seen in any land, frequently obviated the necessity of drinking the strongly brackish water.

Yet this experience was sufficient to impress us with the fact that the national poets, Hafiz and Sadi, like Thomas Moore, have sought in fancy what the land of Iran denied them. Those

OLD MOSQUE AT SULTANIA.

"spicy groves, echoing with the nightingale's song," those "rosy bowers and purling brooks," on the whole exist, so far as our experience goes, only in the poet's dream.

Leaving on the right the sand-swept ruins of Veramin, that capital of Persia before Teheran was even thought of, we traversed the

pass of Sir-Dara, identified by some as the famous "Caspian Gate," and early in the evening entered the village of Aradan. The usual crowd hemmed us in on all sides, yelling, "Min, min!" ("Ride, ride!"), which took the place of the Turkish refrain of "Bin, bin!" As we rode toward the caravansary they shouted, "Faster, faster!" and when we began to distance them, they caught at the rear wheels, and sent a shower of stones after us, denting our helmets, and bruising our coatless backs. This was too much; we dismounted and exhibited the ability to defend

an open quadrangular court, at the time filled with a caravan of pilgrims, carrying triangular white and black flags, with the Persian coat of arms, the same we have seen over many doorways in Persia as warnings of the danger of trespassing upon the religious services held within. The cadaverous stench revealed the presence of half-dried human bones being carried by relatives and friends for interment in the sacred "City of the Silent." Thus dead bodies, in loosely nailed boxes, are always traveling from one end of Persia to the other. Among the pilgrims were blue and green turbaned Saids, direct descendants of the Prophet, as well as white-turbaned mollahs. All were sitting about on the *sakoo*, or raised platform, just finishing the evening meal. But presently one of the mollahs ascended the mound in the middle of the stable-yard, and in the manner of the muezzin called to prayer. All kneeled, and bowed their heads toward Mecca. Then the horses were saddled, the long, narrow boxes attached upright to the pack-mules, and the *kajavas*, or double boxes,

PILGRIMS IN THE CARAVANSARY AT DEHI NEMEK.

ourselves, whereupon they tumbled over one another in their haste to get away. But they were at our wheels again before we reached the caravansary. Here they surged through the narrow gangway, and knocked over the fruit-stands of the bazaars.

We were shown to a room, or windowless cell, in the honeycomb structure that surrounded

FEMALE PILGRIMS ON THE ROAD TO NESHED.

adjusted on the backs of the horses of the ladies. Into these the veiled creatures entered, and drew the curtains, while the men leaped into the saddle at a signal, and, with the tri-cornered flag at their head, the cavalcade moved out on its long night pilgrimage. We now learned that the village contained a *chappar khan*, one of those places of rest which have recently been provided for the use of foreigners and others, who travel *chappar*, or by relays of post-horses. These structures are usually distinguished by a single room built on the roof, and projecting some distance over the eaves.

To this we repaired at once. Its keeper evinced unusual pride in the cleanliness of his apartments, for we were asked to take off our shoes before entering. But while our boastful host was kicking up the mats to convince us of the truth of his assertions, he suddenly retired

behind the scenes to rid himself of some of the pests.

Throughout our Asiatic tour eggs were our chief means of subsistence, but *pillao*, or boiled rice flavored with grease, we found more particularly used in Persia, like *yaourt* in Turkey. This was prepared with chicken whenever it was possible to purchase a fowl, and then we would usually make the discovery that a Persian fowl was either wingless, legless, or otherwise defective after being prepared by a Persian *fuzul*, or foreigner's servant, who, it is said, "shrinks from no baseness in order to eat." Though minus these particular appendages, it would invariably have a head; for the fanatical Shiah frequently snatched a chicken out of our hands to prevent us from wringing or chopping its head off. Even after our meal was served, we would keep a sharp lookout upon the unblushing pilferers around us, who had called to pay their respects, and to fill the room with clouds of smoke from their chibouks and gurgling kalians. For a fanatical Shiah will sometimes stick his dirty fingers into the dishes of an

CARAVANSARY AT FAKIDAOD.

"unbeliever," even though he may subsequently throw away the contaminated vessel. And this extreme fanaticism is to be found in a country noted for its extensive latitude in the profession of religious beliefs.

A present from the village khan was announced. In stepped two men bearing a huge tray filled with melons, apricots, sugar, rock-candy, nuts, pistachios, etc., all of which we must, of course, turn over to the khan-keeper and his servants, and pay double their value to the bearers, as a present. This polite method of extortion was followed the next morning by one of a bolder and more peremptory nature. Notwithstanding the feast of the night before at our expense, and in addition to furnishing us with bed-clothes which we really ought to have been paid to sleep in, our oily host now insisted upon three or four prices for his lodgings. We refused to pay him more than a certain sum, and started to vacate the premises. Thereupon he and his grown son caught hold of our bicycles. Remonstrances proving of no avail, and being unable to force our passage

A PERSIAN WINE-PRESS.

through the narrow doorway with the bicycles in our hands, we dropped them, and grappled with our antagonists. A noisy scuffle, and then a heavy fall ensued, but luckily we were both on the upper side. This unusual disturbance now brought out the inmates of the adjoining *anderoon*. In a moment there was a din of feminine screams, and a flutter of garments, and then — a crashing of our pith helmets beneath the blows of pokers and andirons. The villagers, thus aroused, came at last to our rescue, and at once proceeded to patch up a compromise. This, in view of the Amazonian reinforcements, who were standing by in readiness for a second onset, we were more than pleased to accept. From this inglorious combat we came off without serious injury; but with those gentle poker taps were knocked out forever all the sweet delusions of the "Light of the Harem."

The great antiquity of this Teheran-Meshed road, which is undoubtedly a section of that

IN A PERSIAN GRAVEYARD.

erally, "pillars of state," who was also a cousin to the Shah himself. This potentate we visited in company with an English engineer whom we met in transit at Sharoud. It was on the evening before, when at supper with this gentleman in his tent, that a special messenger arrived from the governor, requesting us, as the invitation ran, "to take our brightness into his presence." As we entered, the governor rose from his seat on the floor, a courtesy never shown us by a Turkish official. Even the politest of them would, just at this particular moment, be conveniently engrossed in the examination of some book or paper. His courtesy was further extended by locking up our "horses," and making us his "prisoners" until the following morning. At the dinner which Mr. Evans and we were invited to eat with his excellency, benches had to be especially prepared, as there was nothing like a chair to be found on the premises. The governor himself took his accustomed position on the floor, with his own private dishes around him. From these he would occasionally fish out with his fingers some choice lamb *kebabh* or cabbage *dolmah*, and have it passed over to his guests — an act which is considered one of the highest forms of Persian hospitality.

With a shifting of the scenes of travel, we stood at sunset on the summit of the Binalud mountains, overlooking the valley of the Kashaf-rud. Our two weeks' journey was almost ended,

GIVING A "SILENT PILGRIM" A ROLL TOWARD MESHEH.

former commercial highway between two of the most ancient capitals in history — Nineveh and Balk, is very graphically shown by the caravan ruts at Lasgird. These have been worn in many places to a depth of four feet in the solid rock. It was not far beyond this point that we began to feel the force of that famous "Damghan wind," so called from the city of that name. Of course this wind was against us. In fact, throughout our Asiatic tour easterly winds prevailed; and should we ever attempt another transcontinental spin we would have a care to travel in the opposite direction.

Our peculiar mode of travel subjected us to great extremes in our mode of living. Sometimes, indeed, it was a change almost from the sublime to the ridiculous, and vice versa — from a stable or sheepfold, with a diet of figs and bread, and an irrigating-ditch for a lavatory, to a palace itself, an Oriental palace, with all the delicacies of the East, and a host of servants to attend to our slightest wish. So it was at Bostam, the residence of one of Persia's most influential *hakims*, or governors, lit-

PILGRIM STONE HEAPS OVERLOOKING MESHEH.

IN THE GARDEN OF THE RUSSIAN CONSULATE AT MESHED.

for the city of Meshed was now in view, ten miles away. Around us were piles of little stones, to which each pious pilgrim adds his quota when first he sees the "Holy Shrine," which we beheld shining like a ball of fire in the glow of the setting sun.

While we were building our pyramid a party of returning pilgrims greeted us with "Meshedi at last." "Not yet," we answered, for we knew that the gates of the Holy City closed promptly at twilight. Yet we determined to make the attempt. On we sped, but not with the speed of the falling night. Dusk overtook us as we reached the plain. A moving form was revealed to us on the bank of the irrigating-canal which skirted the edge of the road. Backward it fell as we dashed by, and then the sound of a splash and splutter reached us as we disappeared in the darkness. On the morrow we learned that the spirits of Hassan and Hussein were seen skimming the earth in their flight toward the Holy City. We reached the bridge, and crossed the moat, but the gates were closed. We knocked and pounded, but a hollow echo was our only response. At last the light of a lantern illumined the crevices in the weather-beaten doors, and a weird-looking face appeared through the midway opening. "Who's there?" said

a voice, whose sepulchral tones might have belonged to the sexton of the Holy Tomb. "We are *Ferehghis*," we said, "and must get into the city to-night." "That is impossible," he answered, "for the gates are locked, and the keys have been sent away to the governor's palace." With this the night air grew more chill. But another thought struck us at once. We would send a note to General McLean, the English consul-general, who was already expecting us. This our interlocutor, for a certain *inam*, or Persian bakshish, at length agreed to deliver. The general, as we afterward learned, sent a servant with a special request to the governor's palace. Here, without delay, a squad of horsemen was detailed, and ordered with the keys to the "Herat Gate." The crowds in the streets, attracted by this unusual turnout at this unusual hour, followed in their wake to the scene of disturbance.

There was a click of locks, the clanking of chains, and the creaking of rusty hinges. The great doors swung open, and a crowd of expectant faces received us in the Holy City.

Meshed claims our attention chiefly for its famous dead. In its sacred dust lie buried our old hero Haroun al Raschid, Firdousi, Persia's greatest epic poet, and the holy Imaum Riza, within whose shrine every criminal may take refuge from even the Shah himself until the payment of a blood-tax, or a debtor until the

RIDING BEFORE THE GOVERNOR AT MESHED.

AN INTERVIEW WITH GENERAL KUROPATKINE AT THE RACES NEAR ASKABAD.

giving of a guarantee for debt. No infidel can enter there.

Meshed was the pivotal point upon which our wheel of fortune was to turn. We were filled with no little anxiety, therefore, when, on the day after our arrival, we received an invitation to call at the Russian consulate-general. With great ceremony we were ushered into a suite of elegantly furnished rooms, and received by the consul-general and his English wife in full dress. Madame de Vlassow was radiant with smiles as she served us tea by the side of her steaming silver samovar. She could not wait for the circumlocution of diplomacy, but said: "It is all right, gentlemen. General Kuropatkin has just telegraphed permission for you to proceed to Askabad." This precipitate remark evidently disconcerted the consul, who could only nod his head and say, "*Oui, oui*," in affirmation. This news lifted a heavy load from our minds; our desert journey of six hundred miles, therefore, had not been made in vain, and the prospect brightened for a trip through the heart of Asia.

Between the rival hospitality of the Russian and English consulates our health was now in jeopardy from excess of kindness. Among other social attentions, we received an invitation from Sahib Devan, the governor of Khorassan, who next to the Shah is the richest man in Persia. Although seventy-six years of age, on the day of our visit to his palace he was literally covered with diamonds and precious stones. With the photographer to the Shah as German interpreter, we spent half an hour in an interesting conversation. Among other topics he mentioned the receipt, a few days before, of a peculiar telegram from the Shah: "Cut off the head of any one who attempts opposition to the Tobacco Regie"; and this was followed a few days after by the inquiry, "How many heads have you taken?" A retinue of about three hundred courtiers followed the governor as he walked out with feeble steps to the parade-

ground. Here a company of Persian cavalry was detailed to clear the field for the "wonderful steel horses," which, as was said, had come from the capital in two days, a distance of six hundred miles. The governor's extreme pleasure was afterward expressed in a special letter for our journey to the frontier.

The military road now completed between Askabad and Meshed reveals the extreme weakness of Persia's defense against Russian aggression. Elated by her recent successes in the matter of a Russian consul at Meshed, Russia has very forcibly invited Persia to construct more than half of a road which, in connection with the Transcaspian railway, makes Khorassan almost an exclusive Russian market, and opens Persia's richest province to Russia's troops and cannon on the prospective march to Herat. At this very writing, if the telegraph speaks the truth, the Persian border-province of Dereguez is another cession by what the Russians are pleased to call their Persian vassal. In addition to its increasing commercial traffic, this road is patronized by many Shiah devotees from the north, among whom are what the native term the "silent pilgrims." These are large stones, or boulders, rolled along a few feet at a time by the passers-by toward the Holy City. We ourselves were employed in this pious work at the close of our first day's journey from Meshed when we were suddenly aroused by a bantering voice behind us. Looking up, we were hailed by Stagno Navarro, the inspector of the Persian telegraph, who was employed with his men on a neighboring line. With this gentleman we spent the following night in a telegraph station, and passed a pleasant evening chatting over the wires with friends in Meshed.

Kuchan, our next stopping-place, lies on the almost imperceptible watershed which separates the Herat valley from the Caspian Sea. This city, only a few months ago, was entirely destroyed by a severe earthquake. Under date of January 28, 1894, the American press re-

WATCH-TOWER ON THE TRANS-CASPIAN RAILWAY.

ported: "The bodies of ten thousand victims of the awful disaster have already been recovered. Fifty thousand cattle were destroyed at the same time. The once important and beautiful city of twenty thousand people is now only a scene of death, desolation, and terror."

From this point to Askabad the construction of the military highway speaks well for Russia's engineering skill. It crosses the Kopet Dag mountains over seven distinct passes in a distance of eighty miles. This we determined to cover, if possible, in one day, inasmuch as there was no intermediate stopping-place, and as we were not a little delighted by the idea of at last emerging from semi-barbarism into semi-civilization. At sunset we were scaling the fifth ridge since leaving Kuchan at daybreak, and a few minutes later rolled up before the Persian custom-house in the valley below. There was no evidence of the proximity of a Russian frontier, except the extraordinary size of the tea-glasses, from which we slaked our intolerable thirst. During the day we had had a surfeit of cavernous gorges and commanding pinnacles, but very little water. The only copious spring we were able to find was filled at the time with the unwashed linen of a Persian traveler, who sat by, smiling in derision, as we upbraided him for his disregard of the traveling public.

It was already dusk when we came in sight of the Russian custom-house, a tin-roofed, stone structure, contrasting strongly with the Persian mud hovels we had left behind. A Russian official hailed us as we shot by, but we could not stop on the down-grade, and, besides, darkness

AT SAMARKAND.

last ridge that lay between us and the desert. At 9:30 P. M. we stood upon its summit, and before us stretched the sandy wastes of Kara-Kum, enshrouded in gloom. Thousands of feet below us the city of Askabad was ablaze with lights, shining like beacons on the shore of the desert sea. Strains of music from a Russian band stole faintly up through the darkness as we dismounted, and contemplated the strange scene, until the shriek of a locomotive-whistle startled us from our reveries. Across the desert a train of the Transcaspian railway was gliding smoothly along toward the city.

A hearty welcome back to civilized life was given us the next evening by General Kuropatkin himself, the Governor-General of Transcaspia. During the course of a dinner with him and his friends, he kindly assured us that no further recommendation was needed than the fact that we were American citizens to entitle us to travel from one end of the Russian empire to the other.

From Askabad to Samarkand there was a break in the continuity of our bicycle journey. Our Russian friends persuaded us to take advantage of the Transcaspian railway, and not to hazard a journey across the dreaded Kara-Kum sands. Such a journey, made upon the railroad track, where water and food were obtainable at regular intervals, would have entailed only a small part of the hardships incurred on the deserts in China, yet we were more than anxious to reach, before the advent of winter, a point whence we could be assured of reaching the Pacific during the following season. Through the kindness of the railway authorities at Bokhara station our car was side-tracked to enable us to visit, ten miles away, that ancient city of the East. On November 6 we reached Samarkand, the ancient capital of Tamerlane, and the present terminus of the Transcaspian railway.

AVENUE OF POPLARS LEADING TO THE TOMB OF
TAMERLANE.

was too rapidly approaching to brook any delay. Askabad was twenty-eight miles away, and although wearied by an extremely hard day's work, we must sleep that night, if possible, in a Russian hotel. Our pace increased with the growing darkness until at length we were going at the rate of twelve miles per hour down a narrow gorge-like valley toward the seventh and

(To be continued.)

LOVE IN IDLENESS.

A FORTNIGHT AT BAR HARBOR.

BY F. MARION CRAWFORD.

Author of "Mr. Isaacs," "Saracinesca," "Paul Patoff," "Katharine Lauderdale," etc.

I.

'M going to stay with the three Miss Miners at the Trehearne's place," said Louis Lawrence, looking down into the blue water as he leaned over the rail of the *Sappho*, on the sunny side of the steamer. "They're taking care of Miss Trehearne while her mother is away at Carlsbad with Mr. Trehearne," he added, in further explanation.

"Yes," answered Professor Knowles, his companion. "Yes," he repeated vaguely, a moment later.

"It's fun for the three Miss Miners, having such a place all to themselves for the summer," continued young Lawrence. "It's less amusing for Miss Trehearne, I dare say. I suppose I'm asked to enliven things. It can't be exactly gay in their establishment."

"I don't know any of them," observed the professor, who was a Boston man. "The probability is that I never shall. Who are the three Miss Miners, and who is Miss Trehearne?"

"Oh—you don't know them!" Lawrence's voice expressed his surprise that there should be any one who did not know the ladies in question. "Well—they're three old maids, you know."

"Excuse me; I don't know. Old maid is such a vague term. How old must a maid be to be an old maid?"

"Oh, it is n't age that makes old maids. It's the absence of youth. They're born so."

"A pleasing paradox," remarked the professor, his exaggerated jaw seeming to check the uneasy smile as it attacked the gravity of his colorless thin lips.

His head, in the full face view, was not too large for his body, which, in the two dimensions of length and breadth, was well proportioned. The absence of the third dimension, that is, of bodily thickness, was very apparent when he was seen sideways, while the exaggeration of the skull was also noticeable only in profile. The forehead and the long delicate jaw were unnaturally prominent; the ear was set much too far back, and there was no development over

the eyes, while the nose was small, thin, and sharp, as though cut out of letter-paper.

"It's not a paradox," said Lawrence, whose respect for professorial statements was small. "The three Miss Miners were old maids before they were born. They're not particularly old, except Cordelia. She must be over forty. Augusta is the youngest—about thirty-two, I should think. Then there's the middle one,—she's Elizabeth, you know,—she's no particular age. Cordelia must have been pretty in a former state. Lots of brown hair and beautiful teeth. But she has the religious smile—what they put on when they sing hymns, don't you know? It's chronic. Good teeth and resignation did it. She's good all through, but you get all through her so soon! Elizabeth's clever—comparatively. She's brown, and round, and fat, and ugly. I'd like to paint her portrait. She's really by far the most attractive. As for Augusta—"

"Well? What about Augusta?" inquired the professor, as Lawrence paused.

"Oh, she's awful! She's the accomplished one."

"I thought you said that the middle one—what's her name?—was the cleverest."

"Yes; but cleverness never goes with what they call accomplishments," answered the young man. "I've heard of great men playing the flute, but I never heard of anybody who was 'musical' and came to anything, especially women. Fancy Cleopatra playing the piano, or Catherine the Great painting a salad of wild flowers on a fan! Can you? Or Semiramis sketching a lap-dog on a cushion!"

"What very strange ideas you have!" observed the professor, gravely.

Lawrence did not say anything in reply, but looked out over the blue water at the dark-green islands of the deep bay as the *Sappho* paddled along, beating up a wake of egg-white froth. He was glad that Professor Knowles was going over to the other side to dwell among the placid inhabitants of Northeast Harbor, where the joke dieth not, even at an advanced age; where there are people who believe in Ruskin and swear by Herbert Spencer, who coin words ending in "ism," and intellectually subsist on the "ologies"—with the

notable exception of theology. Lawrence had once sat at the professor's feet, at Harvard—unwillingly, indeed, but not without indirect profit. They had met to-day in the train, and it was not probable that they would meet again in the course of the summer, unless they particularly sought each other's society.

They had nothing in common. Lawrence was an artist, or intended to be one, and had recently returned from abroad, after spending three years in Paris. By parentage he belonged to New York. He had been christened Louis because his mother was of French extraction, and had an uncle of that name, who might be expected to do something handsome for her son. Louis Lawrence was now about five and twenty years of age, was possessed of considerable talent, and of no particular worldly goods. His most important and valuable possession, indeed, was his character, which showed itself in all he said and did.

There is something problematic about the existence of a young artist who is in earnest, which alone is an attraction in the eyes of women. The odds are ten to one, of course, that he will never accomplish anything above the average, but that one-tenth chance is not to be despised, for it is the possibility of a well-earned celebrity, perhaps of greatness. The one last step out of obscurity into fame is generally the only one of which the public knows anything, sees anything, or understands anything; and no one can tell when, if ever, that one step may be taken. There is a constant interest in expecting it, and in knowing of its possibility, which lends the artist's life a real charm in his own eyes and the eyes of others. And very often it turns out that the charm is all the life has to recommend it.

The young man who had just given Professor Knowles an account of his hostesses was naturally inclined to be communicative, which is a weakness, though he was also frank, which is a virtue. He was a very slim young man, and might have been thought to be in delicate health, for he was pale and thin in the face. The features were long and finely chiseled, and the complexion was decidedly dark. He would have looked well in a lace ruffle, with flowing curls. But his hair was short, and he wore rough gray clothes and an obtrusive tie. The highly arched black eyebrows gave his expression strength, but the very minute dark mustache which shaded the upper lip was a little too evidently twisted and trained. That was the only outward sign of personal vanity, however, and was not an offensive one, though it gave him a foreign air which Professor Knowles disliked, but which the three Miss Miners thought charming. His manner pleased them, too; for he was always just as civil to them as though

they had been young and pretty and amusing, which is more than can be said of the majority of modern youths. His conversation occasionally shocked them, it is true; but the shock was a mild one and agreeably applied, so that they were willing to undergo it frequently.

Lawrence was not thinking of the Miss Miners as he watched the dark-green islands. If he had thought of them at all during the last half-hour, it had been with a certain undefined gratitude to them for being the means of allowing him to spend a fortnight in the society of Fanny Trehearne.

Professor Knowles had not moved from his side during the long silence. Lawrence looked up and saw that he was still there, his extraordinary profile cut out against the cloudless sky.

"Will you smoke?" inquired Lawrence, offering him a cigarette.

"No, thank you—certainly not cigarettes," answered the professor, with a superior air. "You were telling me all about the Miss Miners," he continued; for though he knew none of them, he was of a curious disposition. "You spoke of a Miss Trehearne, I think."

"Yes," answered the young man. "Do you know her?"

"Oh, no. It's an unusual name, that's all. Are they New York people?"

Lawrence smiled at the idea that any one should ask such a question.

"Yes, of course," he answered. "New York—since the Flood."

"And Miss Trehearne is the only daughter?" inquired the professor, inquisitively.

"She has a brother—Randolph," replied Lawrence, rather shortly; for he was suddenly aware that there was no particular reason why he should talk about the Trehearnes.

"Of course they are relatives of the Miners," observed the professor.

"That's the reason why Miss Trehearne has them to stay with her. Excuse me—I can't get a light in this wind."

Thereupon Lawrence turned away, and got under the lee of the deck saloon, leaving the professor to himself. Having lighted his cigarette, the artist went forward, and stood in the sharp head-breeze that seemed to blow through and through him, disinfecting his whole being from the hot, close air of the train he had left half an hour earlier.

Bar Harbor, in common speech, includes Frenchman's Bay, the island of Mount Desert, and the other small islands lying near it—an extensive tract of land and sea. As a matter of fact, the name belongs to the little harbor between Bar Island and Mount Desert, together with the village, which has grown to be the center of civilization since the whole place

has become fashionable. Earth, sky, and water are of the north — hard, bright, and cold. In artist slang, there is no atmosphere. The dark-green islands, as one looks at them, seem to be almost before the foreground. The picture is beautiful, and some people call it grand, but it lacks depth. There is something fiercely successful about the color of it, something brilliantly self-reliant. It suggests a certain type of handsome woman — of the kind that need neither repentance nor cosmetics, and are perfectly sure of the fact; whose virtue is too cold to be kind, and whose complexion is not shadowed by passion, nor softened by suffering, nor even washed pale with tears. Only the sea is eloquent. The deep-breathing tide runs forward to the feet of the over-perfect, heartless earth, to linger and plead love's story while he may; then, sighing sadly, sweeps back unsatisfied, baring his desolate bosom to her loveless scorn.

The village, the chief center, lies by the water's edge, facing the islands, which inclose the natural harbor. It was and is a fishing-village, like many another on the coast. In the midst of it, vast wooden hotels, four times as high as the houses nearest to them, have sprung up to lodge fashion in six-storied discomfort. The effect is astonishing; for the architect, gesticulating in soft wood and ranting in paint, as it were, has sketched an evil dream of medievalism, incoherent with itself and with the very commonplace facts of the village street. There, also, in Mr. Bee's shop window, are plainly visible the more or less startling covers of the newest books, while from on high frowns down the counterfeit presentment of battlements and turrets, and of such terrors as lent life interest when novels were not, neither was the slightest idea of the short story yet conceived.

But behind all and above all rise the wooded hills, which are neither modern nor ancient, but eternal. And in them and through them there are secret sweetness, and fragrance, and much that is gentle and lovely — in the heart of the defiantly beautiful earth-woman with her cold face, far beyond the reach of her tide-lover, and altogether out of hearing of his sighs and complaining speeches. There grow in endless greenness the white pines and the pitch-pines, the black spruce and the white; there droops the feathery larch by the creeping yew, and there gleam the birches, yellow, white, and gray; the sturdy red-oak spreads his arms to the scarlet maple, and the witch-hazel rustles softly in the mysterious forest breeze. There, buried in the wood's bosom, bloom and blossom the wild flowers, and redden the blushing berries in unseen succession, from middle June to late September — violets first, and wild iris, strawberries

and raspberries, blueberries and blackberries; short-lived wild roses and tender little bluebells, red lilies, goldenrod, and clematis, in the confusion of nature's loveliest order.

All this Lawrence knew, and remembered, guessing at what he could neither remember nor know, with an artist's facility for filling up the unfinished sketch left on the mind by one impression. He had been at Bar Harbor three years earlier, and had wandered among the woods and potted along the shore in a skiff. But he had been alone then, and had stopped in the medieval hotel, a rather solitary, thinking unit amidst the horde of thoughtless summer nomads, designated by the clerk at the desk as "Number a hundred and twenty-three," and a candidate for a daily portion of the questionable dinner at the hotel table. It was to be different this time, he thought, as he watched for the first sight of the pier when the *Sappho* rounded Bar Island. The Trehearnes had not been at their house three years ago, and Fanny Trehearne had been then not quite sixteen, just groping her way from the school-room to the world, and quite beneath his young importance, even had she been at Bar Harbor to wander among the woods with him. Things had changed, now. He was not quite sure that in her girlish heart she did not consider him beneath her notice. She was straight and tall — almost as tall as he, and she was proud if she was not pretty, and she carried her head as high as the handsomest. Moreover, she was rich, and Louis Lawrence was at present phenomenally poor, with a rather distant chance of inheriting money. These were some of the excellent reasons why fate had made him fall in love with her, though none of them accounted for the fact that she had encouraged him, and had suggested to the Miss Miners that it would be very pleasant to have him come and stay a fortnight in July.

The *Sappho* slowed down, stopped, backed, and made fast to the wooden pier, and as she swung round, Lawrence saw Fanny Trehearne standing a little apart from the group of people who had come down to meet their own friends, or to watch other people meeting theirs. The young girl was evidently looking for him, and he took off his hat, and waved it about erratically to attract her attention. When she saw him she nodded, with a faint smile, and moved one step nearer to the gangway to wait until he should come on shore with the crowd.

She had a quiet, business-like way of moving, as though she never changed her position without a purpose. As Lawrence came along, trying to gain on the stream of passengers with whom he was moving, he kept his eyes fixed on her face, wondering whether the expression

would change when he reached her and took her hand. When the moment came, the change was very slight.

"I like you—you're punctual," she said. "Come along!"

"I've got some traps, you know," he answered, hesitating.

"Well, there's the expressman. Give him your checks."

II.

"THEY've all gone out in Mr. Brown's cat-boat, so I came alone," observed Miss Trehearne, when the expressman had been interviewed.

"Who are 'all'?" asked Lawrence. "Just the three Miss Miners?"

"Yes; just the three Miss Miners."

"I thought you might have somebody stopping with you."

"No. Nobody but you. Why do you say 'stopping' instead of 'staying'? I don't like it."

"Then I won't say it again," answered Lawrence, meekly. "Why do you object to it, though?"

"You're not an Englishman, so there's no reason why you should n't speak English. Here's the buckboard. Can you drive?"

"Oh—well—yes," replied the young man rather doubtfully, looking at the smart little turn-out.

Fanny Trehearne fixed her cool gray eyes on his face with a critical expression.

"Can you ride?" she asked, pursuing her examination.

"Oh, yes—that is—to some extent. I'm not exactly a circus-rider, you know; but I can get on."

"Most people can do that. The important thing is not to come off. What can you do, anyway? Are you a good man in a boat? You see, I've only met you in society. I've never seen you do anything."

"No," answered Lawrence; "I'm not a good man in a boat, as you call it, except that I'm never sea-sick. I don't know anything about boats, if you mean sail-boats. I can row a little; that's all."

"If you could 'row,' as you call it, you'd say you could 'pull an oar'; you would n't talk about 'rowing.' Well, get in, and I'll drive."

There was not the least scorn in her manner at his inability to do all those things which are to be done at Bar Harbor, if people do anything at all. She had simply ascertained the fact as a measure of safety. It was not easy to guess whether she despised him for his lack of skill, but he was inclined to think that she did, and he made up his mind that he would

get up very early, and engage a sailor to go out with him, and teach him something about boats. The resolution was half unconscious, for he was really thinking more of her than of himself just then. To tell the truth, he did not attach so much importance to any of the things she had mentioned as to feel greatly humiliated by his own ignorance.

"After all," said Miss Trehearne, as Lawrence took his seat beside her, "it does n't matter. And it's far better to be frank, and say at once that you don't know, than to pretend that you do, and then try to steer and drown me, or to drive and then break my neck. Only one rather wonders where you were brought up, you know."

"Oh, I was brought up somehow," answered Lawrence, vaguely. "I don't exactly remember."

"It does n't matter," returned his companion in a reassuring tone.

"No. If you don't mind, I don't."

Fanny Trehearne laughed a little, without looking at him, for she was intent upon what she was doing. It was a part of her nature to fix her attention upon whatever she had in hand, a fact which must account for a certain indifference in what she said. Just then, too, she was crossing the main street of the village, and there were other vehicles moving about hither and thither. More than once she nodded to an acquaintance whom Lawrence also recognized.

"It's much more civilized than it was when I was here last," observed Lawrence. "There are lots of people one knows."

"Much too civilized," answered the young girl. "I'm beginning to hate it."

"I thought you liked society—"

"I? What made you think so?"

This sort of question is often extremely embarrassing. Lawrence looked at her thoughtfully, and wished that he had not made his innocent remark, since he was called upon to explain it.

"I don't know," he replied at last. "Somehow I always associate you with society, and dancing, and that sort of thing."

"Do you? It's very unjust."

"Well, it's not exactly a crime to like society, is it? Why are you so angry?"

"I wish you would n't exaggerate! It does not follow that I'm angry because you're not fair to me."

"I did n't mean to be unfair. How you take one up!"

"Really, Mr. Lawrence—I think it's you who are doing that."

Miss Trehearne, having a stretch of clear road before her, gave her pair their heads for a moment, and the light buckboard dashed

briskly up the gentle ascent. Lawrence was watching her, though she did not look at him, and he thought he saw the color deepen in her sunburnt cheek, although her gray eyes were as cool as ever. She certainly was not pretty, according to the probable average judgment of younger men. Lawrence himself, who was an artist, wondered what he saw in her face to attract him, since he could not deny the attraction, and could not attribute it altogether to expression, or to the indirect effect of her character acting upon his imagination. He did not like to believe, either, that the charm was fictitious, and lay in a certain air of superior smartness, the result of good taste and plenty of money. Anybody could wear serge, and a more or less nautical hat and gloves, just in the fashionable degree of looseness or tightness, as the case might be. Anybody who chose had the right to turn up a veil over the brim of the aforesaid hat, and anybody who did so stood a good chance of being sunburnt. Moreover, as Lawrence well knew, there is a quality of healthy complexion which tans to a golden brown, very becoming when the gray eyes have dark lashes, but less so when, as in Fanny Trehearne's case, the lashes and brows are much lighter than the hair — almost white, in fact. It is not certain whether the majority of human noses turn up or down; there was, however, no doubt that Fanny's turned up. It was also apparent that she had decidedly high cheek-bones, a square jaw, and a large mouth, with lips much too even and too little curved for beauty. After all, her best points were perhaps her eyes, her golden-brown complexion, and her crisp, reddish-brown hair, which twisted itself into sharp little curls wherever it was not long enough to be smoothed. With a little more regularity of feature, Fanny Trehearne might have been called a milkmaid beauty, so far as her face was concerned. Fortunately for her, her looks were above or below such faint praise. It was doubtful whether she could be said to have charm, but she had individuality, those terms being in common use to express gifts which escape definition.

A short silence followed her somewhat indignant speech. Then, the road being still clear before her, she turned and looked at Lawrence. It was not a mere glance of inquiry, it was certainly not a tender glance, but her eyes lingered with his for a moment.

"Look here, are we going to quarrel?" she asked.

"Is there any reason why we should?" Lawrence smiled.

"Not if we agree," answered the young girl, gravely, as she turned her head from him again.

"That means that we sha'n't quarrel if I

agree with you, I suppose," observed the young man.

"Well, why should n't you?" asked Fanny, frankly. "You may just as well, you know. You will, in the end."

"By Jove! You seem pretty sure of that!" Lawrence laughed.

Fanny said nothing in reply, but shortened the reins as the horses reached the top of the hill. Lawrence looked down toward the sea. The sun was very low, and the water was turning from sapphire to amaranth, while the dark islands gathered gold into their green depths.

"How beautiful it is!" exclaimed the artist, not exactly from impulse, though in real enjoyment, while consciously hoping that his companion would say something pleasant.

"Of course it's beautiful," she answered. "That's why I come here."

"I should put it in the opposite way," said Lawrence.

"How?"

"Why, it's beautiful because you come here."

"Oh, that's ingenious! You think it's my mission to beautify landscapes?"

"I thought that if I said something pretty in the way of a compliment, we should n't go on quarreling."

"Oh, were we quarreling? I had n't noticed it."

"You said something about it a moment ago," observed Lawrence, mildly.

"Did I? You're an awfully literal person. By the by, you know all the Miss Miners, don't you? I've forgotten."

"I believe I do. There's Miss Miner, the elder, to begin with —"

"The eldest — since there are three," said Fanny, correcting him. "Yes; she's the one with the hair — and teeth."

"Yes; and Miss Elizabeth — is n't that her name? The plainest —"

"And the nicest. And Augusta, she's the third. Paints wild flowers and plays the piano. She's about my age, I believe."

"Your age! Why, she must be over thirty!"

"No; she's nineteen still. She's got an anchor out to windward — against the storm of time, you know. She swings a little with the tide, though."

"I don't understand," said Lawrence, to whom nautical speech was incomprehensible.

"Never mind. I only mean that she does not want to grow old. It's always funny to see a person of nineteen who's really over thirty."

Lawrence laughed a little.

"You're fond of them all, are n't you?" he asked presently.

"Of course; they're my relatives. How could I help being fond of them?"

"Oh, yes," answered Lawrence, vaguely.
 "But they really are very nice — people."

"Why do you hesitate?"

"I don't know. I could n't say 'very nice ladies,' could I? And I should n't exactly say 'very nice women,' and 'very nice people' sounds queer, somehow, does n't it?"

"And you would n't say 'very nice old maids' —"

"Certainly not."

"No; it would n't be civil to me, nor kind to them. The truth is generally unkind and usually rude. Besides, they love you."

"Me?"

"Yes. They rave about you, and your looks, and your manners, and your conversation, and your talents."

"The dickens! I'm flattered. But it's always the wrong people who like one."

"Why the wrong people?" asked Fanny Trehearne, not looking at him.

"Because all the liking in the world from people one does n't care for can't make up for the not liking of the one person one does care for."

"Oh, in that way. It's rash to care for only one person. It's putting all one's eggs into one basket."

"What an extraordinary sentiment!"

"I did n't mean it for sentiment."

"No; I should think not! Quite the contrary, I should say."

"Quite," affirmed Fanny, gravely.

"Quite?"

"Yes — almost quite."

"Oh — 'almost' quite?"

"It's the same thing."

"Not to me."

The young girl would not turn her attention from her horses, though in Lawrence's inexperienced opinion she could have done so with perfect safety just then, and without impropriety. The most natural and innocent curiosity should have prompted her to look into his eyes for a moment, if only to see whether he were in earnest or not. He would certainly not have thought her a flirt if she had glanced kindly at him. But she looked resolutely at the horses' heads.

"Here we are!" she exclaimed suddenly.

With a sharp turn to the left the buckboard swept through the open gate, the off horse breaking into a canter which Fanny instantly checked. The near wheels passed within a foot of the gate-post.

"Was n't that rather close?" asked Lawrence.

"Why? There was lots of room. Are you nervous?"

"I suppose I am, since you say so."

"I did n't say so. I asked."

"And I answered," said Lawrence, tartly.

"How sensitive you are! You act as though I had called you a coward."

"I thought you meant to. It sounded rather like it."

"You have no right to think that I mean things which I have n't said," answered the young girl.

"Oh, very well. I apologize for thinking that what you said meant anything."

"Don't lose your temper — don't be a spoiled baby!"

Lawrence said nothing, and they reached the house in silence. Fanny was not mistaken in calling him sensitive, though he was by no means so nervous, perhaps, as she seemed ready to believe. She had a harsh way of saying things which, spoken with a smile, could not have given offense, and Lawrence was apt to attach real importance to her careless speeches. He felt himself out of his element from the first in a place where he might be expected to do things in which he could not but show an awkward inexperience, and he was ready to resent anything like the suggestion that timidity was at the root of his ignorance, or was even its natural result.

His face was unnecessarily grave as he held out his hand to help Fanny down from the buckboard, and she neither touched it nor looked at him as she sprang to the ground.

"Go into the library, and we'll have tea," she said, without turning her head, as she entered the house before him. "I'll be down in a moment."

She pointed carelessly to the open door, and went through the hall in the direction of the staircase. Lawrence entered the room alone.

The house was very large, for the Trehearnes were rich people, and liked to have their friends with them in considerable numbers. Moreover, they had bought land in Bar Harbor in days when it had been cheap, and had built their dwelling commodiously, in the midst of a big lot which ran down from the road to the sea. With the instinct of a man who has been obliged to live in New York, squeezed in, as it were, between tall houses on each side, Mr. Trehearne had given himself the luxury, in Bar Harbor, of a house as wide and as deep as he could possibly desire, and only two stories high.

The library was in the southwest corner of the house, opening on the south side upon a deep veranda, from which wooden steps descended to the shrubbery, and having windows to the west which overlooked the broad lawn. The latter was inclosed by tall trees. The winding avenue led in a northerly direction to the main road. At the east end of the house the offices ran out toward the boundary of the Trehearnes' land, and beyond them, among the

trees, there was a small yard inclosed by a lattice of wood eight or ten feet high.

The library was the principal room on the ground floor, and was really larger than the drawing-room, which followed it along the line of the south veranda, though it seemed smaller from being more crowded with furniture. As generally happens in the country, it had become a sort of common room in which everybody preferred to sit. The drawing-room had been almost abandoned of late, the three Miss Miners being sociable beings, unaccustomed to magnificence in their own homes, and averse to being alone with it anywhere. They felt that the drawing-room was too fine for them, and by tacit consent they chose the library for their general trysting-place and tea-camp when they were indoors. Mrs. Trehearne, who was, perhaps, a little too fond of splendor, would have smiled at the idea as she thought of her gorgeously brocaded reception-rooms in New York; but Fanny had simple tastes, like her father, and agreed with her old-maid cousins in preferring the plain, dark woodwork, the comfortable leathern chairs, and the backs of the books, to the dreary wilderness of expensive rugs and unnecessary gilding which lay beyond. For the sake of coolness, the doors were usually opened between the rooms.

III.

THE weather was warm. By contrast with the cool air of the bay he had lately crossed, it seemed hot to Lawrence when he entered the library. Barely glancing at the room, he went straight to one of the doors which opened upon the veranda, and, going out, sat down discontentedly in a big, cushioned straw chair. It was very warm, and it seemed suddenly very still. In the distance he could hear the wheels of the buckboard in the avenue, as the groom took it round to the stables, and out of the close shrubbery he caught the sharp, dry sound of footsteps rapidly retreating along a concealed cinder path. The air scarcely stirred the creeper which climbed up one of the pillars of the veranda, and festooned its way, curtain-like, in both directions to the opposite ends. On his right he could see the broad, sloping lawn, all shadowed now by the tall trees beyond. Without looking directly at it, he felt that the vivid green of the grass was softened, and that there must be gold in the tops of the trees. The sensation was restful, but his eyes stared vacantly at the deep shrubbery which began at the foot of the veranda steps, and stretched away under the spruces at his left.

He was exceedingly discontented, though he had just arrived, or, perhaps, for that very reason, among many other minor ones. He had

never had any cause to expect from Fanny Trehearne anything in the way of sentiment, but he was none the less persuaded that he had a moral right to look for something more than chaff and good-natured hospitality, spiced with such vigorous reproof as "Don't be a spoiled baby."

The words rankled. He was asking himself just then whether he was a "spoiled baby" or not. It was of great importance to him to know the truth. If he was a spoiled baby, of course Miss Trehearne had a right to say so if she liked, though the expression was not complimentary. But if not, she was monstrously unjust. He did not deny that the accusation might be well founded; for he was modest as well as sensitive, and did not think very highly of himself at present, though he hoped great things for the future, and believed that he was to be a famous artist.

The more he told himself that he had no right to expect anything of Fanny, the more thoroughly convinced he became that his right existed, and that she was trampling upon it. She had ordered him into the library, in a very peremptory and high-and-mighty fashion, to wait for her, regardless of the fact that he had traveled twenty-four hours, and had acquired the prerogative right of the traveler to soap and water before all else. No doubt he was quite presentable, since the conditions of modern railways had made it possible to come in clean, or comparatively so, from a longish run. But the ancient traditions ought not to be swept out of the way, Louis thought, and the right of scrubbing subsisted still. She might at least have given him a hint as to the whereabouts of his room, since she had left him to himself for a quarter of an hour. She had not been gone four minutes yet, but Louis made it fifteen, and fifteen it was to be, in his estimation.

Presently he heard a man's footstep in the library behind him, and the subdued tinkling of a superior tea-service, of which the sound differs from the clatter of the hotel tea-tray, as the voice, say, of Fanny Trehearne differed in refinement from that of an Irish cook. But it irritated Lawrence, nevertheless, and he did not look round. He felt that when Fanny came down again he intended to refuse tea altogether, presumably by way of proving that he was not a spoiled baby after all. He crossed one leg over the other impatiently, and hesitated as to whether, if he lighted a cigarette, it would seem rude to be smoking when Fanny should come, even though he was really in the open air on the veranda. But in this his manners had the better of his impatience, and, after touching his cigarette case in his pocket in a longing way, he did not take it out.

At last he heard Fanny enter the room. There was no mistaking her tread, for he had noticed that she wore tennis shoes. He knew

that she could not see him where he sat, and he turned his head toward the door expectantly. Again he heard the tinkle of the tea-things. Then there was silence. Then the urn began to hiss and sing softly, and there was another sort of tinkling. It was clear that Fanny had sat down. She could have no idea that he was sitting outside, as he knew, but he thought she might have taken the trouble to look for him. He listened intently for the sound of her step again, but it did not come, and, oddly enough, his heart began to beat more quickly. But he did not move. He felt a ridiculous determination to wait until she began to be impatient, and to move about and look for him. He could not have told whether it were timidity, or nervousness, or ill temper which kept him nailed to his chair, and just then he would have scorned the idea that it could be love in any shape, though his heart was beating so fast.

Suddenly his straining ear caught the soft rustle made by the pages of a book turned deliberately and smoothed afterward. She was calmly reading, indifferent to his coming or staying away—reading while the tea was drawing. How stolid she was, he thought. She was certainly not conscious of the action of her heart as she sat there. For a few moments longer he did not move. Then he felt he wished to see her, to see how she was sitting, and how really indifferent she was. But if he made a sound, she would look up, and lay down her book, even before he entered the room. The veranda had a floor of painted boards,—which are more noisy than unpainted ones, for some occult reason,—and he could not stir a step without being heard. Besides, his straw easy-chair would creak when he rose.

All at once he felt how very foolish he was, and he got up noisily, an angry blush on his young face. He reached the entrance in two strides, and stood in the open doorway, with his back to the light. As he had guessed, Fanny was reading.

"Oh!" he ejaculated with affected surprise as he looked at her.

She did not raise her eyes or start, being evidently intent upon finishing the sentence she had begun.

"I thought you were never coming," she said absently.

He was more hurt than ever by her indifference, and sat down at a little distance, without moving the light chair he had chosen. Fanny reached the foot of the page, put a letter she held into the place, closed the book upon it, and then at last looked up.

"Do you like your tea strong or weak?" she inquired in a business-like tone.

"Just as it comes; I don't care," answered Lawrence, gloomily.

"Then I'll give it to you now. I like mine strong."

"It's bad for the nerves."

"I have n't any nerves," said Fanny Trehearne, with conviction.

"That's curious," observed Lawrence, with fine sarcasm.

Fanny looked at him without smiling, since there was nothing to smile at, and then poured out his tea. He took it in silence, but helped himself to more sugar, with a reproachful air.

"Oh, you like it sweet, do you?" said Fanny, interrogatively.

"Peculiarity of spoiled babies," answered Lawrence in bitter tones.

"Yes, I see it is."

And with this crushing retort Fanny Trehearne relapsed into silence. Lawrence began to drink his tea, burnt his mouth with courageous indifference, stirred up the sugar gravely, and said nothing.

"I wonder when they'll get home," said Fanny, after a long interval.

"Are you anxious about them?" inquired the young man, with affected politeness.

"Anxious? No. I was only wondering."

"I'm not very amusing, I know," said Lawrence, grimly.

"No, you're not."

The blood rushed to his face again with his sudden irritation, and he drank more hot tea to keep himself in countenance. At that moment he sincerely wished that he had not come to Bar Harbor at all.

"You're not particularly encouraging, Miss Trehearne," he said presently. "I'm sure, I'm doing my best to be agreeable."

"And you think that I'm doing my best to be disagreeable? I'm not, you know. It's your imagination."

"I don't know," answered Lawrence, his face unbending a little. "You began by telling me that you despised me because I'm such a duffer at out-of-door things; then you told me I was a spoiled baby, and now you're proving to me that I'm a bore."

"Duffer, baby, and bore!" Fanny laughed. "What an appalling combination!"

"It is, indeed. But that's what you said—"

"Oh, nonsense! I was n't as rude as that, was I? But I never said anything of the sort, you know."

"You really did say that I was a spoiled baby—"

"No. I told you not to be, by way of a general warning—"

"Well, it's the same thing—"

"Is it? If I tell you not to go out of the room, for instance, and if you sit still, is it the same thing as though you got up and went out?"

"Why, no; of course not. How absurd!"

"Well, the other is absurd too."

"I'll never say again that women are n't logical," answered Lawrence, smiling in spite of himself.

"No; don't. Have some more tea?"

"Thanks; I've not finished. It's too hot to drink."

Thereupon, his good temper returning, he desisted from self-torture by scalding, and set the cup down. Fanny watched him, but turned her eyes away as he looked up and she met his glance.

"I'm so glad you've come," she said quietly. "I've looked forward to it."

Perhaps she was a little the more ready to say so because she was inwardly conscious of having rather wilfully teased him, but she meant what she said. Lawrence felt his heart beating again in a moment. Resting his elbows on his knees, he clasped his hands, and looked down at the pattern of the rug under his feet. She did not realize how easily she could move him, not being by any means a flirt.

"It's nothing to the way I've looked forward to it," he answered.

She was silent, but he did not raise his head. He could see her face in the carpet.

"You know that, don't you?" he asked in a low voice, after a few moments.

Unfortunately for his information on the subject, the butler appeared just then, announcing a visitor.

"Mr. Brinsley."

It was clear that the man-servant had no option in the matter of admitting the newcomer, who was in the room almost before his name was pronounced.

"How do you do, Miss Trehearne?" he began, as he came swiftly forward. "I'm tremendously glad to find you at home. You're generally out at this hour."

"Is that why you chose it?" asked Fanny, with a little laugh and holding out her hand. "Do you know Mr. Lawrence?" she continued, by way of introducing the two men. "Mr. Brinsley," she added, for Louis's benefit.

Lawrence had risen, and he shook hands with a good grace. But he hated Mr. Brinsley at once, both because the latter had come inopportunely, and because his own sensitive nature was instantly and strongly repelled by the man.

There was no mistaking Mr. Brinsley's Canadian accent, though he seemed anxious to make it as English as possible, and Lawrence disliked Canadians; but that fact alone could not have produced the strongly disagreeable sensation of which the younger man was at once conscious, and he looked at the visitor in something like surprise at the strength of his instan-

taneous aversion. Brinsley, though dressed quietly, and with irreproachable correctness, was a showy man, of medium height, but magnificently made. His wrists were slender, nervous, and sinewy; his ankles—displayed to advantage by his low russet shoes—were beautifully modeled, whereas his shoulders were almost abnormally broad, and the cords and veins moved visibly in his athletic neck when he spoke or moved. The powerful muscles were apparent under his thin gray clothes, and Lawrence had noticed the perfect grace and strength of his quick step when he had entered. In face he was very dark, and his wiry, short, black hair had rusty reflections. His skin was tanned to a deep brown, and mottled, especially about the eyes, with deep shadows, in which were freckles even darker than the shadows themselves. His beard evidently grew as high as his cheek-bones, for the line from which it was shaved was cleanly drawn and marked by the dark fringe remaining above. His mustache was black and heavy, and he wore very small, closely cropped whiskers, like those affected by naval officers. He had one of those arrogant, vain, astute noses which seem to point at whatever the small and beady black eyes judge to be worth having.

At a glance Lawrence saw that Brinsley was an athlete, and he guessed instantly that the man must be good at all those things which Louis himself was unable to do. He was a man to ride, drive, run, pull an oar, and beat everybody at tennis. But neither was that the reason why Lawrence hated him from the first. It had been the touch of his hard, dry hand, perhaps, or the flash of the light in his small black eyes, or his self-satisfied and all-conquering expression. It was not easy to say. Possibly, too, Louis thought that Brinsley was his rival, and resented the fact that Fanny had betrayed no annoyance at the interruption.

But Brinsley barely vouchsafed Lawrence a glance, as the latter thought, and immediately sat down much nearer to Miss Trehearne and the tea-table than Louis, in his previous rage, had thought fit to do.

"Well, Miss Trehearne," said Brinsley, "how is Tim? Is n't he all right yet?"

"He's better," answered Fanny. "He had a bad time of it, but you can't kill a wire-haired terrier, you know. He would n't take the phosphate. I believe it was sweetened, and he hates sugar."

"So do I. Please don't give me any," he added quickly, watching her as she prepared a cup of tea for him.

Lawrence's resentment began to grow again. It was doubtless because Mr. Brinsley never took sugar that Fanny had seemed scornfully surprised at the artist's weakness for it.

IV.

LOUIS LAWRENCE was exceedingly uncomfortable during the next few minutes, and, to add to his misery, he was quite aware that he had nothing to complain of. It was natural that he should not know the people in Bar Harbor, excepting those whom he had known before, and that he should be in complete ignorance of all projected gaieties. Of course no one had suggested to the Reveres, for instance, to ask him to their dance; because they were Boston people, they did not know him, and nobody was aware that he was within reach. Besides, Louis Lawrence was a very insignificant personage, though he was well-connected, well-bred, and not ill-looking. He was just now a mere struggling artist, with no money except in the questionable future, and if he had talent, it was problematical, since he had not distinguished himself in any way as yet.

He remembered all these things, but they did not console him. In order not to seem rude, he made vague remarks from time to time, when something occurred to him to say, but he inwardly wished Brinsley a speedy departure and a fearful end. Fanny seemed amused and interested by the man's conversation, and she herself talked fluently. Now and then Brinsley looked at Lawrence, really surprised by the latter's ignorance of everything in the nature of sport, and possibly with a passing contempt which Lawrence noticed and proceeded to exaggerate in importance. The artist was on the point of asking Fanny's permission to go and find the room allotted to him, when a sound of women's voices, high and low, came through the open windows. There was an audible little confusion in the hall, and the three Miss Miners entered the library one after the other in quick succession.

"Oh, Mr. Brinsley!" exclaimed Miss Cordelia, the eldest, coming forward with a pale smile, which showed many of her very beautiful teeth.

"Mr. Brinsley is here," said Miss Elizabeth, the ugly one, in an undertone to Miss Augusta, who possessed the accomplishments.

Then they also advanced and shook hands with much cordiality, the remains of which were promptly offered to Lawrence. Mr. Brinsley did not seem in the least overpowered by the sudden entrance of the three old maids. He smiled, moved up several chairs to the tea-table, and laughed agreeably over each chair, though Lawrence could not see that there was anything to laugh at. Brinsley's vitality was tremendous, and his manners were certainly very good, so that he was a useful person in a drawing-room. His assurance, if put to the test, would have been found equal to most emer-

gencies. But on the present occasion he had no need of it. It was evidently his mission to be worshiped by the three Miss Miners and to be liked by Miss Trehearne, who did not like everybody.

"I'm sure we've missed the best part of your visit," said Miss Cordelia.

"Oh, no," answered Brinsley, promptly; "I have only just come — at least it seems so to me," he added, smiling at Fanny across the tea-table.

Lawrence thought he must have been in the room more than half an hour, but the sisters were all delighted by the news that their idol meant to stay some time longer.

"How nice it would be if everybody made such speeches!" sighed Miss Augusta to Lawrence, who was next to her. "Such a charming way of making Fanny feel that she talks well! I'm sure he's really been here some time."

"He has," answered Lawrence, absently, and without lowering his voice enough, for Brinsley immediately glanced at him.

"We've been having such a pleasant talk about the dogs and horses," said the Canadian, willing to be disagreeable to the one other man present. "I'm afraid we've bored Mr. Lawrence to death, Miss Trehearne; he does not seem to care for those things as much as we do."

"I don't know anything about them," answered the young man.

"I'm afraid you'll bore yourself in Bar Harbor, then," observed Mr. Brinsley. "What can you find to do all day long?"

"Nothing. I'm an artist."

"Ah? That's very nice. You'll be able to go out sketching with Miss Augusta — long excursions, don't you know? All day —"

"Oh, I should not dare to suggest such a thing!" cried Miss Augusta.

"I'm sure I should be very happy, if you'd like to go," said Lawrence, politely facing the dreadful possibility of a day with her in the woods, while Brinsley would in all likelihood be riding with Fanny or taking her out in a cat-boat.

But Miss Augusta paid little attention to him so long as Brinsley was talking, which was most of the time. The man did not say anything worth repeating, but Lawrence knew that he was far from stupid in spite of his empty talk. At last Lawrence merely looked on, controlling his nervousness as well as he could, and idly watching the faces of the party. Brinsley talked on and on, twisting to pieces the stem of a flower which he had worn in his coat, but which had unaccountably broken off.

Lawrence wondered whether Fanny, too, could be under the charm, and he watched her

with some anxiety. There was something oddly inscrutable in the young girl's face, and in her quiet eyes, that did not often smile, even when she laughed. He had the strong impression, and he had felt it before, that she was very well able to conceal her real thoughts and intentions behind a mask of genuine frankness and straightforwardness. There are certain men and women who possess that gift. Without ever saying a word which even faintly suggests prevarication, they have a masterly reticence about what they do not wish to have known, whereby their acquaintances are sometimes more completely deceived than they could be by the most ingenious falsehood. Lawrence was quite unable to judge from Fanny's face whether she liked Brinsley or not, but he was wounded by a certain deference, if that word be not too strong, which she showed for the man's opinion, and which contrasted slightly with the dictatorial superiority which she assumed toward Lawrence himself. He consoled himself as well as he could with the reflection that he really knew nothing about dogs, horses, or boats, and that Brinsley was certainly his master in all such knowledge.

As an artist he could not but admire the perfect proportions of the visitor, his evident strength, and the satisfactory equilibrium of forces which showed itself in his whole physical being; but as a gentleman he was repelled by something not easily defined, and as a lover he suspected a rival. He had not much right, indeed, to believe that Fanny Trehearne cared especially for him, any more than to predicate that she was in love with Brinsley. But being in love himself, he very naturally arrogated to himself such a right without the slightest hesitation, and he boldly asserted in his heart that Brinsley was nothing but a very handsome "cad," and that Fanny Trehearne was on the verge of marrying him.

The conversation, meanwhile, was lively to the ear if not to the intelligence. It was amazing to see how the three spinsters flattered their darling at every turn. Miss Cordelia led the chorus of praise, and her sisters, to speak musically, took up the theme, and answer, and counter-theme of the fugue, successively, in many keys. There was nothing that Mr. Brinsley did not know and could not do, according to the three Miss Miners, or if there was anything, it could not be worth knowing or doing.

"You 'll flatter Mr. Brinsley to death," laughed Fanny, "though I must say that he bears it well."

A faint shade of color rose to Miss Cordelia's pale cheeks, indicative of indignation.

"Fanny," she cried reprovingly, "how rude you are! I 'm sure I was n't saying anything at all flattering."

"I only wish people would say such things to me, then," retorted the young girl.

"We 're all quite ready to, I 'm sure, Miss Trehearne," said Brinsley, smiling in a way that seemed to make his heavy dark mustache retreat outward, up his cheeks, like the whiskers of a cat when it grins.

Fanny turned and met Lawrence's eyes.

"You seem to be the only one who is ready," she said, laughing again. "'One is n't a crowd,' as the little boys say."

"Where do you get such expressions, my dear child?" asked Cordelia. "I really think you 've learned more slang since you 've been here this summer, though I should n't have believed it possible."

"There!" said Fanny, turning to Brinsley; "that 's the kind of flattery my relatives lavish on me from morning till night. As if you did n't all talk slang the whole time!"

"Fanny!" protested Augusta, whose accomplishments made her sensitive and conscious. "How can you say so?"

"Well, dialect, if you like the word better. I 'll prove it to you. You all say 'won't' and 'sha'n't', and most of you say 'I 'd like'; for instance, Mr. Brinsley says 'ain't,' because he 's English—"

"Well, what ought we to say?" asked Augusta. "Nobody says 'I will not,' and all that."

"You ought to. It 's dialect not to, and the absurd thing is that people who go in for writing books generally write out all the things you don't say, and write them in the wrong order. We say 'would n't you,' don't we? Well, does n't that stand for 'would not you?' And yet they print 'would you not,' always. It 's ridiculous. I read a criticism the other day on a man who had written a book, and who wrote 'will not you' for 'won't you,' and 'would not you' for 'would n't you,' because he wanted to be accurate. You 've no idea what horrid things the critic said of him; he simply stood on his hind legs and pawed the air! It 's so silly! Either we should speak as we write, or write as we speak. I don't mean in philosophy and things,—the steam-engine, and the descent of man, and all that,—but in writing out conversations. But then, of course, nobody will agree with me—so I talk as I please."

"There 's a great deal of truth in what you say, Miss Trehearne," observed Brinsley, assuming a wise air. "Besides, I beg to differ with Miss Miner on one point: I venture to say that I don't dislike your slang, if it 's slang at all. It 's expressive, of its kind."

"At last!" cried Fanny, with a laugh. "I get some praise—faint, but perceptible."

"Faint praise is n't supposed to be complimentary," observed Lawrence, laughing too.

"That 's true," answered Fanny. "It 's just

the opposite — the thing with a 'd.' I won't say it, on account of Cordelia. She'd all frizzle up with horror if I said it,—would n't you, dear? There'd positively be nothing left of you — nothing but a dear little withered rose-leaf with a dewdrop in the middle, representing your tears for my sins."

"I'm afraid so," answered Cordelia, with a little accentuation of her tired smile.

It was not a disagreeable smile in itself, except that it was perpetual, and was the expression of patiently and cheerfully borne adversity, rather than of any satisfaction with things in general. For the lives of the three Miss Miners had not been happy. Sometimes Fanny felt a sincere and loving pity for the three, and specially for the eldest. But there were also times when Cordelia's smile exasperated her beyond endurance.

Mr. Brinsley rose to go rather suddenly, after checking a movement of his hand in the direction of his watch.

"You're not going, surely?" cried one or two of the Miss Miners. "You're coming to dinner."

"Stay as you are," suggested Fanny, greatly to Lawrence's annoyance.

"You're awfully kind," answered the Canadian, "but I can't to-night. I wish I could. I've asked several people to dine with me at the Kebo Valley Club. I'd cut any other engagement, to dine with you, indeed I would. I'm awfully sorry."

Many regrets were expressed that he could not stay, and the leave-taking seemed sudden to Lawrence, who stood looking on, still wondering why he disliked the man so much. At last he heard the front door closed behind him.

"Who is Mr. Brinsley?" he asked of Fanny Trehearne, while the three Miss Miners were settling themselves again.

"Oh, I don't know. I believe he's a Canadian Englishman. He's very agreeable, don't you think so?"

"He's the most delightful man I ever met!" sighed Augusta Miner, before Lawrence had time to say anything.

"Did you notice his eyes, Mr. Lawrence?" asked Miss Elizabeth. "Don't you think they are beautiful?"

"Beautiful? Well — it depends," Lawrence answered with considerable hesitation, for he did not in the least know what to say.

"Oh, but it is n't his eyes, nor his conversation," put in Cordelia, emphatically: "it is that he's such a perfect gentleman. You feel that he would n't do anything that was n't quite — quite — don't you know?"

"I'm not sure that I do," replied Lawrence in some bewilderment. "But I understand what you mean," he added confidently.

"My dear," said Augusta to her elder sister, "all that is perfectly true, as I always say. But those are not the things that make him the most charming man I ever met. Oh, dear, no! Ever so many men one knows have good eyes, and talk well, and are gentlemen in every way. I'm sure you would n't have a man about if he was n't a gentleman, would you?"

"Oh, no; in a wider sense, all the men we have to do with are of course —"

"Well," argued Augusta, "that's just what I'm telling you, my dear. It n't those things. It lies much deeper. It's a sort of refined appreciation — an appreciative refinement — both, you know. Now, the other day, do you remember — when I was playing that mazurka of Chopin — did you notice his expression?"

"But he always has that expression when anything pleases him very much," said Miss Elizabeth.

"Yes, I know; but just then it was quite extraordinary. There's something almost child-like —"

"If you go on about Mr. Brinsley in this way much longer you'll all have a fit," observed Fanny Trehearne.

"My dear," answered Cordelia, gravely, "do you know what a 'fit' means? Really, sometimes you do exaggerate —"

"A fit means convulsions — what babies have, you know. They used to say it was brought on by looking at the moon."

Lawrence felt a strong inclination to laugh at this moment, but he controlled it, and only smiled. Then, to his considerable embarrassment, they all appealed to him, probably in the hope of more praise for Brinsley.

"Do tell us how he strikes you, Mr. Lawrence," said Cordelia.

"Yes, do!" echoed Elizabeth.

"Oh, please do!" cried Augusta, at the same moment.

"I should be curious to know what you think of him," said Fanny Trehearne.

"Well, really," stammered the unfortunate young man, "I've hardly seen him — I've not had time to form an opinion — you must know him, and you all like him, and — it seems to me — that settles it. Does n't it?"

While Lawrence was speaking, Miss Cordelia stooped, and picked up something from the floor. He noticed that it was the leafless stem of the flower which Brinsley had been twisting in his fingers. She did not throw it away, but her hand closed over it, and Lawrence did not see it again.

(To be continued.)

F. Marion Crawford.

AN UNEXPECTED LEGACY.

THE Little place was eastward from the village of Groversville. The Reverend Ephraim Little had not been much of a farmer, but the fields around him were good hay-fields, and after their father's death the Little girls found that the yearly sale of their hay provided for all necessities. Their clothes wore well, and they had little use for money.

But when their uncle, Daniel Little, a prosperous merchant in Concord, died and left them five hundred dollars, they hardly knew what disposition to make of it.

The letter announcing their good fortune reached them one morning in early spring, and that evening at an unusually late hour the elderly sisters were still sitting in the neat kitchen. Jane Little objected when her sister spoke of putting more wood into the small kitchen-stove.

"There's no occasion for us to be wasteful, Eliza," she said gravely, and Eliza made no reply.

"It's considerable money; I always felt money must be a responsibility," Miss Jane continued, with a sigh; "still, I hope we sha'n't shirk it."

"I'd always calculated on Uncle Daniel's leavin' us something, an' I d' know as five hundred dollars is such a great sight, after all. I've heard that Colonel Sprigg's folks spend more 'n that every summer, jest goin' about. Now we could go somewhere, if we wanted to, an' stay all summer, an' then have 'nough left to last a spell," said Eliza, hopefully.

Miss Jane looked at her sister. "Eliza, I never heard such childishness. What's money for? We must put it right into the savings bank, so's to have it to take comfort with when we're old."

"I shall be fifty, come June," ventured Miss Eliza, and, as the elder sister did not notice the statement, she went on:

"It ain't as if there was anybody dependin' on us or lookin' to us, an' this money's sort of unexpected like, an' I should like to see a little of the world with it. I've never been to Boston except when I was too young to sense it, an' I was a-thinkin' that we'd go down there, an' sort of look 'round; stop at a hotel, p'raps, and"—here Miss Eliza stopped as if to gain courage, and then went on more firmly—"stop at a hotel, and go to the theater."

There was a silence in the room. The Reverend Ephraim Little had been dead for seven years, but both sisters felt a guilty consciousness of his presence at that moment.

"You don't know what you're talkin' about, Eliza," said Miss Jane, with a little quiver of curiosity in her voice.

"Yes, I do too."

"It's a dreadful undertakin' to start off on a journey like that, Eliza. And where'd we stay? We ain't got a relation there."

"We'd go right to a hotel; I guess we could get accommodations well 'nough," said Eliza, briskly.

"Well, I d' know. I guess I'd better have Mr. Sanders put the money right into the bank to-morrow. Land of gracious, Eliza! do you see the time?" said Miss Jane, pointing at the old clock. "Here't is after nine; we'd better go to bed."

The next morning the investment of their money was again the chief subject of their thoughts.

"I s'pose we could go to Boston an' stay some time for less 'n fifty dollars," suggested Miss Jane, as the two sisters were carefully putting away the breakfast dishes.

Miss Eliza stopped on the way between the sink and the pantry with her hands full of china.

"Be you a-thinkin' of the hay-money, Jane, or of Uncle Daniel's? Because, if we go to Boston, there ain't goin' to be no question of expense about it. We're goin' to the best hotel, an' not question as to price."

"You might a-dropped those dishes, Eliza," said Miss Jane, reprovingly.

"I s'pose we should need considerable many new things before we started; we should have to go over to the Junction—that is, if we go," said Miss Jane, as the sisters sat together that afternoon.

"There's my black alpaca," responded Eliza; "it's just as good as new, an' so's yours; we ain't wore 'em none to speak of; we should n't have to wait to have no dresses made."

"I ain't got no wear out of that dress. I've got through tradin' with Simpson, anyway. He told me that was good wearin' material, an' it's sleazy as sleazy."

"You've got considerable wear out of it," ventured Eliza, meekly, "an' I'm sure it looks real well now."

"It ought to," replied Miss Jane, with repressed indignation; "I ain't had it out of the closet since year before last, when Mis' Peters died—I wore it to her funeral."

"If we're goin' to the Junction we might ask something about the trains for Boston," again ventured Miss Eliza.

"I ain't made up my mind about it; we may

go, but 't ain't likely," said Miss Jane, settling herself back in the creaking rocking-chair.

But the next day found the two ladies on their way to the Junction with a small list of the things they considered necessary for their journey; and early one pleasant morning a week later the Misses Little stood on the narrow platform of the station awaiting the train for Boston.

A shiny new zinc-covered trunk was on the baggage-truck, and Miss Jane kept an anxious eye over it.

Miss Eliza had charge of the somewhat old-fashioned, but still stout and serviceable, carpet-bag which their father had been wont to carry on his few journeys from home.

The train came puffing into the station, and they hurried toward the car nearest to them.

"Pullman for Boston," shouted the alert, smiling-faced darky, taking the bag from Eliza's unwilling clasp, and hurrying them up the steps.

Miss Jane, the usual business head of the family, had apparently not recovered her direction of affairs since Eliza's scheme for visiting Boston was suggested; and she now felt a reckless irresponsibility as to the adventures which might befall them.

Miss Eliza paid the extra two dollars with vague misgivings. "I s'posed our tickets gave us a right to seats," she said with faint dignity, and the porter's prompt, "Yes, ma'am," left her still uncertain.

When the train reached Boston, both ladies were tired and a little nervous. They had discussed the question of hotels with some trepidation.

"S'pose we just say to the man that drives the carriage to take us to the best house there is?" ventured Miss Eliza.

"Like as not there won't be no carriage at the depot; it's after dark now," said Miss Little, as the train came to a stop, and the passengers gathered up their belongings and left the car.

"I 've been talkin' to the darky, an' he 's goin' to get us a carriage; said 't would n't be no trouble to him; I think I 'd better give him some change, don't you, Jane?"

The porter helped them out, and almost before the sisters realized it they were in a comfortable carriage, and heard the rattle and rasp of their trunk being fastened on behind.

Miss Eliza bestowed a number of small coins on the good-natured porter as she bade him a polite "Good evening."

"How much d' you give him?" asked Miss Jane.

"There was eight cents; I s'pose five would ha' been all he 'd 'a' looked for, but I did n't want to appear mean."

Their conversation was interrupted by the driver helping another passenger into the carriage.

"Where to, ladies?" Before the Misses Little could ask his advice, the new passenger had given an address, the carriage-door slammed, and they were rattling off.

"Dear me!" ejaculated Miss Jane; "he don't know where we want to go, he did n't give us a chance to ask him about any hotel."

The new passenger was a small woman, with thick dark hair, and a kindly face. "Are you strangers in the city?" she asked pleasantly, and the sound of a friendly voice was most welcome to the elderly travelers.

"If you are, and want to go to a nice, quiet boarding-house, I can recommend the address I just gave. It is under the charge of an association of women, and strangers are always made welcome. My name is Mrs. Amanda P. Walton," concluded the stranger.

"We had thought of goin' to a hotel," suggested Miss Eliza.

"Yes? Hotels are very expensive. Now, this place I was speaking of is very quiet; you would feel just as if you were at home. I could introduce you to the matron."

"My sister and I will be very glad to find such a stoppin'-place as you describe. Our name is Little—Miss Jane and Miss Eliza Little. We were obliged to come to Boston for a few days on—on business." Miss Jane's voice was firm. The reins of government were again in her charge.

Eliza made a feeble effort for freedom. "But, Jane, we was thinkin' of—"

"Never mind, Eliza," replied the elder sister; and Miss Eliza, silent but rebellious, was borne onward by resistless fate.

That night as the sisters sat together in the narrow, chilly room, Miss Eliza said:

"Jane, we come to Boston a-purpose to stop at a hotel, an' I know jest as well as I want to that if we say anything 'bout theater, that Miss Walton 'll have a fit."

Miss Jane was struggling with the fastenings of their trunk. "There 's to be an entertainment here to-morrow," she said finally; "Miss Walton 's to read a paper."

"I can read the paper myself, far as that goes," said Eliza. "Be you a-goin' to unpack the trunk, Jane?"

"Of course; why, what 'd we bring our best things for?"

"I d' know, I 'm sure," answered Eliza, with some little emotion.

"I 'm glad I brought the hay-money along," said Miss Jane, after the trunk-fastenings had yielded to her patient investigation; "I guess 't will be all we shall need to use."

The morning after their arrival Mrs. Walton tapped at their door to inquire if they had rested well. "I thought perhaps you would like to visit the sewing-class with me this morning," she said

pleasantly. So, directly after breakfast, the two sisters went across the street to a small hall where a number of women were busily engaged. "They are all at work for our annual fair," explained Mrs. Walton. Miss Jane listened politely, but Eliza looked out of the window with a vague envy of the moving throngs on the street.

The morning drifted wearily by. Miss Jane gave Mrs. Walton a slight account of the Reverend Ephraim Little's work, and of the prosperity of her Uncle Daniel.

"I hope he remembered you in his will," responded Mrs. Walton, sympathetically.

"He left us five hundred dollars," replied Miss Jane. "It's been something of a question in our minds as to what use we should put it to."

"I suppose your dear father would have advised you to use it for others, would he not?" suggested Mrs. Walton.

They were late for lunch that day, but were ready when Mrs. Walton came to escort them to the sitting-room, where she was to read her paper. Eliza attempted a faint resistance, but was overcome by Miss Jane's firm determination to be polite to a stranger who had done so much for them.

"I'd a great sight ruther be home in my own rockin'-chair than stuck up on this settee," ventured Miss Eliza. "Here 't is 'most dark, an' we ain't seen nothin' yet," she continued; but Jane made no reply.

The next morning Mrs. Walton said that she wanted to introduce them to one or two of the directors. The directors proved to be very cordial, pleasant women, with whom Miss Jane was greatly impressed.

In the afternoon Jane had a long talk with Mrs. Walton, while Eliza impatiently waited in the little room that looked out upon a narrow court. It was evening before the two sisters were alone together.

"I ain't been out of the house to-day," announced Eliza in an aggrieved tone. "What be we goin' to do to-morrow, Jane?"

"Mis' Walton says she should like to have us look over the reports of their work for the library fund in the morning, and —"

"Well, I sha'n't look over no nothin'. I shall set right in this room; I wish that Mis' Walton would let us alone a minute. I did n't come to Boston to visit with her," said Eliza.

The fourth day of their pleasure trip dawned bright and clear, but found Eliza nearly discouraged. She had not suggested returning home, as she hoped that each day might bring a chance to see something of the city of which she had dreamed. Even Miss Jane began to wonder if they would not have enjoyed their visit better at a hotel.

"Seein' as we're in Boston, I dunno but what I should like to see Bunker Hill monu-

ment, after all," she confided to Eliza. "I've heard father tell considerable 'bout it."

Miss Eliza looked up hopefully. "Well, why don't we go *an'* see it?" she urged. "There's cars a-goin' by to all points of the compass, an' if we are a-goin' anywheres, it's about time we made a start, Jane; we've been here four days. To be sure, Bunker Hill ain't the theater, but it's *somewheres*."

"Has Mis' Walton said much to you about that library fund they're tryin' to raise?" asked Miss Jane. The sisters were alone in the narrow room. The door was securely fastened, but Miss Jane lowered her voice to a whisper, and without waiting her sister's answer continued: "She was a-sayin' to me last night, that five hundred dollars would complete the amount needed. It seems to be for a good cause, Eliza."

"I s'pose we should have to allow some time, a good part of a day, mebbe, if we was calculatin' on visitin' Bunker Hill," remarked Miss Eliza, with a fine disregard of her sister's question.

"I s'pose so. I was a-thinkin', Eliza, that p'r'aps, seein' you was so set on it, we might go to the theater; we could go up an' see the Common in the morning, an' go to the Museum to-morrow night; that is," concluded Miss Jane, "if we could manage it without causing unnecessary talk."

Miss Eliza's face brightened. "You jest leave it to me, Jane; don't you charge your mind with it at all. An' about that library fund, I may say that Mis' Walton's said a good deal to me about it. She seems to feel jest as if father's bein' a minister sort of bound us to give that money. I declare, I did n't like to tell her that if it had n't been Uncle Daniel's leavin' it to us, we should n't ha' thought of Boston."

The next morning, after their early breakfast, Jane and Eliza hurried to their room, put on their bonnets, and, coming softly down the stairs, opened the front door and stepped out.

It was a bright spring morning, and the country-bred women were keenly sensitive to the crisp, salt-touched air.

"I declare to it, I don't feel more 'n seventeen," said Eliza, joyfully. "I was afraid Mis' Walton would n't want us to go out alone; but I s'pose she did n't see no way to prevent it," she finished, with a little laugh.

"You're sure you know the way, ain't you, Eliza?" questioned Miss Jane, anxiously.

"Land, yes; we jest keep down this street a little way, and then turn to the right, and there we be; but I jest want to step into this store a minute, Jane."

The elder sister followed meekly. In the pursuit of pleasure she felt herself a secondary power. A bright-faced, good-natured girl came forward to meet them. "Would you be kind

enough to direct us the nearest way to the Museum?" asked Miss Eliza.

"The cars go right by here," answered the girl; "you just wave to them, and they 'll stop. You tell the conductor to leave you at the Museum."

Both the ladies thanked her, but outside the shop Miss Jane said, "We don't want to go to no Museum now, Eliza."

"Yes, we do; we want to get reserved seats, so 's to be sure 'bout to-night," replied her sister, as she hurried Jane toward a horse-car.

"I've got to meet Mis' Walton at ten o'clock, Eliza, so we won't mind 'bout the Common this forenoon," said Jane in an almost apologetic manner, as they came down the long flight of stairs that led from the ticket-office.

Miss Eliza made no objections. Two tickets for the evening performance were in her grasp. The charms of the Common were of little importance.

"I don't s'pose you feel willin' we should give that money to the fund, do you, Eliza?" ventured Miss Jane. "The fact is, I told Mis' Walton that we 'd consider the subject, an' I thought, if you agreed, that I 'd pay for these tickets with the cranberry-money."

At that moment five hundred dollars seemed a matter of small consequence to Miss Eliza. She was in Boston, she was going to the theater that night. The sun shone, and along the borders of an old cemetery she could see the yellow gleam of the crocus.

"I dunno as I care, Jane. I s'pose it 's puttin' it to a good use," she answered.

Miss Jane said nothing, but it was her triumphant moment. She felt that, after all, the cranberry-money had not been spent in vain. She pictured to herself the scene when she should formally present the money to the board. She flushed at the thought of their admiring thanks, and smiled at her own modest acceptance of their appreciation.

Although the walk home was a silent one, both sisters remembered it as the most pleasant part of their visit.

Mrs. Walton met them at the door. She was sorry, but she must ask Miss Little to postpone their little talk until afternoon. There was to be a meeting of the directors that evening in regard to the library fund. She hoped Miss Little would feel like coming down; at any rate, she would see her directly after lunch.

Miss Jane agreed cheerfully. "I shall have something pleasant to tell you, Mis' Walton," she said; and, shaking off Eliza's warning hand, she continued, "my sister and I have at last agreed—" Mrs. Walton gave utterance to a hopeful, short-breathed "Yes?" and Miss Jane went on, "I will tell you our decision this afternoon."

When they were alone, and Jane was preparing for the afternoon meeting, Eliza spoke: "Now, you be careful, Jane, or we 'll have to go to that meetin' to-night. I know just as well as I want to that Mis' Walton would think we 'd ought to put the money in the mission-box instead of goin' to the theater with it. You be firm, Jane. You can give 'em that five hundred dollars if you want to, but don't you let her have the chance to stop us goin' to the theater now the tickets are bought."

It was, therefore, a somewhat difficult task for Miss Jane to respond to her sister's questioning look when they met at supper.

"Tain't no use, Eliza; we've got to go to that board meeting to-night. We've got to sign papers 'bout givin' that money; and I—well, 't wa' n't no use to say nothin' 'bout our goin' out to Mis' Walton," said Jane, weakly.

"What be we a-goin' to do with those theater-tickets? They're bought an' paid for," said Eliza.

"I can't help it. There ain't no way but for us to go to that board meeting to-night," answered her sister.

It is a week later, and the Misses Little are again at home. In the frame of the small mirror in Eliza's room are stuck two narrow slips of blue pasteboard, the only purchase she had made while in Boston.

They are sitting together in the kitchen, Miss Eliza occupied in vain endeavors to sew up a long slit in an old rubber, while Jane's needle speeds busily back and forth weaving in a neat darn in the front breadth of her black alpaca.

The elder sister's face is calm and placid, but Eliza's thoughts are evidently not of a satisfactory nature.

"You ain't read the notice 'bout our givin' the money to the library fund in that paper Mis' Walton sent, have you, Eliza?"

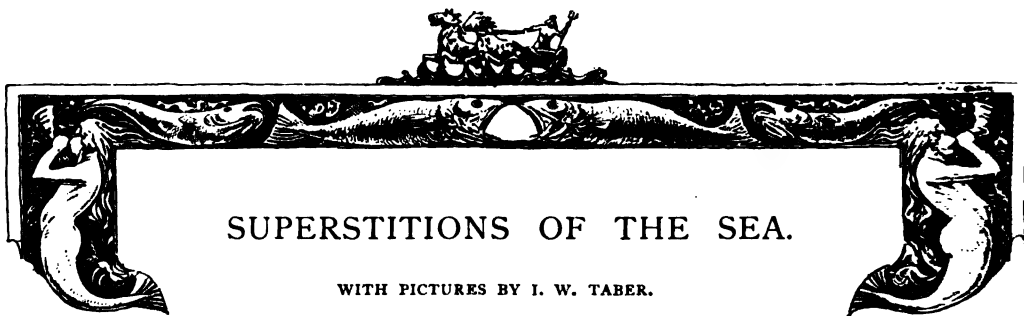

"Yes, I read it. It read well 'nough. Sounds well to give five hundred dollars to 'most anything; but I sha'n't have no new rubber shoes next fall now the cranberry-money 's spent. I ain't begrudin' the money, Jane, but when I think of our buyin' those theater-tickets an' not goin', an' not seein' the Common, nor goin' to Bunker Hill, an' not stoppin' at no hotel, all just because Mis' Walton happened to ride in the same carriage we did, I declare, it makes me feel as if I wished Uncle Daniel had n't left us a cent."

Miss Jane's placid expression fades a little, and she says: "We shall have to plan pretty close this year to pay for it, but I guess if we 're careful we shall be 'bout 's well off in a year or two as we was 'fore we had money left us."

AWAITING THE TRAIN.

SUPERSTITIONS OF THE SEA.

WITH PICTURES BY I. W. TABER.

EARLY in the seventies the steam sloop-of-war *Resaca* was detailed for duty as the depot ship of the naval expedition employed upon the Pacific side in that optimistic survey of the Isthmus of Panama which was to reveal a tide-water canal route to the Atlantic. The climate was villainous, the work rigorous, the surroundings most depressing. Even in the preliminary stages so many denials had to be enforced that at last, as a concession to the civilized side of the men engaged in the labor, an opportunity was offered them to send home and receive letters through agencies less uncertain than the pestilent bungoes which traded coastward from the Gulf of San Miguel. Into these denials entered many essentials such as clean linen and mess stores, so when it was announced that the sailing-launch, adequately equipped and manned, was to go to Panama, there were arrayed such a mail, personal and official, and such lists of stores necessary for the successful pursuit of the elusive routes, that the departure of the craft took on a fine air of ceremonious congratulation. When the boat shoved clear of the ship's side, the men crowding the rail, and the officers gathered aft, sped her in a hearty cheer the warmest of God-speeds; the ship's dog barked, the landmen swore at their bondage, and the fore-castle cat glared silently from the pivot-port. For hers was an absorbing interest, as among the launch's crew was that very tender-hearted blue-jacket whose affection for the cat had made him go the length of sporting her tattooed portrait, in the primary colors so dear to Jacky, upon a stalwart forearm, where a very weeping willow and an impossible tomb divided the muscles with a quaint distich out of a sailor's hornbook.

The cat gazed long and uncannily from the pivot-port rail, her tail waving a protesting adieu, and her whiskers rigged out with the rigidity of a Greek brig's bowsprit. When the boat turned a bend in the river, and was shut in by a lush fringe of mangrove, the cat jumped spitefully to the deck, walked forward (back arched and tail swollen like a magnified frankfurter), spat at the yellow dog we had—conveyed, the wise call it—up-river, and then disappeared—forever.

Whether she dropped overboard in the

swift tide-stream of the Tuyra, or was astrally translated, none of us ever learned after the closest inquest; but that surely was the end of cat number one, as we despairingly called her.

Two nights afterward, when inshore, fairly well up Panama way, the launch, spitted by a squall from no-man's-land, turned turtle, belched mail, and coin, and linen, and all the rest of it, to the sharks, and one man, the cat's particular adoption, was drowned.

Six months later, and after a deal of trying work, the *Resaca* gained a well-earned anchorage off the murky coast of Callao. Here we met an American, a civil engineer of exceeding promise, who was engaged as chief of division in the survey of that cloud-assailing route which started from Lima, skirted the Rimac, and then zigzagged over the hills at an elevation deadly to the plain-reared gringo. He was low in his clever mind, hipped, sapped by fever and anxieties, and pathetically hungry for home and American faces and ways. We stumbled into his story through a lucky pitfall, though this may have no place here. It opened our hearts, however, for he was a stranger in a freebooting zone, and we were his countrymen, and surely that was enough to make the mess beg him to come on board for a chance at the sea breezes and a sure hit at American ways and faces.

The night he crawled over the gangway the ship's new cat slipped overboard, but with such pitiful mewings and clawings that the rush of rescuers nearly swamped the lowered boat. By the flare of signal torches and deck lanterns Tom was seen in the nick of time, and to everybody's content was hauled safely inboard.

Our visitor found a tonic in the breeze, and the rest and novelty of the life, made a most receptive target for the mess-worn stories, and all around proved such a good sort of American that when, ten days later, he announced his intention of striking the beach for the afternoon, a howl of growls went up, which had a sane echo in the calm and strong protest of the surgeon. It seemed, however, that he had to go, for one of his inventions, upon which depended the immediate support of his old people at home, was then under examination by the authorities.

MERMAIDS.

ENGRAVED BY C. A. POWELL.

He remained ashore after sundown, came off in the damp boat of a drunken fletero, who raised a row half-way to the ship about the fare, and when he climbed the gangway was so worn out with the running about and heat and worry that he had to be helped to his state-room. Just as two bells struck in the first watch (nine at night), and tattoo had its echo in taps beaten, the doctor came on deck to tell us that the engineer was in a bad way; but in the middle of his explanations we heard a scramble on the housed awning, saw a tangle of flying feet and clawing paws, and heard a splash, a wail-

ing mew of despair, answered by the bleat of a belated seal paddling toward San Lorenzo, seaward. Cat number two was overboard, this time for good and all; for though the nearest boat went into the water by the run, and willing fingers gripped oar-looms and handles, it was too late. The cat had slipped into the darkness, and was borne shoreward on the flood, surging riotously.

When the ebb was making about two in the morning of the second day, the young engineer stretched out a faltering hand to the doctor and to the rest of us gathered about him,

INDIANS SACRIFICING TOBACCO TO APPEASE THE SPIRIT OF THE WAVE.

tried to tell us something about his invention, and died.

After long days at sea, and longer ones in stunted Peruvian and Chilian ports, the *Resaca* anchored one breezy morning off the town of Talcahuano, which offers such large possibilities to sailors. Here some one was given a wonderful kitten, yellow and gray, with curious interlacings of black and tawny rings. It was a breed strange to the country, so everybody said, and no one pretended to account for it save Lafferty, a Californian, who ran the Fourth of July hotel. This tavern was much frequented by sailors of all degrees, and here one day, in the captain's room, religiously tabooed to all save master-mariners and naval officers, Lafferty told in an ornamental lie how the kitten's mother had appeared suddenly after a rainfall, and how she proved to be, not a Dago cat, but one of an Indian breed, born on the silent, yellow pampas, which stretched over the hills for miles and miles out Argentine way.

The kitten grew into a very gentle cat, took kindly to all hands, though it adopted as its special ward the senior watch-officer, who, by the way, was the only man in the mess that had a wife and baby to keep him out of mischief.

Those were busy days for the ship off that nook-shotten coast, and so after another six months the *Resaca* was one morning at sea, standing up the shore, bound for Payta, when the senior watch-officer came on deck and learned that the cat was dead. In a mad chase

after a rat, diving into a chain-pipe, it had made a jump from the topgallant forecastle, struck its head on the cable, and ended thus untimely its career. After his manner, the senior watch-officer fell into sad forebodings. When the day broke, the gear was laid up, decks were swept, and preparations made for washing down. Hardly had the hickory brooms begun their swishing when White — John White, captain of the starboard watch of the after-guard — staggered against the bulwarks, and said, "I feel bad, sir," and then gripping his throat, continued; "all throttled here." Two hands were ordered to help White forward, the doctor was called, the apothecary aroused.

Just as the gray dawn silvered into clear day the doctor came — in pajamas — with a leap and a bound on deck, asked what the row was, and started forward; but in the center of a silent crowd of sailors of the watch gathered at the weather-gangway he stopped. It was too late; White was dead.

After the captain of the after-guard had been buried, and the ship had gathered way on her old course northward, the petty officers came to the mast, and asked to see the captain. When he appeared, the senior sailorman, cap in hand, forelock properly patted, spoke up manfully and quietly. The burden of his request — this most gravely considered, most earnestly granted — was that the ship's company begged that no more cats be allowed on board. He went on to prove that they brought bad luck; black cats

and strange, foreign cats especially, and while the people forward were not superstitious, still, queer things had happened of late, and he felt it to be only fair that the captain should know how the men looked at it.

Lafferty's pampas cat was the last weshipped that cruise, and the rats had a fine run of the holds thereafter, until one day Bill Clarke, late champion light-weight of South Australia, and then proprietor of a snug English pub and dog-pit in Callao, came off to the ship by contract, and, baiting his traps with melon rinds, caught in two nights more rats than may be chronicled here.

This, of course, is an over-long yarn to reel off in order to prove that superstition is still

itances and developments. In the youth of the world its manifestations were the earliest recorded utterances of men concerning the visible phenomena of the universe, and its grip on simple words was an outgrowth of the fear of the unknown. Of all people sailors must deal at first hand, and helplessly to some degree, with the most unknowable, uncontrollable of material problems, the sea, and it is only natural that their folk-lore should be, in part, land stories fitted with sea meanings, and in part blind explanations of sea phenomena—both being maintained valorously by the gruesome conservatism of the seaman, even after rational causes come to the rescue.

In earlier days superstition was as much a

THE FLYING DUTCHMAN.

ENGRAVED BY E. H. DEL'ORME.

foolishly potent with sailors. It is as easy as fudging a day's work to show that, in the case quoted, coincidences were mistaken for causes, and that the evidence needed a link or two; but it was another curious coincidence that no more men died suddenly that cruise after we gave up enlisting cats.

AFTER studying them fairly well, I doubt if modern sailors are more superstitious than any other class with equal training and opportunities. I believe that everybody is leavened with superstition, notably the noisiest scoffers, and those mountebanks, the Thirteen Clubs, for these gentry protest too much. It seems to be a human instinct, modified by racial inher-

part of every ship as the water she was to float in: for it entered with the wood scarfed into her keel, and climbed to the flags and garlands waving at her mastheads; it ran riotously at her launching, controlled her name, her crew, and cargoes; it timed her days and hours of sailing, and convoyed her voyages. It summoned apparitions for her ill fortune, and evoked portents and signs for her prosperity; it made winds blow foul or fair, governed her successful ventures and arrivals, and, when her work was done, promised a port of rest somewhere off the shores of Fiddler's Green, where all good sailors rest eternally, or threatened foul moorings deep in the uncanny locker of Davy Jones of ballad memory.

In many countries stolen wood was mortised into the keel, as it made the ship sail faster at night; though if the first blow struck in fashioning this keel drew fire, the ship was doomed to wreck upon her maiden voyage. Silver (usually a coin) placed in the mainmast-step went for lucky ventures, and misguided indeed was the owner who permitted any of the unlucky timbers to enter into the construction. Something of the ceremonious character given to launchings survives to this day; where of old ships were decked with flowers and crowns of leaves, flags now flutter; the libation poured on the deck, the purification by the priest, the anointing with egg and sulphur, find their ex-

bring ill luck—lawyers, undoubtedly, from the antipathy of sailors to the class, a dislike so pronounced that “sea-lawyer” is a very bitter term of reproach, and “land-shark” is a synonym. Clergymen—priests and parsons—are unlucky, probably because of their black gowns and their principal duty on shipboard,—that of consoling the dying and burying the dead,—though possibly because the devil, the great storm-raiser, is their especial enemy, and sends tempests to destroy them. Women—who may reason out their unpopularity?—save that a ship is the last place for them, or perhaps because of the dread of witches; for of all spell-workers in human form none is so dreaded as the female brewers of hell-broth. Like the priests of the middle ages, they can raise a prime quality of storm by tossing sand or stones in the air, and, like Congreve’s Lapland sorceress, are supposed to live by selling contrary winds and wrecked vessels.

Russian Fins—or “Roosian” Fins, as Jacky has it—were, and are yet, wizards of high degree. Hurricanes blew, calms beset, gales roared, as they willed, and their incantations began to operate by the simple sticking of a knife in the mast. If they wished to drive the rats out of a vessel, they shoved the point of a snicker-snee into the deck, and every rat ran for the sharp blade, and willy-nilly performed *hara-kiri*. No one ever saw, in sailor lore, a penniless Russian Fin, for by slipping his hand into his pocket he can always produce a gold doubloon—why a gold doubloon, no one seems to know, but it is always that coin; his rum bottle, often consulted silently and alone, is never full nor empty—a gentle plashing of tide—half-tide bringing fat content, and woe be to the incautious mariner who bites the weather-side of his thumb at him, for harm will surely follow.

Certain families could never get sea employment under their own surnames, not even such members as were born with caul, for they were tabooed, barred; and many animals—hares, pigs, and black cats, for example—could neither be carried nor mentioned on shipboard, save under very stringent conditions. Scarborough wives kept a black cat in the house to assure their husbands’ lives at sea; but on voyages every black cat carried a gale in her tail, and if she became unusually frolicsome a storm was sure to follow. Years ago, on board the flag-ship *Franklin*, up the Mediterranean, we had a yarn that illustrated a survival of this antipathy

RATS LEAVING A SHIP.

emplars in the well-aimed and wasted magnums which are shattered on the receding cut-water as the craft, released from the ways, slips, well-greased, into the sea; the jar of wine put to his lips by the captain, and then emptied on deck, the cakes and ale set before the crew, the stoup of wine offered to passers-by on the quay, and the refusal of which was an evil omen—all are realized in these sadder lusts by the builder’s feast in the mold-loft.

Lawyers, clergymen, and women are ever looked at with disfavor on sailing-ships as sure to

THE PHANTOM BURNING SHIP.

ENGRAVED BY J. W. EVANS.

to certain forms of animal life. Two old quartermasters were heard during the morning watch exchanging in the cockpit dismal experiences of their dreams the night before. One was particularly harrowing, for the narrator wound up with, "And I say, Bill, I was never so afeared in my life; when I woke up it seemed as true as day, and I was all of a tremble like an *asp on a leaf*."

"What's that?" said the other. "Pipe down; don't mention that rep-tile; he's a hoodoo on shipboard."

Whistling — and let us honor this sweet tradition — is very much against the proprieties of sea-life. You may, in a calm, if not a landsman, woo with soothing whistle San Antonio or Saint Nicholas, and a lagging wind may be spurred in consequence by these patron saints of the mariner; but once the ship is going, never,

wise and wary passenger, whistle if you fear keel-hauling, for, like the Padrone in the Golden Legend, you may find

Only a little while ago,
I was whistling to Saint Antonio
For a cap-full of wind to fill our sail,
And instead of a breeze he has sent a gale.

Figureheads were at first images of gods, and later of saints and sea-heroes, and were held in high reverence, and the eyes glaring from each bow of a Chinese junk enable the boat to voyage intelligently — for "no have two eyes, how can see? No can see, how can do?" is the shibboleth of their sailors. Ships' bells were blessed, and to-day if a mistake in their striking is made by a stupid messenger-boy, they are struck backward to break the spell. In one ship to which I was attached the bell had

ST. ELMO'S FIRE.

ENGRAVED BY H. DAVIDSON.

come down to us from the *Ticonderoga*, through the *Thetis*, I think, and was supposed to be under the special control of a blue spirit of mischief. Why the blue spirit should indulge in such vagaries is hidden, but in the middle of deep-sea nights, when the moon rode in an

auspicious quarter, and the wind blew with the force, and from the direction, necessary for the spell, the blue bell was bound to make a complete circle, and ring out nine bells stridently. Of course no one ever heard or ought to hear nine bells at sea, for eight bells are as fixed in limit as

the decalogue; but this was promised. Whether the conditions failed to coördinate, I cannot say, but though the bell was watched by all sorts and conditions of men, the occult ceremony was never performed for our benefit. Is it necessary to add that by report it was a common event in the other ships mentioned?

The proverbial desertion of sinking ships by rats is founded upon reason, and undoubtedly occurs, for as rats like to prowl about dry-footed, and will stick to one place so long as food is plenty, it is probable that the ship they leave is so leaky and unseaworthy that their under-deck work is too wet to suit them.

Most of the ceremonies of ship-life are of long descent, but, I believe, none is more ancient or more honored in the observance than those attendant upon crossing the line, whether it be the equator with deep-water ships, or the arctic circle with whalers. The details of the performance vary even among the ships of the same waters; but it is always a tribute to Neptune exacted of the officers, crew, and passengers new to the waters entered. Bassett gives a description, taken from Marryat's "Frank Mildmay," which is true of our ships in essentials. With us the ship is usually hailed from the supposed depths of the sea the evening before the line is to be reached, and the captain is given the compliments of Neptune, and asked to muster his novices for the sea-lord's inspection. The next day the ship is hove-to at the proper moment, and Neptune, with his dear Amphitrite and suite, comes on board over the bow or through a bridle-port, if the weather permits.

Neptune appears [writes Marryat] preceded by a young man, dandily dressed in tights and riding on a car made of a gun-carriage drawn by six nearly naked blacks, spotted with yellow paint. He has a long beard of oakum, an iron crown on his head, and carries a trident with a small dolphin between its prongs. His attendants consist of a secretary with quills of the sea-fowl; a surgeon with lancet and pill-box; a barber with a huge wooden razor, with its blade made of an iron hoop, and a barber's mate, with a tub for a shaving-box. Amphitrite, wearing a woman's nightcap with seaweed ribbons on her head, and bearing an albicore on a harpoon, carries a ship's boy in her lap as a baby, with a marlinspike to cut his teeth on. She is attended by three men dressed as nymphs, with currycombs, mirrors, and pots of paint. The sheep-pen, lined with canvas and filled with water, has already been prepared. The victim, seated on a platform laid over it, is blindfolded, then shaved by the barber, and finally plunged backward into the water. Officers escape by paying a fine in money or rum.

To this day it is the roughest sort of rough man-handling, but it is a short shrift for those who take it good-naturedly, and, like bear-baiting, affords great amusement to the spectators.

On Good Friday, in many ports, Roman Catholic sailors cockbill their yards, slack their gear, and scourge Judas, as signs of mourning. In the harbor of New York I have seen the effigy of Judas hanged to a yard-arm until sunset, then lowered, and so belabored and beaten, so cuffed and kicked, that it seemed a mercy when it was burned to a charred mass in the galley, and the ashes were scattered with contumely on the water. Spanish sailors, on certain days of the week or month, lay aloft at sunset, and beat the sheaves and pins of the blocks—pulleys, as shore people call them. This is driving the devil out of the gear, and a fine din it makes, for the Spaniards put their brawn into it. After all, it is nothing more than a general order popularized, and is the result of a certain disaster, when a Spanish squadron, surprised at a long occupied anchorage, could not make sail to engage the enemy because the pins and sheaves of all the principal blocks had rusted in their seatings.

Nothing was more common at sea in the old days than apparitions, from horned and monstrous seamen, through saints and red-bearded Norse-gods, to that dreadful specter of the Cape, Adamaster, who is sometimes seen even yet, in the twilight, hovering in cloud and mist over the white folds of the Devil's Tablecloth mantling the headland of Good Hope. More picturesque than any other, perhaps, is the Flying Dutchman, whose tale is told with variations in nearly every maritime country, and whose sad mishaps have formed the burden of many a song and story. Jal gives the accepted version thus:

An unbelieving Dutch captain had vainly tried to round Cape Horn against a head gale. He swore he would do it, and when the gale increased, laughed at the fears of his crew, smoked his pipe, and drank his beer. He threw overboard some of the crew who tried to make him seek a port. The Holy Ghost descended upon the vessel, but, firing his pistol at the apparition, he pierced his own hand and paralyzed his arm. He cursed God, and was then condemned to navigate always without putting into port; only having gall to drink, and red-hot iron to eat, and a watch to keep that should last forever. He was to be the evil genius of the sea, to torment Spanish sailors; the sight of his storm-tossed bark to carry presage of ill-fortune to luckless beholders. He sends white squalls, disasters, tempests. Should he visit a ship, wine sours, and all food becomes beans; should he bring or send letters they must not be touched on pain of death and damnation. His crew are all old sinners of the sea, sailor thieves, cowards, and murderers, who suffer and toil eternally, and have little to eat and less to drink.

Cooper tells us that the vessel is said to be a double-decker, always to windward, sometimes in a fog during clear weather, often under all

sail in a gale, and on occasions veering and hauling among the clouds. The ship's history has been chronicled with the particularity of a great war, and in the late Lieutenant Bassett's book will be found many curious particulars of her woful fate and of her Heaven-cursed skipper.

To the adventurous globe-trotter who has climbed the rock-path to the sailors' church of Notre Dame de la Garde, dominating the Phenician port of Marseilles, the potent influence of sacrifices and offerings for perils passed and to come must be no old story. There is a pathos, even for the worldly, in the quaint ships and galleons, in the rusting marlinspikes and shattered tiller-heads, swinging to the mistral, in reverential offering before the shrines. These graces after danger, these insurances against evil to come, circle the world. No people have escaped the influence of such hopes and thanks. Our Indians were fettered by them, and no ceremonious offerings were more common than those which went to appease the angry Spirit of the Waters. On the upper tributaries of the Mississippi, the Indians, with occult rites, gave tribute of tobacco from a beetling cliff to the Great Spirit of the River, and to the winds that smote the waters with blasts from the caverns of the jealous gods. Algonquins in the North, Aztecs, sons of Atahualpa and Marco Capac, in the South—all blew incense out of their pipes, and strewed upon the currents and tide ways just such offerings of tobacco as, in our more subjective days, we give with lost meanings to the

minor gods who rule the man's hour in our feasts.

But not alone did apparitions, or votive offerings which must be made, crowd to daunt the sailor, for in his voyages ghostly lights would gleam suddenly from yard-arms or masthead, and at the bowsprit-cap spectral flames might cast weird reflections upon the water.

High on the mast, with pale and lurid rays,
Amid the gloom portentous meteors blaze,

is the manner in which Falconer sang of it, though among the Latin seafaring races the St. Elmo's Fire or the corposant is, specially if seen double, the best of omens, and is hailed as evidence of Heaven's care for ship and crew. Dampier described it as a small, glittering light, like a star when it shines at the masthead, like a glow-worm when it appears on deck. He believed it to be some kind of a jelly, but we know now that it is an electrical manifestation which occurs in rarified conditions of the atmosphere, and adheres to the iron of the spars, as the metal is the best conductor available.

Many modern sailors will reject this explanation as incomplete, and in the older days it would have been scoffed at, and banned by bell, book, and candle, for it was one of the commonest and most cherished of superstitions held by the men who went down to the sea in ships and saw the supernatural everywhere.

J. D. Jerrold Kelley.

THE PASSING OF DAY.

BLUE bloom is on the distant hill;
Mystic grays the mid-air fill.
The low winds say:
"Farewell to Day;
Evening is on her way."

She walks the waters and the land,
She and Quiet, hand in hand.
The low winds say,
"Sweet sounds, obey;
Soft colors, fade away."

And all the lovely colors go;
All the sounds; and very low
The winds say on—
Do they say on?
No whisper. Day is gone.

John Vance Cheney.

A BACHELOR MAID.

BY MRS. BURTON HARRISON,

Author of "The Anglomaniacs," "Sweet Bells Out of Tune," "Bellhaven Tales," etc.

WITH PICTURES BY IRVING R. WILES.

JUDGE IRVING.

MR. JUSTICE IRVING was in the act of putting on his overcoat to leave the Antediluvian Club. He was feeling reasonably cheerful, for he had beaten his favorite adversary, Bob Crouch, at billiards; so cheerful, indeed, that he made a mental note of a fleeting resolve to give Crouch, to console him, the next appointment he should have of a commissioner in lunacy.

It was, therefore, a smiling countenance his honor turned upon a young man already equipped for the street, who came up to offer him a hand with his coat.

"Ha, Gordon! That you? Have n't seen you before this evening."

"No; I have just come in, hoping to catch you—and to walk home with you, if I may."

"Glad of your company, my dear boy," the judge said, as they emerged under the sparkling heaven of a mild winter's night in New York. "Wanted to speak to you about the sale of Romaine's books. What the deuce he means

by selling them, I can't make out. Twenty good years of a man's life put into a collection that can't be beat for choiceness, and here they are to be scattered for a freak. You must manage to be there, my dear lad; there are one or two tidbits my mouth has been watering for this age. You must appear for me, as usual, and mind you secure them, if I am to die in peace. And I've got a copy of the new Prayer-Book. édition de luxe, to show you, with a story attached to it as good, almost, as my luck in getting it half price. Did n't see you at the Grolier last night, by the way. Were you and Marion quarreling, as usual, at our house? Can't think where that daughter of mine gets her way of flying off the handle about little things not quite to her taste."

"She has flown off the handle for good and all, so far as I am concerned," said the young lawyer. "She has broken our engagement."

"Broken—your—oh—good heaven, Gordon, you are thirty years old—you are not taken in by stuff like that? Broken—the girl's mad; I always said so; that woman's college I was fool enough to send her to—to 'finish her education,' forsooth!—has put more silly rot into her head than it ever did ideas. Ever since she quitted it, four years ago, she has gone on following one fad after the other, till I'm only thankful she has n't brought me to be an open laughing-stock before the town. And what this means, I don't believe anybody knows. She took you of her own free will; you've been engaged a year; and I had every hope of seeing her married, and settled, and out of mischief, in the spring—and—" here his honor emitted a naughty word, and struck his stick upon the pavement so fiercely that a policeman, accidentally in his place upon the block, looked around with languid interest to see what was "up"—"she *shall* marry you in the spring, or I'll know the reason why."

"Marion would not be the prize I have thought her," said the young man, modestly, "if she could be forced into marrying against her will."

"What's her will? What does a girl know about what she wants, and what she does n't want?" pursued the irate father. "If there's anything on God's earth troublesome to deal with at the breakfast-table, or on the witness-stand, it's a woman. Troublesome? Exasperating? *Devilish*! If ever I lost my temper, it would be with the whimwhams miscalled wo-

man's ideas. This age is going to pot with 'em. The creatures write (and, what's worse, print!), and howl and shriek on platforms, and struggle for equality with us in a perfectly disgusting way. It's some one of that gang that's got hold of Marion, you may depend; that's persuaded her she has a mission above matrimony. If that were the case, and I had my way, I'd like to sentence the offender to be ducked as a common scold."

Gordon had foreseen the effect of his communication. He waited quietly, adjusting his long strides to the somewhat shorter and heavier ones of his senior, until the first access of anger had talked itself out, and then took up the tale in the same even, self-controlled voice in which he had begun it.

"I don't suppose it's worth while for me to tell you how long I've wanted Marion. She is five-and-twenty now, and I took my love for her into the law-school with me, and have never wavered in it since. I did not ask her till a year ago, because I had n't enough to offer her till then."

"Egad, man, you've made a hit at our bar second to none of your contemporaries; and I'm blessed if I know one of them that's got an eye and a *flair* like yours for a good book. You are the only man alive I'd wish to have come in for my library when I'm gone. I have left it to you in my will, as you know, with the stipulation it's to be kept together."

"That can now no longer be my duty, sir," answered Gordon.

"Alec, what are you thinking of? Why, if twenty *Marions* threw you overboard, you'd still have *the books*!" exclaimed his honor, with heartfelt emphasis. "But, come, tell me about this business quietly; don't excite yourself. In such matters nothing is gained by losing our grip on our tempers. When did she give you this precious piece of information? Broken her engagement, eh? I'll be hanged if I'll put up with such scurvy treatment of her father's wishes. Am I nobody in my own house, I'd like to know? Am I a cipher, a petticoat-ridden judge, at the mercy of a spoiled girl infected with all the worst notions about woman's independence in our day — a — ?"

"I received, yesterday, a note from her," Gordon said, taking advantage of a pause during which the judge was fortunately obliged to blow his nose, "telling me that she was thoroughly unhappy in the existing relations — which, indeed, I have perceived. She asked me to go to her last evening, and I went. We talked over the subject in every aspect possible. I said everything a man in my circumstances could say. She looked more beautiful than I have ever seen her, and she was neither over-excited, nor exaggerated in her speech —"

"Marion *is* like me, they tell me," interpolated the father, grimly smiling in the dark.

"But there was no deceiving myself. Marion's ideas have undergone a change. She has come to this conclusion deliberately. She did not need to remind me that she, unlike most girls, had begun her life in society without holding marriage as its chief goal —"

GORDON.

"Stuff and nonsense! If you can find anything in the world as dismal and depressing as a woman, outside of a sisterhood, who devotes herself, through conviction, to a single life — they're bad enough, and vexatious enough, married; but as old maids — and if I've got to pass the remainder of my days in the cage with one of them! I won't do it, Gordon; I won't do it! I'll box up the books, send them to a safety deposit company, let my house, take rooms near the club, and allow Miss Irving to enjoy her single blessedness where she will."

"Don't decide now, sir," said Gordon, who, not in the least surprised at the father's attitude, pursued the even tenor of his way. "What I want to ask you—as a favor to me, if you consider that I am at all injured or aggrieved by the turn affairs have taken—is to say nothing to Marion. I told her that I would tell you of her dismissal of me."

"It's the first time I ever knew her to be a coward!"

"She is no coward; and you do not think so," Gordon said, a little rise in his temperature making itself manifest in his voice. "She is as brave a girl as ever drew breath, and as true. I asked her leave to tell you—I want you to prove your friendship for me, sir—that I've never had cause to doubt—that is my honor and my pride—"

"You'd have been the son I'd have chosen, Alec, to make up for the boy I lost," said the older man, and the two gripped hands on it.

"You won't scold her—you won't visit it on her in any way? You will accept it, as I do, as final? You will gratify any wish of hers to shape her life according to the ambition she now has?"

"You ask a good lot of me, Alec. I did not see her this morning. Come to think of it, they said she had a headache, and Marion never has headaches; and I dined at the club with Crouch and a couple of Western lawyers he has on hand. Crouch plays a pretty good game at billiards, Alec, eh? Not many men in the Antediluvian who can lay him out. Well, I beat him three times running to-night. Poor return for his capital dinner, eh? By George, that chef can cook little ruddy ducks! Outside, a beautiful, even brown, and the blood following the knife—cooked to a charm. And with them we had a glass of Chambertin just the right temperature. Say what you will, those things tell. Give me rather a chop and a bottle of beer if I can't get ducks roasted right, which you never can in your own house, I've found. I'm the easiest fellow to please in all the world, but when that woman of Marion's sends up wild ducks overdone! You were saying you want me not to haul Marion over the coals. Why, Alec, you know if there's anything I don't do, it is to let myself loose when anything vexes me."

"I know," ventured Gordon, soothingly. "But as this is rather more vexing than usual, I want to be sure Marion does not suffer because I have been telling tales on her. Let her speak to you first, if speak of it you must, between you. Allow everything to go on as before. If you could think of some one to invite to make her a visit at this time, it would take her out of herself, and break up her solitude, which can't be good for her just now."

"Solitude? What does she expect? She's

mistress of a good house, with plenty of servants, leave to go and come, a carriage and a maid to take her into society. She has more invitations than she cares to accept. I can't fill up the house with chattering women to please her. Good Lord! They'd be turning over my neckties, and even handling the books, before you'd know it! But I'll agree to say nothing. That I can do. It's no sacrifice to me not to speak my mind out."

"Thank you," said Gordon, briefly. They were now stopping in front of the judge's house, a broad, comfortable mansion of red brick a few doors from Fifth Avenue, in an old-fashioned, pleasant quarter not far from the Marble Arch. While the judge was feeling for his latch-key, Gordon managed to look up unobserved at the windows of the third story above him. From the angle made by the curtains in one of these, upon a shade illuminated from within, he saw a shadow withdraw. He knew this room to be the special belonging of his lately affianced wife, and he recognized the stately outline of her figure. She, then, had been waiting and watching for her father, when all the rest of the quiet house was in darkness. Gordon remembered, with a pang of sympathy for her, that in all the world outside that sleeping house she had no friend but himself who knew her as she was, who was familiar with the daily trials of her lot, who could stand between her and them. And now she had voluntarily put him from her, to live alone and to fight her own battles with what he believed to be a world of shadows summoned by her over-vivid imagination to people the loneliness of her life.

Not anger, but a vast pity for Marion, took fresh possession of him.

"Good night, then, Alec, if you won't come in and look at that catalogue of Romaine's books," said the judge in his loud, clear, self-satisfied voice.

"Not to-night. I think if you or Marion could think of any place where she might like to go for a little change—any one going abroad whom she might join—"

"Go abroad! Not by a jugful," said his honor, vexed into a slang phrase. "I've no patience with these female vagrants who leave the houses provided for them, and the duties of their proper sphere, to go wandering around in foreign parts amusing themselves like tramps. Marion knows that, when I am able to get off, she goes with *me*, under *my* charge, to do the things I think best for her; and with that she has got to be content. Oh, these women, Alec—these women nowadays! They never are content; they are as mischievous an element in our society as anarchists. Look at my mother—wife of a country parson, brought up six sons in a Massachusetts village, toiled and

struggled for them, never thought of herself, I believe, till she lay down to rest in the old graveyard. Look at Marion's mother — ill health from the time Marion was born, and she never let me know it, except in a general way, until she died. Those *were* women; Marion's degenerate —"

"I won't keep you in the draft of the open door," Gordon went on, with the quiet persistence that was a part of him. "But I hope, if Marion has any friend she desires to visit her, you will think well of providing her with a companion. Just now she needs distraction for her thoughts. She will be safer with some outlet."

"Well, well, I'll think of it. Good night. Come over on Sunday afternoon as usual, and stop to dinner, and we'll go over Romaine's catalogue carefully. You are not going to let this girl's folly rob me of you, my boy?"

"Good night, sir," the young man said. He had grown into the habit of thus addressing him as a father.

Again they shook hands, the front door closed, and Gordon ran down the steps to the sidewalk. Instead of going home, however, he crossed the street, walking up and down, and looking from time to time over at the window of Marion's sitting-room. When the lights there were extinguished, he turned into the Avenue, and made his way to his quarters in Washington Square.

In the corridor leading to his rooms he met a man of his acquaintance, likewise on his way into retreat.

"Hullo, Gordon! Saw you leaving the Antediluvian a while ago arm-in-arm with your father-in-law elect. I stopped behind to enter my third remonstrance on one subject in the complaint-book. There's a plot among the club-servants to smile whenever I make observations about the ventilation of the rooms; and by George, if the governors don't take some notice of it, I'll resign out of the club. Been seeing his honor home, eh? Soft thing you have there, old fellow; not to speak of the references that drop into your path like 'the gentle dew from heaven.' When are you going to hang up your hat for good upon Irving J.'s hat-rack?"

"Miss Irving's engagement to me is at an end, Clarkson," said Gordon, pausing at his own door, and speaking deliberately, while holding his handsome head erect, and looking his interlocutor full in the face.

"*What!*" said Clarkson, genuinely surprised.

"Yes," answered Gordon.

"Is there — if any one asks me the reason, what would you like me to say, old man?"

"Say that it has been dissolved by mutual consent. Good night to you." And, opening

his door, Gordon disappeared abruptly from the view of his acquaintance, who was left upon the mat, whistling softly.

"FATHER, I have been sitting up for you," Marion had said, following the judge into his library, whither he went directly upon entering his home.

This room, containing the apple of Judge Irving's eye, was at the back of the house, in an extension built to receive it over the dining-room. Upon its walls, everywhere — save for the projecting jamb of a great chimneypiece of carved oak, and a bay-window, the upper half of thin glass veined with delicate traceries of lead, the lower curtained with amber silk, making sunshine in the gloom — were seen the mellow bindings of "the books." The books, Marion's rivals, were best loved, as she knew, for their outer integument, for their rare press-marks, for the fact that another collector had failed to secure them. Into these had gone a liberal part of the income insured to Mr. Irving during his life by his wife's will, setting aside for her daughter, after she should have reached the age of twenty-five, an annual allowance of three thousand dollars.

Marion, having just passed the period indicated, had not as yet touched her inheritance. Her father had reluctantly acceded to his wife's desire so to dispose of her own belongings. Although he would have furiously repudiated the idea of having influenced his spouse in the matter of a will so largely in his favor, poor meek Mrs. Irving, going to her grave at a gallop, took care to obtain from her husband information as to the exact age at which he was willing their daughter should begin to enjoy an independence of the purse; and somehow or other, twenty-five was the age given to the lawyer who drew up the document.

"I am glad you fixed upon five and twenty, Angela," the judge had said approvingly, after the poor lady's last will and testament had been duly signed and witnessed. "It is an evidence of your excellent judgment, my dear. You know very well that no young woman, before that age, should be regarded as a responsible being, or have tools for folly or mischief-making put into her hands. Yes; I am glad you thought of it — very glad."

Whereon he had stooped over her couch, and kissed her, going out of her room in such fullness of vigor and manly good-looks that she felt, in the heart already gripped by death, a gentle palpitation of her old adoring love for him. A little later she went to her reward, satisfied that she had done her best by the daughter left in the care of such an infallible being.

These things had passed when Marion was a child of twelve. At eighteen she had been

a woman, ardent, thoughtful, speculative, but ever since had lived the life of an infant in leading-strings, so far as her father was concerned. The curriculum he had allowed her to take at a woman's college in a neighboring State had been her one opportunity to stand alone, to test the little budding wings of her intellect, to speak upon any subject of the outer world without the certainty that she would be crushed, or smiled down upon, according to his mood.

Thus the engagement with Alec Gordon, entered into by her with hesitation in response to his fervent pleadings, was poisoned at its source. She had learned to look upon man as an oppressor of woman; to mistrust him as morally weak when physically most attractive; to resent the domestic law-giver; to dread giving up liberty, even comparative, for the positive slavery of marriage. Her father's favorite saying, in response to any remark of hers he found inconvenient to answer,—"When Gordon gets hold of you, he will take all that nonsense out of you, my dear,"—had grown to be the nightmare of her engagement. And at last, little by little, the solitary self-tormenting of the girl had worn away her power to discriminate in character. She could see in her lover only her father's instrument. In her despair she wrote to a friend who had been a professor in the college, and told her the case as if it had been that of some one else. Of the answer we will quote this phrase:

In sum, I should say to your friend that if her God-sent intentions were followed out by all women who experience them, we should be moving with quick strides to the future we pray for, when man through woman shall be made to know himself.

"I am not sure I know what she advises," quoth poor Marion, who had been reading seven pages preceding the sentence quoted. "But she feels for me. If I could talk with her in person, I should be easier. Oh, what in my place would the higher woman do?"

What Marion did we have learned from Alec Gordon's lips. It now remained for her to meet the storm of her father's wrath. She came into the library, swiftly, tragically, her tall form carrying the sweep of a loose white robe edged with brown fur. A band of the same fur, clasping her throat, repeated the tint of her massive hair parted in an exquisite clean line, and twisted in a coil behind. This, as did everything about the physical woman of Marion Irving, illustrated nature unspoiled by conventionality. Her taper waist, her small bust, her grand arms, her free movements, were the delight of a sketch-class of girls to which she belonged. When she would consent to sit for them, there was a general exclamation—a long-drawn "Oh!" of satisfac-

tion, deep, not loud. Once, draped in cheese-cloth dampened and dried into the beautiful pliability beloved by an artist, she had posed for them in the attitude of the "Winged Victory of Samothrace." Her superb appearance on the platform in this guise was followed by an enthusiastic burst of applause from the class that covered the model with a veil of blushes.

Of the bewitchments of ordinary feminine beauty she possessed few. She had no coquetry, no desire to test her power on men. Her father's unfeigned contempt of all varieties of female supremacy had made her mistrust her ability either to charm or to command. She was singularly simple, direct, outspoken, and by men of society, so called, was rather eschewed than otherwise.

As she now descended upon her father, she found him warming himself, with his back to a cozy little fire, its flame many times repeated in a setting of yellow tiles. On the table beside his deep arm-chair cushioned with old-blue corduroy (these blues and yellows carefully chosen by himself) stood a reading-lamp, and a tray with a small cut-glass decanter of spirits and a plate of biscuits. The butler had seen, according to custom, that everything was in place. The judge meant to sit there for a quiet half-hour before retiring, to enjoy the consciousness of good health, good looks, good digestion, good repute, and a good balance at the bank.

Marion's appearance surprised him unpleasantly. A domestic whirlwind, in the wee sma' hours, when a man has nowhere to flee from it, is indeed a fearsome sight. Why in the dickens, he asked himself, could not the girl have put off this business till morning, when it is always possible to cut short the heat of any discussion by opening the front door? He frowned, therefore. His eyes surveyed her with the cold displeasure she so easily aroused. He was the Mr. Justice Irving Marion knew best, not the clever, genial Mr. Justice Irving known to the bar and public.

"You know I cannot endure having any one sit up for me. You have repeatedly heard me say so to the butler and the maids."

"I know, father, I know. I will never do so again. But I felt I could not go to sleep another night not having told you that I have broken with Alec Gordon."

"You may spare yourself the words, and me the annoyance. Gordon walked home with me and told me. If I had to hear it, it was better coming from a man who can tell a straight story than from a woman who dresses the whole thing up to suit herself—"

"Stop!" she cried. "Not that! In all my life I never told you a lie."

"There you go, taking offense at trifles, as usual. I meant, of course, that you would nat-

urally want to put the best face on this shameful business."

"There is no shame in refusing to marry a man I am afraid I may grow to hate. The shame would be standing at the altar by him, and swearing false oaths. I want to put no face on it except the true one. I have searched my heart, father, for the love a wife ought to bear her husband, if married life is to be supportable—"

"Come, come!" said the judge, rather scandalized.

"I have found there nothing but a cold, hard crust of indifference. I like Alec as a friend; I tried to love him: but I love no one. Father—" she paused, a mighty swelling of the heart took away her speech for a moment; she drew near and, rare act, laid her hand upon his shoulder—"father, you *do* understand me, don't you? You loved once—did n't you?"

The judge, uncertain whether to be angrier than he already was, or to treat the matter as a very insignificant joke, moved away from her hand.

"I—why, Marion, I am astonished at you—I—bless my soul, what won't women try to investigate in these days—I believe your mother had no cause of complaint against me as a husband. But then *she* was one of the kind who take things as they find them, who don't tear the passions to tatters, and go back to the fundamental basis of created things when a hasty word is spoken. She was an admirable woman, and her loss—er—ah—" here the judge, catching sight of a newly arrived express-parcel upon the table, expanded into a positive smile of rapture. "By the Great Horn Spoon! if there 's not the '*Gesta Romanorum*' from that Boston sale!"

"May I finish, father?" said Marion, her arms falling dead, as her father seized, gloatingly, upon his prize.

"If it's *quite* the same to you, my dear Marion, we'll remit the rest until breakfast-time to-morrow. I had made an offer for this, but feared Lewis, who was on the spot, would outbid me. Oh, by the way, on Saturday I shall have leisure—you shall have your bank-book and check-book, and I'll explain to you how to use them. And, Marion," he added, turning over affectionately the saffron-hued leaves of the little volume, "that reminds me, if you would like to have a visit from any friend—how would it do to invite my brother Joe's girls over from Philadelphia for a week?"

"They have gone to Montreal, father," she said listlessly. Even the threat of a visit from her Uncle Joe's girls—pretty, flippant creatures, forever agog after men and finery—could not shock her now.

"Then think for yourself—there must be somebody," he suggested, already a little out of patience, and longing to be alone.

"I have a friend—a widow; she was for a time a teacher in our college, and left it to be married. She is now in Washington, unoccupied and very poor, I believe."

"And, pray, what is her name?" he said, turning over the leaves as before.

"Stauffer—Madame Stauffer, they call her, since her husband was a foreigner. She is not old, and rather nice-looking. She would interest me, I think."

"Then for Heaven's sake ask her, and be done with it. Only, when she gets here, mind, I breakfast alone, and dine at the club whenever the fancy takes me."

"I understand."

She waited a minute, but he did not again notice her. Marion left the room, in spite of herself, a trifle lighter of heart than when she came into it. She remembered Sara Stauffer's gift of sympathy. She was at last to have some one, all her own, unshared by her father, uninfluenced by his views and wishes.

Before going to bed, she glanced again at the letter received from Sara a few days before. She decided that she would not wait to write, but early next morning would send a telegram inviting Madame Stauffer to be her guest.

Marion, warmed with new hope, was still thinking of Sara Stauffer when, by extinguishing the gas, she did what, unknown to her, was the signal for Alec Gordon to turn away from his watchman's beat on the pavement over the way, and to go back to his quarters, carrying the keenest disappointment of his life.

II.

A FEW days after the permission given to his daughter in the first glow of satisfaction at acquiring an almost unique copy of the "*Gesta Romanorum*," Judge Irving, coming home to dinner, stumbled, upon his own threshold, over an expressman carrying in a little trunk.

"Here, you! There's some mistake. That is not for this number," he called out to the man, who was blocking the way ahead of him.

"I beg your pardon, sir," interposed the footman, who held open the heavy old mahogany door with its side-lights, fan-light, and brass knocker, bespeaking the antique respectability intrenched behind it. "It's the luggage of the furren lady that's come to visit Miss Irving. Hurry up, my man!" he added in a lower tone. "Look sharp for the gas-fixture, and carry that there little article to the third-story back. Maid's on the stairs to show you."

"Third-story back?" repeated the master of the house, who was all ears for everything that went on inside of it. "That is Miss Irving's own bed-room, Hilary."

"Them was Miss Irving's orders, sir. Miss

Irving have moved into the small room for the present."

"Very extraordinary," muttered the judge, rather pleased with a grievance to cover the extreme annoyance he had felt at sight of the little trunk.

An impertinent little trunk—small, cramped-looking, not by any means of the appearance to justify its ascent of *his* front stairs—the kind of trunk habitually delivered after night-fall by cheap expressmen at the basement door,

almost immediately, to Miss Irving's sitting-room, where the ladies has been talkin' ever since."

"I remember, now," said his master, frowning upon his affability. "It *was* to-day she—that pers—the lady, was to arrive. Hilary, I shall dine at the club. You can mention it to Miss Irving, just before dinner is served, so that she may not wait for me."

"Very good, sir," said Hilary, hanging up the judge's coat, and smiling more freely as the

MARION.

as appertaining to one of the ladies of divers nationalities who arrive at one's home, and remain for a time, 'until suited,' with their clothes in a paper parcel.

Mr. Justice Irving, whose appearance on the bench presented a majesty felt alike by lawyers, clients, and court-officers, had a dim idea that he had detected on the countenance of his servant, when the offending box had come under his august observation, an expression of pleased appreciation.

"So Miss Irving has changed her bed-room? And this lady—when did she arrive?"

"About four-thirty, sir. Walked over from the elevated, sir, I understood. I took tea in,

broad back of his master ascended the stairs to his dressing-room.

But, after all, what was there to smile at? Any man in Judge Irving's circumstances would have had just cause for a desire to flee. His privacy invaded, the silence of his home broken, by a little Madame Nobody, who had been trumped up by his daughter when in one of her hysterical moods. A little person—that she was little he decided from her trunk—who would require civility, before whom he must needs curb his tongue into the platitudes expected by women at meal-times. A "queer" person he was sure; a genius of the provinces; a bore, in short—a fearful, unmitigated bore!

And add all this to the natural unwillingness of the male sovereign to face in his domestic kingdom a stranger who would expect him to live up to his reputation for dignity and agreeability. He thought, while tying his white cravat, of the occasion when Charlotte Brontë had arrived to dine with Thackeray, and *that* great man was discovered by his daughters in the act of escaping from the house to seek the seclusion of *his* club. No; this was really too much for even Marion's selfishness to impose on him, and he should take care not to delay in making her understand the ordeal was not to last.

MEANWHILE the afternoon that Marion felt to be an epoch in her existence had flown by, for the women, on happy wings. Sara, arriving by some mischance unexpectedly, had been met, greeted, installed by Marion in her own easiest chair in her own sanctum, petted, looked after, in a way that expanded the stranger's heart with wonder.

What a transition for Madame Stauffer — from the hall-bedroom of a dingy boarding-house in Washington to the heart of this broad, luxurious, esthetic home, where life ran on well-oiled wheels, where flowers and sunshine banished winter, where the delicious scent of burning hickory arose from the fireplaces, where books and pamphlets, old and new, were scattered on all sides!

Sara, who by nature dearly loved easy-chairs and sweet odors and warm sunshine, and by theory as well as necessity renounced them, was for a moment staggered, at the outset of her visit to her old pupil.

She had not, for some reason, counted upon all this. Marion, always simple in her dress and habits, had been, while in college, under the yoke of a period of self-denial. Everything not absolutely necessary had been by her vowed to students poorer than herself, to philanthropic or charitable enterprises nurtured among them. And, since Miss Irving's father had never thought it wise to give her the control of funds, her scanty pocket-money had not gone far in the directions indicated. Her want of finery had often been discussed among her fellows. She was, in fact, regarded as one of the students kept in college by an effort on the part of their parents or guardians.

Madame Stauffer, after weighing against the price of board in Washington the expense of a railway journey to New York, had decided that the affair, even if Marion's way of living were rather pinched, would be "worth while." A two weeks' stay would justify her outlay. And for many reasons Sara had long and ardently desired a visit to the great metropolis. She was of the army of modern thinkers who declare, "Better a garret in New York" than a first-floor

bedroom in the "half-baked" cities elsewhere to be found in America — an expression for which Madame Stauffer's class must stand responsible.

In the short time that had elapsed since her arrival, Sara had been put into possession of the chief facts of her friend's recent experience of the heart; of Marion's doubts, fears, and ambitions for a more fully developed intellectual existence; of her difficulty in finding true sympathy with her aims among the people she was cast with; of her conviction that there was a key to the higher philosophy of living, if she could only lay hand on it; of her longing to be something — if it were but a unit — in the great cause of the evolution of true womanhood.

Madame Stauffer, a slight, pleasing woman of thirty-one or two, with dark, diamond-bright eyes and an irradiating smile, looked down from her throne among the cushions on the corner of Marion's divan next the fire, at the noble, earnest, dilating creature seated upon a low stool at her feet. They had dressed for dinner, and returned to wait in the morning-room till that meal should be announced.

In her room — Marion's room vacated for her — Sara, left alone, had sped from object to object of its luxurious furnishings, examining them curiously. She had even turned up a corner of the old Genoese coverlet of flowered cotton edged with antique lace, to see the silk lining underneath.

"Cotton on top, silk underneath! That is the real thing! When could I have afforded such?" she said, with a pang of envy. "Every thread of silk in my life has done duty before the public — exhibited for all it was worth!"

The couch, the writing-table, the sundry mirrors, the bath-room opening out of Marion's bower, had seemed to her unbelievable.

"A porcelain tub, all to myself, with white tiles underfoot, has always seemed to me something intended for the angels," she murmured whimsically. "And towels like those! Long, fine, hem-stitched, abundant! Oh, it is too much; I must shut the door, and not think of the bath-room, or my brain can't be depended upon to do its duty and pay for the privilege of using all this!"

She had put on the one best gown of the traditional poor heroine, and, opening the door into the corridor, had found Marion waiting there for her, with a fresh bunch of purple violets. There is no heart, however cold, case-hardened, worldly, that cannot be touched by the humanizing offer of a bunch of fresh violets. They are the open sesame to every woman's affections; on their breath arise the most tender beseechings to loving-kindness; under their influence the recipient longs to do, say, be, something delightful to the giver.

Sara Stauffer almost cried when she took

these from the hand of Marion. It was the finishing touch to her newly erected dream-temple of comfort and beauty combined. She kissed the tall girl, inclining her face upward to do so, and, twining her arm round her waist, exclaimed, as they went downstairs:

"O Marion, how perfectly happy we are going to be!"

And now Marion, whom nothing could long divert from her intense purpose, had reverted to asking Sara's advice.

"Do you mean that you want to go in for public utterances?" Sara answered, vaguely thinking how hard it would be to leave this nest of cushions by the fire in behalf of the suffering sisterhood.

"Forspeaking?" said Marion, a little startled, yet dazzled visibly. "Oh, I should never be allowed, *never!* After you have seen, you will know."

"Writing over your own name? As your father's daughter, that would mean much."

"Even if I dared to think of that, Sara — for you are not madame to me, are you, any longer? You are my friend, my teacher; you are going to be my sister spirit. Think of a woman of twenty-five saying, 'If I dared do what my conscience tells me is right!' But as long as I live here under his roof, supported by my father, I can do so little: I could write anonymously, I suppose."

"There are so many who write well whose names don't count," answered Sara, as if with an effort. She had just caught sight of Marion's beautiful, shapely foot extended upon the hearth-rug; of its casing of fine black silken openwork, its high-heeled slipper of patent leather, with a small buckle of brilliants. And Sara, who had a charming foot of her own, did so love pretty shoes and stockings, and had had so few of them! "Perhaps we can work out between us some method for you to serve the cause."

"Oh, how gladly would I do so! If I might, how gladly would I give up all this cramping luxury, to go out and work for and with my sisters, as you have done!"

"It is a hard life. I have lectured so much in the last year, and traveled so far, that my physician ordered me to rest in the comparatively mild climate of Washington," said Madame Sara, with a faint sigh.

"Poor thing!" said Marion, with a heartfelt sigh. "And so you divined at once that, in the hypothetical crisis my first letter laid before you, I was stating my own case?"

"Yes, dear child," answered Sara, caressingly. "And, to tell you the candid truth, I was a little afraid to handle it freely, as you asked me to do."

"Well, it is all settled now. You can speak out now. As I told you a little while ago, I am

already happier to be free from the torment of wondering if I loved him enough to accept, for his sake, the further limitations marriage would set around me."

"Is he — is he — good-looking, dear child?" Sara asked, burying her little nose in her violets, as if she could not get enough of their fragrance.

"I suppose you would think so," answered the girl. "He is on rather a large scale; but most people call him handsome."

"And successful — sure to rise?"

Marion was a little surprised. In the college days Sara had affected to scorn mere externals in mankind, to hold them as naught beside the gold of heart and mind.

"I believe people say he is," she said almost coldly.

"I was only trying to gage the depth of your renunciation, my love. In these days what they call a good match is so hard to find, and the world is so hard upon women struggling for themselves, it is almost heroism to renounce a safe marriage. But you — what am I thinking of? Your future is secure beyond peradventure. You, no matter what knocks and thumps you may get from the public, will have the sinews of war provided. You have only to be brave and steadfast, and in time all things will come to you."

"Do you think so?" cried Marion, exultingly.

"I do. Just now, while you are still young and nominally under your father's control, you can work for the 'Woman Question' alone. By and by you will reach, and be able to handle, the broader phase of it, the 'Marriage Question,' which is, after all, or is sure to absorb, the 'Woman Question.'"

"I don't quite understand," said Marion, her sweet, innocent eyes a little clouded by bewilderment.

"No; but there is time enough for that," said Sara, nestling down with fresh abandonment among the pillows. "Those of us who are victims of the horrible mistake of marriage with men whom we could not possibly know as they were may be left in charge of that branch of the subject. I see you are too much afraid of wounding me to ask if that was, indeed, my case. Some day I will tell you at length my experience, luckily brief. My husband, a German professor, whom I met at a friend's house in Chicago and married three weeks later, died of yellow fever in the South at the end of a year, six months of which we had spent apart. From these dates you may see my bondage did not long endure. But it has left in me an ineffaceable sense of wrong, and, having told you so much, I will not darken the enjoyment of the hour by elaborating on the theme."

"Don't tell me, you poor dear!" cried Marion. "I am sure that, whoever was wrong, you

were right; that you did everything noble, grand, and true."

At this juncture the door opened. Madame Stauffer, who had paused to adjust an answer to Marion's enthusiastic speech was prevented from uttering it by the appearance of Hilary, conveying the judge's message to his daughter.

"Not going to dine with us!" exclaimed the new arrival, in what Hilary decided to be "a forward way, considerin'."

"Of course you understand, dear girl," the lady went on, as they, directly afterward, walked down to dinner, "that, having come here as special physician in your case, I am all impatience to possess myself of it in every detail. Until I know your father, and see you with him, I cannot pretend to say how far you ought to venture in maintaining our ideas about free womanhood. Until now my time has been almost exclusively occupied with wives, not daughters. My mission is to overcome the isolation of the married woman, to reclaim her into an understanding of her rights, to show her there are other things to absorb her every waking thought than the mere subserviency to a husband — the mere bringing into the world, and up in the world, of children. Your case, being novel, interests me greatly. Yours is a thralldom from which even your liberal education has not been able to free you —"

At this moment Madame Stauffer dipped her spoon into her soup, and a mouthful of velvety *crème de céleri* found its way to her palate.

The Swedish dame who presided over the stew-pans of Mr. Justice Irving was, in her way, a gem. In spite of his animadversions upon her habit of misunderstanding the divine canvasback, he knew, and everybody knew, she could be trusted to send up dinners not to be outdone at any of his clubs. For the two ladies she had prepared a few selected *plats* only; but they were cooked to perfection, and served by the butler and Hilary on the silver dishes bearing the Irving crest. The little round snowy table in the middle of the big crimson-hung dining-room, the shaded candle-light upon the silver vase of white orchids in the center, the "feel" of the large fine damask napkins across her knees, renewed in Sara the gentle cerebral intoxication she had experienced over the porcelain bath-tub in her dressing-room. After she had sipped half a glass of good claret, the color rose into her pale cheeks, her diamond eyes sent forth more brilliant rays, she talked dashingly of many themes, but said no more, that night, of advancing the day when woman shall count all dross save the effort of her intellect to dominate slowly-awakening man.

When they returned to the drawing-room,

she sat down at the piano and played so exquisitely as to finish the subjection of Marion.

"You must play for my father," cried the girl. "He loves music. If I could play like you, I believe he would have loved me," she added, with sudden pathos.

"You must make him honor your courage, your consistency," remarked Sara, her white fingers twinkling over the keys. "It is a great mistake for woman to suppose that she is dependent on man's love for her earthly happiness. Great Heaven! When one thinks how many things there are *besides* men! Are not we two, for instance, perfectly cheerful, comfortable, well entertained by each other? Why on earth should we hang our hopes and fears upon man's frowns and smiles, as most women do? A woman who has the world's applause, the world's indorsement, will she not often throw it all at the feet of some good-looking animal, and be wretched if he does not approve of her, and then crawl up like a spaniel to receive a pat of his hand? A girl like you who has brains, beauty, wealth, position, power to come and go, why should her life be blighted because the man nature has chanced to place in charge of her, unsolicited by her, refuses to smile on her unless she is the abject echo of his opinions!"

"Why, indeed?" exclaimed Marion, kindling.

"And, all said, what is man as we know him in our generation? I pass over the so-called man of the world, except to ask you if a season passes, in your society, when you don't see parents ready and willing and anxious to give their young daughters in marriage to the heroes with whose 'gallant' adventures the newspapers have been filled for years? Is there ever a time when you don't hear this rich bridegroom's gifts of jewels, and horses, and houses, publicly extolled before other young girls as an incentive for them to go and do likewise, if they can? Let such things go. I speak particularly of the man of our homes, the average man we are called on to honor and obey. Is n't he a petty creature when you see him behind the scenes? A captious, whimsical being, unjust, and unwilling to admit himself in the wrong. Are his purpose, achievement, fair play, to be all devoted to outer affairs, and left down-town in his office, to hang behind the door there till he puts them on again next day? Why must he be wheedled—as God knows all women have to wheedle—in order to purchase peace at home? This is the cry of thousands of quiet home-keeping women, if they only dared voice it. This is one of the things we are trying to help them to speak out—and the time is coming when speak they surely will."

"Do you believe that all marriages end in this, if they end in nothing worse?" said Marion, with a shade of regret in her honest voice.

"My dear, if Asmodeus could lift the roofs of all the houses of all your acquaintances to-night, to jot down statistics of woman's dissatisfaction in his note-book, I'm afraid there would be few from which he would go away carrying a blank page."

She struck into a bit of Chopin that might have been composed by Asmodeus on his return from such a statistical round as she described. Marion shivered, as if with cold, and Sara, jumping up, shut the lid of the piano-forte, abruptly.

"Come over to the fire," she said. "Do you mind my taking your tongs, and playing with your log? For so long I have dreamed of a wood-fire with liberty to poke at it unchecked."

"But, Sara, you have not answered me. Do you believe all marriage is a bar to the intellectual development of woman?"

"My dear, do you know what a Girton girl remarked not long ago? 'All might yet be well with us, if we could only have three generations of single women.'"

"I am not prepared to say that. I have too much tenderness for the memory of my mother." Marion looked over wistfully at an oil-painting of a pale, slender lady in a robe of velvet and sable fur, hanging upon the wall. "That was done by Cabanel from an old photograph some years ago, and my father thinks it very like her. She was an invalid, in charge of nurses, for years before she died; and I was not allowed to be much with her. But I remember certain expressions of her face when I came into the room—yearning expressions, as I now interpret them. She seemed to be wanting to save me from something that had overtaken her. The son she lost just before her own death was her joy and comfort. She had no fears of any kind for him."

"Do you not see?" exclaimed Sara. "She wanted you to be spared the inevitable disappointments of marriage and maternity. So long hovering on the threshold of another world, may not she have had power to see what was in store for a girl of your strength of character? She, I take it, was of a yielding character."

"Entirely so, I think. The gentlest, timidiest of women. I remember that when, just before she died, she called me to her, and said she had arranged, by will, that I should have an independent income upon reaching the age of twenty-five, she uttered the word 'independent' in a whisper, looking about her to see that no one was in the room. And then she added: 'It is not that I do not feel your dear father will do all that is just and best for you, my child. His judgment is so much better than mine that you lose little in losing me. But perhaps you will marry, and there are moments when every woman likes to feel she has it in her power to supply her own needs—to give as

she likes. Since I have been married, your father has been good enough to lift every care of my property from me. With my health, indeed, what could he do, else? I have had only to sign the papers. But you may not get such a husband as I have had, my dear.' A nurse came in just then, and ordered me away. I was a wide-eyed, serious child of twelve, and my mother's words sank deep. Two days later, I saw her again—in her coffin. After she was carried out in it, my life went on with my new governess almost as before. I scarcely missed my mother; but this was not my fault."

"No, poor darling!" said Sara. "But I trust the governess was able in some degree to supply her place?"

"Miss Ainslie was an Englishwoman of the most conventional pattern. She had brought up a Lady Maud and a Lady Sylvia, so that my father congratulated himself upon having secured her on her first arrival to seek a far higher salary in New York than her noble employers had given her in England. But not knowing our customs in America, not allowing for the impulse of revolt against authority in our air, she made my life,—as I made hers, no doubt,—a wretched one for six long years. A devotee to duty, she never left me. I knew every one of her maxims by heart. A-h-h! Do you wonder I rejoiced in going to our college, where I expanded like a cellar-bred plant in the sunshine?"

"And what became of Miss Ainslie?"

"Her father's death recalled her to England. I have often wondered how she has adapted herself to the new order of things over there—the new education for women, the university training, that was to her like a red rag to a bull when I mentioned it, here. She must be a much astonished woman."

"I am surprised your father consented to let you come to us at Somerville."

"You could not have been more surprised than I. I was eighteen, just ready to go into society, when Miss Ainslie quitted us. My father waked up to confront that fact with genuine dismay. When he was asked by my Uncle Joseph's wife if he meant to give me a coming-out ball, or a reception, I wish you could have seen his face. Then I took my courage in both hands, and pleaded to be sent to Somerville. I have always felt I owed the permission he granted to my Aunt Joseph's offering to come over with her girls, and arrange the details, and chaperon the affair of my *début*."

"Your father, then, has an aversion to society?"

"Not at all. He is one of the men most sought after for dinners, where, I am told, he is the life of the table. Sometimes, when we dine out together, I peep across at him between the lights and flowers, and wonder if he

can be the same man I see, but don't dare interrupt by speaking to, behind his morning or evening newspaper. I am proud of his looks, of his wit, of his youth, for he is younger than most of his confrères—barely fifty now. Then I hope some other hostess will take pity on me, and invite me with him, so that I too can be charmed by him."

"I understand," said Sara, sympathetically.

"Oftentimes the older women of society say to me, '*What a lucky girl you are, to have that delightful creature to yourself.*' I fancy what he would say if I told him he was called '*a delightful creature.*'"

"And where, in this life you have been leading since you left Somerville, did the man come in to whom you have just ceased to be engaged?"

"Alec? I have known him always. Better since, after his graduation at the law-school, and a year of study in Germany, he became one of the 'juniors' in my father's law firm. For my father is in his first term, as you know, and has not been long upon the bench."

"I think I rather like your Mr. Alec Gordon," said Sara.

"I'm sure I do. He is far and away the best friend I ever had. He understands me as well as a man can understand a woman. Not as you do, dear; that could not be. Intuition like yours is not born into man."

"It must have cost you something to give him up," said Sara, narrowing her diamond eyes after a little nearsighted fashion not unattractive.

"Yes. I wounded him. I disappointed him. For a time he will feel very sore. But, feeling as I do, I am not fit to marry. I can't tell at what moment I should say or do something that would turn him away from me completely. I had rather keep his friendship than ultimately lose his respect."

"It is too late to-night to discuss that most interesting question. I shall have to study you all before I can say whether I indorse your action thoroughly. But, after all, you should, at your age, be your own mistress."

"Yes; and on Saturday I come into uncontrolled possession of an income, not large according to values in New York, but a boon to me—three thousand dollars a year, left me, as I told you, by my mother."

"Three thousand dollars a year!" cried Sara Stauffer, sitting upright. "Not large? Oh! what could not I do with three thousand a year, safe, secure, coming in regularly? No struggle to pay rent, to pay board, to journey from place to place, to strain after new, whole

clothes. Why, you who are cradled in eider-down have no conception what other women live on—what the world you are so anxious to go out and confront is to us who are at its mercy. Try to fancy yourself always, for instance, in one of those crowds going off a ferry-boat or pushing into the car of an elevated train. That's my world of every day!"

"It shall never be said, when I have the means, that I forget others less fortunate," answered Marion, simply.

"I am not afraid of you. Forgive my vehemence," said Sara, relapsing into her old pose. And so they talked, till the fire on the andirons sank into the singing stage, and Madame Stauffer, gracefully covering a tiny yawn, announced that she would like to go to bed.

As they mounted the stairs, the butler, who had just finished adjusting his master's little arrangements for a comfortable closing of the evening, came out of the library.

"What a lovely room!" exclaimed Sara. "Might I take one little peep?"

"I rarely go in," said Marion, while nervously preceding her friend across the threshold.

"Poor Fatima!" laughed Madame Stauffer. "I believe if, after finding her predecessors hanging in a gory row, she had had courage to face Bluebeard, and threaten to report him to the police, there would have been no need of the brothers riding up to deliver her. In *our* version, if there are any deliverers, they shall be sisters. Ah, what treasures of bindings! Now I happen to know something about good bindings."

"What do you not know?" asked Marion, one ear alert for her father's latch-key in the door below.

"I see we had better not stay. What if, some day, he asks us to come in here and visit him?"

"He will never do that, Sara."

Sara was not so sure. Still, it was very well for Miss Ainslie's pupil to preserve her illusions on this as on many other subjects.

At this moment they both heard the click of the latch-key in the lock of the front door.

"Shall we go up?" asked Marion, catching her breath a little.

"Just as you like," her guest answered carelessly. As the two moved along the corridor, Judge Irving mounted the stairs. It seemed impossible that he should not have been aware of their presence, but he gave no sign—opening the library door, and retiring within, with the magisterial dignity of his usual movements.

"You do resemble him strongly," remarked Madame Stauffer, who, through those narrow deep-fringed eyes of hers, managed to take in much of the fleeting show of life.

(To be continued.)

Constance Cary Harrison.

PAINTING AT THE FAIR.

THE great bugaboo of art that chases us half-way around the globe is decadence. It dogs our footsteps in the National Academy, in Burlington House, in the French Salon, in Munich, Rome, China, and Japan. It induces us to question of every international exposition, Is this indicative of progress or decline? And after we have forgotten the good works, and remembered the bad ones, we are disposed to favor the gloomy suggestion of decline. Then we hear periodic regrets expressed about the present work, and sad tales told of the good old times, just as if time were ever so old or so good as to-day, and presently we come to believe that the age of art has passed, and that modern painting is merely the final splutter in the socket.

But the specter of decadence is largely a specter, and the bright star of progress largely a will-o'-the-wisp. Their appearances are more local than general. The law of art is the law of the running brook, and its character is not so much progress or decline as change. There are rapids in the brook where the water breaks in brilliant light and color, there are pools where it lies in deep somber silence, there are places where it disappears from view under tangled brush, or sinks into the sand only to reappear farther on in some new land. It is ever shifting its position, and changing its depth, or hue, or quality, but it does not go out in utter darkness. When art disappeared from Greece and Rome, it rose to the surface in renescent Italy; when it ran out in Italy, it appeared in Spain, Holland, and Flanders; when they too stagnated or ran shallow, the stream suddenly showed in France. If art is now ebbing away from France, as some of our writers are prone to believe, we have only to look for its appearance elsewhere. It may not show soon, but it will surely rise again in some new form, in some new land. In fact, there were indications in the World's Fair Exhibition that it is even now rising in two places at once—America in the west and Scandinavia in the north.

The World's Fair was not the best lookout point from which to judge the world's painting. The representation was uneven, and in no case was the average high, except perhaps with our own country. We were on the ground, and a good showing was possible, yet no one who knows American art but regretted the absence of many notable pictures that would have materially helped our exhibit. The European nations were less fortunate. The good painters of Italy at the present day may be counted on one's fin-

gers, but they were not represented at the Fair with the exception of Boldini, who is Italian only by the accident of birth. Just so with Spain, Austria, and, in measure, with Germany. English painting was out in considerable force, but Scotland and the Glasgow-Edinburgh painters had nothing at all. France and Holland held up indifferently well, and Denmark, Sweden, and Norway did not appear so strong as at Paris in 1889. Still, from the Chicago exhibit one could gain a tolerably correct idea of the tendency of modern painting especially if he had been fortunate enough to see the Paris Exposition of 1889, together with the recent Berlin and Munich exhibitions.

In the nature of things it was not to be supposed that much excellence of painting could come out of Italy. As well expect fine marbles from modern Greece or bas-reliefs from Mesopotamia. The flower is blown, and even the stalk is in a dry rot. The art genius of Italy typified itself in countless forms during the Renaissance. It spent its force, culminating with Titian, and dying with Tiepolo, in an art peculiar to its age and people. The present race cannot repeat the triumphs of the past, nor have they the versatility or strength to produce a new art in keeping with new tastes. The attempts of most of the moderns are pitiful in their weakness. Pictures of the Roman Campagna with ruined aqueducts, pictures of the Pyramids, St. Peter's, the Forum, Pompeian flower-girls at fountains, monks, fruit-sellers, beggars—how much better are they than the tourist pictures of castled Chillón, or the Jungfrau with an Alpine glow collar around its top! Penelope's suitors with the bow of Ulysses, and the modern Italians with the palette of Titian! What could they do that would not seem petty by comparison? That which is Italian is mediocre in quality, and that which is very good is not Italian. Boldini, Michetti, Tito, Nono make a charming mingling of Fortuny and Paris; Morelli is cultivating the obsolete ideal of Dusseldorf, while Segantini is seeking to revive the archaism of the Giottesque. For the rest (those who made up the bulk of the exhibit at Chicago), they compound pictures to their own humiliation. The stream of art has passed through Italy, heading northwest. It is not likely that it will ever return to its source by the old channel.

There is little more encouragement to be extracted from Spanish than from Italian art. It came originally from Italy, and found its greatest representative in Velasquez. Religion was its mainspring, to begin with, but when Velasquez came it grew realistic in a broad sense, and

after his death it sank rapidly. At the end of the last century Goya lent it a fevered flush accompanied by some delirium, and about 1860 Fortuny created something of a revival with a bright, vivacious art of color and light. The example of Fortuny has had great weight with the modern men, and has produced a glittering, ornate art, in both genre and historical work, that is more interesting at first sight than at any time afterward. The best Spanish painters have been drawn to Paris, where they have adopted Parisian methods. Madrazo, Rico, and Palmaroli were not represented at the Fair, but had they been, their works would have shed no light on Spanish art. Alvarez and Villegas were to be seen in indifferent examples only. Two pictures out of about two hundred were conspicuously good, the "Hospital Ward" by Luis Jimenez Aranda, and "Another Marguerite" by Sorolla. There was no reason why these pictures should not have been hung in the French section, because they were typical Parisian art, and had little to do with Spain. What may be the future of Spanish painting no one can predict, but there seems little reason for supposing that it will improve upon modern Italy.

For years all the art roads have led to Paris. It is to-day the center of the art world, a model of taste, skill, and knowledge as well as a hot-bed of eccentricities, mannerisms, stilted affectations, and small trickeries. It takes in the world, takes credit for all its virtues, and is saddled with all its vices. It is ruled by the quips and cranks of what at times seems outrageous fortune; it is magnified and belittled; it is overpraised and underpraised; it seems to be rising to lofty heights at times, and then, again, to be sinking into the mire. It is at once the best and the worst art-center in the world, a crucible where all elements mix, all become alloyed, and yet all average up a respectable grade of amalgam. That which keeps it from hopeless debasement is the art genius of the French people. Has that art genius ever yet reached its apogee? Has it fulfilled its mission, and voiced the finer feeling of France as painting once did in Italy and Spain? Did we accept the exhibit at the World's Fair as a criterion, we might think her day was about finished, that her artists had said all there was for them to say; but the representation was inadequate. The French stand sponsor for all the academic emptiness displayed there, for all the studio recitation, all the exaggerated realism, all the tawdry sentiment, and yet at heart they have little sympathy with them. The academic was foisted upon them early in life by the example of Italy, and the misdirected energy of royalty. Poussin or Lebrun was no more French in thought or method than Corneille. The monarchy upheld the academic because it smacked of heroism, and the empire because it

fostered the military spirit; but the republic has barely tolerated it, and the radicals have always hated it. It is the *bête noire* of French art against which there has been a long series of revolutions. Why, if not that it fails to represent the French? They are fond enough of talking about such loyalists as Poussin, David, Ingres, and Cabanel, but the men they love are the rebels, Watteau, Fragonard, Delacroix, Millet, Corot, Courbet, The vivacious, the decorative, the emotional, the sentimental, the positive—all these they love because they are national characteristics; but the mock-heroic, the grandiloquent, the bombastic, have been more the result of foreign imitation than the outcrop of French feeling.

One wonders whether painting in France has ever yet been French painting except in periods of revolt. In the other countries of Europe (England, Holland, Spain, Italy) the course of national art has run smooth, but in France it has been a history of quarrels, an eternal struggle for freedom of expression. Shackling traditions within, and the influx of opposing notions and people from without, have had weight to drag down effort, and to breed fretfulness, eccentricity, mannerism, dull conservatism. This was noticeable at the Fair in the attempts at "smartness" or oddity, in the Beaux-Arts pictures painted for the Salon, in the time-honored nudes or classical themes of the academicians, in the small buttons and cocked hats of the realists. But this, instead of representing France, represents the Old Man of the Mountain she is carrying on her back. The incubus is of her own growing, but it is not the more enjoyable for that. Those painters who might stand for power, sentiment, decorative color, originality,—men like Dagnan-Bouveret, Laurens, Puvis de Chavannes, Ribot, Roybet, Cormon, Degas, Besnard, Boudin, Monet,—were represented but slightly or not at all. There were some good portraits by Carolus-Duran, Gervex, and Bonnat, but they were not sufficient to redeem the many mediocrities. Nearly a thousand pictures, and half of them unworthy of a second study! Such was the display that misrepresented France by showing the capricious, or mannered, efforts of her studios instead of the heart of her people. Judging from this alone, one might well think her art in decline; but the Paris Exposition of 1889 is still fresh in mind, and those who saw it know well the power of her better painters, and have faith to believe that she will rise even higher in the arts in the future. She is the last of the Latin race that has left so deep an impression on the art of Europe, and it is not likely that her light will go out with the end of this century.

In art, England and Germany have never had the excuse of dissension. They have not been great centers of art, such as Paris is to-day; they have not been the stamping-ground of cosmo-

FOXES.

ENGRAVED BY W. MILLER.

politanism; they have not had to harmonize a score of discordant voices—an ungrateful task that has brought reproach upon France, artistically, as upon these United States, politically. There has been unity of thought and method in both England and Germany; they have expressed themselves and their peoples, and if we do not like their art expression, we must seek the cause elsewhere than in their lack of opportunity. The shortcoming—and there is shortcoming—lies in the nature of the peoples. The English and Germans are readers, thinkers, reasoners. They gather ideas by words (sound), and put them together by thought (logic). They are not observers, and they do not gather ideas by forms and colors (sight), and put them together by taste (feeling). This, for art production, seems to be a radical defect in organization, and results in the application to painting of the wrong senses. For the primary requisite of the painter is that he shall be an observer, and record what he observes with taste or feeling. But the English and Germans have not looked at it in that way. From the very beginning, painting with them was made largely dependent upon literature. Dürer, Holbein, Hogarth, though doing purely pictorial work, were great illustrators, designers for wood- and steel-engraving. The success of Hogarth's satires lay more in the fact that they were adapted to engraving, and would point a moral, than in their picturesque qualities. The idea that painting was illustration, not creation,—an epitome of a sermon, a history, or a novel, rather than a revelation of independent visual beauty,—has obtained with them for years. It is to-day apparent in the tell-a-story pictures—the five sequential canvases corresponding to the five acts of a play, the deaths of Arthurs and Tannhäusers, the rides of Brunhildes, and Guineveres, the loves of Byrons and young Werthers. Even the British landscape-painter who paints a field of waving grain with a blue sky over it is afraid to let it stand as a harmony of blue and gold. He puts to it the title of

the happy autumn fields,
And thinking of the days that are no more,

and hands it out as an illustration of Tennyson.

And what becomes of the pictorial, where every nerve is strained to convey the literary? Where are the mysteries of light and shade, the harmonies of color, the rhythm of line, the translucent veil of atmosphere? These qualities, which are beautiful in themselves, are slurred, overlooked, despised, in favor of the story. Lack of use brings lack of knowledge, and as a result we have hot color, weak drawing, false values, and heavy painting. Where they have to observe the model, as in portrait-

ure, they very often do well. Nothing could be much finer than Mr. Watts's "Portrait of Walter Crane," or Lenbach's "Doctor Döllinger." There are Englishmen,—Watts, Leighton, Millais, Orchardson,—and there are Germans,—Menzel, Leibl, Liebermann, Thoma, Lenbach,—who discriminate between the literary and the pictorial, and produce works of much merit, but they are the few out of the many. The prevailing Britishism or Germanism of painting as illustrated literature bears down the majority, and lends a flavor to the whole product. There is no hope that this defect will ever be totally remedied. It is racial. The English and Germans are successful as writers, poets, philosophers. They have never been very successful as artists, and to expect great painting from them is as visionary as to look for great poetry from France or Spain. The exhibits at the Fair were good of their kind, that of England being specially representative, but neither of them was an exhibit of the pure art of painting, barring exceptional work. It is to be regretted that there was no representation of the Scotch painters from Glasgow and Edinburgh. Their work would have pointed the distinction between the pictorial and the literary more strongly than any words could possibly convey it.

From the English to the Dutch section at the Fair was something more than crossing the North Sea. It was a transition from form and color as a means to form and color as an end. The one slurred the means for a factitious result; the other sought no result save that which lay in the beauty of hue or air or sea or sky, in the sentiment of these, or in the sentiment of their producer. The pictures of Israels, the Maris, Neuhuys, Bosboom, Mesdag told the tale of appearance. A woman and child sitting by a window with diffused light and air, cattle standing in the meadows by water with the silvery light of a clouded sky, the nave of a church with its vast spaces of light and shade and broken color, the surge of the yellow sea at the base of the dunes. No more—no need for more. Painting is not a matter of extent, but essence; not so much a matter of subject as of feeling; and surely the Dutch have excelled in these qualities. Their past is perhaps more glorious than their present. For some years there has been no new development; yet in an age not too favorable to the arts they have managed to hold their own with honor.

It was not so long ago that all the art genius of Europe was supposed to rest with the Latins. Louis XIV. thought so at least, and heartily despised the Dutch "maggots." Even those who cared for Dutch painting were inclined to think it odd that art should spring from such a source. The Teutons might be

ALONE IN THE WORLD.

REPRODUCED BY HENRY WOLF.

good musicians, and the Anglo-Saxons good poets, but only the Latins could build, carve, and paint. The history of the past gives some warrant for such a parceling out of the arts. Greece and Italy have been the great art-teachers of Europe. Spain, France, and Flanders have been their aptest pupils, and all the other art-producing nations borrowed what they could of Italian example. The teachers are long dead. The stream of art has passed them with most of their pupils, but where now does it begin to emerge to the light in new form? Not with any Latin descendant, but with the Scandinavians at the North.

Denmark, Norway, and Sweden have not had an art history of much importance. They have never been considered as great art-producers, and the rather sudden appearance of good painting among them is noteworthy. It comes from a body of new men, who, for the main, have been students at their own academies, though often a painter appears who has supplemented an education at home by study in Paris, and, indeed, most of them are acquainted with Parisian art. France has taught them something, has smoothed away their rough edges, helped their technic, but has not as yet disturbed their local character. The color is usually very high—warm reds, yellows, and greens mingling with sharp blues. This leads one at first to imagine that the Scandinavians are impressionists, following the methods of Paris; but the color-motive apparently springs from a different cause. The scientific knowledge that light is prismatic color in a translucent form led the Parisians to use prismatic color with the hope of obtaining light. It was more scientific than optical knowledge with them; but with the Scandinavians it would seem to be exactly the reverse. The Northern summers, with their long sunsets and sunrises, diffuse light through the media of the lower atmosphere with the result of much color brilliancy. Red sunsets are not an unusual thing, and it takes no great faith to believe that Larsson's "Ulf in the Sunset" and Wallander's "Putte," shown at the Fair, were taken directly from nature, though they were sharp and harsh with reds. Again, at other seasons of the year, under a different light, the clearness of the air gives wonderful depth and luminosity to the blue skies, and admits of their intense reflection in calm water. There is no improbability about Prince Eugen's lake views or the water-pieces by Tegerström, Olsen, and Thaulow, though they appear almost prismatic in their color brilliancy. These men have simply painted what was before them, and if their views look strange to us, it may be because our eyes are accustomed to a different light.

The Scandinavians are among the simplest of the modern painters, composing in large groups,

handling color in large masses, painting with the flat of the brush, and grasping the great essentials at the expense of the trivialities. Simplicity is met with in all the elementary stages of art; but we must not reason from this that the Scandinavians are mere children at painting. True, their years are few, and they have much to learn, but their point of view and craftsmanship are knowing, considering the experience they have had. A people possessed of integrity and capacity, they produce that which is within them in the faith that it is good. That is the basis of true national art.

It is something new, this stream of art under the northern lights. Ten years ago there were only a few painters from the North seen in the Salons. Krøyer, Petersen, Larsson, Edelfelt, and some others had won recognition, and Zorn was a young man just beginning. In the Paris Exposition of 1889 there was an appearance of many canvases that attracted attention. It was a notable exhibition, the first one of importance, and particularly acceptable because of its originality and freshness. The exhibition at Chicago was perhaps less representative, yet every weary wanderer there knows how welcome was the Scandinavian section after viewing the other pictures. It was a breath of pure air after the hot-house studio, something unique, something new. To some it indicated progress, and to others doubtless decline, but it was neither the one nor the other except as regards Scandinavia. It was a change. The old stream of art had put on a different phase, and in a new land was reflecting the beauty of Northern skies, and lakes, and forests. What may be the future of this art it would be unwise to predict. Perhaps it is sufficient that we enjoy it in the present. Its strength lies in its truth, its sincerity, its provincialism, if you please to put it that way. So long as it is true to its own, so long as it reflects the North in thought, method, and spirit, so long as it keeps by itself, it is likely to flourish. The evil that lies ready to ensnare it is cosmopolitanism—the equalizing of all thought and method by a world standard, and the negation of nationality.

Fifteen years ago America had little painting to boast of; certain it is that to-day we have a painting full of much skill, energy, and sentiment, with considerable originality. Fifteen years ago there was a lamentable lack of technical knowledge. Such painters as we had were, with some exceptions, poor workmen. They did not know how to draw, model, or paint. The young men could not get the instruction at home that they desired, and so began the outpouring to Munich and Paris schools. They have been returning to us now for some years, and the present result is a body of young men learned in all the modern knowledge of the brush; but

in gaining foreign methods they have acquired foreign ideas, tastes, feelings, sentiments.

Thus we are at the start influenced by foreign elements. The influence is to our gain in craftsmanship, but it is to our loss in originality. Parisian ideas and notions of art may be better than our own, but the point is, they are not our own, and, if we repeat them, we are playing the parrot, imitating, and not creating. American painters are not disposed to be servile followers. On the contrary, the effort is toward being distinctly and individually themselves, but artistically they are hampered by many Gallicisms or world-isms, just as politically a good piece of American legislation is checked by forced consideration for some foreign vote. In both cases there is a compromise not altogether pleasing to either party. We see this compromise in the pictures at the Fair in the profound regard shown for Cazin's tone effects, or Mauve's sheep, or Carolus-Duran's method of handling drapery, or Liebermann's lighting of an interior. "If I could only paint like Velasquez," sighs young Pictor. And the first sitter he gets, he makes it apparent that he can paint just enough like Velasquez to make a nonentity of Pictor. And he is a good American at heart, too. Americanism prevails in his work, but it is indecisive, half-hearted, apologetic. It temporizes, would please the Old World and his own, and in standing on two stools comes near falling down between them. With less technical skill than some of our younger men, Winslow Homer stands by himself, a painter of strength whose works command attention everywhere, largely because they are American without preface or apology. They breathe of the soil and the sea, tell of their place of origin, give the American point of view. Just so with the landscapes of Mr. Inness. They are peculiarly our own in every respect, and would be recognized as such in any country. Many of the older painters, contemporaries of Mr. Inness, such as Mr. Martin, the late Mr. Wyant, and others, men who have not been turned aside by foreign ideas, make up to-day our strongest landscape art. They know what they wish to paint, and they paint it.

We come nearer to having an American school of art in landscape than elsewhere. There is a decisive note even from the younger men. Mr. Platt, Mr. Tryon, Mr. Twachtman, have an individual way of stating their ideas, and some of the painters given to schemes of high light and color are branching out in new and unexpected ways. In fact, there is much hope to be placed in the large band of young landscape-painters at present working in this country. They have skill, and as they grow older they will gain the conviction that our pic-

torial view is the only one for them. It might be added, without national pride, that, as regards landscape, it is the best one now extant in the schools, and that it has little or nothing to gain from the view of others.

Policy as well as patriotism should induce an American to be an American, for there is little advantage in trying to be anything else. Of course there are brilliant painters — Mr. Whistler and Mr. Sargent for instance — who, so far as art is concerned, show no particular nationality. We cannot claim them any more than London or Paris. They are men who would doubtless appear brilliant under any circumstances by virtue of inherent genius. But they are the exceptions, not the rule. The chief value of a nation's art, aside from its being good art, lies in its nationality, its peculiar point of view, its representation of a time, a clime, and a people. We shall never have any great art in America unless it is done in our own way and is distinctly American. We shall never be accounted great because of our doing something like some other people, nor by fashioning that which is best in others into an eclectic cosmopolitanism.

Happily our younger painters are rousing to the necessity of individuality in their work. Year by year their styles deepen, one in refined color, another in pure line, another in brush work, another in largeness of conception, another in delicacy of sentiment. It is these added individualities that produce nationality in art when there is homogeneity in fundamental thought and aim. We have not just now so much of the latter as could be wished for, but we are likely to come to it by degrees. That there is to be great production in painting in this country during the next quarter of a century is almost a foregone conclusion, and it cannot be doubted that our painters will find American life their strongest inspiration.

The pictures at Chicago simply intensified the impression made by the pictures at Paris in 1889. Art in the present, as in the past, is reflecting its surroundings, and throwing out new phases of light and color corresponding to new movements in life. In the older countries of Europe the changes have been few, but with Scandinavia at the north, and America in the west, they have been sudden and rather brilliant. Following the track of civilization, painting writes the color history of the people, and when the land and the people are young, the record is full of aspiration, hope, and energy. Fortunately for the Scandinavians and ourselves, the period is that of youth. The book of our art has just been opened, and no one knows what bright deeds of beauty may be written upon its pages in the years to come.

A PORTRAIT.

A GERMAN COMIC PAPER. (FLIEGENDE BLÄTTER.¹)

DRAWN BY R. REINICKE.

BOOKSELLER: "What would you like, miss?"

YOUNG GIRL: "I want all of the 'Sorrows of Werther.'"

THE best way to spoil a story is to say that it will be funny; the best way to ruin a joke is to say that you are going to tell one. Like Jack the Giant-Killer's bean-stalk, humor must spring up spontaneously, quickly, and with strong and rampant growth. Thus "Fliegende Blätter," the most successful of humorous papers, began its career, took its name, and sent forth its "flying leaves" from a plain, unpretentious building in Munich, without blare of trumpets or flare of pride.

And the great German world, which had seldom seen printed laughter before, enjoying the pictures and the humor, at once took the leaves to its heart, and week by week, from year to year, still welcomes them.

It is a strange thing that among a people famed for thoughtfulness in times of peace, and for fierceness in times of war, this paper of jokes, which does not pretend to deep thought, and from the pages of which all political reference is strictly banished, should have lasted unchanged for fifty years. Nations have fallen and risen, philosophies have been supplanted, and science

has discovered new realms of thought, but still "Fliegende Blätter" has lived on, passed from father to children, quite unchanged, except that the leaves fly freer and farther, as trees grow and multiply, and as children outnumber their parents. The title is the same, the illustration which surrounds it is still unchanged, and shows the queer little people—the jester, poet, and fool, entertaining both peasant and lady—just as years ago. The eldest sons of the founders are now in charge, and many of the original artists illustrate new jokes on old subjects. Its old home is its present home, and the fundamental character of the journal is unaltered. "The thing which hath been, it is that which shall be, and that which is done, is that which

¹ The pictures in this article are taken from "Fliegende Blätter," by permission of the publishers, Braun & Schneider, Munich.

shall be done." So may it ever be with "Fliegende Blätter."

It was in 1844 that the first number of the journal was issued from the Maximilian-platz in Munich. "Punch" had been introduced to London three years before, but it is doubtful whether the English paper exerted any influence over the German periodical, or whether the founders of the latter had ever heard of "Mr. Punch." At all events, "Punch" "knew a rickety infancy and hours of peril," had suffered "neglect and starvation," and was resuscitated only at the last critical moment, as history tells—certainly not an encouraging example for "Fliegende Blätter." But "Punch," for all his jokes, began with, and still professes, a serious purpose. There is method in his madness, and he makes it his aim to play the rôle of the old court-jesters who, under cover of wit, could speak home-truths, and, while they capered and cavorted, could also criticize and condemn. "Fliegende Blätter" in its infancy had no such lofty purpose. Its first aim was to amuse, and if there was any other object it must have been artistic rather than moral. Moreover, there were no prior discoverers to teach it how the goose of humor might be made to lay eggs that stand on end with natural joyousness, and are golden in the eyes of a publisher.

The founders of the German periodical were Caspar Braun and Friedrich Schneider. Braun

DRAWN BY H. SCHLITZGEN.

A CONTRIBUTION TO THE SPRING FASHIONS OF 1893.

was an artist. He was born at Aschaffenburg in 1807, studied painting in Munich, and afterward wood-engraving in Paris. When he was thirty-two years old he returned to Munich, and there started a wood-engraving establishment which soon acquired an enviable reputation. In 1843 he became associated with Friedrich Schneider of Leipzig, and from that time the fame of their work spread rapidly. In 1844 they started "Fliegende Blätter," and the paper was then bought by the public mainly for its illustrations. Braun, in those early days, did some of the best work that has ever been done for it, and his pictures were the more successful because they disclosed to Germany a new world of humor. No predecessor had shown the spirit that is in these drawings, and they not only became very popular, but

DRAWN BY E. HARBURGER.

PUBLISHER AND POET.

have since served as models for innumerable later artists. At the same time, Schneider touched a popular note with his poems; and his verses, illustrated by Braun, gave to "Fliegende Blätter" that immediate success which has been denied to its many imitators in Germany, England, and America. And yet to-day these various humorous journals are reaping where "Fliegende Blätter" has sown; and having survived the vicissitudes of a fickle public taste, are growing and flourishing on an appetite for humor which they have only successfully cajoled, not created.

AN AMERICAN COW-BOY STORY,

Though "Fliegende Blätter" has had on its staff few such artists as the first Caspar Braun, even among those who imitate him, yet Braun and Schneider were uniformly fortunate in the choice of their associates, and the present contributors seem to have slipped into the old shoes of their predecessors most naturally and easily. It is a curious thing that the eldest sons of the first editors should each have entered so readily, and have filled so capably, the place left vacant by his father. The editors are still Braun and Schneider,—Caspar Braun and Julius Schneider,—and they are assisted by Professor Ille, who, years ago, was a subaltern assistant to the first editors. Among the literary workers for the paper are some men who have won a large measure of success. One of the earlier of these was Franz Trautman, whose good-natured stories of the olden time first appeared in

"Fliegende Blätter." The brilliant Crassus was a regular contributor, and many of Emanuel von Geibel's poems were therein published for the first time.

But, in general, it may be said that "Fliegende Blätter" is remarkably independent of individuals. Its staff includes all Germany. Its humor is thus spontaneous, natural, and universal. Its contributors are found in every rank—men and women, rich and poor, young and old. None is too wise and none too lowly to send the joke of the day to this paper, and it is interesting to note that nearly all the Jewish humor comes from Semitic sources. It is as though "Fliegende Blätter" had a thousand reporters in every walk of life, always on the lookout for funny sights and bright sayings. The "Flying Leaves," as they speed, week after week, over all Germany, lead the people to look for the humor that is ever present in the life about them.

AS RETOLD BY FLIEGENDE BLÄTTER.

Sorrow is an old, familiar friend; Humor but a chance acquaintance, whom we fain would meet oftener; yet watch Sorrow from behind, and you may sometimes see a merry smile under her tragic mask. And so, wherever Sorrow stalks through all this vale of tears, a thousand watchers peep behind her mask, or seek for sudden gleams of merriment when the mask is cast aside. And all these gleams and all these smiles the writers catch, and forward to the paper, and artists paint them, or clever writers tell of them, and the "Flying Leaves" carry them forth through all Germany, and the world besides, until a rainbow of smiles breaks through the people's tears, and the whole earth seems bright and gay. By popular coöperation "Fliegende Blätter" has thus been made a concentration—a consensus, a school—of German humor, and the ninety-nine volumes now completed form a storehouse into which has been

gathered nearly all the humor of modern Germany.

While the published product is thus excellent, one can easily imagine the vast amount of material from which it is culled. "Fliegende Blätter" travels as far as there are Germans, and thus from every quarter of the globe contributions are apt to come, until it is said that, in the course of years, almost every country of any importance has sent its quota to the editors in Maximilian-platz, Munich. No doubt strange stories could be

told of these contributions, of the curious drawings that come with some, and the often ridiculous notes that accompany others. As to the rejected poems, one does not care to imagine what they must be. As in all successful journals, skilful and laborious editing is required in sorting the material; and the sifting and revising of jokes, in lots of scores or hundreds, is a thankless task which makes the life of the man who "never smiled again" hilariously merry by comparison.

It often happens that jokes are sent which have already been published in "Fliegende Blätter," or which, indeed, may even have originated in the office. The work of revision, therefore, requires constant and careful study of the files, though in spite of this many a "shop-worn" item must needs be found pictured as a novelty. An old German joke might be cited as a good commentary on all jokes: To a man twirling his thumbs, his companion remarks, "Do you always do that?" "No," is the answer, while the twirl is reversed; "sometimes I do this." And many a joke is similarly reversed, revised, or rejuvenated till the father thereof would hardly know his offspring.

A curious circumstance that could be noticed only in such an office, but is there not infrequently remarked, is the traveling capacity of a joke. A joke may come first from Berlin; after a few days it is sent in from Dresden; in

A CORNET SOLO.

the course of two or three weeks — a month, perhaps — it comes from some quiet village on the Rhine; and some have even been known to go around the world in an incredibly short period. After each batch of jokes has been carefully read by several men, and the old ones, the poor ones, and those ruled out because they treat of politics or religion, have been cast

aside, the fairly good jokes that remain are sent to Julius Schneider to be finally passed upon. Some of these must be rewritten, some must be thrown away, some must be illustrated, and some may stand alone upon their merits; and this final judgment requires the discretion and the indefatigable industry which the editor of "Fliegende Blätter" so fully possesses.

DRAWN BY E. REINICKE.

THE NEAR-SIGHTED SACRISTAN.

E. REINICKE

In assigning each joke to the artist best fitted to illustrate it, Julius Schneider is assisted by his brother Hermann and by Caspar Braun. Though an artist of much merit, Hermann Schneider, as an illustrator, has done but little for "Fliegende Blätter." In judging the powers of his colleagues, however, he is almost without a rival, and his work in this line has gone far toward giving the paper the artistic position which it now holds, and which, to a paper of its kind, is worth so much.

As to the artists in whom this journal finds its greatest strength, any one who knows the paper can name half a dozen, out of the two hundred and seventy, more or less, who have drawn for it, whom he especially regards, and whose work is particularly associated with it. Yet, from the culling of an acre of roses, who would wish to be limited to the choice of half a dozen blooms? If one were only looking over the files of a year or two he would doubtless pick out six or eight names, and say, "Oberlander,

Harburger, Meggendorfer, Schlittgen, Ludwig Bechstein, Reinicke, and Wagner are the chief men whose work gives 'Fliegende Blätter' its artistic character."

Of these, the first four, together with Hengeler and some others, form the group known as "the Munich humorists." Of "the Munich humorists" Oberlander is easily first and best known, and the wealth of his humor is apparently limitless. The casual reader will doubtless say that he is the better half of the journal. He was born in Regensburg in 1845, but came to Munich as a child, and his devotion to art has been almost uninterrupted. "Like a second Hogarth, he lashes at the follies of the times, and, with the weapon of humor, strives against modern weakness and immorality. His pictures are not only humorous but full of earnest warning. His drawings are characterized by harmonious finish, even to the smallest detail; by complete symmetry of artistic expression, as well as by deep thought and a warm grasp of the

subject. These qualities have properly made him known as the first humorist of Germany."

Harburger's drawings are characterized by excellence of execution and kindness of spirit. His genius is versatile, for he succeeds equally well in the portrayal of aged inebriates, and the picturing of women of refinement. His drawing, however, is of so vigorous a style as to be often almost coarse and crude.

Meggendorfer has probably done his best work outside of "*Fliegende Blätter*," in juvenile books, as may be said of many another artist. His open, simple manner is especially well adapted to children, and seems, indeed, to please the public better than it pleases the critics. He is a valuable man to the paper, however, for he thinks up his own jokes, and the strange ideas which he depicts are of his own invention.

Schlittgen, ever since childhood, has supported himself by drawing. He is the youngest of the artists mentioned, his work having first appeared in the paper twelve years ago, when he was only twenty-three. He quickly won for himself a high place, and has suffered the annoyance and compliment of a horde of imitators. Schlittgen may be called the *Du Maurier* of "*Fliegende Blätter*." He endeavors in all his illustrations to give the effect of a painting, and his subjects are generally on about the same plane as the English artist's. Of late he has spent much time in Paris, and has been a less frequent and perhaps less satisfactory contributor than formerly.

Bechstein made a reputation with his series of "costume" pictures; and Wagner is known for the romantic nature of his subjects, and for the prettiness of his girls, who are sweet and refined, from the roses in their hair to their daintily slippered feet.

But in addition to its literary and artistic sides, the paper has commercial features, and some of these should prove of interest even to the most soulful artist or the most hardened reader of jokes. "*Fliegende Blätter*," so far as one can see, publishes no sworn statement of circulation, but its friends are not diffident in claiming the globe as its field, and the claim seems to be justified. At any rate, there appears to be no doubt as to Austria or Germany, for subscriptions are received not only at any bookstore, but at any post-office. The real income, however, of any paper comes from its advertisers, and in its advertising department "*Flie-*

THE NEW

gende Blätter" is believed to be unique. It issues, separately bound, an advertising supplement with every copy, refusing, under any circumstances, to insert an advertisement into the paper itself. To a foreigner these advertising pages are almost as entertaining as the more pretentious part of the journal. They are profusely illustrated, and include occasional draw-

OPERETTA.

ings of genuine merit, and always (by way of a banner) one illustrated joke in the upper left-hand corner of the first page of each supplement, of which there may be half a dozen with a single copy of the paper. The subjects advertised are amusing. They cover a wide field, though the beer-brewers, the jewelers, and the manufacturers of patent hair-restorers, combs, and

brushes, seem to be especially prominent. We English-speaking people may think we know something about advertising patent medicines, but given the subject of hair-restorers, and more particularly "bart-erzeugers," elixirs, and medicaments that will make beards and mustaches grow like a German officer's, therein must we yield to the advertisers in "Fliegende Blätter." Their claims are so embroidered with prose and poetry, their names so heralded with romantic epithets, and their success so artistically pictured in the suitor "before" and "after,"—beardless, be-reft; and bearded, betrothed,—that surely no advertiser here may dare to compete with them in this particular line. German officers are noted for hirsute glory, particularly in mustaches. It may be that the secret thereof is to be found in some of these advertised preparations. As showing the frequency of illustrations, it may be said that out of seventy-three advertisements in one supplement forty-eight had cuts, and those that were not illustrated were usually very small, being hardly more than business cards of a few lines each. Evidently the German advertiser is as wide awake as the American, and believes that a picture of a diamond tiara or an elixir-sprinkled head will do more to awaken popular interest than half a column of glowing description. Another point that the business man would notice is the wide field whence "Fliegende Blätter" draws its advertisers. Choosing again a supplement at random, on half a page there are advertisements recommending wares in Dusseldorf, Munich, Berlin, Zurich, Mayence, Dresden, Cologne, Stuttgart, Hanover, and France, England, and America besides.

The story of "Fliegende Blätter" is almost told, for it is never safe to dwell too long on a joke, much less on a collection of jokes. A writer for "Punch" years ago solved for his readers a mathematical problem to show the good that his paper did. He thought that each copy gave to some reader five minutes of pleasure, and the formula can be reproduced here as applying to "Fliegende Blätter."

$$5 \times 52 \times 50 \times y = x$$

The five represents the minutes of pleasure, the fifty-two the weeks of the year, the fifty the years of the life of "Fliegende Blätter," and y its circulation; and the result x must be, repre-

THE OUTWITTED MASTIFF.

sented in time, what "a girdle of smiles around the earth" would be in miles.

There is no need to discuss the value of humor, or to compare the various ways in which laughter may be brought to the people — by the stage, by books, or by papers. Each way has its admirers, and "Fliegende Blätter" is deserving of notice because it is one of the best and first of its kind, and because it is only

of late that Americans have begun to ask regarding those "Flying Leaves" which, coming from a distant nation, and printed in a foreign language, yet find a welcome here. But the whole world is kin, and there are many who still remember Germany as the dear old "Vaterland," and many more besides who welcome humor wherever found, since trouble and sorrow so readily seek out their own victims.

CELEBRATING THE FOURTH IN ANTWERP.

(ARTISTS' ADVENTURES.)

WITH PICTURES BY THE AUTHOR.

INGULARLY enough, whenever I have particularly wished to do anything in my peregrinations over Europe, that wish has almost invariably been blocked by the conspicuously exposed sign, "C'est défendu." There were exceptions to this rule; that is to say, wherever the sign was missing, and I began to believe that here at last was a spot where the official notice was honored in the breach, just so sure would a more or less gaudily uniformed official appear, and utter

the expected words. It really seemed as if the authorities, anticipating the natural desires of the stranger, passed all their time in devising insurmountable "défendus" for his mortification. There was a time, however, when I was ignorant of the existence of the défendu; when as yet the significance of the uplifted arms, hands, and eyebrows of the gendarme was unknown, and I fancied myself free to go and come as I chose. In this way I was upheld by those luckless ones whom I had undertaken to guide through the realms of the effete monarchs, with the help of Baedeker.

It had been a warm day in Antwerp that 4th of July, 1882, and we had done little sight-seeing. Our salon at the corner of Ham street and Green place was cool and cozy; we had selected one of a pile of new Tauchnitz volumes, and had read aloud by turns until the band began to play in the kiosk, before the statue of Rubens. Good music it was, and the Antwerpians, peasant and bourgeois, thronged the place, the former walking arm in arm up and down in the middle of the street, the latter comfortably sitting at small tables, before the cafés and estaminets, drinking their Münchener in conscious rectitude. Now the light began to fail, the silvery chimes in the cathedral rang a few bars, and the bourdon struck the hour of nine. In my trunk, carefully wrapped in paper, I had brought three Roman candles,—long ones,—with plenty of shells in

them—fifteen, the wrapper said, and I don't doubt the statement, although I did not count them. "See here," said one, "this is the Fourth of July. Why not let off one of those Roman candles out of the window? It will make a fine show, and really we ought to do something by way of celebrating the day." It took but a moment to get the package, and in another I was holding a candle out of the window, unrolling the little fuse at the top, and applying a sputtering match to it. There was an instant's pause during which I had time to take a rapid glance at the scene. In the square below moved the black mass of people, dotted with the white lace caps of the women, and there sounded a curious rhythmic ring of sabots on the stones. The musicians were packing up their instruments in the kiosk; the cabs were returning to the stand opposite; at the right a man was putting up the shutters of a glove-shop over which hung a huge vermilion hand with outstretched fingers. Overhead were orange flecks of cloud in the pale green and violet sky, pierced by the lovely lace-like mass of stone, the cathedral spire. All this I saw in a twinkling, before the outpour of fire that followed—such an outpour of fire, such a belching of blue, yellow, violet, crimson, and green balls of fire, such torrents of golden stars, descending upon the heads of the astounded natives, such a lighting up of the square as perhaps had not been seen since the entry of Charles V. I cannot remember a Roman candle with such richness of contents. The manufacturer of the candle not only was a genius, but he had been prodigal of his chemicals to a degree that, if persisted in, must inevitably have brought him to bankruptcy. It seemed to me as I gazed upon the sea of upturned faces, now red, now green, and again pale violet, that there was no end to that particular candle. Indeed, I became somewhat alarmed as dimly in my inner consciousness dawned an intuitive sense of what I afterward recognized as the impending défendu. This was increased, as I threw the smoking tube among the crowd, by a hoarse hum such as one hears upon the operatic stage, as evidence of the surprised displeasure of the mob. I had never before heard it in real life,

and now I began to feel somewhat alarmed. The mob was gazing up at me. Soon there came, faintly at first, then louder, the sound of the tramp of men's feet moving in unison; the crowd parted at the corner, a file of soldiers appeared, a word of command was given, and muskets fell sharply upon the pavement. I closed the swinging window, and sat down. There was evidently going to be trouble, as I explained to my party. I had not given the matter thought or I might not have set off the candle. However, I said that as it was the Fourth of July, and as we were all American citizens, of course it was all right for— There came a vigorous rat-tat-tat upon the street door, followed by another, delivered with an impatient command to open at once. I opened the window and leaned out. An officer in a long cloak was in the act of hammering on the door with the hilt of his sword. Some of the mob cried out at sight of me, and gesticulated in that rude manner that foreigners sometimes show when one transgresses their *défendus*. I withdrew. A light flashed under the door, and I heard the slipped feet of our landlord descending; then came a heavy tramping on the stairs, and a knock at my door. I opened, resolving that I would appear ignorant of any save my native tongue. The officer, upon seeing ladies present, saluted, and addressed some words to me in German. I shook my head. He seemed surprised, and made a remark in Dutch. I stared at him. His eyebrows went a little higher as he evolved a sentence in Italian; then he turned to mine host, who was quaking in his slippers, and dropping grease all over himself from the guttering candle, and said something rude in Flemish. Then I thought it time to assert myself.

"Why do you come here to disturb us in our little celebration? We would have you to understand that we are good American citizens, enjoying ourselves as we are permitted and authorized to do under the provisions of this document," saying which I extracted from my pocket my passport, emblazoned with the eagle.

"Ah," he said, "Anglais!"

"No," I said, "Américain."

"Peut-être," he replied; "c'est la même chose. Whoo-y to you let thee farewerk?"

"Oh, that," I said, with a shrug unsurpassed by any foreigner,— "that was only a little celebration of the Declaration of Independence, the Fourth of July, you know," I concluded affably.

"The force of Jooly? No, no," he said; "not so; thee day is the 14th to anniversaire."

"No, no," I said impatiently; "it's nothing of the kind."

"Eh, bien," he said indifferently, "c'est dé-

fendu de—" Here followed a rigmarole which he read from a document incased in shiny black covers, ending with a stamp of his foot, which brought into view two soldiers, one of whom went up-stairs with heavy tread to my room, while the other stood at ease in the doorway, his hands resting on his musket. The officer saluted the ladies, and with the men withdrew. I closed the door. "Here's a pretty mess," I thought. But I said aloud: "Never mind; it will be all right in the morning. I'll see the consul, and we'll fix it up all right. They cannot do anything to us." I threw open the window; the black mob of people thronged the square; there was the hum of many voices, which grew louder as they caught sight of me. I thought best to retire, but in the interval I saw a soldier stationed opposite at the cab-stand, one in the dark doorway of the glove-shop, and another at our own door below. The chimes rang the half-hour, and the moon was shining. I had an unpleasant quarter of an hour with the excited landlord, who alternately wrung his hands and called down maledictions upon the American for bringing the police upon him—he who for twenty years had kept shop without, etc. He explained to me the majesty of the *défendu*—explained it with unnecessary and offensive vehemence, and intimated that it would cost him dear in fines to the city, and *pour-boire* for the sentinels outside, adding that his trade (that of a tobacconist) would be ruined, and all for the sake of a *sacré nom d'un Américain*, or something to that effect, which I thought it expedient, in view of all that had happened, to ignore.

That night I did not sleep. I had visions of the oubliettes of the Steen Museum. The awfulness of the *défendu* stalked by my bedside, clothed in the red garments of the Inquisitors.

In the morning I tried to go out for a cigar, but found my way was gruffly barred by a gendarme, who said, "*Défendu*," in a very unpleasant manner, indeed. After breakfast was served, at which, in view of the doom soon to be visited upon us, all tried to be as pleasant and light-hearted as possible, our officer of the night before again entered our salon, saluted, read once more the *défendu* from his pocket-book, and invited me to follow. I complied with the request, bidding my companions be of good cheer. Followed by a mob, which seemed to have remained beneath our window all night, I was hauled before the commissioner of police. The office of the commissioner was a cold, barren, whitewashed room, lighted by two long narrow windows, between which was a tall, black crucifix. Before this, at a high sort of desk, sat the commissioner. I was placed

THE FIRST OUTBURST OF FIRE.

between two gendarmes, and was told to be seated, and at once was asked to stand up again. The commissioner addressed me in French. I pretended not to understand. Then he said, "You are an Englishman?" "American," I said.

With a sort of *défendu* motion of his head and shoulders, he replied, "Eet ees ze same theeng." I attempted at some length to explain the difference, but he cut me short by

reading a long document containing a bewildering number of *défendus*, and then read from another paper as follows: "You arrive on the Red Star steamer *Pennland* on June thairtieth—you and your familie. You go to the *Hôtel des Flandres*; dair you remain for doo tays; you begage appartements of un homme Deetjen, rue du Jambon. You make many skits in leetle book in the city. You write much letters, and in the soir d'hier you what you

call shoot signal in the square publeek—eh, what you say to a' theese?"

I explained the custom in America of celebrating the anniversary of the Declaration of Independence, and the fact that I was ignorant of the existence of a *défendu* prohibiting such celebration in the city of Antwerp, adding that I regretted exceedingly having transgressed this particular *défendu*, and ending by waving under his nose the crackling parchment passport, and demanding, in the name of the President of the United States, to be set free instantler. Up jumped a little Hebrew-looking person with a red head, who conversed at length with the officer who arrested me, and he in turn exercised his shoulders, as if to say, "Well, here 's a large-sized *défendu* which has been trampled upon by this American. Shall we then admit that our *défendus* are to be violated with impunity, or shall we make an example of him?" Finally they arrived at some sort of an understanding, and the little red-headed man addressed me: "You, sare, have gomidded an offense gontra la loi of Anwers—Antwerp. Bod ve theenk dat you are nod to mage thee zignal for any unlawvul burbose, bod zimply for to mage thee zelepration of your Fête Nazionale. Deerfore, az thiz iz pairhap possible and do thee pelief of M. le Commissaire, and that considering that you do bromise that you leaf Anwers—Antwerp—le bludo bossible, I shall say that you are bairmit to pe discharsh. What you vil say do thees?" To which I replied: "Convey to M. the Commissaire the assurances of my distinguished consideration. Say to him that I regret I was so unfortunate as to shock the proprieties; that I had not the slightest idea of the presence of a *défendu* in way of the innocent pyrotechnic celebration to which I plead guilty; that equally I regret the trouble to which I have put the authorities; and that if my life is spared, and no other *défendus* intrude, I will depart from the town of Antwerp with such celerity that my retreat will not be visible to the naked eye for the ensuing dust." How this elaborate and technical information was conveyed to the commissioner I do not know, but obviously the reference to dust bothered the interpreter not a little. That he attempted to convey the confused idiom I am sure, for I caught the French word for dust, and a frown of incredulity upon that officer's face.

"Eh, bien," concluded my ruddy interpreter. "I haf explain to M. le Commissaire all that you haf say, ant 'e ees please to bairmit your discharsh; 'e knows the consul Americain,—ver' goot vriendt,—bod it eet ees understand that you mage the depart le bludo bossible, n' est-ce pas?"

I was free. I departed. I hastened through the

crowd of peasants and idlers, and rejoined my party. I explained to them that I had upheld the majesty of the United States, and incidentally that we had better proceed to pack our luggage, and wend our way hence to Paris. They pointed out the soldier in the glove-shop, and with some emotion explained that when they would have gone outside to make some purchase while I was gone, their way was barred by a soldier and a *défendu*. It was then that I waxed wroth. Should it be said that I was afraid? No. Here we would remain until such time as it pleased us to depart. There was a little town some distance down the Scheldt which I had resolved to make a sketch of—a long green bank with a red-tiled roof showing here and there among the gray willows and poplars, and at each end a windmill, with velvety brown arms waving against the sky. In ten minutes I was on the wharf armed with my sketch-book and stool, had made arrangements with a wherryman for a five-franc piece, and was dropping down the stream with the current. We tied up to the braided basket-work which protects the dike, my wherryman lighted his pipe, my sketch was getting on famously, when up in the green bank, against the sky, appeared a row of heads. The heads popped up here and there for an interval, when suddenly a green door, which I had not noticed, opened in the bank, and a file of soldiers in red breeches, headed by a corporal, came out like a string of hornets, and galloped down the hill toward me. After an instant it dawned upon me that this was a fortification, and that I was transgressing the largest *défendu* of all,—sketching a fortification,—and was about to be taken red-handed in the act. We were in midstream, and my faithful wherryman, beaded with perspiration from his efforts to get out of reach of the corporal's guard now running wildly along the bank at our right, was well nigh exhausted. Said he, "Mynheer, ven de boot is at de Hoofd van't Vlaanderen we git ketch-ed." "Very well," I replied; "we won't go to the Hoofd. Ten francs to you if you land me." "Mynheer, der is stoom-boot behind; ve git on him, and do de Katendyk basin go." The captain of the tug-boat who caught our line was an Englishman, and to him I explained the case in a very few words. With a low whistle he intimated that this was trouble indeed, but he would do all he could to get me out of it. He advised me to throw away the sketch-book, and when I refused, shrugged his shoulders, and offered a bottle of Bass and a cigar. We could still see the soldiers running along the dike at a dog-trot as we turned into the great Katendyk basin, and they lost sight of us among the high hulks of the mighty merchantmen. Breathless, I climbed the stairs to

our salon. "In ten minutes," I whispered hoarsely, "we must be at the railroad depot. In ten minutes. Get the luggage ready while I call a cab." The door opened, and the officer appeared, and, saluting, explained that our luggage must be examined again, demanded our keys, and departed, leaving a gendarme in our salon, who proceeded to examine the backs of all the pictures, and ended by pulling up the carpet, amid the excited expostulations of old Deetjen. The officer appeared again with my two remaining Roman candles in his hand, read a *défendu* out of his shiny black book, saluted the ladies, who were somewhat alarmed, and withdrew with his men. I saw the cab which I had engaged at the door. When our luggage was stowed upon its top, I paid mine host Deetjen a week's rent in advance, and away we rattled. I saw once or twice a man dressed in black, with sharp features, running along beside us on the footway. We missed our train because of several minor *défendus* connected with the arrival of passengers with which I was unfamiliar. We sat in the waiting-room while I examined and studied with care the conspicuous *défendu* signs, and entertained my companions with lively and somewhat incoherent

fancies of our arrival in Paris, while keeping an eye upon the party in black, with the sharp features, who sat opposite and watched our every movement. The train bell rang, I gathered up our loose bundles—we were in a first-class carriage of the express for Paris. I caught sight of the hatchet-faced chap in black talking excitedly with a gendarme, who was making notes in a shiny black book. I caught his eye; I leaned out of the window as the train started to make him a chaste, if ironical, salute. "Tenez, m'sieur!" ("Hold, sir!") said a guard, rapidly running along the foot-board. "You must not put your head out of the window. C'est défendu."

I learned afterward that our luggage, which was detained in Antwerp for weeks, had been examined for possible proof of complicity in a celebrated assassination case that was convulsing Belgium; that we were thought to be military spies conspiring against the peace of the state; that the bureau in Paris was notified of our arrival in that capital; and that finally we were under police surveillance for several months.

I have been abroad many times since these occurrences, but I have now a wholesome regard for the proprieties of the *défendu*.

George Wharton Edwards.

HER MOTHER'S SUCCESS.

WITH PICTURES BY ALBERT E. STERNER.

"HERE'S Bonner going?" said the leading man to the comedian as the two stood on the sidewalk, picking their teeth.

"The *Juliet* of the future is going to the depot to meet her ma," said the comedian. "Ma," he continued, "is coming up from Kentucky to see us play-act. It's probably the first time ma has been to a show since 'befo' de wah.'"

Lila Bonner was twenty, and she was beginning her theatrical career as the old woman, technically speaking, of the "Brother and

Sister" company. At the station she anxiously watched an incoming train from the South until her eyes fell upon a certain almost youthful, small figure toward which other eyes than her own were pleasantly turning; then she ran swiftly along the platform, and with a half sob caught the little mother in her arms. Lila, when she was a girl, had said with a child's pretty pride that she could always tell where her mother was in a crowd because that was the way people were looking.

People still looked at Mrs. Bonner, and the fact was to the credit of their taste; it was a tribute to a perfection of gentle beauty and gen-

THE LEADING MAN, THE STAGE-MANAGER, AND THE COMEDIAN.

tle bearing that with unconscious felicity defeated its own essential expression and was conspicuous. Time had seemed only to increase her most characteristic charms as she began to let the fashions pass her by, and the soft, smooth bands of chestnut hair rippling over the tips of her little ears came to seem less a convention old or new, and more simply a happy expression of her own sweet personality and pretty, modest taste. She was a revelation of ladyhood—a revelation well worth noting; for surely, as we have to pay for all gains by some loss, it told of an exquisite phase of humanity that is passing away. The next generation will undoubtedly know great women, high-bred women, in a sense, sweet-natured women; many desirable kinds of women, but just what a lady was when she was a lady first, and more than anything else in the world, it will be obliged to learn, I fear, at second hand. That was the kind of lady Mrs. Bonner was, and that was what she looked. The stage-manager—who had now joined the leading man and the comedian

on the sidewalk—remarked it while the three watched the mother and daughter pass through the grimy "entrance" into the grimy hotel: "My great Jehoshaphat! but don't she look the part! It'd be worth while writing a piece with the old woman in the lead if you could get anybody to play it that looked like that."

"Well, you never will," growled the comedian, surlily. "Can't you ever get the blooming show business off what you call your mind? That's a real lady you saw just now, if you want to know."

"That's what I said," cried the stage-manager; but the other, who as an old and established practitioner in one of the most curiously conservative professions in the world was a privileged person, with the rudeness that privilege usually begets in our pleasing race, had walked away.

In her ugly room up-stairs Lila Bonner was taking off her mother's bonnet, her wraps, even her gloves for her; and all the time, despite her

will, the tears kept gathering in her dark eyes. Her mother looked at her with a little troubled bewilderment; it was altogether as if the daughter were the elder.

"My daughter, you are not happy, I'm afraid," she said hesitatingly, looking up into the tall girl's face.

"Yes, I am, mama," and Lila got the better of her tears; "it's been hard being away from you, and traveling so, you know. It's been hard for you, too,"—she laid her cheek down against the other's head,— "but I've made my start, and that's everything; and now it almost seems as if there were a chance for me to play *Bertha*,—a better part, a great deal better,—young,—you'll see when you see the piece. And if I get it I'll have the chance to play it in New York. The girl that's had it is going to leave week after next. I played *Bertha* once, when she was sick, out West."

"Yes, I know; and the papers praised you so. I have the piece; I know you did it beautifully, my baby child."

Lila remembered that the article her mother treasured (she had all notices of the company sent her) was exactly copied from another paper—thanks probably to the advance-agent—in which it had appeared weeks before; she said only: "I think I did pretty well. I had to take it up very suddenly. It would help me on a great deal if I could do it in New York. It would help me about next year," she sighed. "I wish I could." She sat down on the foot of the bed.

"Why, of course you will," said the little mother, going to the girl's side, and patting the massy brown hair, like her own in color, and so unlike it in character.

"I'm not sure at all, mama; everything is very uncertain on the stage; I've learned that. Never mind, let us not talk about it now—tell me about home."

"The bishop was with us last week; I don't think I wrote you about it, I was going to see you so soon. Mary's little Ellen was confirmed. He came to see me just as he always did. He took tea with us; Aunt Viley waited very well. I talked to him about you. I said: 'It's just as strange to me, bishop, to have my child on the stage as it is for any of my friends; but I know my child: she has gone out into the world for my sake and for her little sister's more than for her own; a more delicate, reserved, truly feminine girl never lived,'—that's all I said, dear, about you. I'm sure it's more than true, and if your mother does not know, who should? Yes; then I did just say that withal you were a most high-spirited nature, for, of course, that is how you are different from other girls. I said, 'She's too much her father's daughter to eat the bread of depen-

dence, and she has talent, dramatic talent, and I believe God will bless her in the use of it.'"

Mrs. Bonner wiped the unshed tears from her long-lashed, gentian-blue eyes.

Lila was silent; she had gone to the window. The mother went on, able, with mother-tact, despite her childlike need of speech, vaguely to sympathize with and ignore Lila's lack of graciousness in a conversation that played upon sensitive nerves.

"I told him you had no foolish ideas of leaping into success all at once, though I have not the least doubt but you have more ability now than Miss—— I did not say that to him, darling, indeed I did not." She had interrupted herself as the girl turned quickly and impatiently toward her, crying, "O mama!" "I only said how practical you are. I wish I'd known and could have told him you were going to get a better part."

Lila was again looking out of the window, but she said, gently this time: "Mama, mama, I'm afraid you'll be disappointed about that. I'm afraid I won't get it. Don't set your dear heart on it. Let's not talk about it now."

"The bishop said he wished you the best good fortune, whatever that might be; he said he could but wish your choice had been a different one. Of course he had to say that, but he was in every way very sympathetic. I told him I knew nothing about the stage, but I knew my child, and that when you went on it I knew I must always have been unfairly prejudiced in my ideas." Mrs. Bonner brought forth this conclusion with the charming triumph of one who does not often use the severe weapon of logic, and so feels it the greater victory when she wields it successfully.

In the mean while, in another room of the hotel, the question of Lila Bonner's immediate professional opportunities was being discussed and decided upon by the manager and the star.

"Helen, what's the girl ever done to you, anyhow? What difference does it make to you that you've got to set in and kick the roof off about a little thing like that, that would save me a heap of trouble?"

So spoke the manager, walking about with his hat on the back of his head, his hands in his pockets, and worry and anger disturbing his hard, shrewd features.

Helen, a big, dark woman with something decadently Greek in her soft and splendid beauty, sat by a window, an elbow on the sill and her chin in her palm, looking out gloomily upon the same ugly street that was occupying Lila Bonner's eyes. The man took another turn across the room; she did not move. Beginning his sentence with an oath, he again spoke:

ENGRAVED BY J. W. EVANS.

"'I 'M GOING DOWN TO DINNER DISGUISED AS A LADY.'"

"I don't know whether I'll knuckle under about this thing or not. I'm not the man to stand much bullying. You know that, don't you, my girl?" He stopped before her, looking at her with both curiosity and menace in his face. She looked up at him from beneath her long, low, straight brows:

"You know you can do just as you like, don't you?" She spoke just audibly, in a contralto voice.

He turned on his heel, then turned back, saying:

"I'll do you the justice to say you ain't often as bad-tempered as you've been about this business. I wish you'd let the girl play the part. I can't see what it is to you; but naturally, I'd rather get some one out from New York than to have a row with you."

Evidently with a man's philosophy, deciding to yield, he aimed at yielding gracefully, not caring to pay the double toll of a defeat and a quarrel. He threw himself down on a chair in front of the woman; he threw an arm over the back, crossed his legs, and looked at her

with a good-natured, quizzical half smile, and with the effort to read her in his keen, half-shut eyes.

"You made the best exit in that third act last night I've seen yet. The yokels did n't catch on very well, but I'm not caring so much about them now — that's the way I want you to do it in New York."

The actress slowly turned her perfect head till her lovely eyes, eyes as simple and inscrutable as an animal's, rested on him; but she said nothing.

After a moment's silence he spoke again: "I say, Helen, I've seen a good deal of women, but age can't wither nor custom stale my interest in their infinite variety. Now you've beat me, it's only fair you tell me what it is you've got against poor Bonner."

Helen's gaze returned to the window. "She looks down on me," she said, with an odd simplicity of intonation.

"Hey? On *you*. Well, I like that. The girl ain't quite an idiot. She would n't show that up in the company."

"She tries not to, but she does. She thinks I'm bad."

"Aw, Helen — you talk like a fool," said the man, roughly, with a queer touch of embarrassment. He got up, and, taking a cigar from his pocket, occupied himself lighting it.

Helen looked out of the window again. "I'll show her about badness," she said. "I'll show her I'm worse than she thinks. She acts as if she'd never thought of my having any say about her parts. She's the fool."

The manager whistled softly. "Well, you're all queer cattle. You that —" the woman raised her eyes quickly to his; after a barely perceptible break in his sentence he finished it — "always seemed beyond all that sort of affectation, that's a woman of the world, here you are up on your ear about what a little country girl thinks, a girl that has n't been on the stage long enough to get the hay-seed out of her hair. Her mother's come to see her, did you know?"

"Come here?"

"Yes; going on to Columbus with us. Yes; I've seen her; just saw her as she came in from the train."

"What's she look like?"

"She's a right stunning-looking old girl; a sort of a cross between a saint and a first-class 'Two Orphans' countess, only she's little."

Helen got up and moved idly toward the dressing-case. She rested both hands on it, and looked in the mirror; she took up a comb, and parted and pushed back the short locks of soft, lusterless black hair from her low forehead. Then she began taking the big diamonds out of her ears.

"What are you up to?" said the man. "It is nearly dinner-time."

"I'm going down to dinner disguised as a lady," said Helen, without emphasis. To this variation of a standard theatrical joke the man said:

"All right, anything for a change," adding, as he resettled his hat on his head: "I'll bet on you. I'm going around to see how that donkey is getting on with the supers."

When the star entered the dining-room the other members of the company were already seated; they were together at one table, and a place for her with them was left vacant, it not being her way, they all admitted, to give herself airs.

Lila Bonner and her mother were seated with the rest, and an unwonted air at once formal and graciously social pervaded the scene. Heads were turned in her direction when the star appeared, and a shade of anxiety could be seen on several faces. A moment before one of the men had said, *sotto voce*, to another:

"Wonder if Madison knows. Hope she and Springer won't come in together." Looking up now, he said: "Get on to St. Clara Vere de Vere, will you? She's all right; she's gotten herself up for Mrs. Bonner's particular benefit, ain't she?"

The leading man sat opposite Mrs. Bonner, and with his very best society-play manner was saying to her: "In all my travels, Mrs. Bonner, I've never seen any other spot in the world to compare with the blue-grass region of Kentucky."

Mrs. Bonner listened with soft pleasure; just then she raised her eyes and saw Miss Madison standing at the head of the table, and she gave her the tribute of a little start. There was an instant's silence, and then, before Lila could speak, the leading man, with a pleasing little flutter disturbing his usual brazen grace of manner, constituted himself master of ceremonies, and said: "Miss Madison, let me introduce you to Mrs. Bonner, who — whose visit we have all been so looking forward to."

Mrs. Bonner bowed, while her sweet eyes spoke her admiration; she too, in her day, had belonged to a world which in its way bowed as profoundly to beauty as do the satellites and speculators of the stage; then she turned her grateful, gracious smile back to the leading man, and from him she gave a tender glance to the daughter at her side. How kindly toward her and appreciative of her they all must be to greet her mother so — that was what the glance said.

And Lila? Her face wore that peculiar look of significant blankness which comes when conflicting sentiments meet in the consciousness, one neutralizing the other in the play of expres-

sion; but she too acted her part, and responded in kind to the unwonted cordiality and social ceremonial about her.

Were these players really profoundly impressed by the quaint, pure sweetness of this old-fashioned provincial gentlewoman? They were always facilely impressible; to be so was, one may say, their trade (such impressionability, in the nature of things, can exist only with an equal elasticity in recovery); and Mrs. Bonner was apt to attract the admiring regard of the most stolid.

Even after dinner was over, and she had gone up-stairs in the company of Miss Madison and Lila, the leading man remained helplessly perched on the pinnacle of polite dignity which he had mounted for her benefit. He strolled out upon the sidewalk, neglecting his customary toothpick, and stood looking before him with the scowl of meditation on his handsome brow. One of the other men asked him for a match, and then he roused himself to light his own cigar, saying, as he did so:

"That lady is a perfect flower of Southern civilization. In the South woman occupies the true place that —"

"Aw, come off, Anderson; she's gone now. Save the rest till you see her again," interrupted the comedian.

"Put it in your play, old man," cried another, who habitually echoed the comedian; but a young fellow who spoke only three lines in the piece declared with the emphasis of a preliminary oath, "Anderson's right; it's so. She's my idea of aristocracy." This indorsement of his sentiments seemed to bring about a reaction in Anderson; he turned his back on the speaker, slapped the comedian on the back, and said:

"Come, have a drink, and then get out your chips."

Up-stairs the three women with whom this bit of history deals had gone into the dreary hotel parlor. Miss Madison, a shade of shyness softening yet more the exquisite modelings of her face, sat on the haircloth sofa with Mrs. Bonner. Lila walked about the room and looked out of the windows.

Miss Madison talked very little, but her manner was excellent; it was as if she felt her part, but did not know the lines, as if she could not trust her invention far enough to improvise speeches for the scene. This quietness exactly suited Mrs. Bonner's ideas of the conduct most becoming a beautiful young lady; she said to Lila afterward that she had rather expected to find such an actress as Miss Madison different—"talking more, taking the lead more, you know, dear, as if she were an older woman, or even as if she were perhaps a little—a little frivolously gay; but she, why, she has all that retiring instinct—that bloom on the fruit—that

that I hate to see girls lose. I feel that I have done her and, doubtless, others an injustice."

That afternoon Miss Madison said to Springer: "Lila Bonner hated to have her mother talk to me, I believe. I wonder what she thought I'd do to her." And though resenting it, she seemed to find nothing anomalous in the girl's instinct to shield her mother from contact with the world in which she herself was struggling. After a minute's silence Miss Madison spoke again. "She's an angel, that's what she is. She told me I made her think of Miss Sally Warton when she was the greatest belle in the South, from Louisville to New Orleans. Did you ever hear of her? She belonged to one of the real old families, did n't she?"

The next day, after Mrs. Bonner's predestined pleasure in the performance and admiration of the performers had found expression in many a nicely turned little compliment, and she and Lila, again alone, had turned to the ever-suppressed, ever-recurring subject of the girl's chance for advancement, she startled her daughter by saying:

"My darling, I believe I'm more of a diplomat than you are. My father used always to say, 'When you want anything of a man go to a woman.' I'm going to talk to Miss Madison about your having that part!"

Lila looked at her with wide eyes, and said nothing.

"You had n't thought of that, had you, dear?" said Mrs. Bonner, half mystified by Lila's gaze. "But you see —"

"She has nothing to do with the management—she ought n't to have," said Lila.

"Oh, I dare say not, daughter, but she's a very lovely, sweet woman, and she's certain to have some influence; such a woman in her position must." Mrs. Bonner spoke for once with the confidence of an elder.

"I think her influence is against me," Lila murmured, turning away to hide her weary tears.

"What did you say, darling?"

"Nothing, mama; I only said I don't know what her influence could do."

"No, that's just it; you don't know, and you know you've always said that to leave no stone unturned was your motto; that—that's the way to do when you don't know which one may be the right one. You see, your poor old mama is n't so bright as you are, my baby, but she can apply your lessons sometimes when you don't think of them. I've learned better than you have yet how accidentally things go in this world. Your father used to say, 'Except in mathematics you are never beyond the possible empire of the emotions.' I've heard him say it to other lawyers when they were talking about cases, and he meant that little

feelings influence people, too. Now, perhaps it all may be very uncertain in Mr. Springer's mind, and Miss Madison might turn the current if she'd say a word; she'd know if she could do any good by speaking or not. I'm going to talk with her about it."

"She never liked me," said Lila, faintly.

"O daughter, don't get in that way of feeling about people," said Mrs. Bonner; "it's a most unfortunate habit; it's—why, really, it is n't ladylike!"

"It seems to me, mama, to be a question of fact rather than feeling."

"Lila, daughter!" exclaimed the little mother piteously, as if this were a personal and most unkind observation; and Lila sighed and said, "I beg your pardon, mama," as if it were.

"Are you opposed, dear, to my speaking to Miss Madison?" asked the mother, with a touch of inconsequent deference in her manner.

Lila came and stood behind her, and again rested her cheek upon the pretty head. "Mama," she said at last, "I'm afraid it won't do any good; I'm afraid she may be rude to you, wound—"

"Lila! rude to me! Miss Madison!"

There was such a ring of pained astonishment in these exclamations, that Lila, perhaps thinking that the unpleasant possibilities of Miss Madison's conduct were the lesser evil as compared with the certainty of the hurt she herself was inflicting, said:

"I may be wrong, mama."

"Why, Lila, daughter, these people have been most pleasant, really attentive to me; they are not quite always what we are accustomed to: but then, Northern people, I suppose, are always a little—a little odd. I've heard people who admired them very much say they sometimes lacked polish, and Miss Madison—why, Miss Madison would be admired, her manners would be admired, in the South! Lila, is anybody rude to you, ever? Tell me; I've been afraid you were not quite happy, as happy as you should be,—that is, as you could be,—going about like this. Are you keeping things back?"

"Oh, mama," cried Lila, "what a suspicious mama! Do you think the whole company has conspired to deceive you? There'd be a world of kindness in such a plot to conceal unkindness, would n't there?" She laughed and kissed her, and the conspiracy she outlined was so grotesquely improbable that Mrs. Bonner's mind was set at rest.

"I don't know Miss Madison as well as the rest, that's all," said Lila. "You know she's so quiet. I dare say I've been a brute to suggest that she should be a brute. Ask her, do; I've changed my mind about it. I think I've

thought over this thing till I've lost all judgment."

"My poor baby girl!" murmured the mother, the blue eyes swimming again in tender tears. Mrs. Bonner suggested that she go at once to Miss Madison's room. Lila insisted that she wait till she saw her at dinner, and ask her permission to call upon her; and despite her impatience to be upon her mission, Mrs. Bonner fell in easily with the more formal course.

When Lila next found herself alone she shut the door, stretched her arms above her head, dropped them with a quick, loud sigh, and flung herself face down upon the bed.

A few moments after Mrs. Bonner left the star's room, the star herself swept down the hall, and rang the one bell the floor boasted. She rang more than once, and many minutes passed before a sulky youth, wearing a dirty white apron, put his head over the stairway railing. Guests at this hotel were not encouraged to meddle with bells.

Miss Madison held out her hand with a significant gesture, palm downward, and said: "I want you to go find Mr. Springer, our manager, for me. Tell him Miss Madison wants to see him right away."

The youth illustrated the facile perceptions of the American people by his ready response to a pantomime of which he had small experience, and yet, at the same time, demonstrated the independence of our national spirit by looking sulkier than ever as he pocketed his silver.

When Springer entered her room, Miss Madison stood in the middle awaiting him, and as he looked at her something worth seeing happened: a deep flush, a blush, overspread the brown oval of her face, and she glanced down with what looked like embarrassment at the girdle cord she twisted in her fingers.

"By George, Helen," Springer began, but Helen interrupted him, dropping in front of her the hands that still stretched the cord between them, and, lifting her head and her eyes:

"Have you got a girl to play that part?"

"Why, no, not yet; they'll get some one; Daisy Farnham, I hope."

"No," said Helen; she took a step toward the man, and laid a hand on his arm. "Charley, I'm going to give up to you; telegraph you don't want anybody. Give the part to Bonner."

"And you're going to play that on me as giving up," he cried, and threw his head back in a big laugh.

She dropped her hand, but still stood there with the simple waiting look one so often sees in the faces of women and dogs and children when their natural superiors are giving expression to accepted incomprehensibilities.

Springer caught her arm with a little shake, laughed again, and went across the room and sat down. "Now tell me why you've given up to me," said he.

"I've done it for her mother," said Helen, abandoning without a perceptible pang of consciousness the theory of submission.

"Hello! Have you reminded her of any more ancient history Kentucky belles?"

"She thinks I'm just as good as they were." Helen still stood quietly in the middle of the room, exhibiting that superb unconscious command of noble pose on which Springer counted to help make his fortune.

Now he looked at her, started to speak, but remained silent.

"I ain't," Helen continued after a moment's pause, "but it'll never hurt her that she thought so. If Lila Bonner has any sense she'll keep her away from the company in Columbus. She—Mrs. Bonner—said to-day she felt as if she ought to beg my pardon for having thought bad of the stage before Lila went on. She put it in nicer words than that."—Helen still spoke with a childlike seriousness. She too sat down now in her chair by the window, saying, "You better send that telegram."

When Springer departed, Helen again made use of the bell in the hall, and sent a messenger for Lila Bonner. She met her with a constrained antagonism which at first she carried off with a touch of the hauteur of a star, an arrogance she rarely assumed.

"I told your mother I'd do what I could," she began, "that I could not tell how it would be. That was a lie, but she never guessed it.

I knew how it was, and how it would be. It's settled now. I kept you out of it before, but now you're to have the part. No, don't you thank me; you've got your mother to thank; she's—I never knew anything like her before. I never even saw an angel like that till yesterday. You've had her all your life. Maybe you think you're as good as she is, but I can tell you you're not."

Helen was speaking now with the deep excitement of a slow nature. "You ought to be better than I am. Maybe you don't know that I'm better than I used to be, than I was brought up to be—though it would be strange if you hadn't heard. I've raised myself. Maybe you're smarter than she is, but it's her not being smart that's fixed you this time. Mr. Springer'll talk to you about it when he gets ready."

"I will thank you for loving my mother," said Lila, taking a step toward her, and putting out both hands.

"No; let's not begin what we don't want to keep up," was the answer; but it was softly spoken, though with a backward movement.

"I'm not talking about loving your mother. I would n't; and what I've got to say is, I don't want to see her any more—no more than I can help, anyhow; it worries me. Take her somewhere away from us all in Columbus. They'll all get tired acting up to her after awhile. They all see she's an angel, but—" a pause and a change of tone—"lots of things would bother her that ain't any harm. We've all put ourselves out to please her; you see to it that she gets home satisfied. You make her happy. Good day, Miss Bonner."

Viola Roseboro'.

SLEEP AND DEATH.

SOFT Sleep, the benediction of the day,
 Death, that all life o'ershadows: mysteries.
 Alike, and yet how strangely different, these!
 Sleep, when reality has sunk away,
 Can charm with dreams, as when musicians play,
 Hid in the summer dusk, rich melodies.
 Has Death such grace, life-longings to appease,
 The dread of Stygian darkness to allay?
 Sleep to the pangs of love surcease can bring
 Without annihilation—like a fire
 Drowsed in rose-embers. But the funeral pyre
 'Neath ashes cold leaves no warmth smoldering.
 Friendly is Sleep: in Death we fear a foe.
 Sleep is but seeming—oh, that Death were so!

Henry Tyrrell.

TOPICS OF THE TIME.

The New Woman-Suffrage Movement.

THE recent active agitation in the State of New York of the question of Woman Suffrage was the result of an opportunity, namely, the Constitutional Convention. Those who so earnestly protested against a condition of wrong did not, we believe, claim that the "wrong" was an increasing one. In fact, it is generally admitted that the condition of woman, as such, before the laws, and as to her education and her general opportunities in the community, is, on the whole, becoming more favorable. Women are not declared to be getting fewer and fewer "rights" and advantages, but rather more and more, with advancing civilization. It was, then, not a new condition so much as a new opportunity that occasioned this special movement.

The difference of the new movement from similar agitations was in the character and social position of many of the women and men who were among the leaders. Men and women of ability and character have not been absent from the previous "crusades," but no previous one, in this part of the country, has had so much leadership or so much following of a supposedly conservative sort. To be sure, some of the old champions sounded again a certain familiar note,—the note which a generation ago met with the ridicule of the wise and the approval of the light-headed,—and this note was not so rare as some adherents must have wished in the new discussion—the old voice and proclamation of feminine revolt! The new crusaders, however, mainly based their claim on natural rights and absolute justice, on their new application of the principle of no taxation without representation, on the probable betterment of the position of women as wage-earners, on the good that would accrue to women and to the community by their enforced education in political duties, and on the improvement of laws and their administration to be caused by the admission of women to the suffrage.

While the entire movement was deeply deprecated by many thoughtful persons as having tendencies, and as being sure of effects, of an unfortunate character, yet so much study of, and thinking on, the fundamental principles of government, and on the relation of the sexes to each other, to society, and to the State, had not been done in this neighborhood for generations. It is not, then, a matter of surprise that a counter-movement should have sprung up among women, and that the earnest protest of women and men against the proposed change should have gone forth. Owing to this, and to the arguments presented on both sides, and to the intense attention attracted to the subject, many have been able to take a stronger hold upon the principles underlying all government, and upon some of the greatest problems of life.

The argument has at times been hot; it may have seemed at times not in all respects entirely frank. The most inescapable condition of humanity is sex; it is the element most carefully to be considered in the ques-

tion at issue, yet it has appeared at times that this aspect of the question was evaded by some of the most eloquent champions of a scheme which would plunge all womanhood into the welter of universal suffrage and partizan politics. The question involved is not only the right to vote, but also "the right not to vote"; for, at heart, the question is this: Shall men, at the request of some women, load upon all women, equally with men and in addition to their present burdens, the duties and obligations of civil government?

Other allied questions of a fundamental character also arise: Is complete Woman Suffrage the next logical step in the advance of civilization, or would it be an unfortunate *non sequitur*? Would the proper function, and use, and power of woman in the State be increased or impaired by so-called "equal rights," *i. e.*, equal suffrage? Will the suffrage be equal if extended to a sex that cannot physically endure the strain of duties implied in the suffrage? Could suffrage be called "equal" suffrage when mothers of families—upon whom the State depends in a peculiar sense for its very existence—would be under special disabilities as compared with single or childless women? Would it elevate or degrade the ideal of the suffrage to attempt to extend it to a class that could not, as a class, fulfil all of its duties and obligations, military, constabulary, juridical, and political? Should the system of government tend to build up or to impair the family and the home, and what effect upon the institution of the family would follow the extension of the suffrage to women? How can it be absolutely predicted that women's wages will be affected by this revolutionary device more than by economical conditions? And even if they should be affected favorably, would this device, under all the circumstances, still be desirable?

There are other questions more immediately "practical," perhaps; such as the effect upon the general suffrage,—and upon the present affliction of spoils and of bosses,—of the enormous increase of the suffrage along exactly the same lines as now; but we do not care to go into the subject at present with more detail, especially as in the August number of THE CENTURY many of the arguments *pro* and *con* will be given at length—by Senator Hoar in the affirmative and by the Rev. Dr. Buckley in the negative.

To-day women are not compelled as a class by our laws and our political system to the assumption of duties for which there is any suspicion of their unfitness. It is our own profound belief that women's work should continue to expand naturally along the lines of education, philanthropy, and the housekeeping interests of our local communities, and along the line of their general influence in the arts and sciences, and in society at large; and that her energies should not be compelled into a domain of untried and physiologically impossible civil obligations.

Some things are sure: if there is anywhere "oppression" other than through the laws of nature, and if this oppression can be lifted by human device, it

must, and will, be in some way ; but above all, it is sure that there can be no conflict of interests between men and women. The development of one is the elevation of the other ; the good of one is the good of both. But let no one be deceived by false analogies and evasions of the deepest facts of humanity, because the compulsion of all womanhood into the political arena (what the law *allows* to all at once becoming the *duty* of all) would be a revolution of greater magnitude and effect than any the world has yet witnessed.

A Martyr of To-day.

THE recent murder of Robert Ross by political roughs during a municipal election in the city of Troy occurred under peculiar circumstances of more than local significance. For years the government of that city has been a byword of national reproach for the audacity with which the criminal element has dared to defy the simplest and most fundamental principles of justice. So absolute was the control of the local boss,—now the junior Senator from the great State of New York,—that he is said to have boasted that he could elect a Chinaman as mayor of the city if he should so desire. The efforts of law-abiding citizens to punish frauds upon the ballot have been in vain—not for lack of conclusive evidence, but because of it. Grand juries have been unfairly chosen for the purpose of defeating indictments, and even the police have refused to serve warrants. In the face of all obstacles, the patriotic citizens of Troy did not relinquish their fight for the vital principle of honest elections, but knowing well the brutal element with which they had to deal they courageously faced the issue. The death of Ross in the discharge of the highest duty of citizenship has revealed to the American people an example of civic devotion and of self-sacrifice which should inspire decent citizens everywhere, while it should startle the indifferent into a realization of the desperate and dangerous character of the new generation of political spoilsmen.

Robert Ross was in an eminent sense a martyr to liberty. No man that fell at Lexington or Sumter gave his life to his country with more willingness or for a better principle. He knew the type of political rough he would have to deal with in undertaking his duty as a guardian of the election, for he and his brothers had been warned that their lives were threatened. That duty he undertook solemnly and without bravado. He was not inspired by partizanship, for he was a Republican advocating the election of a Democrat ; nor by race prejudice, for he was a Scotchman advocating the election of an Irishman ; nor by religious bigotry, for he was a Protestant advocating the election of a Roman Catholic. He was simply inspired by the most patriotic desire for good government, and it was in defense of this cause—the cause of every American citizen—that he was brutally murdered. Nothing is clearer than that he was the victim of the accursed Spoils System, which is daily bringing disgrace upon the American nation, and is spreading a blight of misgovernment upon every community over which it holds sway. The responsibility for this murder lies at the doors of those who have fostered or consented to the conditions which by an inevitable logic lead to such deeds. In these days of lawlessness it will not do to hold one's peace when a Senator of the United States permits, as it is well

known he might prevent, those encroachments upon the rights of citizens which make justice a mockery and representative government a jest. It is not a question of partizanship, but one of national self-preservation.

In what way is Ross's sacrifice to be given its proper accent and honor ? His townsmen have already provided for a suitable memorial for his grave, and it is to be hoped that the spot upon which he died may also be marked in a way appropriate to its significance. But his service was to the nation, and it deserves another sort of recognition. What more appropriate and useful than to perpetuate his name in organizations to defend the purity of the ballot ? The danger of the ascendancy of the criminal element in politics is a danger to men of all parties, and there is hardly a city of the United States where there is not need of a non-partizan body of picked men whose duty it shall be to exalt the sanctity of the now degraded suffrage : to agitate for the most perfect election laws, and for more severe penalties for their violation ; to bring the force of public opinion to bear on the selection of registry and election boards ; to scan and purify the lists of voters ; to study the rights of citizens at elections, and to defend them at the polls ; to become familiar with the personnel of the districts in which they are to serve as watchers, and to exert the whole power of the law on election day to insure the free casting and faithful counting of the vote. An appropriate name for such a body would be "The Robert Ross Association." In the June CENTURY was recounted what has been accomplished by a few determined citizens in the redemption from ring-rule of the city of Montreal. The overthrow of the Brooklyn ring, and the conviction of McKane and his associates, were due to volunteer work of a similar character. The imprisonment of twenty-nine offenders against the election law in New York city was accomplished by exactly the sort of work which might be undertaken by these associations. Bearing the name of Robert Ross, they would at once be a challenge to evil-doers, and a solemn proclamation of the serious nature of their mission.

For it is undeniable that within the past few years a new depth of political unscrupulousness and violence has been revealed. Wholesale bribery, cheating, and counting out, thefts of legislatures and downright murder, make an alarming record. These very crimes have revealed a sound state of latent public opinion ; but what is needed is that public opinion should be not latent, but vigilant. Beside the question whether representative government shall perish through the perversion of the very machinery by which it operates, all financial and economic questions seem trifling.

For what avail the plough or sail,
Or land or life, if freedom fail ?

If the standard weights and measures of public opinion be tampered with, how shall we discover the will of the people ? The Spoils System is a deadly upas-tree, which the nation has long been nourishing ; its leaves are dropping upon us as never before ; here and there we have broken a twig or lopped off a branch ; but the time has come to root it up entirely. To do this, in nation, State, city, and village, is a purpose to which every good citizen should devote himself. The death of Robert Ross will not have been in vain, if it

shall lead his countrymen to ponder the fundamental principle for which he died.

The Latest Cheap-Money Experiment.

IN THE CENTURY'S series of articles on cheap-money experiments in the world's history,—now published in book form,¹—there was none of later date than that of the Argentine Republic, which began in 1884 and ended in 1890. We have now the opportunity of recording one which has come to an end during the present year, and in which the kind of cheap money involved was silver, a fact which makes the details of the case especially interesting and instructive to us at this time.

A few months ago Professor James Laurence Laughlin of Chicago University, author of the "History of Bimetallism in the United States," was invited by the government of the republic of San Domingo to visit that country, and devise for it a currency system. He spent some time on the island, and returned to Chicago in April last. He found on his arrival at San Domingo that the finances of the country were in a chaotic condition. The only circulating medium was the Mexican silver dollar, which had fallen in value with the price of silver till it was worth only forty-eight cents. This was the only money in the country, and the inhabitants had no choice about using it, though they did so at a constant loss. They sold their products, and bought goods, in the markets of Europe and America, where gold was the standard. Yet when they came to retail the purchased goods at home they had to sell them at silver prices. The constant fluctuations in the price of silver made exchange so uncertain that the bankers conducting it guarded themselves against loss by deducting a heavy percentage. This is always the case when international trade is carried on under such conditions. The nation using an inferior or cheap form of money always must pay a tax for doing so. As Daniel Webster said eighty years ago, in a passage which we have quoted in a former article: "The circulating medium of a commercial community must be that which is also the circulating medium of other commercial communities, or must be capable of being converted into that medium without loss. It must be able, not only to pass in payments and receipts among individuals of the same society and nation, but to adjust and discharge the balance of exchanges between different nations." When this is not the case, the exporter of produce from a country having a fluctuating and cheaper form of money to countries having the gold standard, or a stable and dearer form, must calculate on a possible decline in the value of the home money, and deduct a percentage therefrom from the price he pays for the goods to be exported. Bankers and other dealers in exchange under such conditions also charge an increased percentage for the same reason.

The effect of these conditions in San Domingo was the same as it has always been under like conditions everywhere else. "The price of all commodities," says Professor Laughlin, "began to rise, although the scale of wages remained the same. While a laborer did not receive any less money for his work, its purchasing

power diminished one half. Consequently the distrust of silver money permeated all classes, and the necessity for devising some better monetary system was universally felt."

Professor Laughlin's remedy was a very simple one. It was to lift the country at once to the gold standard. He drew a law making the unit of value one dollar in gold, of the same weight and fineness as the gold dollar of the United States. The gold coins were to be in five-, ten-, and twenty-dollar pieces. As a subsidiary coinage, for ordinary currency use, silver dollars of 380 grains, with halves and quarters of proportionate weight, were to be coined. The Mexican silver dollar has 377.4 grains and the American 371 $\frac{1}{4}$. This silver currency was made redeemable in gold in amounts from five dollars upward, and was receivable in customs duties. Being based upon the gold standard, the silver currency will circulate as freely as gold so long as the government redeems it on demand. As an incentive to prompt redemption, the government was enabled to make a profit of fifty cents on the seigniorage of each silver dollar only by keeping the silver circulation at a par with gold by a system of redemption. In order to rid the country of Mexican dollars, their acceptance at the custom-house was permitted only at their bullion value, less five cents. This deduction is two cents greater than the cost of shipping these dollars from San Domingo to New York, so that it will be more profitable for bullion dealers to ship them out of the country than to dispose of them in San Domingo.

In commenting on his plan, which is likely to be accepted and put in practice before this number of THE CENTURY is published, Professor Laughlin says, as reported by the Chicago "Inter Ocean":

I regard the situation in San Domingo as a clear refutation of the position taken by some financiers in favor of the unlimited coinage of silver. Under the most favorable conditions it failed signally. It was the only money in the country, and the people were willing to use it, if possible. Notwithstanding this universal toleration, it proved unstable. Every fluctuation of the silver market made this money change its value, and it might have been as useful in an uncoined state. Not until it has a gold basis back of it will it answer for money, and only then when it is understood that it does not represent the exchange of ultimate redemption. The people of San Domingo, having experienced the ills of an unstable currency, were anxious to adopt a gold basis. With this new currency system I expect to see commerce revive in San Domingo, and a tide of prosperity set in that will make it the most prominent of the West Indian Islands.

The moral of all this is as plain as a pikestaff, and is the same one that has been drawn from all other cheap-money experiments. It is that no country, however large or however small, that has commercial dealings with other countries can prosper with any monetary standard save that which other nations of the world have. The experience of civilized nations, through many centuries, has convinced them that gold is the best standard thus far discovered, and upon that all nations must agree, in their domestic and international dealings, until a better one shall be found. The nation which, alone, attempts to set up a different standard must do so at great loss to itself.

OPEN LETTERS.

"The Anti-Catholic Crusade."

A REPLY BY THE SUPREME VICE-PRESIDENT OF THE A. P. A.

THERE is nothing in this country too good to escape criticism, nor so bad that it should be misrepresented. The American Protective Association, like every other movement ancient or modern, has its friends and its foes. When the search-light of investigation is turned on, men will be enamored of its beauty or disgusted with its ugliness. In the criticism of this movement in Dr. Gladden's article in the March CENTURY, we think there is unintentional injustice and misrepresentation. That Dr. Gladden would be willing to wrong a great body of his fellow-men, no one who knows him will for a moment think; but that he has done so we hope to prove. Painful, therefore, as the task must be, in the spirit of fairness attention will be called to its glaring inconsistencies.

The writer is Supreme Vice-President of the A. P. A., and is, ex officio, supposed to know something of its teachings and history. He will give the public some facts which can easily be verified, and will quote only such truths as all may understand, *and only truths.*

The A. P. A. was born in Clinton, Iowa, about six years ago, and not in the year of the Parliament of Religions, as stated in the "Anti-Catholic Crusade." Henry F. Bowers of the place named can verify this statement. It is a strictly political non-partizan order, and not a religious or semi-religious organization. It interferes with no man's religious notions. Men may worship God when and how they please, as provided by the Constitution of the United States, or they need not worship him at all. This is its "exoteric" and its "esoteric" teaching, and they are one and the same. Who otherwise teaches or interprets, misinterprets and falsely teaches. This point is made clear by the action of the Iowa State Council, the proceedings of which are in part recorded in the "Keokuk Gate City" of March 9, 1894.

Some of the Councils, it seems, had made the mistake of hiring ex-priests, who discussed the Roman Church from a religious standpoint. The Executive Board called the attention of State President Jackman to the fact, and he recommended the following, which was unanimously approved, and given to the public:

I am heartily in favor of this action of the State Executive Board. The average ex-priest is simply a leech sucking the life-blood of the Councils, for their own enrichment. We claim in our principles that we attack no man's religion, and make no warfare on the religious tenets of the Roman Catholic Church; and yet we hire these hermaphrodite priests to abuse all of the peculiar observances of this Church, and to vilify and make fun of those observances: we hereby stultify ourselves, and bring reproach upon the order and its principles.

The Council unanimously indorsed the resolution and the president's reference to it. So did the Wisconsin State Council. This is official.

What Dr. Gladden quotes as the platform of the A. P. A. is considered among its basic principles. He thinks, however, that men play hypocrite easily, and so

have a teaching for the public, and one for the inner circle. Then he proceeds to read an essay on human meanness, and calls it A. P. A. He takes only two points from which to condemn a great organization, and those two points are admitted by all to have been brought to light by the Columbus politicians, and distributed on Saturday evening just before the election. He must surely place a very low estimate on the intelligence of his neighbors to think that they would swear to sustain, and then to violate, the Constitution of the United States in the same breath. It would require "a good dose of inconsistency to do this." "The depth and density of such ignorance would certainly be pitiful.

The terms "curia" and "throne" are used appropriately when speaking of the Roman hierarchy; savoring, as they do, of temporal power they are fraught with deep meaning to the A. P. A., and give a reason in part for its existence. Our critic says that Roman Catholic scholars dispute the interpretation as to the temporal power of the Pope. But Roman Catholic scholars will have only heresies to teach until a plenary council, with the Pontiff's approval, sanctions such teachings. When that happens the A. P. A. will have no reason for further existence; but until then we are here to stay.

If allegiance to the Pope does in no way affect the Romanist in his duty as a citizen, an explanation of the condition of affairs in Germany, Italy, and old Mexico would be gratifying and instructive; also a word as to Emperor William's recent visit to Rome. Caprivi, King Humbert, or President Diaz could write an article on this subject that would be read with avidity in almost any magazine.

Bogus encyclicals, instructions, and forgeries are all credited to the A. P. A., no names, no dates, nor particulars being given. Let us examine a few of them. They are all from A. P. A. official newspapers; but the A. P. A. has no official newspaper, and has no power to control any organ. The country is full of newspapers, and individuals running private enterprises are publishing what pays them best, and are answerable only to the public. Dr. Gladden quotes probably from these, and calls them A. P. A. authorities. He quotes from a country doctor, whose quackery had probably ruined the nerves of his "small town," and charges that to the A. P. A. A preacher bought a gun to defend himself against the Romanists; the cowardly parson had doubtless read Father Sherman's last manuscript. It is claimed that harmonious A. P. A. doctrines, exposed through independent sources, differed only in verbal variations, yet the same exposé was published first in one paper, and then copied by all who had room for a sensation. A man who criticizes ancient manuscript, and preaches sometimes on the evidences of Christianity, calls this evidence from independent sources. The public is asked to judge.

Mayor Van Horn of Denver, Colorado, is the principal witness in this matter. The mayor was visited by an

A. P. A. committee. He himself had been a member of the order, and, being mayor of a town even in the far West, would be presumed to possess ordinary intelligence. This committee notified the mayor that because he appointed a Roman Catholic chief of police, his picture would be draped in black, inscribed "Traitor" and "Perjurer," and the same sent to "every supreme council, supreme lodge, supreme camp, and grand commandery within the jurisdiction of the United States."

These terms are to us unknown. There is one and only one Supreme Council, and in each State one State Council, and there are what are called Subordinate Councils. Who the deceiver was in this case, we know not, but Dr. Gladden seems certainly to have been imposed upon. It never occurred to him that this would be unusual power for a committee of three from a Subordinate Council, and that such foolish and wicked proceedings could scarcely have taken place where the Mafia and Molly McGuires were born. We think a blizzard must have struck the mayor's picture on the way, for it has never yet arrived in Ohio. "Are American Protestant graduates of our public schools expected to believe this?"

As to the arms and drilling and the uprising: all the fear of these things was happily averted by a circular sent out by Dr. Gladden and his timid colleagues some months since; borne on the wings of peace, its reassuring message was welcome to the Doctor's country town. Since then Bismarck has drunk wine with the Kaiser, Diaz has driven out the Jesuits, and Tammany Hall is a broken column; no ruler of power sits on a Romanist throne, and the old Church keeps step with modern civilization: we have naught to fear.

Hints to organizers are given, and the documents which are usually serviceable are named. An accredited organizer with whom I am acquainted uses "Thompson's Civil Power and the Papacy," McGlynn's "Pope in Politics," and his lecture on the public schools, and reads the newspapers continually. Foreign flags on American city halls, nuns teaching in public schools, a war upon history, a complaint of unreasonable taxation for the support of schools—all these are the most constant stimulants to a member of the A. P. A. He often mentions the fate of Mayor Hewitt of New York, and sometimes even suggests that the 17th of March be substituted for Washington's birthday or the 4th of July.

There are many people in Columbus who would like to become acquainted with the gentleman who belongs to the A. P. A., and who said that the county offices were all held by Romanists, and that the teachers in the public schools were all Romanists. Let his name be called Ananias A. P. A.

Dr. Gladden must despise and pity the A. P. A. of his mind, but the people will feel grateful to know that he is a child of the Doctor's fertile imagination.

A word as to the mayor of Rockford, Illinois. If he removed a worthy man from office to make room for an inferior one, he violated almost every principle and obligation of the Association, and brought himself and it into disrepute.

As to the Roman Catholic spilling his blood upon many of our battle-fields, it is all true. Has any Church but the Romanist ever made such a boast, or has any defender of his Church claimed credit for protecting the flag that gave him protection?

The Pope desires and possesses temporal power, and

his claim to spiritual leadership makes his temporal claims none the less. If he is the Vicar of Christ, he should claim an oversight over the whole world; if he is not, then he is an imposter and only a foreign potentate meddling in affairs that do not concern him; and the A. P. A. knows it.

As to the matter of secrecy, secrecy does not make a thing virtuous or vicious. Secrecy may be a question of expediency in this case.

The spirited subjects who resented the Pope's interference in Irish politics please our author; in this he commends disobedient subjects as the best citizens; in other words, the inference is, the more disobedient the Romanist, the better the citizen.

It is a pity that the whole curia does not see fit to declare itself according to Dr. Gladden's idea.

"If the ministers would only speak out, the plague would soon be stayed or abated." The opposite has, in fact, been true. Dr. Gladden and Father Sherman are the A. P. A.'s most successful recruiting-sergeants.

COLUMBUS, O.

Adam Fawcett.

REJOINDER BY DR. GLADDEN.

NO statement was made in my article as to the date of the birth of the A. P. A. It was simply said that "an outbreak of religious rancor" occurred last year. How long this outbreak had been festering I do not pretend to know.

Mr. Fawcett's principal complaint refers to my exposure of the documents used by the A. P. A. in their propagandism. The A. P. A. papers, with which I have been abundantly favored since the appearance of my article, all join in this cry. With Mr. Fawcett they all deny: first, that the society has any organs, and, in the second place, that these forgeries—the "Instructions to Catholics" and the forged "Encyclical"—have been extensively used as campaign documents.

As to the latter statement, I desire only to appeal to the members of the order throughout the United States. They know whether or not the "Instructions to Catholics" and the "Encyclical" have been published week after week in the newspapers which they have been reading, and whether they have been printed on leaflets, and circulated from hand to hand by emissaries of the A. P. A. They know whether these documents have been treated in their secret meetings as "clever bits of satiric writing," or whether they have been assumed to be genuine. The members of the order in Toledo, for example, who, only a few months ago, were buying rifles, and alleging that they were arming themselves against the very uprising commanded by the Pope in that forged "Encyclical," were evidently familiar with that document, and had not been taught that it was a bit of satire. The Toledo "American," which represents the A. P. A. in northern Ohio, said in an editorial of February 25, 1893: "The Encyclical, signed by the Pope, was freely circulated among the Catholic churches, read from some pulpits, and passed through the hands of hundreds. It came into the possession of non-Catholics unexpectedly, and thus became public in a manner not so pleasing to the Catholic authorities." As late as last October the same paper editorially denounced a few gentlemen in Columbus for declaring these documents to be forgeries, and demanded to know on what authority we made our statement. For more

than a year and a half I have been receiving, by almost every mail, newspapers from all parts of the United States claiming to represent the A. P. A., and I know that these forgeries have been employed everywhere, that they have been defended as genuine, that they have been essential factors in the A. P. A. propaganda. The denial that they have been so used is a characteristic falsehood. Those members of the order who can read know whether the men who now stand forth and make this denial are telling the truth or not.

As for the Rev. Adam Fawcett, it is easy to test his veracity. He says that the A. P. A. has no organs. This is a quibble to which these defenders all resort. An order which endeavors to conceal its own existence is not likely to have any acknowledged official newspaper. But there are scores of newspapers all through the West which are just as much organs of the A. P. A. as any Republican or Democratic newspaper is the organ of its party. One of these is published in Columbus. It is the "Columbus Record." In its issue of August 2, 1893, under the heading "Very Encouraging Words," is printed, in double-ledged type, the following:

From the National Vice-President and Ohio President of the American Protective Association of the United States and Canada.

It gives me pleasure to certify that the "Columbus Record" is a *true blue* and ably edited A. P. A. paper (the only one in Central Ohio), and very justly entitled to a large share of the credit for the united and very flourishing condition of the order in Columbus.

D. T. RAMSEY, State President.

I heartily concur in the above, and hope every Council in the country will embrace this opportunity to flood the country with patriotic literature.

ADAM FAWCETT.

Perhaps Mr. Fawcett will admit that I had some reason for regarding this particular newspaper as an "A. P. A. authority." In the same issue of the "Columbus Record" which contains Mr. Fawcett's official indorsement, the bogus encyclical is printed *twice*, in large type, with these flaming headings: "Americans, Beware!" "The Lord God the Pope says, 'Thou shalt Surely Die!'" "Will you Heed the Warning?" "The Great Event to take place on or about September 5, 1893." The Rev. Adam Fawcett knew when he signed this indorsement of the "Record" that the "Encyclical" and the "Instructions to Catholics" had been appearing for some months, nearly every week, in the columns of this newspaper. I will not accuse Mr. Fawcett of believing these documents to be genuine. He is a member of the school board of Columbus, and has aspired to be its president. Undoubtedly he believed them to be forgeries. But he greatly wished the country to be "flooded" with this kind of "patriotic literature."

The article to which Mr. Fawcett is replying directly charged him, as a member of the A. P. A., with having laid his hand upon his heart, and sworn that he would *never employ a Roman Catholic in any capacity* if he could obtain the services of a Protestant. He has either sworn this inhuman oath or he has not sworn it. If he has not, he violates no engagement, human or divine, in saying that he has not. If he has, the public will know how to estimate what he says on other subjects. If every member of the A. P. A. has sworn that oath (and no officer and no organ has yet appeared to deny

it), then the statement that the order "interferes with no man's religious notions" must be taken for what it is worth.

COLUMBUS.

Washington Gladden.

A Recent Phase of Relief Work.

LAST summer the sea islands of South Carolina were visited by a series of cyclones that left in their path devastation and want. At the same time the whole country was struck by a financial cyclone that swept everything before it. Each day brought fresh news of disaster; bank after bank, and houses of business firmly established, went down like houses built of straw. It was as if a tidal wave had swept over the land, washing out every sign of life, leaving only the fossil remains upon the shore. In such times the rich fall back upon their capital, and economize—it is easy enough for them to bridge over the temporary difficulty; but the poor are helpless.

While half the nation was out West, glorying in the beauties of the wonderful "White City," here in New York thousands were getting thinner and thinner, crying out from want and hunger, and some going almost insane, inflamed to acts of violence by the speeches of anarchistic demagogues. We who away by the sea or in the country read in the newspapers of the riots in Walhalla Hall, and of the labor troubles on the East Side.

To the stranger within our gates it might perhaps be somewhat of a surprise to find that, in the same city, there could exist two worlds so thoroughly distinct. One, a world free from want and care, of people living in the midst of broad streets with pure air and sunlight, with every now and then a breath of country; their children shielded from every sorrow, having every opportunity to develop mind and body, and, opening up before them, the worlds of music, literature, and art. The other world—one of thousands of struggling people, fighting for a mere chance to keep alive—huddling together like cattle; their streets vile with the stench of human filth; their rooms and cellars foul with contagion and disease; working at starvation wages far into the night; grinding themselves out in the treadmill of ceaseless toil; without rest, without joy, without hope—only a dull smoldering existence.

Were we to put down in black and white the mere statement of the evils of our own city, and add it up as we would a bill of goods, we might begin to reckon the cost:

Of the *sweating-system*, with its starvation wages and its long hours of toil.

Of the *landlord-system*, with its outrageous rents, and the tumble-down tenements, with their vile closets and halls, their cellars filled with decayed refuse.

Of the *filthy streets*, with their foul air and disease.

Of the *police stations*, where the innocent and the guilty are often treated alike, where the young boy arrested on a trivial charge is handled as if he were the most hardened criminal—thrust into pens with professional thieves, kept often for twenty-four hours without food (unless he has money or influence).

Of the *police force*, many of whose members instead of being regarded by the poor as their protectors are too often feared as the colleagues of criminals.

Of the lack of *public baths*. Men and women have no chance to be clean even though they desire it.

Of the lack of *parks*. The only playgrounds for the children, the gutters; their only breath of air, the occasional trips into the country which charity may give them.

We might begin to reflect that for music many have only the occasional hand-organ, with its groups of dancing children—one bit of sunlight in the life of the poor; that for art they have the chromos of the corner grocery-store; and for literature, the sensational newspaper and the cheap "novel."

The ordinary conditions of life on the East Side are full of problems which years hence will be unsolved. Add to this state of affairs the fact that the majority of the people were idle, and had been out of work for months, that their savings were nearly exhausted, and that there was no hope of any work to come, and we begin to realize to some extent the situation as it was last fall. Underneath it all, however, there was a dangerous undercurrent, which every now and then broke forth upon the surface, finding expression in the theory: "If you have n't bread, demand it of the rich; their property belongs to you."

The problems were: (1) To find some form of work that would give employment to the greatest number of people, and, by means of the wages thus earned, would enable them and their families to keep alive through the winter. (2) To prevent self-respecting workingmen from being compelled to accept alms, whether in the form of money, food, or clothes. (3) To find a form of work at which men of every trade could be employed, and in which the expenses of management should be relatively small, so that the bulk of the money might go to the men as wages. (4) To find work the results or product of which would not interfere with a market already overstocked. (5) So to manage and conduct the work that only those who needed it the most should receive it, and that no one should be attracted to it from other cities or from other parts of the city. (6) To secure the financial support necessary to carry on such an undertaking.

I realize how handicapped I am in having no statistics of the most important aid that was given—the help which, in a crisis like this, was the first to come, which always comes first. It is not the help that comes from relief committees; no "philanthropists" are ever called upon to support it; and strange to say, no one ever gets his name in the newspapers in connection with it: for it is only the quiet, simple, kindly help of the poor to the poor. Philanthropy is no more a question of dollars and cents than is morality.

The first organized and systematic attempt to relieve the abnormal conditions then existing was the formation of what was known as the "East Side Relief Work Committee," which was the coming together of several men and women whose work brought them in direct contact with the lives of the people in their own neighborhood.

While every business was suffering, there were thousands of tailors on the East Side who had been out of work for periods ranging from four to eight months. The clothing market was already overstocked. If tailors were to be set at work making clothes, this would increase the supply and only aggravate the conditions. Just when everything seemed most hopeless, there came an appeal for help for the cyclone sufferers in the

sea islands of South Carolina, asking for money, food, clothes—anything; for the destitution was terrible. At the happy thought of one of the members of the committee it was suggested, "Why not set the poor tailors of the East Side at work making clothes for the sufferers from the South Carolina cyclones?"

Our problem was beginning to be solved, but the solution was only a partial one. It is true that this would provide work for the tailors without interfering with the regular trade; but what of the thousands of other workmen? Bricklayers and carpenters could not make clothes.

Looking around us, trying to find some form of work that could be started, we saw the streets of our own neighborhood filled with foul refuse, and it occurred to us to set men at work cleaning them. A form of work had now been found at which men of every trade could be employed, and which required no special training or experience. As it was felt that many would object to doing such work, the people in the neighborhood were consulted as to the advisability of trying this form of relief, and were united in the opinion that the better class of workmen would be only too glad to get any honest work possible.

After consulting experts in the clothing trade, it was decided to hire a shop and machines, buy material, and set men at work making clothes, which were to be sent to the sufferers from the South Carolina cyclones.

Having received the assurance of the commissioner of the city street-cleaning department that the employment of men on the streets could not throw others out of work, as he would not discharge any of his men, but would concentrate them on other parts of the city, it was decided to organize a private street-sweeping force, to clean the streets in the tenement-house districts, thus giving work to the unemployed, and at the same time improving the sanitary condition of the city.

In view of the fact that the amount of work that could be given was limited, it was felt that every precaution must be taken to insure that the work be given only to those persons who needed it and deserved it. The members of the committee could not spend their time in finding out whether people were needy, nor was it desirable to create new investigating bodies when the existing ones were capable of doing the necessary work. It was therefore decided that the work should be obtained by means of tickets and that these tickets ought to be given only after the most thorough investigation.

Every one felt that the ministers of the churches and missions, the charitable and philanthropic societies, and the trades-unions, knew better the condition of their own people than did any one else. Tickets entitling a man to a week's work were accordingly sent to these societies upon condition that they should not be given to homeless men, nor to men without families dependent upon them; thus several individuals were helped instead of one. And it was especially impressed upon the persons distributing these tickets that the relief work was to meet an emergency, being intended only for those workmen who were suffering from the exceptional industrial conditions, and was in no sense intended for those chronically needing aid.

By scrupulously refraining from publishing accounts of the work in newspapers (except where it was abso-

lutely necessary to raise money), by suppressing the addresses of the various offices of the street-cleaning force and of the shops, and by not making known the names of the persons receiving tickets, the gathering together of people in crowds, the fruitless hurrying to and fro in search of work, and the hopeless disappointment at not receiving it, were prevented. Had we announced that in New York thousands of dollars had been raised for the relief of the unemployed, we should have been deluged with an army of tramps eager to get their share of the spoils. By thus refraining from all publicity, the attracting to the work of people from other cities was avoided.

As the sole support of this undertaking was from public contribution, the work in the beginning was naturally tentative and on a small scale. It was started November 28 by putting sixteen men at work on the streets, and at a later date men were employed in the tailor-shops, and in cleaning the cellars of tenement-houses. Not, however, until men prominent in the life of the city had become interested in the work, gaining for it support and confidence, was it possible for it to develop. As soon as this occurred, the work increased rapidly, so that, by March 9, 1600 people were employed in the various branches of the East Side Relief Work.

The great danger of relief work, and the one which cannot be too much emphasized, is the disinclination that people have to conduct such work upon business principles. It is often so very hard to act contrary to one's feelings and emotions, but in accordance with reason. When men kiss your garments, begging not to be discharged, and with tears in their eyes tell heart-rending tales of the sufferings of their families, it is difficult not to weaken and yield to the impulse of the moment. If you yield, however, and once stamp the work as charity, and not as work, its chief value is lost, and you have taken the first step toward the demoralization of the community.

The real value of it all is the one fact that it is a means of giving help to people who very properly would scorn charity, but who are perfectly willing to accept money which they know they have earned. This was most strongly borne in upon me one morning as I watched the men line up to receive their instructions. As it was said to them, "Men, you have a certain amount of work to do, and it is n't too much. If you can't do it, we'll get some one who can; this is n't charity; it's business," it was most interesting to watch their faces, and to see how they nodded approval at the idea that it was business and not charity. It is most interesting to record the fact that the men who were promoted to the position of foremen, on account of their faithful work in sweeping, proved most trustworthy and efficient. It was a great privilege to have been able to give so practical a demonstration of the principles of civil-service reform.

While to the majority of people it would seem that enough good had been accomplished by spending \$100,000 in providing 85,000 days' work for 5000 heads of families, and thus helping, say, 25,000 different individuals over a period through which they otherwise could not have existed, yet to those persons who carried through the undertaking these results are only a few of many; for it is the indirect results that have been of value to the community.

It is impossible to estimate the value to the health

of the people, in having the streets of the tenement-house districts kept clean for so many months, and in having so large an amount of refuse removed from their houses. The moral effect upon the people in thus affording them a standard of cleanliness in their streets and houses is of inestimable value. Having had clean streets once, they may insist upon having them always; having had clean houses once, they may force the landlords to keep them clean.

One of the most important results of relief work is the fact that the money received by the men as wages is spent among the tradespeople in the neighborhood for the necessities of life, and thus tends to keep up the normal conditions of trade, rendering it possible for the storekeepers to get along, and preventing them from being forced into the army of the unemployed. Direct relief, however, acts in just the opposite way; food or clothes given to a family stop with that family, and that is the end.

I have purposely refrained from making any mention of the other methods of relief that were called into existence in this city last winter, for the majority of them were more productive of harm than of good. Many were well-meant, but ill-advised; not planned with reference to the real problems, but the result of impulse without knowledge. Others were only another form of the modern advertising spirit, and have no place in an article on charity. It will be years before New York recovers from the effects of its free-bread and free-clothing funds.

Can one imagine a policy more insane than this of training up our children to be professional beggars; of teaching them that it is right to get something for nothing; and that, whenever they need anything, they shall call upon charity for it? When we learn that a woman standing in line waiting to receive free bread was robbed of forty dollars; and when we hear one respectable, well-to-do boy say to another: "Come on; let's get some free bread. It's great fun," we begin to realize how far-reaching and how dangerous such things can be. Aside from the fact that nearly all of the money thus spent is wasted, aside from the fact that the majority of the people thus indiscriminately receiving alms are unworthy, there remains the degrading spectacle of people gathering in crowds, pushing and fighting among themselves, publicly branded as charity-seekers. I can find no words strong enough to express the evil results of such advertising schemes. They are the one great, terrible danger of "hard times"; more to be dreaded even than the influx into the domain of charitable work of inexperienced people, who with one act destroy the influences that the trained worker has been carefully building up step by step.

Of the many results that have come out of the work, there is one which seems more than any other to give special promise for the future. It is the fact that the clergy have awakened to the value of modern scientific methods, and have begun to realize that it is as dangerous to separate the heart and the head in charity as it is in human character.

The two great dangers of relief work, as we have seen, have been avoided; there now remains for us the third. It is the danger that the people may get to rely upon such work, making no effort to secure other employment, so that when the work stops, they become helpless, and do not know which way to turn, like men

suddenly emerging from a dark room into the sunlight. The danger is a very real one where the distress is chronic, and not exceptional. I need offer no arguments to show that in this emergency it did not exist; the mere statement of the occupations of the men, and of the wages they ordinarily receive, is sufficient proof.

When we consider that among the many trades represented there were bakers, bricklayers, bookkeepers, clerks, grocers, diamond-setters, musicians, photographers, weavers—in fact, men of every trade; and when we consider that the average wages ordinarily received by these men were fifteen dollars a week, it is hard for us to believe that such men would sweep the streets for a dollar a day, when they could get work at their regular trade for two and a half dollars. Indeed, many of the men were in the habit of looking for employment each morning before they went to work.

Looking back at it all now, and trying to find some one thing of more value than all the rest, I am impressed with the different minor results that have been accomplished. Thousands have been saved from starvation; families have been kept together, and homes prevented from being destroyed; the self-respect of the workman has been preserved; and the cause of labor saved from taking a step backward, as it might have done had men been forced through hunger to ally themselves with anarchistic agitators. The rich have a better opinion of the poor, and the poor have a better opinion of the rich.

As we read of the case of the man who had been out of work for months, and who, in addition to supporting his family on the six dollars he received each week, brought to his minister one tenth of this scanty wage, to be used to help those around him who were suffering, we begin to realize that the true philanthropist is he who gives of himself, and not of his superfluities.

When the poor see thousands of dollars spent for their relief, and see men and women working far into the night, giving everything they have for them, they begin to have a better opinion of the rich. Religious and class prejudices have been broken down. Catholic and Jew, Presbyterian and agnostic, have worked together, side by side, shoulder to shoulder, in the cause of humanity. We have at last awakened to a sense of our responsibilities, and are beginning to realize that this life of ours is full of very real and vital problems.

Every year over eight millions of dollars are expended in New York for charity. What a comment upon our civilization! Are we never to realize the danger to our city in having this festering sore upon its life?

After all, are we really roused to the city's true conditions? Shall we ever be able to understand that there is more in life than the mere business of money-making?

"Hard times" and financial panic will pass away, but the problems of the city will remain. We shall still have our "East Side" and our "Tenth Ward," our tenement-houses and our sweating-systems. Shall it be so always?

Lawrence Veiller.

The Public Milk-Supply.

DURING the last few years there has been a growing suspicion that the milk-supply of our cities is a prolific means for the distribution of disease. Our newspapers sometimes tell us with startling headlines that there are more bacteria in city milk than in city sewage. Our

physicians are advocating the sterilization of milk for drinking purposes, and our bacteriologists are informing us on every occasion how milk may serve as a means of distributing disease. It is desirable that with all this cry we should know just what the danger is and the best methods of meeting it.

It is undoubtedly true that city milk contains great numbers of bacteria—numbers so great that they have no meaning to us. Some of the milk of our cities is forty-eight hours old before it is delivered, and even though it has been kept cold, bacteria have had a chance to grow in it until they are very numerous. But the question to concern us is not their number, but their effect upon the milk consumer. Bacteria have to most minds a bad reputation, but one that is not deserved. It is true that a few species are the source of much mischief, but it is equally true that the vast majority of them are perfectly harmless, and indeed beneficial agents in nature. We do not have any fear of swallowing a quantity of yeast, and in most cases it is no more harmful to swallow bacteria. The simple fact that bacteria are present in milk in great numbers does not in itself render milk dangerous any more than the fact that yeast is present in beer renders that beverage a source of suspicion. Mankind has for ages been drinking milk with these germs in it, and has in general suffered no injury from them. The question of interest, then, is not the number of bacteria in milk, but the conditions under which they may do harm.

It is unprofitable to speak of any general injury done by the bacteria of milk unless we can deal with definite facts. The only diseases which we have good reason for believing are distributed by milk are typhoid fever, scarlet fever, diphtheria, cholera, tuberculosis, and certain forms of intestinal troubles, such as summer diarrhoea. That typhoid and scarlet fever, diphtheria and cholera, may be distributed by milk has been demonstrated beyond question.

That tuberculosis may also be thus distributed is also certain, but at present we do not know whether the danger is great or slight. It is certain that a considerable percentage of the cows supplying the milk of the city are tuberculous, and equally so that the milk of tuberculous cows may contain the tuberculosis bacteria. Beyond a doubt the city milk is more or less infected with the tuberculosis germ. But this germ cannot multiply in milk although it may remain alive for some time. Hence when the tuberculous milk is mixed in distribution with other milk, the germs are diluted, and thus the chance of any lot of milk containing the tuberculous germ is much diminished by the time it reaches the consumer. Further, it has been found by experiment that it requires a number of germs to enter the body at once in order that they may serve as the source of the disease, and hence the chance of any person becoming affected through milk is perhaps not very great.

So far as concerns tuberculosis, fresh milk is even more likely to be infectious than stale milk. The case is different with cholera infantum and other intestinal troubles. It seems that these diseases are produced by certain bacteria, perhaps several different species, which multiply in the milk itself, and there produce poisons which do injury by direct poisoning when taken into the stomach. Here it is the multiplication of the bacteria in the milk itself which renders it injurious, and fresh milk would be harmless. In a word, then, fresh

milk may be a source of typhoid fever, scarlet fever, diphtheria, cholera, or tuberculosis, while milk that is not fresh may contain poisons which give rise to cholera infantum or summer diarrhoea.

The question of the best method of dealing with milk so as to avoid these difficulties is one of growing interest. The growth of bacteria may be checked by ice, but this will not destroy the disease germs, and will not, therefore, prevent milk from being a means of spreading disease. Sterilization has been much resorted to in recent years. This usually consists in subjecting it to a boiling temperature by means of steam. Such treatment destroys all pathogenic germs and most others, and physicians have found it a great help in dealing with intestinal diseases. Its popularity has grown rapidly, and many forms of sterilizing apparatus have been placed on our markets. In Europe it is even more popular than in this country. But while the sterilization of milk is of value in the treatment of disease, it is to-day becoming unpopular with physicians as a method of providing a constant article of diet. The high heat injures the nature of the milk. It modifies the fats, the sugars, the casein, and the albumen in such a way as to render them less easily digested, and experiment has shown that sterilized milk is less easily assimilated than raw milk. Children fed upon it alone do not thrive. Physicians are now beginning to recommend in the place of sterilization another method of treatment known as pasteurization, as producing better results. This new treatment is simply to heat the milk to about 160° F. for a few moments and then to cool rapidly. This temperature destroys all the disease germs, and so far reduces the number of other germs as virtually to remove the danger of cholera infantum or other intestinal troubles. The milk must be used within twenty-four hours after such treatment, before the few bacteria which remain have a chance to become very numerous.

Pasteurized milk retains the taste of fresh milk, and is as easily digested and assimilated. Physicians find the treatment is equally valuable with sterilization in case of sickness, and is free from all secondary evil effects. The trouble with the method has been the difficulty of its application, for few people in our kitchens are familiar enough with the thermometer to use it. The operation may be practically performed in the following simple manner: The milk is placed in bottles, thoroughly clean, which are corked with cotton. The bottles are then placed in a basin in several inches of water, and the whole placed on a slow fire. The water in the basin is allowed to boil for ten minutes, the milk not boiling, but simmering slightly. The milk is then cooled, and used for food within twenty-four hours. These directions are unfortunately rather indefinite, and the result will vary with the size of the bottle and the amount of fire. Recently there has been put on our markets a form of apparatus which accomplishes the processes surely and simply. With some simple form of pasteurizing apparatus city milk may at all times be rendered free from disease germs, and if the milk is tolerably fresh, it will be perfectly healthful even for infants. If, however, the milk is stale, and the poisonous products of bacteria growth have accumulated, neither pasteurization nor sterilization will render it harmless.

As concerns food for adults, it is ordinarily not necessary to take any precautions unless in the case

of persons of slight vitality who would most readily yield to disease. But in seasons when any of the above mentioned diseases are prevalent, in periods of cholera, typhoid, scarlet fever, or diphtheria epidemics, it would be wise to pasteurize all milk that is used directly for drinking purposes.

WESLEYAN UNIVERSITY, MIDDLETOWN, CONN.

Stonewall Jackson's Eccentricity.

ALL persons who saw much of General Stonewall Jackson remarked his taciturnity and his self-abstraction. I once rode with him during an entire day, and I now recall the trip as one of the most lonesome I ever made. It was in the summer of 1862, shortly after McClellan had "changed his base" to the James River, and was securely resting under the shelter of his gun-boats at Harrison's Landing. Jackson's command, recently from the mountains, had been withdrawn to a more healthful encampment a few miles north of Richmond, but General Lee, with the bulk of the army, was still fronting the enemy. Early one morning, while doing duty at Jackson's headquarters, I was told to get my horse and accompany the general on a ride. As we quietly jogged along the road, I endeavored to draw him into conversation about the incidents connected with the terrible Seven Days' battle we had just fought, but failing to elicit anything more than short negative or affirmative responses, I changed the subject to general topics—the weather, etc. Still meeting with no better success, I relapsed into complete silence, determined not again to talk unless invited to do so. For hours we continued down the road at a fox-trot, or rapid walk, without a word being spoken. The prolonged silence was growing oppressive to me, when I noticed him muttering, as if talking to some one he had in mind—probably arguing a question of strategy. As the debated point grew in interest, the muttering became louder and more frequent. He was evidently in hot dispute with an imaginary person upon a subject about which they differed widely. Dummy had apparently laid down some proposition which to the general's mode of reasoning was clearly untenable. He therefore replied, "No, sir! No, sir!" in a loud voice, and with a gesture of impatient dissent. The physical exertion seemed to arouse him from his reverie. Dummy vanished instantaneously; and turning to me with an odd expression of countenance, Jackson remarked, "That is a handsome cottage over there," pointing to a farm-house we were then passing. Immediately afterward, putting spurs to his horse, he went clattering down the road at a 2:40 gait, leaving me to bring up the rear. Not another word was spoken until we reached General Lee's headquarters, whither we were bound.

SOLDIERS' HOME, RICHMOND, VA.

"Voting by Machinery."

WE have received a letter from Mr. J. H. Myers, inventor of the voting-machine which bears his name, in which he commends our recent editorial article describing the operation of his invention as the "most interesting and faithful of the many" he has read, but takes exception to some statements in it as misleading. He regards as erroneous our remark that the Myers

Ballot Machine "is in the interest of straight party voting of the blindest and most unreasoning kind," saying: "It is exactly the opposite. Experience proves it to be very conducive to independent voting. The voter declines and omits to push in the knobs for the undesirable candidates." He also declares that he had never seen or heard of a voting-machine before his was perfected, that the Rhines voting-machine is not similar to his, but en-

tirely unlike it, and that his is the only machine which secures an absolutely secret ballot. EDITOR.

A Game of Whist.

ETHEL: Whose deal? Mine? I declare! I thought I dealt before. Now (*dealing to her partner*), Tom, we really must make more. Diamonds are trumps, and —

MAY: Whose lead?

DICK (*mildly*): Yours, Miss May. MAY: Oh, of course. How stupid! Yes. I don't know what to play. But (*throws an ace*) we're sure of one. What! must I play again? Well (*leads another*) —

ETHEL: I do like to play with men. They always keep so quiet and —

MAY: That's what I like, too. You can't play whist and talk. At least I can't. (*To Dick*) Can you? DICK (*smiling*): Oh, yes; pretty well. (*Aside*) Well, I'm a chump if I play whist with girls again.

MAY: What! my play? What's trump?

TOM: Diamonds.

DICK: Clubs led, Miss May.

MAY: Well, if that's the case

I think I'll trump it.

ETHEL: May, that was your partner's ace. MAY: Never mind; we got the trick. (*To Dick*) You're in the dumps because I took it.

DICK: Your play.

MAY: Mine? Oh, yes. What's trumps? ETHEL: Now, we must make the odd. We really must, indeed. My play? Well, there!

TOM (*mildly*): That was our opponent's lead. ETHEL: I thought you led it. Well, it does n't matter. Say, What are the trumps?

TOM: Diamonds.

DICK: You took that trick, Miss May. MAY: Did I? Oh, yes. Well, let's see — I'll play that then (*Dick starts*). Why, what's the matter — is that wrong?

DICK (*grimly*): Tom trumps hearts. TOM (*leading diamonds*): "When in doubt —"

ETHEL: My play again? MAY: What are trumps?

DICK: Diamonds.

MAY: Oh, yes. What ails you men? Don't you think whist is fun? I do. Why, you look just as glum. DICK (*feebly*): Do I?

TOM (*aside*): I wish these girls were dumb. DICK: We think this is fine.

TOM: Yes, the pleasure is intense. We've had a most delightful time, I'm sure.

DICK: Just immense! MAY: We've enjoyed it.

ETHEL: Yes; we do so like to play A scientific game of whist, with men, too, don't we, May?

Transformation.

THE butterflies are buttercups, wind-blown,
Bright, airy flowers upon the summer's breast;
The buttercups, thick in the meadows sown,
Are butterflies flight-weary, seeking rest.

James G. Burnett.

Richard Burton.

Outlines.

A MAN found fault with the world, the way it was made, and the way it was managed. Among the rest, he said that his nose was too long, and, to mend matters, he cut off the tip of it. But now, finding his nose too short, he bewailed to a friend that he could not again make it longer. Said his friend, "It is much easier to find fault than it is to make either a world or a nose."

* * *

A SAILOR, having quitted the sea, and settled down to an inland life, was wont to tell his neighbors of the many strange lands, strange peoples, and strange customs he had seen. All of which being outside their own knowledge and experience, they touched their foreheads, and winked at one another.

Afterward there came among them a man who had studied the stars. He told them how these stars were great worlds, and how it could not reasonably be otherwise than that in these strange worlds were other strange peoples with strange customs. Again they touched their foreheads and winked.

And the sailor winked with the rest.

* * *

A CHILD, a boy, a man, and a giant, went into the water. The child having gone as far as he could go, the boy went farther, and said, "I stand upon the bottom." But the child would not believe it. The man went still farther, and said, "I stand upon the bottom." But the boy would not believe it. Then the giant went farther yet, and said, "I stand upon the bottom." But the man would not believe it.

Just beyond our own depth lies the inconceivable.

* * *

THESE three contended which was happiest, Sleep, and Waking, and Death.

Death said, "I have no bad dreams."

Sleep said, "I have good dreams."

Waking said, "I am."

* * *

A CHILD was born rich. He was to know every sane pleasure. He was to be made wise, and good, and great.

The child was stolen. He was brought up in the slums. He tasted every ill of poverty. He became a vagabond and a thief, and he was hanged on the gallows.

Berry Benson.

Confirmation of Pudd'nhead Wilson's Views on Valor.

"Courage is resistance to fear, mastery of fear — not absence of fear."
— *Pudd'nhead Wilson in March CENTURY.*

IF Mark Twain had been a soldier himself, and had felt that mortal chill which strikes a fellow when the bullets begin to whistle and his comrades begin to fall on right and left, he could n't know more about it.

When, in 1861, I went into Company B, 2d Virginia Regiment, Stonewall Brigade, as a private, and was marched to Harper's Ferry, one of my fellow-privates was John P—— E——, of the same company. He was a plain, hard-working young carpenter, and a day or two before had married a pretty young wife. Jackson's

brigade never had much play or rest, and when the first battle came they were in it, and so on to Appomattox. John P—— was not one of those rare heroes who "did n't know what fear was." He knew very well, but always met it face to face. He said he was always "scared to death" in battle, but he had a curious way of showing it. When the battle was joined, and blood and ruin were everywhere, then, wherever the front rank of danger and fighting was in his regiment, there was John P——, with shaking legs, pale face, and tears running down his cheeks, ready to advance with the first, and staying with the last that retreated. Then and there, without shout or boast, firing steadily, he did his duty until the last shot had been fired. When picket duty demanded special reliability he was sent. He might have moaned inwardly, but he never tried to escape. Once (I was a captain then), when he was complaining of his own cowardice, I said to him: "If you are half as afraid in battle as you say you are, how can you keep from running away? I could n't."

"Why, captain," he replied, "do you think I'd disgrace that little wife I left at home for half a dozen such 'or'nary' lives as mine?"

"Well, John, if all of General Lee's army were such cowards as you are, we'd capture Washington and end the war this campaign," was all that I could answer.

John P—— and his wife survived the war, and they have a houseful of children. He is just as faithful and trustworthy in peace as he was in war, leading a quiet and respected life. When I think of his constitutional infirmity, and of the sense of duty and manly courage which conquered it, I feel that no braver man ever

Fought with Stonewall Jackson
In the old Stonewall brigade.

H. K. D.

When the Heart's in its Prime.

THE SUN's on his throne, and the Wind on his tour
Like wandering minstrel o'er meadow and moor;
The day and the season are both in their prime,
And youth's at its sweetest and tenderest time.

The buds are in bloom, and the birds sing their best;
The trees are in leaf, and the orchard is dressed
With clustering fruits, for the year's in its prime,
And youth's at its ripest and tenderest time.

Too soon shall the clouds cover sunshiny sky,
The voice of the minstrel be hushed to a sigh;
Too soon shall the day and the season decline,
And clustering fruits shall be melted to wine.

The petals shall fall, and the songsters depart,
The foliage fade like the youth of the heart;
For swift runs the current of pitiless time,
And always the swifter when life's in its prime.

The birds and the blossoms and fruit shall appear,
With summer's return and the turn of the year,
The breeze shall be sweet, and the sun be as fair;
Alas! but the prime of my youth is not there.

Each month of the year has its prime, but in truth
There's only one prime in the season of youth,
Though hearts love again, and shall love for all time,
There's only one love when the heart's in its prime.

Mary Berri Chapman.

Virginia Day Nursery, 632 E. 5th Street,
New York, N. Y.

April 12, 1894.

The Doliber-Goodale Company,
Proprietors of Mellin's Food,
Boston, Mass.

Dear Sirs:—

From my experience with Mellin's Food in the Day Nursery at the World's Fair, where I fed four thousand babies with it without a single case of sickness or trouble of any kind, I have come to look upon Mellin's Food as a reliable and never-failing resource in my work.

Since my return from Chicago last November, I have used Mellin's Food with the same certainty and success in the Virginia Day Nursery for feeding the many babies that are brought here every day. These babies are as a rule the children of the poorest people in New York City, and when brought here are, almost without exception, weak, sickly and unhealthy, having never been properly fed or sufficiently nourished. After they have been fed on Mellin's Food here at the Nursery, they soon develop into sound, healthy babies.

I feel it my duty to make known to all who are carrying the responsibility of the health, yes, the lives of these little ones, whether in Day Nurseries or in their own homes, that I have found that Mellin's Food will nourish, strengthen and sustain the babies fed with it.

Sincerely yours,

(Miss) Mayory Ball.

Does *your* baby need Mellin's Food?

WASHINGTON AS A SPECTACLE.

WITH PICTURES BY A. CASTAIGNE.

A POLITICIAN.

WASHINGTON is a city planned and built solely for the purposes of government. It is probably the only capital in the world which has had such an origin; which is named after a nation's first leader, laid out according to his individual views, and beautified, to some extent, according to his ideas of beauty. Washington, as it stands to-day, may be said to be the expression of George Washington's intention and personal taste, and, in a consequent way, of his character. The plan of the city reminds one of the man's face, with its large,

quiet features, its calm symmetry, and its singularly unobtrusive individuality. One might almost say that the face of Washington the man, like the face of Washington the city, was characterized by its "magnificent distances." We even feel a little, in spite of what we know of his youth, that the man himself was "planned and built solely for purposes of government."

Strangely enough, too, the features of the first President, as we know them from his many

portraits, remind one irresistibly, by their almost supernal calm, of some of those beautiful heads of Buddha modeled in the far East by the hands of believing men; and his capital recalls very strongly the modern and English portions of such an Indian city as Allahabad, for instance. The beautiful trees, the endless, perfectly smooth roads, the red brick houses, the dark faces of the colored population, and, above all, the moist softness of the sunny air on summer days when it has lately rained, are points which Washington has in common both with Allahabad and Bombay, and which cannot fail to strike one who has lived long in all three places.

We Americans may say of ourselves that our qualities are real, but that our tastes are artificial. We may arrogate praise for what we have done, and deprecate foreign criticism of what we like. Our deeds are our own, but our tastes, as yet, are not. We have more really the desire for taste than taste itself. But the desire is enormous, and in seeking to satisfy it we have desperately attempted to throw an impossible bridge across the wide and deep gulf by which we are divided from former civilizations, and to drag the beau-

FROM THE SUNNY SOUTH.

a. Castaigne

THE WHITE HOUSE—MAIN ENTRANCE.

tiful by force over that bridge, to stay with us. We have indeed a preëminent right to please ourselves in our own way; but we cannot help being concerned about pleasing other people besides Americans, as we have lately shown. Hence the curious, sporadic conventionalities which crop up in unexpected places all over our country — conventionalities of which the object seems to be to produce a good, though only a temporary, impression where genuine traditions have not as yet developed. They make one think of those sham fronts of wood and plaster which are sometimes put up before great buildings yet unfinished, but to which it is necessary to give the appearance of being completed for some special occasion. They answer the purpose, but we feel that they are not intended to last.

In Washington, however, almost everything is meant to be enduring, and in one sense, which is a good sense, there is perhaps no city in any part of the world where a conventional standard has been arbitrarily adopted with such determination, and adhered to with such consistency, throughout so long a period of time, and, on the whole, with such good results. There is no city in the world, I think, where so many public buildings are of Greek style, and yet so unobtrusive.

But in these days of specialism, it is for specialists to talk of architecture, and it is the province of the novelist to enjoy such fiction as he can find in the world, and to make it enjoyable for others. It must be in spite of its conventionalism that Washington suggests romance, and breathes the breath of dream-life into the nostrils of dead statues, and in through the windows of lifeless buildings, and through all the bright air of blazing modernness in which we, the living ones, have our being. There is romance — let us not define the pretty word — in the dim, soft dawn, when the mists of the river are surprised in their loves with the sleeping trees; in the fresh morning, when the quiet streets ring with the double trill of the song-birds as each in turn and all together, and none last, they lift up their little voices in a long, caroling cheer to the rising sun; in the broad day, wherein men work and struggle, and quarrel and make peace, and speak words which all the nation hears and judges, condemns, approves, or laughs at, as all humanity laughs or looks grave over its own centralized self; in the red evening light, when the perspective of the avenues grows long and fairy-like, and the brilliant equipages roll swiftly and smoothly through the sunset air that reddens the horses' bay coats, and enriches collar and harness with its fiery gold. And most of all at night, when the trees are all breathing again, and the broad streets are quiet; when the great army of work-

ers is gone to its boarding-house quarters, and the little regiment of do-nothings is broken up into squads to hunt the Beast of Boredom with laughter and sometimes with tears; when the stars play hide-and-seek with the moon round the corners of the silent Capitol, and kiss the great Liberty on either cheek, high in the cool, dark blue air; when the moonbeams run quivering through the rustling leaves, and weave white lace across the dark pavement; when the soft lights stream from the windows of the White House, across the broad lawn, and through the trees, to the high railings of the avenue; when the darky boy and girl, hand in hand, pour out their little tale of woe to the passing dandy, trotting beside him as he strolls along in white tie and black cloak, on his way from a dinner to a reception; when the herdic cab backs up under the trees against the curbstone, swinging wide its self-opening doors, and throwing its bright flash out upon a vision of fair hair, and satin, and white lace, and slim silk-clad ankles, just as the impassive English footman opens the door of the house, and lets out a blaze

AN OFFICE-SEEKER.

THE DOME OF THE CAPITOL.

of other light ; when, now and then, the over-smooth, honey-sweet voices of colored men echo very softly from back streets to the resonant little drumming and twanging of a banjo. There is assuredly something in it all that suggests romance, something that delicately stirs the heart with a premonition, as it were, of some other heart waiting for it somewhere, in shadow, or moonlight, or noonday sunshine.

It has been, and is still, the fashion to laugh at our capital city, and to speak with a very libelous contempt of what is done there. Many fashions are set by the Europeanized Ameri-

can, and they are not, on the whole, good ones. There are, indeed, two distinct classes of transatlantic Americans—those who live most of their lives abroad because they are obliged to do so by circumstances not to be controlled, and those who spend half the year on the other side as a matter of taste. The former are often more patriotic than those who stay at home. For them there is a glamour over everything ; they feel little patriotic thrills at the sight of the Stars and Stripes, and the bald eagle's screaming is as melodious to them as the song of the nightingale. But the other is an unpleasant person who affects strange

THE WAR, NAVY, AND STATE DEPARTMENTS.

accents and quaint gestures, wears curiously elaborate garments of great price, and calls America a "beast of a hole," which is a coarse expression not susceptible of grammatical explanation. One chief object of this man's calumnies is Washington, under which general term he abuses the city, its inhabitants, and those whose thankless task it is to make laws for the general cases in which our federation must needs figure as one State. The American Parisian and the British New Yorker consider Washington a failure, its official society a band of ineffable cads, and the Government of the United States a fraud.

Even in New York it is amazing to see what

prejudice there is against Washington, and what indifference even where there is no prejudice. And yet, even as a mere spectacle, Washington is not by any means to be despised, while, as a study, it is one of the most interesting cities in the whole world.

There is this fundamental difference between the general aspects of Washington and New York. The latter, cramped for space on its narrow island, has increased by building higher. The former, unhampered by limits of nature, has spread over an enormous area of naturally fertile land. There is, indeed, an even greater regularity of plan in Washington than in New York, to which the ruler and square were applied, so to

say, after the city had grown out of infancy. But in the capital this regularity is not forced upon the eye by the unbroken succession of blocks succeeding blocks, for miles, in a wearisome similarity of architecture, and with such a monotonous absence of landmarks in some regions as to puzzle a Western pathfinder. On the contrary, the lines are everywhere broken by the variety of detachment where dwellings stand alone, and feathered all along their length with graceful trees. In New York, business is the main fact; idleness and its dwellings are incidents. In Washington it is the other way; for business is only incidental, government is

more sky, since the streets are wider, and the houses lower. And winter in Washington brings the white surprise of snow rather than the discomfort of sullen and dirty slush, and a sudden thaw and a quick-succeeding frost will cast the trees in brilliant ice, as it were, making of each twig a miracle in crystal, and of every gnarl and knob and withered berry a crown diamond set in virgin silver.

Especially after a sudden snowfall there is more joy than over many snow-storms in the North, coming as it does with the certainty that it cannot lie long on the ground, nor pile itself into hundredfold wet blankets on the roofs,

IN DIPLOMATIC SOCIETY.

the main occupation, leisure is the common right of many, and idleness is the privilege of not a few. More than New York, too, Washington is subject in its aspect to the influence of the seasons, in proportion as there is more of nature to be seen everywhere, more grass to turn brown and green again, more trees to lose their leaves in winter and to bud in spring,

nor heap itself in ten-foot drifts where it ought not. Snow in the North is a grim certainty; in Washington it is but the illuminating flash of a passing holiday, to be enjoyed quickly while it lasts, to disappear more quickly still in the sunshine that makes it beautiful. It is marvelous to see how the dashing sleighs turn out upon "the avenue,"—which is, of course,

THE NEW BUILDING FOR THE CONGRESSIONAL LIBRARY.

Pennsylvania Avenue,—to hear all at once the unceasing tinkle of the bells instead of the dull roll of carriage-wheels, to feel how in an instant the pace of the whole city quickens with noiseless speed upon the rare white carpet, to listen to new tones of voices echoing across the snow—to have all the magic of winter's beauty, without its grimness, for one short, joyous day.

It is natural that in its social aspect Washington should differ from most other cities. It is strangely cosmopolitan. There is in the ranks of society the greatest variety of race with the greatest variety of interest, or, at least, in the object of interest. There is, in things social, the greatest diversity together with a singular uniformity of principle. There is a notable simplicity existing side by side with something very like real magnificence of display, and a remarkable absence of that socially servile opinion which accepts display alone as an outward and visible sign of inward and social grace. The ubiquitous diplomat leavens

the whole, and lends it a slightly European savor. The curious English traveler comes, sees, and takes away an impression, but leaves none; the German of solid acquirements puts on an air of levity, the better to observe, to note, and mentally to digest; the Frenchman, generally new at wandering, sparkles in conversation, whether he be understood or not, and generalizes within himself as all Frenchmen do. For the French mind differentiates keenly, but integrates by one rule only, which is the Parisian.

You may see almost every type at a big afternoon tea in Washington, especially at one of those given, according to a pretty custom, to "bring out"—to present to society—a daughter of the house. There she stands, the young girl whose social eyes are to be opened, a type of the American maiden of to-day, unlike any other in the world. For we are the only one among the great nations of whom it must be said that we are a distinct result rather

than a distinct race, and this result is a type indefinitely varied by divers race characteristics. The "result" stands by her mother's side near the door of the first drawing-room through which guests pass—tall, slender, probably clad in white, probably having rather dark hair and a complexion to which the "national irritable heart," as the doctors call it, gives a brilliancy rarely seen abroad. Almost beyond a doubt, too, she has eyes which would seem unusual in Europe, with strong, fringing lashes, but rather too boldly bright, and restlessly, though innocently, curious. The mouth is very mobile; the hands are rarely quiet for a moment—slender hands, very narrow at the base, very closely webbed between the thumb and forefinger, very exquisitely kept under her long gloves; hands with which none but those of Frenchwomen can compare for the wise pains bestowed upon them.

By her side, upon a broad table, are endless flowers, chiefly if not altogether white. In her left hand are roses, white too, and as fresh as herself. Her right she gives frankly to stranger and friend alike, as her mother, splendid with historic jewels and maternal pride, introduces them all to her, one after the other. A word or two, not more, to each, and each passes on. It is a pretty custom, unlike any other in the world. They all pass on and join the international

throng in the other rooms—senators, officials, diplomats; grave men who seize the quick opportunity to exchange words of moment, and other grave men, gray-haired, but not old in heart, who whisper the pleasant nothings they learned long ago to young ears that have perhaps not heard them yet. The air smells of tea and flowers, the rooms are

crowded, the heat is great, the good-will greater still toward the tall young girl by the door, who has shaken the hand of each, and looked into the face of each, wondering, perhaps, whether any face of them all is ever to be the one face of all the world for her.

We Americans are a wonderfully sentimental people, and the lily-white maiden who makes

her entrance into society on this day is as eager for sentiment as all the rest of us. Now sentiment is good when it is found, and is real, and there is little enough to care for in life without it. Why, then, should the pursuit of it be ridiculous? It is, and it is strange that it should be. Perhaps the heart is ashamed when the head knows what it is doing.

The Capitol is the heart of Washington, not topographically, but figuratively. As a matter of fact, the city has grown in a direction precisely opposite to that in which its founders expected growth, and what is really the front of the building faces away from the quarter of principal development. Fortunately, this has been an advantage, in so far as it presents the Capitol to the city in its most imposing aspect, from the side on which the land falls away, and on which broad flights of marble steps give access to the building. And from this side it cannot be denied that the great front of well-

IN ALL HIS GLORY.

proportioned colonnades, surmounted by the airy dome, which itself is crowned by Crawford's statue of Liberty, is both imposing and beautiful. To the architect, the fact that the dome is of iron is a flaw in the nobility of the whole, but no ordinary eye can detect the change of material at that elevation. There are hours of the day, especially toward evening in

FIVE O'CLOCK TEA.

A QUIET EVENING — FROM THE VIRGINIA SHORES.

spring, when there is a wonderful fascination in the distant view, as one approaches the Capitol along Pennsylvania Avenue. It has a distinctness of proportion with a soft grace of outline, all in many tones of white against the misty evening sky, such as cannot be likened to anything in any other city. It suggests nothing ancient, nothing traditional, nothing old-fashioned, and yet it has nothing distinctly modern about it. Symbolical, it may be, for one may find symbols in all that man makes with a purpose, for all that man can think, and in nature for all that is beyond man's skill and craft. Let it be a symbol, then, and a good one of some good thing. Calm, lovely, high in air, with a beauty of its own, not beyond criticism, assuredly, but perhaps beyond imitation after its manner, crowned by the very handiwork of one of us,—of one whose hands worked lovingly,—let it be a symbol if it may be, not of the strife which has been striven under its shadow, but of that good state to which honest strife may bring us.

A strange life is going on within it, a wonderful, hive-like activity. All day long men and women stream in and out, their footsteps echoing through the stone passages below, their figures lean, fat, long, short, handsome, ugly, crooked, and straight, crowding the ever-ascending and -descending elevators; their voices, high, low, harsh and angry, or soft and persuasive, ringing in the rotunda, and through the corridors, all the way from the Senate to the House of Representatives; their faces as varied as their figures—the smooth wife of a fashionable senator elbowing the ungainly relative of

a “down-East” postmaster out of office; the scraggy, out-at-elbows office-seeker appealing by his very scragginess to the sleek rotundity of double-breasted success, in whom is exhibited all the symmetrical solemnity of the perfect sphere, which on a solid surface may roll but cannot fall. That lean, energetic man in decent black, who walks with quick stride from door to door of the House, sending in his name to one member after another for a brief interview, is “working a ‘committee’” for a private bill, business-like, direct, tactful. That beautifully dressed and compact young fellow with the bright eyes is the correspondent of a great paper, and knows his way even better than the man in black. That gray-headed giant with his noble head was once a fighter, and is a fighter still with words and ideas. That neat, one-armed man is one of a dozen or more doorkeepers, an old soldier, too, and he knows every member in the House by sight, besides a multitude of other personages great and small in the political world. There goes a bevy of smartly dressed girls who ask their way to the ladies' gallery of the Senate, and two old members, conversing in low tones in the deep embrasure of a window, look up at the sound of young laughter, with eyes that are sharp still under the bushy white brows. And past them all, backward and forward, with steps that hurry anxiously or drag despondently, the crowd unceasingly streams on its way, throughout the long hours, as motley a multitude as one may see together in any civilized place. There are idlers and travelers, too, as well as busy men, and here and there a little knot of people stands

"at gaze," while the mulatto guide expatiates upon the beauties of the rotunda, or explains the subjects of the pictures and the frescos. Nobody pays the slightest attention to any one else with whom he or she is not busy. It would need something very surprising indeed to excite the curiosity of such a crowd. Here and there in the halls and corridors the sturdy guar-

arch of all he surveys, whose slightest gesture could stop even a cable-car, and whose lofty stature and speckless clothes call forth the admiration of the colored nursery-maid, and can impose good behavior even upon fair-haired little boys, and make the soggy-faced, blue-eyed "toughs" look a little less as though they

THE WASHINGTON MONUMENT.

dians of the public peace, clad in immaculate uniforms, sit silent and indifferent, ruminating, to judge from the slow and regular action of their jaws, upon the destinies of the nation, though caring for none of these things. Fine specimens most of them are, too—broad-shouldered, healthy skinned, fair, quiet men, whose solid nerves nothing could surprise, whose firm but gentle mastication no political convulsion could retard. They are of a very different type from the burly New York policeman. One can hardly believe that they are really colleagues of the colored functionary, in similar blue cloth and brass buttons, who stands in all his glory

had bought the pavement for their own convenience and would refuse to let it even at a high price.

A famous living sculptor of ours has given us his opinion in condemnation of the Washington monument. It is sometimes called the Obelisk, for the comparatively simple reason that it is one, just as "they called him Peter, people said, because it was his name." With all due respect to the sculptor's right of judgment, which is unquestioned, we may differ with him, and yet not brand ourselves barbarians. To the present writer it seems not too much to say that in certain lights the Obelisk is the most im-

posing simple object of great dimensions in the whole world. Doubtless when seen, as it always can be seen by day, from a distance of two or three miles and from different parts of the city, cut off by a line of modern roofs across a pale sky, there is nothing remarkable or beautiful about it. It is then but the top of an obelisk, and nothing more; a slender straight line of stone visible in an uninteresting atmosphere. Even then it can hardly be said to be offensive, for it is too simple to offend.

Go to it at evening, when the sunset lights have faded and the full moon is rising. It is impossible not to see its beauty then. For some reason not immediately apparent the white light is not reflected from the lower half of it when the moon is not far above the horizon. The lines are all there, but the shaft is only a soft shadow below, gradually growing clearer as it rises, and ending in a blaze of silver against the dark sky. The enormous proportions are touched then with a profound mystery; the solidity of the symbol disappears, the greatness of the thought remains, the unending vastness of the idea is overwhelming. Block upon block, line by line, it was built up with granite from many States, a union of many into one simple whole, a true symbol of what we Americans are trying to make of ourselves, of our country, and of our beliefs. There is the solid foundation, proved and tried, which we know of and trust in. There is the dark and shadowy present, through which the grand straight lines are felt rather than seen. And there, high in the still air, points the gleaming future, perfect at all points, bright at all points, lofty as all but

A CORNER OF THE AGRICULTURAL GROUNDS.

heaven itself. There is the symbol. We may ask of ourselves whether we are to overtake the shadows and reach the light, we or our children, or our children's children; or whether the half-darkness will creep up with us always, and with them, for ages to come, and even to the end.

The Obelisk is beautiful not only by moonlight, as any one may see who will take the trouble to look at it with eyes human rather than critical — at evening, for instance, from the terrace of the Capitol, when all the world is sinking toward its mighty plunge into darkness through the foam of the cloud-breakers and the purple wash of night's rising tide; or at early morning, when the darkness sinks back, and the first blush of day warms the pinnacle of the lonely shaft — as though it had stabbed night in the sky and drawn the sweet blood of daylight upon its point. Most notably is it beautiful at such times when seen with the whole city from the great military cemetery on the heights of Arlington, than which few points in the world command a more lovely view.

There in the quiet earth the solemn dead lie side by side, the many who fought for us when we were but their children, and who, for ours, will fight their immortal battles again in the clouds like the warriors of old. Many of us have heroes of our own name and race lying there in the broad tree-hemmed meadows, and among the flowers, and in that chosen rank where the great generals lie, as they fought in the forefront of the enemy, facing now not enemies but friends, the deep sweet valley with the quiet river at their feet. And far away, beside the airy dome of the Capitol, the single shaft rises sunward, and tells in shadow-time for us, the living, the hours of the dead men's endless day.

LOUIS LOEB

ROME AND JASPER.

ENGRAVED BY PETER AITKEN.

A CUMBERLAND VENDETTA.

A TALE OF THE KENTUCKY MOUNTAINS.

By the Author of "A Mountain Europa," etc.

WITH PICTURES BY LOUIS LOEB.

XII.

HE star and the crescent were swinging above Wolf's Head, and in the dark hour that breaks into dawn a cavalcade of Lewallens forded the Cumberland, and galloped along the Stetson shore. At the head rode young Jasper, and Crump the spy.

Swift changes had followed the court-house fight. In spite of the death of Rufe Stetson from his wound, and several other Stetsons from ambush, the Lewallens had lost ground. Old Jasper's store had fallen into the hands of creditors — "furriners" — for debts, and it was said his homestead must follow. In a private war a leader must be more than leader. He must feed and often clothe his followers, and young Jasper had not the means to carry on the feud. The famine had made corn dear. He could feed neither man nor horse, and the hired feudsmen fell away, leaving the Lewallens and the Braytons and their close kin to battle alone. So Jasper avoided open combat, and resorted to ambush and surprise; and, knowing in some way every move made by the Stetsons, with great daring and success. It was whispered, too, that he no longer cared who owned what he might want for himself. Several dark deeds were traced to him. In a little while he was a terror to good citizens, and finally old Gabe asked aid of the governor. Soldiers from the settlements were looked for any day, and both factions knew it. At the least this would delay the war, and young Jasper had got ready for a last fight, which was close at hand.

Half a mile on, the riders swerved into a wooded slope. There they hid their horses in the brush, and climbed the spur stealthily. The naked woods showed the cup-like shape of the mountains there — a basin from which radiated upward wooded ravines, edged with ribs of rock. In this basin the Stetsons were encamped. The smoke of a fire was visible in the dim morning light, and the Lewallens scattered to sur-

round the camp. The effort was vain. A picket saw the creeping figures; his gun echoed a warning from rock to rock, and with yells the Lewallens ran forward. Rome sprang from sleep near the fire, bareheaded, rifle in hand, his body plain against a huge rock, and the bullets hissed and spat about him as he leaped this way and that, firing as he sprang, and shouting for his men. Steve Marcum alone answered. Many, startled from sleep, had fled in a panic; others had run deeper into the woods for shelter. Bidding Steve save himself, Rome also turned up the mountain, running from tree to tree, and dropped unhurt behind a fallen chestnut. Other Stetsons, too, had turned, and answering bullets began to whistle to the enemy. But they were widely separated, and ignorant of one another's position, and the Lewallens drove them one by one to new hiding-places, scattering them more. To his right Rome saw Steve Marcum speed like a shadow up through a little open space, but he feared to move. Several Lewallens had recognized him, and were watching him alone. He could not even fire; at the least exposure there was a chorus of bullets about his ears. In a moment they began to come obliquely from each side; the Lewallens were getting around him. In a moment more death was sure there, and once again he darted up the mountain. The bullets sang after him like maddened bees. He felt one cut his hat and another sting his left arm, but he raced up, up, till the firing grew fainter as he climbed, and ceased an instant altogether. Then, still farther below, came a sudden crash of reports. Stetsons were pursuing the men who were after him, but he could not join them. The Lewallens were scattered everywhere between him and his own men, and a descent might lead him to the muzzle of an enemy's Winchester. So he climbed over a ledge of rock and lay there, peeping through a crevice between two boulders, gaining his breath. The firing was far below him, and was sharp. Evidently his pursuers were too busy now defending themselves to think further of him, and he began to plan how he should get

back to his friends. But he kept hidden, and, searching the cliffs below him for a sheltered descent, he saw something like a slouched hat just over a log, scarcely fifty feet below him. Presently the hat was lifted a few inches, a figure rose cautiously and climbed toward the ledge, shielding itself behind rock and tree. Very quietly Rome crawled back to the face of the cliff behind him, and crouched behind a rock with his cocked rifle across his knees. The man must climb over the ledge; there would be a bare, level floor of rock between them,—the Lewallen would be at his mercy,—and Rome, with straining ears, waited. There was a footfall on the other side of the ledge; a soft clink of metal against stone. The Lewallen was climbing slowly—slowly. Rome could hear his heavy breathing. A grimy hand slipped over the sharp comb of the ledge; another appeared, clenched about a Winchester—then the slouched hat, and under it the dark, crafty face of young Jasper. Rome sat like the stone before him with a half smile on his lips. Jasper peered about with the sly caution of a fox, and his face grew puzzled and chagrined as he looked at the cliffs above him.

"Stop thar!"

He was drawing himself over the ledge, and the low, stern voice startled him, as a knife might have done, thrust suddenly from the empty air at his breast. Rome rose upright against the cliff, with his resolute face against the stock of a Winchester.

"Drap thet gun!"

The order was given along Stetson's barrel, and the weapon was dropped, the steel ringing on the stone floor. Rome lowered his gun to the hollow of his arm and the two young leaders faced each other for the first time in the life of either.

"Seem kinder s'prised to see me," said the Stetson, grimly. "Hev ye got a pistol?"

Young Jasper glared at him in helpless ferocity.

"Naw!"

"Knife?"

He drew a long-bladed penknife from his pocket, and tossed it at Rome's feet.

"Move over thar!"

The Lewallen took his stand against the cliff, Rome picked up the fallen rifle, and leaned it against the ledge.

"Now, Jas Lewallen, thar 's nobody left in this leetle trouble 'cept you 'n' me, 'n' ef one of us was dead I reckon t' other could live hyar, 'n' thar 'd be peace in the mount'ins. I thought o' that when I hed ye at the eend o' this Winchester. I reckon you would 'a' shot me dead ef I hed poked my head over a rock as keerless as you." That is just what he would have done, and Jasper did not answer. "I've

swore to kill ye, too," added Rome, tapping his gun; "I've got a cross fer ye hyar."

The Lewallen was no coward. Outcry or resistance was useless. The Stetson meant to taunt him, to make death more bitter; for Jasper expected death, and he sullenly waited for it against the cliff.

"You 've been a-banterin' me a long time, now, 'lowin' as how ye air the better man o' the two; 'n' I've got a notion o' givin' ye a chance to prove yer tall talk. Hit 's not *our* way to kill a man in cold blood, 'n' I don't want to kill ye anyways ef I kin he'p it. Seem s'prised ag'in? Reckon ye don't believe me? I don't wonder when I think o' my own dad, 'n' all the meanness yer folks have done mine; but I've got a good reason fer not killin' ye—ef I kin he'p it. Ye don't know what it is, 'n' ye 'll never know; but I 'll give ye a chance now fer yer life ef ye 'll sw'ar on a stack o' Bibles as high as thet tree thar thet ye 'll leave these mount'ins ef I whoops ye, 'n' never come back ag'in as long as ye live. I 'll leave, ef ye whoops me. Now, whut do ye say? Will ye sw'ar?"

"I reckon I will, seein' as I've got to," was the surly answer. But Jasper's face was dark with suspicion, and Rome studied it keenly. The Lewallens once had been men whose word was good, but he did not like Jasper's look.

"I reckon I 'll trust ye," he said at last, more through confidence in his own strength than faith in his enemy; for Jasper whipped would be as much at his mercy as he was now. So Rome threw off his coat, and began winding his homespun suspenders about his waist. Watching him closely, Jasper did the same.

The firing below had ceased. A flock of mountain vultures was sailing in great circles over the thick woods. Two eagles swept straight from the rim of the sun above Wolf's Head, beating over a turbulent sea of mist, for the cliffs, scarcely fifty yards above the ledge, where a pine-tree grew between two rocks. At the instant of lighting, they wheeled away, each with a warning scream to the other. A figure lying flat behind the pine had frightened them, and now a face peeped to one side, flushed with eagerness over the coming fight. Both were ready now, and the Lewallen grew suddenly white as Rome turned again and reached down for the guns.

"I reckon I 'll put 'em a leetle furdur out o' the way," he said, kicking the knife over the cliff, and, standing on a stone, thrust them into a crevice high above his head.

"Now, Jas, we 'll fight this gredge out, as our grandads hev done afore us."

Lewallen and Stetson were man to man at last. Suspicion was gone now, and a short, brutal laugh came from the cliff.

"I'll fight ye! Oh, I'll fight ye!"

The ring of the voice struck an answering gleam from Rome's gray eyes, and the two sprang for each other. It was like the struggle of primeval men who had not yet learned even the use of clubs. For an instant both stood close like two wild beasts, crouched for a spring, and circling about to get at each other's throats, with mouths set, eyes watching eyes, and hands twitching nervously. Young Jasper leaped first, and the Stetson, wary of closing with him, shrank back. There were a few, quick, heavy blows, and the Lewallen was beaten away with blood at his lips. Then each knew the advantage of the other. The Stetson's reach was longer; the Lewallen was shorter and heavier, and again he closed in. Again Rome sent out his long arm. A turn of Jasper's head let the heavy fist pass over his shoulder. The force of the blow drove Rome forward; the two clinched, and Jasper's arms tightened about the Stetson's waist. With a quick gasp for breath, Rome loosed his hold, and, bending his enemy's head back with one hand, rained blow after blow in his face with the other. One terrible stroke on the jaw, and Jasper's arms were loosed; the two fell apart, the one stunned, the other breathless. One dazed moment only, and for a third time the Lewallen came on. Rome had been fighting a man; now he faced a demon. Jasper's brows stood out like bristles, and the eyes under them were red and fierce like a mad bull's. Again Rome's blows fell, but again the Lewallen reached him, and this time he got his face under the Stetson's chin, and the heavy fist fell upon the back of his head, and upon his neck, as upon wood and leather. Again Rome had to gasp for breath, and again the two were fiercely locked—their corded arms as tense as serpents. Around and around they whirled, straining, tripping, breaking the silence only with deep, quick breaths, and the stamping of feet, Jasper firm on the rock, and Rome's agility saving him from being lifted in the air, and tossed from the cliff. There was no pause for rest. It was a struggle to the end, and a quick one; and under stress of excitement the figure at the pine-tree had risen to his knees—jumping even to his feet in plain view, when the short, powerful arms of the Lewallen began at last to draw the Stetson closer still, and to bend him backward. The Stetson was giving way at last. The Lewallen's vindictive face grew blacker, and his white teeth showed between his snarling lips, as he fastened one leg behind his enemy's, and, with chin against his shoulder, bent him slowly, slowly back. The two breathed in short, painful gasps; their swollen muscles trembled under the strain as with ague. Back—back—the Stetson was falling; he seemed al-

most down, when,—the trick is an old one,—whirling with the quickness of light, he fell heavily on his opponent, and caught him by the throat with both hands.

"'Nough?" he asked hoarsely. It was the first word uttered.

The only answer was a fierce struggle. Rome felt the Lewallen's teeth sinking in his arm, and his fingers tightened like twisting steel, till Jasper caught his breath as though strangling to death.

"'Nough?" asked the hoarse voice again.

No answer; tighter clenched the fingers. The Lewallen shook his head feebly; his purple face paled suddenly as Rome loosed his hold, and his lips moved in a whisper.

"'Nough!"

Rome rose dizzily to one knee. Jasper turned, gasping, and lay with his face to the rock. For a while both were quiet, Rome panting with open mouth, and white with exhaustion, looking down now and then at the Lewallen, whose face was turned away with shame.

The sun was blazing above Wolf's Head now, and the stillness about them lay unbroken on the woods below.

"I've whooped ye, Jas," Rome said at last; "I whooped ye in a fa'r fight, 'n' I've got nothin' now to say 'bout yer tall talk, 'n' I reckon you hev n't nuther. Now, hit 's understood, hain't it, thet ye 'll leave these mount'ins!"
